> contracts of the limitations and provisions of the Boulder Canyon Project Act and the Colorado River Compact, it is essential that the United States know the proper interpretation of those provisions of the Act last mentioned and the Compact which are in dispute between the parties. As more particularly alleged in paragraphs XXXI through XXXIX below, Arizona and the defendants are in controversy as to the meaning of the limiting provisions of the Boulder Canyon Project Act and the Colorado River Compact, and the United States is therefore uncertain as to how much water it may properly deliver annually under the aforesaid contracts."[114]

There is thus a present clash of interests between the parties which constitutes a "case or controversy", as defined by this Court. *Evers* v. *Dwyer,* 358 U. S. 202 (1958); *Aetna Life Ins. Co.* v. *Haworth,* 300 U. S. 227 (1937).

The Special Master's Report carefully reviews the "compelling reasons which justify an adjudication of the various claims presented in this case to the water flowing in the Colorado River" (Rep. 130; see Rep. 129-35). He demonstrates that the physical presence of water in the Lower Basin does not make it available for use in Arizona, absent a determination of her legal right to utilize that water; and that without such an adjudication of her rights, Arizona is for all practical purposes as effectively pre-

---

[114] The prayer of the petition is in part:

"WHEREFORE, the United States of America respectfully prays this Court

"(1) To adjudge and declare the validity of the treaties and international conventions, compacts, laws, contracts and federal documents to which reference has been made throughout this Petition and the pleadings of the parties;

"(2) To interpret, construe, and resolve the conflicts which have arisen among the parties to this proceeding in connection with the laws, contracts, and documents referred to above. . . ."

cluded from further utilization of this resource as if it were being entirely diverted for use in California. In short, a refusal to determine Arizona's rights would be equivalent to a decision in favor of California (Rep. 133-35). This situation exists regardless of the amount of the depletions in the Upper Basin and irrespective of the water supply available for use in the Lower Basin. The reasoning of the Special Master is unanswerable and California makes no effort to answer it. Instead, she seeks to escape the conclusions which it compels by resort to a test applied in equitable apportionment cases but irrelevant to this litigation, governed by a statutory apportionment.

C. Irrelevance of Future Water Supply to the Question of Congressional Intent

California contends that a prediction in this year 1961 of future water supply in the year 2060 is essential to determine the intent of Congress in the year 1928 in enacting the Project Act and in imposing the perpetual limitation on California's use of water. She argues that Congress never intended to deprive the California defendants, and particularly the Metropolitan Water District, which serves the City of Los Angeles and the surrounding vicinity, of sufficient water to meet their needs (Cal. Op. Br. 236-39).

However, the Master held:

> "... But the supply of water which will actually be available in the future for any state or any project does not provide the slightest insight into the intention of Congress when it passed the act in 1928. Obviously the relevant factor in determining Congressional intention is the supply of mainstream water which Congress thought would be available at the time it enacted the Project Act, not the supply which will in fact be available after 1960. ..." (Rep. 101)

California cites an isolated statement by Senator Hayden to the effect that, under the "set-up" which California's Senator Johnson had described to the Senate, the Project Act provided that "a million acre-feet may be used in the vicinity of Los Angeles...." California adds: "This Congressional purpose the Master would frustrate" (Cal. Op. Br. 238).

However, the complete Senate discussion of California's claimed water rights and demands, of which the Hayden excerpt is an isolated part, and particularly the extensive inventory of these asserted rights and needs which Senator Johnson presented to the Senate, compels the conclusion that California fully realized in 1928 that the maximum of 4,400,000 acre-feet per annum stipulated in the California limitation would leave her with less main stream water than she claimed was necessary to satisfy her asserted ultimate requirements and that she deliberately assumed the calculated risk that there would be enough surplus water to supply the deficiency.

Senator Johnson prefaced his list of California's water rights and needs with the urgent request that, in dividing water among the Lower Basin states, Congress should:

> "Give to Arizona all the water that it is within the realm of possibility that Arizona may use; but do not take from the State of California, which is practically using it to-day, and which within a brief period will put infinitely more water to use, the rights that are hers, through an unjust or an unfair division of that water."[115]

Even though Senator Johnson admitted that California's then existing uses aggregated only 2,159,100 acre-feet[116] per

---

[115] 70 Cong. Rec. 234 (1928).

[116] *Ibid.*

Arizona's Reply (par. 28) to the California Answer (par. 28 (b)) did not, as California states, "concede that appropriators in

annum, he then proceeded to state claims of right based on paper filings and the need for future uses as follows:

Areas		Acre-Feet Per Annum[117]	
Imperial Valley		3,115,000	including existing-uses of 2,159,100
Yuma Project		64,500	
Palo Verde Valley		234,000	
City of Los Angeles		1,095,000	
		4,508,700	
Coachella Valley	72,000 acres		
Palo Verde Mesa	18,000 "		
Chucawala	44,000 "		
	134,000 acres	582,800[118]	
		5,091,500	
Claimed for waste in Imperial Valley		918,000	

California beneficially consumed at least 2,900,000 acre-feet annually" from the natural or unregulated flow of the main stream prior to June 25, 1929 (Cal. Op. Br. 262). The averments of the Arizona Reply are nothing more than argumentative allegations that as of June 25, 1929 there were in operation California projects capable of serving 473,500 acres which, if irrigated, would under existing conditions deplete the flow of the stream by about 2,902,000 acre-feet per annum. It is further alleged that any appropriative rights in California were merged in the California water delivery contracts and controlled by the Compact, the Project Act and the Limitation Act. These allegations cannot properly be construed as conceding the extent either of beneficial consumptive uses in California or of established rights in the natural flow in California, whether acquired by appropriation or otherwise.

Moreover, as the Special Master held in denying Arizona's motion to amend its pleadings (so as, among other things, to insert in her Reply a denial of the above allegations in the California Answer):

> "In a litigation of this character it would be strange to hold the parties strictly to their pleadings. See *Kansas* v. *Colorado,* 185 U. S. 125 (1902). . . ."

Clearly the Master considered the issue as to the existence and extent of water rights as of June 25, 1929 to be open for trial and decision (see Recommended Decree, Article VI, Rep. 359).

[117] 70 Cong. Rec. 236 (1928).

[118] 134,000 acres times 4.4 acre-feet per acre asserted by Senator Johnson as the volume of water necessary per acre.

Senator Johnson then proceeded to claim "a total aggregate now appropriated and with rights fully established of 6,009,500 acre-feet per year".[119]

Referring to California's position at the Governors' Conference of 1927, Senator Johnson stated:

> "When California offered to make a compact on a basis of 4,600,000 acre-feet per year plus one-half of the surplus excess and allocated water, it was well recognized that California would be perhaps one and one-half million acre-feet short of its requirements unless a large amount of the surplus water should be available. *In other words, California was willing to take a chance on obtaining surplus water and on the further chance that Arizona would not use the water allocated to her. She would, indeed, be surrendering established rights and substituting therefor simply a chance to obtain water.*"[120]

When California accepted the congressional compromise lowering the limitation provision from 4,600,000 acre-feet to 4,400,000, she did so knowing full well that she was increasing her risk. It is against this background that Senator Johnson's remarks, made near the close of the debate on this phase of the Project Act, emerge in their true significance:

> "I say to the gentlemen from Arizona, 'You say that California shall have but 4,200,000 acre-feet.' We say, and the testimony of Mr. Francis Wilson is the best upon that subject, that the irreducible minimum of the State of California is 4,600,000 feet. You say to us, 'You must bind your people for all time in the future never to go beyond it by this amendment.' The amendment does not divide the

---

[119] 70 Cong. Rec. 237 (1928).

[120] 70 Cong. Rec. 237 (1928).

> water between Arizona and California. It fixes a maximum amount beyond which California can not go. I say to the gentlemen from Arizona, though I think it is a wicked amendment, though I think it is an amendment that harnesses the State of California and its people as they never should be harnessed in the days to come, though I believe it to be an injustice against those who reside in California and in its southern part to-day and those who may reside there in the future—I say to you that if 200,000 acre-feet of water will settle this controversy with them, whatever the wrong, whatever the injustice, whatever may be the yoke that is put upon our people, I will take that as a compromise and a settlement of the differences that exist."[121]

It is also clear that the maximum quantity fixed by the California limitation was not designed by Congress to insure the City of Los Angeles or any particular area of the State of California of ample water to supply its alleged ultimate needs.

Senator Hayden categorically denied the validity of the alleged appropriation for Los Angeles of 1,095,000 acre-feet per year stated by Senator Johnson.[122] He also questioned that Los Angeles would require such an amount of water:

> "I shall concede every figure that the Senator from California [Mr. Johnson] has placed in the Record with respect to irrigation uses in California; every figure of that kind may be conceded; but I do not concede that the City of Los Angeles and the municipalities in Southern California who are asking for 1,095,000 acre-feet of water, need that much water or will need it for a hundred years."[123]

---

[121] 70 Cong. Rec. 385 (1928), Ariz. Legis. Hist. 92.

[122] 70 Cong. Rec. 239 (1928).

[123] 70 Cong. Rec. 383 (1928).

This is undoubtedly the same "million acre-feet" the use of which California asserts that Senator Hayden and Congress assured to the "vicinity of Los Angeles" in the Project Act.

That no such assurance was intended or given becomes even clearer from the discussion of Los Angeles' alleged rights. Senator Walsh of Montana stated he understood it to be

> "the contention of the Senator from California [Mr. Johnson] that the hands of the Government are tied; that if we shall erect a dam there at all we shall have to give enough water out of that dam to the city of Los Angeles to satisfy its appropriation." [124]

But Senator Hayden answered:

> "But I am quite sure, if I understood correctly the Senator from California, that he qualified that statement by saying that, after all, the Secretary of the Interior could allow the City of Los Angeles to have such quantity of water as might be determined by contract.
>
> * * * * * *
>
> "So far as the other States of the Colorado River Basin are concerned, *whatever use is made of the water by the State of California within the limits allowed to that State* by interstate agreement they have no concern whatever. The other States are not interested as to whether it is used for one purpose or another. The Colorado River compact itself recognizes that domestic use is the highest use. Congress will approve the Colorado River compact if this bill is passed. *Therefore the Secretary of the Interior will naturally decide as between applicants, one who desires to use the water for potable purposes*

[124] 70 Cong. Rec. 169 (1928).

> *in the city and another who desires to use it for irrigation, if there is not enough water to go around, that the city shall have the preference.*
>
> "Mr. Phipps. It seems to me that the division of the available water between the States through mutual understanding and agreement will settle this question, and there will be no difficulty in allotting it to the various applicants who may desire to use it."[125]

The fact that the City of Los Angeles, like all other users of water from the Colorado River in the State of California, was to satisfy its needs out of the State's apportionment under the Project Act was not only thus recognized by the Senate, but also by the California defendants themselves in the Seven-Party Agreement.

California quotes the Master:

> " 'Obviously the relevant factor in determining Congressional intention is the supply of mainstream water which Congress thought would be available at the time it enacted the Project Act, not the supply which will in fact be available after 1960.' " (Cal. Op. Br. 236, quoting from Rep. 101)

She proceeds to attack this conclusion by quoting a remark made by Senator Hayden in the course of debate to the effect that "under the set up to which the senior Senator from California has so often referred there will be available at Boulder Dam on the average about nine and one-half million acre-feet of water. . . ." Senator Hayden then roughly outlines the uses this amount will permit in the Lower Basin (Cal. Op. Br. 237). California says this demonstrates that the "supply at the site of Hoover Dam, of which Senator Hayden spoke, is very close to the determinations of flow at Hoover Dam by expert witnesses whose testimony the Master rejects" (Cal. Op. Br. 237).

---

[125] 70 Cong. Rec. 169 (1928).

California again misrepresents the record. Senator Hayden's remarks, read in full,[126] clearly show that he was speaking in generalities of a *net* supply of water available to users, whereas the California estimates relate to *gross* inflow to Lake Mead. These remarks by a single Senator, made argumentatively in debate, stating his views as to probable useable supply, California construes as a congressional finding of fact as to future water supply in the Lower Basin. The argument scarcely warrants the dignity of an answer.

California then characterizes the Sibert Board 1928 Report[127] as "the most authoritative report relating to water supply before Congress when the Project Act was passed" (Cal. Op. Br. 239 note 3). But that report was not even regarded as reliable, much less authoritative, by many Congressmen, particularly Representative Swing, co-author of the Project Act. He criticized the "spirit of extreme conservatism that is manifest throughout the report" and its conclusions as "pessimistic . . . regarding water supply." He called its calculations of flows at Black Canyon "extreme" and "about 25 per cent lower than the indications of 26 years' measurement"; and he characterized the "low period" adopted by the board as "mythical". He complained that the board, "in addition to its extreme assumptions of low water, adds another assumption by concluding that rapid irrigation development is to be expected in the upper basin". Congressman Swing considered far more reliable the findings of the Colorado River Commission. He concluded "that the

[127] C 202 (Tr. 7714) found in SM 4 for iden. (Tr. 255); 70 Cong. Rec. 280-85 (1928); H. R. Doc. No. 446, 70 Cong., 2d Sess. (1928).

'ultraconservative' findings of the Sibert Board will in all probability never be realized''.[128]

The conclusions of the Sibert Board were certainly not accepted by Senators Hayden,[129] Oddie (Nevada)[130] or Ashurst.[131] Senator Bratton also criticized the Sibert Report.[132]

The Special Master correctly presents the situation prevailing at the time the Project Act was enacted when he says:

> ''And, for all of the uncertainty over the actual supply of water in the Colorado River, one thing that is clear is that the estimates of supply in 1928 were uniformly and substantially larger than even the most optimistic estimates made today.'' (Rep. 101-02) (footnote omitted)

It was on the basis of these estimates and California's own appraisal of her then existing and potential water requirements that she acceded to the limitation upon her use of water imposed by the Project Act and confirmed by the Limitation Act (pp. 103-04, *supra*).

California in effect accuses the Master of failing ''to present the appropriate data'' as to the 1928 estimates of supply, thereby concealing, she says, ''what is, if the Master is correct, one of the century's most astonishing paradoxes''. She adds:

> ''Yet that act [the Project Act] generated an 'allocation scheme' under which most of the water which the Boulder Canyon Project makes available for

---

[128] 70 Cong. Rec. 620 (1928).

[129] 70 Cong. Rec. 464-66 (1928).

use, over and above natural flow rights satisfied before Hoover Dam was built, goes to Arizona." (Cal. Op. Br. 239)

This statement is wholly unwarranted. Prior to the passage of the Project Act, California was admittedly diverting no more than 2,159,100 acre-feet per annum of Colorado River water (pp. 103-04, *supra*) and in many years exhausted the low flow of the river which at times was insufficient to irrigate the acreage then in cultivation. California desired to provide a water supply for the Los Angeles area and vicinity, but recognized that this could not be done in the absence of storage. She also realized that she could not enlarge the acreage then being irrigated from the Colorado River unless the flow was regulated.

Contrary to California's claim that most of the benefits under the Boulder Canyon Project Act accrue to Arizona, actually the bulk of these advantages have been conferred on California. The Project Act provided her with a previously unavailable water supply for the area now served by Metropolitan Water District and for Coachella Valley. Since construction of Hoover Dam she has been relieved of the annually recurring threat of floods in Imperial Valley and other areas; she has been provided with the All-American Canal which eliminated the international complications arising from the location of the old canal in Mexico; she has been provided with a supply of silt-free stored water in lieu of an undependable silt-laden natural flow; and she has been enabled to develop a great industrial economy from the use of billions of kilowatt hours of hydroelectric energy which has been made available to her at one of the lowest rates prevailing in the United States.

We can perceive no "paradox" in California's sponsorship and persistent pressure for passage of the Swing-

Johnson bills through four Congresses until the proposed legislation was finally enacted as the Project Act, which conferred upon her all these rich and lasting benefits.[133]

D. The Impossibility of a Reliable Determination of Water Supply

California states, directly contrary to the record, that "the experts were in close agreement as to the permanently dependable supply which will be available to the lower basin" (Cal. Op. Br. 245). She further states that the Master rejects these expert opinions and that he attempts to discredit the science of hydrology. She quotes him only in part as follows:

> "The science of hydrology is not capable of sustaining a prediction accurate enough to shed light on this question." (Rep. 103)

Neither California's assertion of harmony among the experts nor her characterization of the Master's holding is correct, as will be demonstrated immediately hereafter. To begin with, the actual holding of the Master as to the effectiveness of hydrology is:

> "The evidence in this case simply does not permit a prediction of future Lower Basin supply with that refined degree of accuracy necessary to show whether existing California uses can be satisfied from the percentage of future supply apportioned to California. On the contrary, the mass of evidence which has been presented shows only that the science of hydrology is not capable of sustaining a prediction accurate enough to shed light on this question." (Rep. 103)

---

[133] See S. Rep. No. 592, 70th Cong., 1st Sess. 8, 16-27 (1928).

The Master did not discredit the science of hydrology nor did he hold that it was of no utility in planning projects. He merely concluded that in the unique situation presented here the application of established hydrological techniques would not permit a prediction of future water supply sufficiently accurate to be of any utility in this case.

California relies upon what she terms "standard techniques understood by all hydrologists and used in planning all great projects" (Cal. Op. Br. 242), which are stated to be set out in detail in California's Proposed Findings, part V (Cal. Op. Br. 244 note 1). California asserts that by these techniques it is possible to determine future water supply and that this Court has done so from far less satisfactory hydrological data in *Nebraska* v. *Wyoming,* 325 U. S. 589 (1945), and *Wyoming* v. *Colorado,* 259 U. S. 419 (1922) (Cal. Op. Br. 242 and note 12).

Neither of these cases involved a situation like that presented here. Each one was an equitable apportionment case; neither one involved a statutory apportionment nor a "flexible formula" authorized by act of Congress for the allocation of varying supplies of water, as the Master found is established by the Project Act and the Secretary's water delivery contracts (Rep. 100-01). Nor was there involved in those cases an interbasin compact governing the delivery and release requirements of the upper reaches of the stream in favor of users of water in the lower. Furthermore, the water supply determinations in both of those cases were based upon then existing conditions and not upon conjecture as to hypothetical upstream depletions which might or might not occur at some unknown future date.

Acceptance of California's studies as to future water supply requires an assumption that the Secretary will accept and employ the criteria used in these studies or that the Court by its decree will direct him to do so, thereby

invading the province of Congress—the exclusive source of his authority. It also necessitates the assumption that suitable reservoir sites are available in the Upper Basin; that Congress will provide the effective storage capacity hypothesized by California's experts; that uses of water in the Upper Basin will result in a uniform depletion of the flow of the Colorado River of 6.5 million acre-feet each and every year; and that releases of water from the Upper Basin will not be less than 7.5 million acre-feet in any year, despite the flexibility accorded the Upper Basin under the delivery requirement of Article III(d) of the Compact.

Since there is a close interrelation between the inapplicability of the so-called "standard techniques", which California asserts are "used continuously by hydrologists" (Cal. Op. Br. 243-44), and California's claim that "the experts were in close agreement" (Cal. Op. Br. 245), we shall consider both of these together.

(1) California's Procedure (a)

> "Selection of a representative long-term period of stream flow including at least one complete climatological cycle of wet years and dry years, the dry period being the most severe and critical of record."[134]

There was a wide divergence of opinion among the expert witnesses as to whether the concept of climatological cycles had any value and, if cycles were to be used, which one should be selected.

California witness Leopold stated:

> "There is no such thing in hydrologic data as a clearly repeating cycle . . . . If there were cycles

[134] California's Proposed Finding 5A: 102, p. V-4.

one could use them for forecasting but since there are not cycles this is an impossibility."[135]

Arizona witness Erickson testified:

"Q. I would like to ask you this: whether on a river in which the annual flow varies, as it does on the Colorado River, as it has over the past 50 years, do you think it is possible to predict for the future, within, say half a million acre feet, what the average annual water supply is going to be over the next 50 years?

"A. No, sir; I don't believe so."[136]

California's witness Riter testified to the difficulties he and his colleagues had experienced in attempting to predict future run-off of the Colorado by the "cycle" method. Said he:

"I have been studying the Colorado River for a good many years. In 1929 I made some operational studies for Lake Mead. We thought we had the answer. Lake Mead was put into operation in 1935. In 1940 we had the horrible experience of a 10-year drought, 1931 to 1940. That gave us a new critical period to study; so we recalculated again in 1940 on the basis of a new critical period.

"In 1950 we studied the river again. At that time the 1931 to 1940 period was still controlling as a drought cycle. Now comes along 1958. We studied the river again in 1958, and we find that we now have a 27-year drought cycle, from 1930 to 1956; so that experiences like this keep a hydrologist very humble. *It makes him realize that he cannot predict.* He has to use all the information he can and then try to project himself into the future."[137]

---

[135] Tr. 21,474.

[136] Tr. 18,747.

[137] Tr. 21,338-39.

In selecting a cycle for use in making studies of the Colorado River there was complete lack of agreement among the expert witnesses as to what the proper cycle should be. California's Stetson "selected the cycle 1909 through 1956".[138] Riter "included the period 1914 through 1956, inclusive".[139] California's Leopold "would surely choose the 61-year record" if he "were to make a water supply analysis on the Colorado at Lee Ferry".[140] Witness Hill used "various periods".[141] Arizona witness Erickson stated, "You take a different period, you get a different answer."[142]

In view of the obvious differences in flows for different periods and the divergence of opinion as to what is "a representative long-term period of stream flow"—a disagreement which existed even among California's own witnesses—it is impossible to justify California's statement that

> "the experts agree on all hydrologic factors within a few percentage points." (Cal. Op. Br. 243)

(2) California's Procedure (b)

> "Ascertainment of the maximum active reservoir capacity, surface and underground, which may be expected to be available to regulate the long-term flow."[143]

Patently, any "finding of fact" as to the amount of effective storage which will be available in the Upper Basin

---

[138] Tr. 11,705.

[142] Tr. 18,698.

[143] California's Proposed Finding 5A: 102, p. V-4.

many years hence must necessarily rest upon sheer speculation and unproved hypothesis.[144]

That there is no reliable evidence as to the probable amount of future effective storage is demonstrated by the widely divergent assumptions made by the experts as to future Upper Basin effective storage:

> California witness Stetson—25,000,000 acre-feet to 52,000,000 acre-feet;[145]
> California witness Riter—31,000,000 acre-feet;[146]
> California witness Hill—21,000,000 acre-feet to 27,000,000 acre-feet.[147]
> Arizona witness Erickson—25,000,000 acre-feet; 35,000,000 acre-feet; 43,000,000 acre-feet and 45,000,000 acre-feet.[148]

Despite this wide variance in the testimony of the experts California assumes an Upper Basin effective storage equivalent to 25,000,000 acre-feet at Lee Ferry (Cal. Op. Br. 244 note 2).

The further unreliability of the California studies respecting reservoir capacities is demonstrated by the fact that such studies completely ignore (1) main stream reservoir capacity now existing in the Lower Basin, namely, that created by Davis and Parker Dams; (2) potential Lower

---

[144] The depletion which will result from all the structures existing, authorized and planned will approximate only 4,800,000 acre-feet per annum in the Upper Basin. S. REP. No. 128, 84th Cong., 1st Sess. 4 (1955). How much of this capacity may be then available through structures not yet planned and authorized cannot be the subject of proof at this time.

[147] Tr. 21,744, 21,755-59, 22,137.

[148] A 352-54 and A 359-61 (Tr. 18,097); A 366 (Tr. 18,097); A 355-57 (Tr. 18,097) and A 362-64 (Tr. 18,097).

Basin reservoirs, *e.g.*, those which would be provided by Bridge and Marble Dams; and (3) the fact that existing reservoir capacities will be reduced by future accumulations of silt. Despite the fact that California Procedure (b) requires the ascertainment of the capacities of underground as well as surface reservoirs, California's studies do not consider: (1) the existence or effectiveness of groundwater storage in the Upper Basin; and (2) the effect of main stream groundwater reservoirs on main stream water supply in the Lower Basin.

(3) California's Procedure (c)

"Estimation of the extent to which the water supply may be depleted by up-stream uses."[149]

It is impossible at this time to make a reliable estimate of future depletions in the Upper Basin since the rate and extent of development in the Upper Basin depend upon future physical, economic and political considerations, all of which are of an uncertain nature. Before any reliable estimate may be made it is necessary to ascertain and consider all related physical facts and in some fashion to predict future economic conditions as well as to prophesy feasibility determinations by future Secretaries of the Interior and what, if any, enabling legislation will be enacted by future Congresses. Before such an estimate could be arrived at, it would be necessary to obtain engineering and other expert studies and reports as to acreage, soil, elevation, topography, hydrology, crop requirements and a host of other related facts. Prophecies as to future economic conditions and future actions by government officials and Congresses certainly can form no basis for any reliable appraisal. Moreover, a determination of Upper Basin

[149] California's Proposed Finding 5A: 102, p. V-4.

depletions cannot be made without a resolution of the rights and delivery obligations of the Upper Basin states under the Colorado River Compact—a determination which cannot be made in their absence (see Rep. 145).

The California estimate of Upper Basin depletions is based upon three assumptions: (1) an assumed undepleted stream flow for an arbitrarily selected period; (2) an assumed Upper Basin delivery requirement at Lee Ferry; and (3) an arbitrarily assumed effective storage capacity. The resulting quantity which California labels as "upper basin depletion" is the amount of water which would be *available* for depletion by the Upper Basin if the foregoing assumptions were valid. This *contrived* Upper Basin depletion figure is wholly unrelated to the future physical, economic and political factors, which necessarily will govern the amount of *actual* Upper Basin depletion.

California asserts that "all storage capacity existing or authorized for construction in the upper basin at the time of trial would provide the equivalent of 25,000,000 acre-feet of storage capacity effective at Lee Ferry" (Cal. Op. Br. 244 note 2). This figure is arrived at by reference[150] to existing and authorized projects including those "authorized" by the Colorado River Storage Project Act.[151]

On the basis of this assumed storage capacity, California then arbitrarily makes the further assumption of an Upper Basin depletion of 6,500,000 acre-feet per annum. In so doing, she ignores the fact that the Report of the Senate Committee,[152] which studied the Colorado River

---

[150] C 2203, 2203A (Tr. 11,720). And see California's Proposed Finding of Fact 5C: 103(4), p. V-13.

[151] 70 Stat. 105 (1956), 43 U. S. C. §§620-620*o* (1958).

[152] S. Rep. No. 128, 84th Cong., 1st Sess. 4 (1955); see also H. R. Rep. No. 1087, 84th Cong., 1st Sess. 6 (1955).

Storage Project and potential reservoir construction in the Upper Basin, determined that future Upper Basin consumptive use will not exceed 4,800,000 acre-feet per annum (Rep. 112), even if all projects in all categories listed in the Storage Project Act were to be constructed.

It follows that unless additional works not within the contemplation of the Colorado River Storage Project Act are authorized and constructed to achieve California's assumed depletion of 6,500,000 acre-feet per annum, there will be 1,700,000 acre-feet of water descending to the Lower Basin which is not taken into account in California's studies.

Contrary to California's assertion that there was uniformity in the techniques employed and results achieved, the facts are that the various experts used different reservoir operation criteria, made different assumptions as to the delivery obligations, employed varying stream flow figures and arrived at the widely divergent estimates of 5.7, 6.2, 6.4, 6.5, 6.8, 7.2, 7.3, and 7.5 million acre-feet per annum of hypothetical Upper Basin depletion.[153]

(4) California's Procedure (d)

> "Calculation, through reservoir operation and routing studies, of the extent to which the available reservoir capacity (Item b), had it existed throughout the selected period of study (Item a), would have been capable of regulating the available flow during that period into an equal annual discharge, taking into account reservoir evaporation losses and upstream uses."[154]

Since, as we have seen, the requirements of procedures (a) and (b) cannot be met, it follows that procedure (d) has

---

[153] C 5572A for iden.

[154] California Proposed Finding 5A: 102, p. V-4.

no utility. Furthermore, before this procedure can be useful, the criteria employed in any reservoir operation or routing study must either be accepted by the Secretary or their use be imposed upon him by the Court.

The California objective of equal quantities of water available for discharge and use each and every year is neither desirable of accomplishment nor possible of achievement. Obviously, varying economic, political, climatic and other conditions will result in varying water needs and any attempt to cast water uses into an inflexible mold is unrealistic and impracticable.[155]

(5) California's Procedure (e)

> "Calculation of the accruals and losses between the points of discharge from the reservoir and the points of diversion to arrive at a net quantity available for beneficial consumptive use on a permanent basis."[156]

Here again there is great divergence of opinion among the experts. A composite tabulation of the most pessimistic expert opinion respecting gains and losses below Lee Ferry, when compared with a tabulation of the most optimistic opinion on this subject, produces results varying from a net loss of 1,325,000 acre-feet per annum to a net gain of 165,000 acre-feet per annum or a total difference of 1,490,000 acre-feet per annum. The tabulation follows:

---

[155] C 271 (Tr. 6127) and C 355 (Tr. 8726) clearly demonstrate that there is no uniformity of annual use even by established and stable projects although large quantities of surplus water are available.

[156] California Proposed Finding 5A: 102, p. V-5.

E. The Alleged Concurrence of Stetson and Erickson as to Future Water Supply

As support for the claim that future main stream supply in the Lower Basin is readily determinable, California relies heavily upon a study made by California's witness Stetson and one of the several analyses of the Stetson study made by Arizona's expert Erickson. The Stetson study estimated that future Lower Basin main stream supply will be 6,175,000 acre-feet per annum.[158] The Erickson analysis referred to by California put the figure at 6,100,000 acre-feet per annum.[159] On this basis, California asserts that the "experts were in close agreement as to the permanent dependable supply which will be available to the lower basin" (Cal. Op. Br. 245; see Cal. Op. Br. 245 notes 3 and 4 and table accompanying plates 7 and 8 of Cal. Op. Br.).

The Master, however, was not deceived by this seeming close agreement between the two calculations. He says:

> "The apparent concurrence of the Arizona and California witnesses is deceptive, however. Far from supporting California's position, these studies demonstrate that predictions of future supply are necessarily based on so many significant but unknowable

[159] Tr. 18,903-15.

factors that they cannot be accurate enough to be helpful in this case." (Rep. 110)

Actually, Arizona did not present a study of future water supply, as such, since she contended it was irrelevant. Nor did Erickson make an independent study of future water supply. At the request of Arizona's counsel, he made an analysis of Stetson's study by taking Stetson's basic figures as a starting point and applying to them only one of several differing interpretations of the Upper Basin's obligation to release water to the Lower Basin under the Compact.[160] In this way he was able to parallel the Stetson study and to demonstrate the unreliability of Stetson's conclusions.

On cross-examination by California counsel in response to hypothetical questions based on assumptions which Erickson never accepted as sound and which he indeed questioned,[161] Erickson roughly calculated other and widely variant water supply figures.[162] However, all that this cross-examination demonstrated, as the Master remarked at the time and as California's counsel agreed, was "that, on these other assumptions, you will get a reduced net useable supply for the Lower Basin by a substantial amount."[163]

---

[160] The Compact interpretation was supplied Erickson by counsel. Contrary to California's assertion (Cal. Op. Br. 245-46 note 4), this interpretation of the Compact was not "later disclaimed" by Arizona's counsel. It never was espoused by Arizona as other than one *possible* interpretation of the Compact, useful only to demonstrate how the obligation of the Upper Basin varied with a varying interpretation of the Compact, and how this in turn changed the estimates of supply available to the Lower Basin (Tr. 18,009-19).

[161] Tr. 18,009-13, 18,597-98.

[162] Tr. 18,801-19, 18,913-14.

[163] Tr. 18,819-20.

The Master's Report epitomizes Erickson's testimony:

> "The very great significance of each of these assumptions to the prediction of future supply is demonstrated by the Erickson study itself. The study on which California relies, which shows the future Lower Basin mainstream supply to be 6,100,000 acre-feet per annum, is only one of a series prepared by Mr. Erickson. His other studies varied certain of the assumptions, such as Upper Basin storage and the interpretation of Article III(c) of the Colorado River Compact. One of these other studies showed future supply to be 6,500,000 acre-feet per annum; another showed it to be 7,400,000 acre-feet per annum. And none of the Erickson studies assumed an Upper Basin depletion at Lee Ferry of less than 6,200,000 acre-feet per annum despite a maximum depletion to date of only 2,200,000 acre-feet and the Senate Committee prediction of less than 4,800,000 acre-feet." (Rep. 112-13) (footnotes omitted)

California's Opening Brief sets forth in an appendix a table purporting to show by a comparison of the Erickson and Stetson testimony that they were in substantial agreement regarding the amounts of gains and losses to the Colorado River from Lee Ferry to the International Boundary (Cal. Op. Br. A46). However, California neglects to advise the Court of the fact that the figures tabulated in the Erickson column are taken from his answers to hypothetical questions put to him on cross-examination by California counsel and the additional fact that, when not circumscribed by these California hypotheses, Erickson on direct examination made estimates regarding these gains and losses which were substantially different from Stetson's forecasts.

There are set forth immediately below in tabular form the gains and losses as testified to by Stetson and by Erickson on direct examination and on cross-examination on the basis of California's hypotheses:

Line	Losses	Erickson Direct[164]	Erickson Cross based on Cal. Hypotheses[165]	Stetson[166]
1	Evaporation from Lake Mead	450,000	700,000	650,000
2	Uncontrollable spills at Hoover Dam	0	500,000	300,000
3	Evaporation for reservoirs, Hoover Dam to Mexican boundary	300,000	300,000	300,000
4	Channel losses, net of channel salvage, Hoover Dam to Mexican boundary	300,000	300,000	600,000[167]
5	Regulating waste (excess arrivals in limitrophe section)	75,000	75,000	200,000
6	Total losses	1,125,000	1,875,000	2,050,000
	Gains			
7	Net gain—Lee Ferry to Lake Mead	950,000	950,000	950,000
8	Bill Williams and miscellaneous inflow below Hoover Dam	75,000	75,000	75,000
9	Total gains	1,025,000	1,025,000	1,025,000
10	Net losses over gains between Lee Ferry and international boundary	100,000	850,000	1,025,000
11	Difference between Erickson and Stetson: 925,000 acre-feet per year, *i.e.*, Stetson's estimated net losses are more than ten times greater than those of Erickson.			

Arizona does not vouch for the validity or reliability of any of the foregoing estimates. We agree with the Master's conclusion that prophecies as to future water supply are irrelevant to the issues and that in the circumstances of this case it is not possible to arrive at a determination of future water supply which is of sufficient

---

[164] A 366 (Tr. 18,097).

[165] Tr. 18,914-15.

[167] Corrected to this figure at Tr. 18,657, 18,719, 21,836.

reliability to be of any utility (Rep. 102-13). The above comparative table is intended solely to demonstrate that the Erickson and Stetson estimates of gains and losses to the stream below Lee Ferry are not in close agreement, as claimed by California, but differ by 925,000 acre-feet per year.

F. The Colorado River Storage Project and the Bureau of Reclamation 1960 Power Memorandum

Attempting to buttress her prophecy of extensive future Upper Basin uses, California asserts that "project plans are in being for enough projects in the upper basin to use far more than its maximum apportionment" (Cal. Op. Br. 252) (footnote omitted). But California herself has criticized the report,[168] which is relied upon for this exaggeration, as "essentially a catalogue of potential projects" and as lacking in "factors and data which govern the engineering and financial feasibility of the proposed projects".[169]

California refers specifically to the Colorado River Storage Project Act of 1956.[170] She states:

> "Section 2 of that act . . . provides that the Secretary shall give a number of named participating reclamation projects 'priority to completion,' such projects being the first beneficiaries of the water and power made available by the reservoirs authorized by section 1." (Cal. Op. Br. 252)

But that section does not so provide, as is clear from the full text:

---

[168] H. R. Doc. No. 419, 80th Cong., 1st Sess. (1947).

[169] *Id.* at *51-52.*

[170] 70 Stat. 105, 43 U. S. C. §§620-620*o* (1958).

> "In carrying out further investigations of projects under the Federal reclamation laws in the Upper Colorado River Basin, the Secretary shall give priority to completion of *planning reports* on . . . [twenty-five named] participating projects."[171]

Moreover, it is significant that Congress enacted the Colorado River Storage Project Act on the authoritative estimate of the Senate Committee which studied the project "that future Upper Basin consumptive use will not exceed 4,800,000 acre-feet per annum . . . even if the extensive storage capacity envisaged but not as yet authorized for the Upper Basin were eventually constructed" (Rep. 112) (footnote omitted). The Senate Committee Report added:

> "'This would leave an unused apportionment of 2.7 million acre-feet of the 7.5 million acre-feet apportioned to the Upper Basin to meet any contingencies arising out of litigation over varying interpretations of the [Colorado River] compact. *In the circumstances, the continuity of the water supply for the Lower Basin would be assured.*"[172]

California's assertion that the Senate in 1961 enacted a bill "after the Master filed his Report, which will increase upper basin depletions by about 360,000 acre-feet" per annum (Cal. Op. Br. 253) (footnote omitted) is misleading. The reference is to the San Juan-Chama-Navajo Project—one of those approved by the Colorado River Storage Project Act of 1956—and the amount of its depletion is

---

[171] 70 Stat. 106 (1956), 43 U. S. C. §620a (1958).

[172] S. REP. No. 128, 84 Cong., 1st Sess. 4 (1955). See also H. R. REP. No. 1087, 84 Cong., 1st Sess. 5 (1955).

accounted for and included in the over-all depletion of 4.8 million acre-feet determined by the Senate Committee.[173]

There is substantial agreement that these projects—to the extent that they may be found to be feasible—will not be completed until 75 to 100 years hence and that even then maximum depletion in the Upper Basin will not exceed 4,800,000 acre-feet per annum (Rep. 111-12).

Next, California refers to a 1960 Bureau of Reclamation memorandum, evidently completed after the hearings and while the case was *sub judice* before the Special Master.[174] This document is represented to be "a preview of what the Master anticipates, a determination of the total amount of water to be released by the Secretary from Lake Mead" and as "the latest and most authoritative statement of how the Bureau of Reclamation intends to operate the river" (Cal. Op. Br. 259-60). The document is no such thing.

The true character of the memorandum is shown by its introduction which states:

> "*This memorandum has been prepared to determine and support an average power rate for the Colorado River Storage Project and Participating Projects.* Project costs, generation and sales, Bureau of Reclamation policy and other factors affecting power rates, when approved will be incorporated and summarized in a revision of the Financial and Economic Analysis Report of the Colorado River Storage Project and Participating Projects. *Only factors influencing and relating to costs, cost analysis, power*

---

[173] *Hearings on S. 500 Before the Subcommittee on Irrigation and Reclamation of the Senate Committee on Interior and Insular Affairs,* 84th Cong., 1st Sess. 58 (1955).

[174] Bureau of Reclamation, Regional Office, Region 4, U. S. Dept. of the Interior, Financial and Power Rate Analysis, Colorado River Storage Project and Participating Projects (September 1960).

revenues and repayment are covered in this memorandum."[175]

The fact that the memorandum is related solely to power production is demonstrated by the foregoing quotation and also by the following statement made in the body of the memorandum:

> "Operation studies to determine the hydroelectric energy and capacity potential of the power facilities were based on the water supply previously discussed. Two types of operation studies were made, one to determine the rate of filling of project reservoirs and the energy generation resulting from required releases during the filling period and one to determine the expected reservoir release and energy generation subsequent to the initial filling process."[176]

In short, the memorandum is an analysis of the power potential of the initial units of the Colorado River Storage Project and Lake Mead. It is not and does not purport to be a study of an available water supply for irrigation, domestic or municipal use. As the Court will appreciate, there is a vast difference between the procedures followed in the operation and management of a dam and reservoir solely for power production and those which are applied to supply water for irrigation and domestic use.

California relies on this memorandum, prepared solely to determine potential power production, and uses its computations as the basis of her forecast that by the year 1975 the Metropolitan Water District will be short of water by some 674,000 acre-feet (Cal. Op. Br. 260; and see Table 6).

---

[175] *Id.* at 1.

[176] *Id.* at 6.

This claimed shortage entirely ignores the fact that it is accomplished by the withholding in Glen Canyon and Lake Mead reservoirs for power purposes of large quantities of water which will at no time during the period ending in 1975 be less than 40,000,000 acre-feet. Likewise, California's claimed shortage in the year 2006, when it is prophesied that there will be no water at all for Metropolitan, ignores the fact that the storage withheld in these reservoirs for power purposes will at no time during the period ending in 2006 be less than 30,000,000 acre-feet. Also overlooked by California is the fact that these power studies show that water in addition to the quantities specified above will be withheld for power purposes at all times in Blue Mesa, Morrow Point, Crystal, Flaming Gorge and Navajo reservoirs in the Upper Basin.

California's calculations, employing the regional power memorandum as support for her predictions of water shortages, also assume without justification that the Upper Basin reservoirs will withhold for power purposes water needed for Lower Basin domestic and agricultural uses in direct violation of Article III(e) of the Compact which provides:

> "The States of the Upper Division shall not withhold water, and the States of the Lower Basin shall not require the delivery of water which cannot reasonably be applied to domestic and agricultural uses."

Obviously, claimed shortages which are attributable to a regimen of the stream designed to furnish power rather than to supply water are without validity, since they assume the violation of those provisions of the Compact and Project Act which expressly subordinate uses for power purposes to the use and consumption of Colorado River water for

irrigation and domestic purposes (Compact Article IV(b), Ariz. Op. Br. Appendix A, p. 5a; Project Act §6, Ariz. Op. Br. Appendix B, p. 18a).

G. California's Assumption that Science Will Stand Still

California excludes from her consideration altogether any progress whatever over the next century in the science of water development, conservation and management. Her miserific vision of future water supply assumes that the science of hydrology will stand completely still—despite the fact that even now unprecedented achievements in that field have progressed far beyond nascency. Indeed, the record in this very case discloses that extensive studies and investigations are progressing in fields such as:

1. Water shed management to increase runoff.[177]
2. Improvement of irrigation practices.[178]
3. Weather modification.[179]
4. Demineralization of saline water.[180]
5. Channelization procedures.[181]
6. Control of evaporation from free water surface through the use of monomolecular films or other methods.[182]
7. Control of phreatophytic vegetation.[183]

---

[177] Tr. 2047, 2096-2104, 2786, 10,412-13.

[178] Tr. 18,412.

[179] Tr. 2887-89.

[180] Tr. 2885-86.

[181] Tr. 1433, 1435, 12,200-01, 12,213-14, 18,092, 18,896-97, 21,131-32; A 366 (Tr. 18,097).

[182] Tr. 18,410-11, 18,473-75, 18,478.

[183] Tr. 1446-48, 2784-85, 2877-78, 2908-10.

It is impossible to predict what progress will be made in these fields during the next one hundred years, but significant advances in any of them undoubtedly will result in substantial increases in the water supply available for use in the Lower Basin.

H. California's Unfounded Claim of Dire Calamity

California's entire water supply argument is a carefully contrived claim of dire calamity and great disaster to her existing development and economy. Her repeatedly claimed requirements of 5,378,000 acre-feet are greatly inflated. While she speaks in terms of "existing needs" and "present development" and implies that ruin is just around the corner if the Special Master's Recommended Decree is adopted, the truth is that the "existing needs" and "present requirements" actually include domestic and industrial uses for a population of more than 13,000,000 within the Metropolitan Water District, or an increase of approximately 80 per cent over the present population of 7,329,012,[184] as well as more than 900,000 acre-feet of water annually for the irrigation of more than 175,000 acres of new land which is not now and never has been in cultivation.[185]

---

[184] Metropolitan Water District of Southern California, 22 ANN. REP. 5 (1960); Tr. 9830, Tr. 9832-33. Local water supply of 1,220,000 (Tr. 9830) acre-feet per annum plus Metropolitan Contract entitlement of 1,212,000 acre-feet per annum aggregate 2,432,000 acre-feet, which at the rate of 162 gallons per capita per day (Tr. 9832-33) will supply the needs of a population of more than 13,000,000.

[185]

Area	New Acreage	Rate of Use ac-ft/ac/yr	New Use ac-ft/yr
Palo Verde Irr. Dist.....	31,000	4.0	124,000
Yuma Proj. Res. Div.....	7,400	3.5	25,900
All-American Canal Project	137,000	5.5	753,500
Total	175,400	—	903,400

In addition, she includes in her "present uses" approximately 1,000,000 acre-feet of water which Imperial is wasting by runoff each year into the Salton Sea.

The Special Master recognized that if the existing situation of abundant water supply in the Lower Basin is changed and water becomes scarce, present wasteful practices must be replaced by more efficient methods. The notable example of waste to which the Master refers is the "very large unused runoff each year into the Salton Sea" (Rep. 103 note 25). According to the evidence the measured inflow into the Salton Sea from the Imperial Irrigation District alone averaged approximately 1,225,000 acre-feet per annum for the last five years (1951-1955) covered

---

All figures are derived from Cal. Op. Br. Table 1. Arizona, of course, does not concede the accuracy of these figures.

California's claim that she must have 5.5 acre-feet per acre for the All-American Canal Projects, even after making use of reasonable conservation practices, is wholly unrealistic and grossly inflated. This is true because:

1. No recognition is given to effective precipitation of 0.15 feet per year (Tr. 18,387-95).

2. The "requirements" presuppose a "salt content" of 1.25 tons per acre-foot (t.a.f.) (C 283, Tr. 8204). The average for the 16-year period ending in March, 1958 was only 1.02 t.a.f. (A 422, Tr. 19,571), and in the future will not exceed 1.09 t.a.f. (A 372, Tr. 18,139).

3. There is an assumed leaching requirement of 22% founded on 1.25 t.a.f., although based upon past, present or future conditions, it is 10% or less (Tr. 19,413-27, 19,504-05).

4. It is physically impossible to pass through the average soils of Imperial Valley more than 9% of the water applied (Tr. 19,420-24; A 436, Tr. 22,026; *Drainage Investigation in Imperial Valley, California, 1941-51:* Soil Conservation Service Technical Publication 120, September 1959, pp. 29, 31, 48, 49).

5. Seepage losses from the distribution system may be reduced by 90% by lining portions of the system (Tr. 18,157-61).

by the evidence.[186] No claim of leaching requirements nor any other theory can obscure the fact that the Salton Sea is the product of inefficient water uses and gross waste. It is not realistic to assume that such a shameful waste of a precious commodity will continue to be tolerated if and when it results in shortages which can be eliminated by the conservation of water to satisfy California's actual needs.

If California continues to permit such wasteful practices in times of scarce supply, any "dire calamity" which may result cannot properly be assigned to the disposition of this case recommended by the Special Master. Responsibility for such consequences must be attributed to those in California who sanction an internal division of her share

---

6. Approximately 75% of the All-American Canal losses below Pilot Knob could be recovered by pumping (Tr. 18,229-37).

7. Unnecessary seepage loss and waste for system regulation in excess of that occurring in the period 1955-1957 is included (A 426, Tr. 19,594; C 275, Tr. 8210).

8. An amazing 100,000 acre-feet per year to satisfy domestic uses of a static population of approximately 63,000 persons is included (A 426 (Tr. 19,594); California Proposed Finding 4C: 106).

The record does not contain a determination by a disinterested agency of what the needs of these projects will be if reasonable water conservation practices are employed. Hence, for purposes of reply, California's figure of 5.5 acre-feet per acre is necessarily used. The large amount of water involved in even fractional reductions of this use factor becomes apparent when it is recalled that the claim is for water for 661,000 acres of land.

The record discloses that much of the new land intended by California for subjugation and irrigated farming is of questionable economic value—some of it is approximately 90-95% sand. Experiments to determine its adaptability to farming demonstrated that in one instance 70 acre-feet of water per acre per annum were needed and that the average used was 40 acre-feet. The testimony led the Master to remark: "You mean [they] used water and mixed a little sand with it" (Tr. 18,737-38).

[186] C 242 (Tr. 7991), C 243 (Tr. 7994), A 408 (Tr. 19,409).

of Colorado River water which spells the "doomsday for Metropolitan" (Cal. Op. Br. 261), while permitting approximately one million acre-feet of water to be wasted annually into the Salton Sea.

California assumes that, because Arizona did not submit proposed findings on this subject, Arizona concedes the validity of the California arguments that the leaching requirements of Imperial Irrigation District necessitate this waste in order to prevent accumulation of salts and that farm efficiency in Imperial is among the highest. She professes surprise at the Master's reference (Rep. 103 note 25) to the matter (Cal. Op. Br. 276).

Arizona did not propose findings of fact regarding California's wasteful water practices because, as she expressly stated in her Answering Brief before the Master (pp. 73-81), such matters are not material to any issue in this case. Arizona presented evidence of California's wasteful practices only because California insisted, as she continues to insist, that her alleged water requirements, which include large quantities of waste, justify her proposed decree. Only California's persistence in maintaining that her claimed requirements demonstrate the unsoundness of the Master's conclusions caused him to point out in his Report that these alleged requirements are inflated by the inclusion of waste and to reject California's attempted justification of this waste:

> "It is impossible to determine exactly how much more efficiently water will be used if the present condition of abundance turns into one of shortage, but it is clear that savings will be such that California's existing uses could be satisfied *by sustantially less* water than is presently diverted." (Rep. 103 note 25)

The prediction of doom for Metropolitan is also predicated on the assumption that the Colorado River is and

will continue to be the only source of water supply for the District. This is not the fact.

The annual reports of Metropolitan show that in the fiscal year 1960 almost three-fourths of the water used in the Metropolitan area came from sources other than the Colorado River.[187] The California evidence establishes that on a long-time average basis the local water resources and the Owens Valley Aqueduct are capable of an annual yield of 1,220,000 acre-feet.[188] This quantity is sufficient to supply a population of over 6,700,000, based upon Metropolitan's evidence that per capita use within the District in 1970 will be 162 gallons per day.[189]

In addition, on November 4, 1960, Metropolitan executed a contract with the State of California[190] providing for delivery of 1,500,000 acre-feet of water per annum from northern California sources, a part of a much larger quantity planned for delivery to Metropolitan under the California Water Plan.[191] Under the terms of this contract the first delivery of water (110,400 acre-feet) from the Feather River Development and Diversion Project will occur in 1972; thereafter annual deliveries will be gradually increased until 1991 when Metropolitan will receive 1,500,000 acre-feet annually.[192]

Thus in 1991 there will be 2,720,000 (1,220,000 plus 1,500,000) acre-feet available to Metropolitan from sources

other than the Colorado River, which is sufficient to serve 15,000,000 persons on the basis of 162 gallons per capita per day.

In the foregoing discussion no consideration is given to agricultural use of water in the Metropolitan area. 380,941 acres were irrigated in 1955.[193] It is conceded by Metropolitan that acreage now devoted to agricultural uses will progressively go out of cultivation and will be used for urban development, with the result that water now used for agriculture will be available for municipal purposes.[194]

California asserts that Metropolitan diversions have increased substantially since the trial to "nearly" 900,000 acre-feet in 1960 (Cal. Op. Br. A36). It is impossible to ascertain how much of this increase is for bona fide municipal use. California witnesses admitted at the trial that, in addition to agricultural uses in the Metropolitan area, substantial amounts of Colorado River water diverted by Metropolitan were being released for percolation to the underground to replenish groundwater supplies or act as a barrier to further infiltration of salt.[195]

In our foregoing analysis of California's claims of "dire calamity" and "doomsday" for Metropolitan, no consideration has been given to desalting of ocean and other saline water as a source of supply.

Congress has enacted a Saline Water Act[196] for the specific purpose of conserving and increasing the water resources of the nation and specifically to "provide for the development of practicable low-cost means of producing from sea water, or from other saline waters, water of a

quality suitable for agriculture, industrial, municipal, and other beneficial consumptive uses".[197] The Assistant Secretary of the Interior in charge of this program reported to Congress in 1959 as follows:

> "Progress in the field of lower cost conversion or desalting of saline waters has been such that we can state that the prospects are excellent."[198]

Desalinization plants are presently in operation not only in the United States but throughout the world, either on an experimental basis or actually supplying potable water to areas in which fresh water is in short supply.

This source of an unlimited supply of water is physically available to California but is geographically inaccessible to Arizona.

It is abundantly clear from the foregoing that California's water supply future, contrary to her doleful cries, is bright indeed.

I. Arizona's Critical Needs

As we have seen, the California protestation that unless she receives 5,378,000 acre-feet of Colorado River water each and every year she will be visited with disaster is without substance. Equally without foundation are the California insinuations (Cal. Op. Br. 276-77, 292) that Arizona's

---

[197] 66 Stat. 328 (1952), 42 U. S. C. §1951 (1958).

[198] *Senate Select Committee on National Water Resources, Saline Water Conversion, Committee Print No. 26*, 86th Cong., 1st Sess. V (1959). In the same communication the Assistant Secretary indicated that "if the people of California fail to authorize the proposed $1.75 billion bond issue to inaugurate the $12 billion California water plan, which is a distinct possibility, widespread use of converted sea water can be expected in Southern California in the immediate future." *Id.* at VII.

needs for additional Colorado River water are neither immediate nor necessary for the preservation of Arizona's present development and going economy. The truth is that the whole purpose and justification of the proposed Central Arizona Project is to rescue and preserve an existing Arizona development and a present economy which is now and has been for some time faced with extinction. Already thousands of once fertile and productive acres in Central Arizona have been returned to the desert due to the failing water resources of that area and ultimately between 375,000 and 425,000 acres of agricultural lands in central Arizona must go out of cultivation if the local water supply is not supplemented by Colorado River water (see Ariz. Op. Br. 21-23, 190-92). Use of Colorado River water in central Arizona through the facilities of the proposed Central Arizona Project will provide an irrigation supply solely for lands with an agricultural history and no new lands not previously cultivated are to be placed in production through the use of Colorado River water. As stated in the Report and Findings on the Central Arizona Project filed with the Secretary of the Interior by the Bureau of Reclamation:

> "It has been shown previously that the central Arizona project is essentially *a rescue project* designed to eliminate the threat of a serious disruption of the area's economy. This threat is the result of a serious overdraft upon the groundwater supply and failure to drain harmful salts from the area. It has been shown also that the whole of the potential supply, including Colorado River water, will be adequate only for those lands presently irrigated and those in the area irrigated in the past but now idle."[199]

California makes an impassioned plea for projects which were rushed to completion in the face of known Arizona

[199] A 71, p. 118 (Tr. 310).

shortages and for new acreages which have never been in cultivation. At the same time California brushes aside the conceded actual shortages in the central Arizona area with the assertion that under her proposed decree "Arizona will receive only 80,000 acre-feet per annum less than the full ultimate requirements of her existing main stream projects" (Cal. Op. Br. 22). However, California's testimony showed that in the Gila Basin in Arizona there was 3,093,141 acre-feet of agricultural consumptive use in 1953[200] and she concedes that the long-term supply available to meet this use is only 1,715,000 acre-feet per annum. She thus recognizes an ultimate annual shortage of 1,378,141 acre-feet (Cal. Op. Br. 22).[201]

J. Metropolitan's Alleged Equitable Claims

California also argues that the Metropolitan Water District was required to and did underwrite approximately one-third of the cost of the Government's investment in Hoover Dam as a consideration for getting its water delivery contract; that in pursuance of this requirement Metropolitan has paid large sums to the United States and that in reliance on her water delivery contract and interpretations of the Compact and Project Act, which California claims were substantially the same interpretations as were "then" asserted by Arizona, additional large sums have been expended on projects for the utilization of Colorado River water. California concludes that in view of these circumstances the allocation of water proposed by the Special Master, and which California insists would destroy the water rights of the Metropolitan Water District, is inequita-

---

[200] Tr. 10,638; C 1514A sheet 3 (Tr. 10,638).

[201] According to Arizona's testimony the shortage is materially higher. Tr. 19,198, A 397 (Tr. 18,494).

ble and violative of the principles of "fair play" (Cal. Op. Br. 266-71).

Metropolitan was not required to, nor did it, "underwrite" any portion of the costs of Hoover Dam. Metropolitan contracted to pay at a very favorable rate for approximately 36 per cent of the power output of Hoover Dam only after it had unsuccessfully attempted to obtain 50% of such power.[202]

It is recognized that the Boulder Canyon Project Adjustment Act [203] worked some price changes. However, the bargain which Metropolitan received from her share of this eagerly sought after power is illustrated by the facts disclosed in Metropolitan's Annual Report for its Fiscal Year 1960, to which California refers in her Opening Brief (Cal. Op. Br. 270 note 1). The Report (p. 24) shows that Metropolitan paid 1.8 mills per kilowatt hour for 1,239,926,326 kilowatt hours of energy generated at Hoover Dam and that 264,323,912 kilowatt hours of energy generated at Parker Dam cost Metropolitan 1.373 mills per kilowatt hour. The Report also shows that Metropolitan purchased from other sources 49,299,179 kilowatt hours of

---

[202] When the Secretary of the Interior, on September 10, 1929 issued invitations for applications to purchase "Boulder" power, 27 applications were submitted: the three principal applicants were the City of Los Angeles, the Southern California Edison Company and the Metropolitan Water District. Each of the first two asked for the entire output of Hoover Dam which it was then assumed would be 3,600,000,000 kilowatt hours. The Metropolitan Water District asked for approximately one-half that amount and the State of Nevada asked for one-third of it. The total of the applications was for well over three times the amount of power which it was then considered would be available. Negotiations to resolve the problem of allocating power among the conflicting applications resulted in Metropolitan being awarded approximately 36% of the firm power output with first call upon all unused firm and secondary power developed at Hoover Dam up to the Metropolitan requirement for pumping into and in the Aqueduct. WILBUR & ELY, THE HOOVER DAM CONTRACTS 17-24 (1933).

[203] 54 Stat. 774 (1940), 43 U. S. C. §§618-618p (1958).

steam-generated, off-peak energy at a cost of 6.016 mills per kilowatt hour.

Equally without foundation is the California assertion that Metropolitan expended large sums in reliance upon Compact and Project Act interpretations which were substantially in agreement with the Arizona construction of those instruments (Cal. Op. Br. 270). Although California does not in this portion of her brief identify the interpretations referred to, it is assumed that they are the same so often stated and referred to in California's Opening Brief: namely, that the water dealt with in the Compact and the Project Act is system rather than main stream water and that the 2,800,000 acre-feet per annum for Arizona is not main stream water only but consists of main stream and tributary water. California was at all times well aware that the Project Act and Limitation Act dealt only with main stream water in Lake Mead. Senator Hiram Johnson had no doubt that the water supply with which Congress was dealing in §4(a) of the Project Act was main stream water nor did any other Senator (see pp. 62-67, *supra*; Ariz. Op. Br. 61-67).

In 1930, Ralph L. Griswell, then Colorado River Agent, Department of Water and Power, Los Angeles, California (formerly President, Los Angeles City Council) stated:

> "Whether Arizona approves the Colorado River Compact or whether she does not approve it, *under the terms of the Boulder Canyon Project Act she will receive 2,800,000 acre feet and one-half of the unapportioned water from the main stream of the Colorado River and all the waters of her tributary streams.* . . . This leaves only one point in controversy, the title to the 1,000,000 acre feet of water set up in paragraph B of Article III."[204]

---

[204] Griswell, *Colorado River Development and Related Problems*, 148 ANNALS OF THE AMERICAN ACADEMY OF POLITICAL AND SOCIAL SCIENCE 1, 18-19 (1930).

Colonel William J. Donovan's report of the conferences held in February 1930, in an effort to work out a tri-state compact between Arizona, California and Nevada regarding a division of Lower Basin water discloses clearly that Arizona then contended for 2,800,000 acre-feet per annum of main stream water plus half of surplus, without any diminution by reason of her tributary uses and that California distinctly so understood. Arizona's position, as stated in these conferences, was consistent with that asserted by her in earlier conferences with California in March, 1929.[205]

In this connection, California makes no mention of the 1939 and 1941 bills introduced into the Arizona legislature to which we have previously referred (pp. 79-80, *supra*), in which a firm claim was asserted to 2,800,000 acre-feet per annum of main stream water on behalf of Arizona.

A clear recognition by the Secretary of the Interior that his water delivery contracts dealt with main stream water is shown by his account of developments subsequent to enactment of the Project Act:

> "Fourth, the Department has promulgated regulations designed to assure a water supply to Arizona. These regulations are included as an appendix in this volume. They outline the form of a Hoover Dam water-delivery contract which the United States will enter into with Arizona upon certain conditions. Briefly, the contract calls for the delivery of 2,800,000 acre-feet annually, in return for which Arizona undertakes to make no interference with the diversions by other Government contractors. This quantity of water is adequate for all of the Arizona projects below Hoover Dam, and is without prejudice to

[205] 72 Cong. Rec. 11,770-72, 11,778-81 (1930).

> the power of the parties to contract in the future for delivery of additional water required . . . *Arizona is thus offered an assurance of 2,800,000 acre-feet of main-stream water,* and given an opportunity to look to the United States rather than to an agreement with the other States for a delivery of that quantity of water, in return for an agreement not to interfere with diversions by her sister States."[206]

Certainly, California could not very well have misunderstood Senator Hayden's assertion of Arizona's position in 1949 made in response to Senator Downey of California:

> "Senator Downey. Mr. Chairman, in view of that very bitter statement that I think is totally uncalled for and that I very much resent, on which specific act does the Senator base that statement? What specific act?
>
> "Senator Hayden. The assertion, for example, that the State of California could count in the waters of the Gila River as a part of the lower basin waters to which they might lay claim. That is perfectly idiotic. There is not a thing like it in the record. It never was in the mind of Senator Hiram Johnson. It never was in the mind of Sam Shortridge. It never was in the mind of any Senator that any such cockeyed idea could ever be advanced, and yet it has since been seriously advanced by California over and over again."[207]

California's efforts to embrace the doctrine of "fair play" come with peculiar ill grace from a sovereign state which, having gained vast benefits by reason of her "unconditional and irrevocable" agreement made by solemn act of

---

her legislature, resorts to every device which ingenious minds can conjure to evade the bargain which she made.

V

California's suggested modifications of the Recommended Decree should be rejected.[208]

A. The Suggestion that Injunctive Relief Is Not Appropriate

California objects (Cal. Op. Br. 284-87) to Article II of the Recommended Decree (Rep. 346-53), which enjoins the United States from operating regulatory structures and from releasing water under its control except in accordance with the priorities stated and the interstate allocations set forth in the Decree. She also objects to Article III of the Recommended Decree (Rep. 353-54), which enjoins the states and public agencies which are parties to the suit from interfering with the United States in its management of structures and in its releases and deliveries of water in conformity with Article II of the Decree and also enjoins the states and agencies from diverting or consuming or permitting the diversion or consumption of water in violation of the proposed Decree.[209]

California first argues that this suit is declaratory in nature and that the joinder of equitable relief with declar-

---

[208] This point is directed to a refutation of Part Six of California's Opening Brief, pages 279-91 thereof.

[209] Arizona excepts (A Exc. 35) only to those provisions of Article III of the Recommended Decree which enjoin her from "permitting the interference" with the performance by the United States of Article II. Arizona's exception is grounded on the fact that those provisions apparently would transfer to her duties which the Secretary is required to perform under the Project Act and his water delivery contracts and on the further fact that the authority of Arizona to prevent the interference, diversions and uses referred to is questionable.

atory relief is inappropriate. Even if California were correct (and she is not) in contending that the present action is solely declaratory in nature, she would be wrong in her conclusion. The federal courts have expressly held that it is proper and appropriate to combine injunctive with declaratory relief. *United States Galvanizing & Plating Equipment Corp.* v. *Hanson-Van Winkle-Munning Co.*, 104 F. 2d 856, 861 (4th Cir. 1939); *National Hairdressers' & Cosmetologists' Ass'n, Inc.* v. *Philad Co.*, 41 F. Supp. 701 (D. Del. 1941), *aff'd*, 129 F. 2d 1020 (3d Cir. 1942); see Declaratory Judgment Act, 28 U. S. C. §§2201-02 (1958); 6 MOORE'S FEDERAL PRACTICE 3047 (2d Ed. 1953).

The injunctive provisions of Article III of the Recommended Decree are also criticized as unwarranted, since, it is claimed, wrongful conduct on the part of the California defendants would be physically impossible. If that is the fact, these injunctive provisions constitute no bar against any acts of the California defendants and it is difficult to understand their concern. But it is, of course, easy to conceive of numerous instances in which it would be possible for the California defendants, if they so desired, to violate the provisions of the Decree, either by interference with the activities of the United States or by themselves diverting or consuming water to which they are not entitled under the Decree.

California next argues that her agencies should not be subjected to an injunction, since they "expressly declare" that they "will not knowingly violate any provisions of the Decree of this Court" (Cal. Op. Br. 285). The fact that a defendant disclaims an intention to violate an injunction should not prevent the entry of an injunctive decree. *Wyoming* v. *Colorado*, 298 U. S. 573 (1936), does not hold otherwise. There an injunction against Colorado had been entered in an earlier suit. *Wyoming* v. *Colorado*, 259 U. S.

419 (1922). In the later suit, Wyoming sought an injunction against Colorado "enforcing adherence to that decree". 298 U. S. at 575. The alleged violations of the earlier decree were discontinued by Colorado while the case was *sub judice* and this, coupled with the assurance of Colorado counsel that they would not be resumed, rendered it unnecessary for the Court to grant Wyoming injunctive relief *in addition* to that provided for in the original decree.

The situation is far different here. California has made and persists in making claims to water of the Colorado River system, including Arizona's tributaries. These claims have cast a cloud upon Arizona's right to such water and have had the practical effect of preventing congressional authorization of the Central Arizona Project. If upheld, the claims would deprive Arizona of water indispensable to the maintenance of her existing economy. This case is not, therefore, merely "declaratory in nature" (Cal. Op. Br. 284). Indeed, it is a case of immediate danger of irreparable harm, warranting the injunctive intervention of the Court.

Finally, California objects to the application of the injunctive provisions to the California agencies which are parties to the case as "unfairly subjecting those agencies to an injunction which does not apply to their counterparts in Arizona and Nevada" (Cal. Op. Br. 286). The answer is, of course, obvious. The California agencies are parties to the litigation. Those in Arizona and Nevada are not.

B. The Suggestion That Jurisdiction Be Retained Over Possible Future Controversies

California urges the Court to retain jurisdiction to adjudicate "controversies" between "mainstream" users and "tributary" users, which the Master holds are not presently justiciable (Rep. 318-21), "if, as, and when they become justiciable" (Cal. Op. Br. 288). In other words,

California suggests that under the guise of permitting the parties to apply at the foot of the decree for further relief, the Court should assume jurisdiction prospectively of any "new suit" by California against Arizona involving a possible future controversy which is not now justiciable (Cal. Op. Br. 287-88). Such a procedure would deprive of all meaning the constitutional limitation of the Court's jurisdiction to the decision of "cases or controversies".

This procedure would also be contrary to the practice of this Court. For example, in *Arizona* v. *California*, 283 U. S. 423, 464 (1931), the Court, although expressly recognizing the possibility of future litigation between the parties over water of the Colorado River, declined to retain jurisdiction because there was not at the time of suit a justiciable controversy. The Court dismissed the action "without prejudice to an application for relief" in the future. The retention of jurisdiction would have been improper there, as it would be here, since in each case the anticipated future dispute presented no presently justiciable controversy.

C. The Suggestion That Underground Uses Be Included in the Decree

California urges that the definition of "consumptive use" in the Recommended Decree be enlarged to include not only diversions from the stream but "all related ground water" uses as well (Cal. Op. Br. 289-90). Application of such a definition would not be feasible. The basic difficulty lies in defining "related ground water". We submit to the Court, as we did to the Master, that it is preferable to define "consumptive use", as the Recommended Decree defines it—"diversions from the stream less . . . return flow" (Rep. 345)—and to reserve for determination by the Secretary of the Interior, with the aid of his hydrologists,

whether in a particular case the use of underground water constitutes a "diversion" within the meaning of the decree.[210]

D. The Suggestion that Holders of Natural Flow Rights Are Entitled to Water Delivery Contracts

California requests (Cal. Op. Br. 290-91) that the Recommended Decree be amended to require the issuance of contracts to holders of natural flow rights pre-existing enactment of the Project Act. However, the language suggested (Cal. Op. Br. 291) as an addition to Article II (B) (7) of the Recommended Decree (Rep. 349) goes far beyond this goal. The sweeping language proposed by California appears to have been designed to effectuate her thesis that appropriative rights recognized under state law are controlling in the determination of rights to, and the distribution of, main stream water in Lake Mead and below. This California thesis was rejected by the Special Master; we have dealt with it at length in both this brief and in Arizona's Opening Brief (pp. 8-53, *supra;* Ariz. Op. Br. 40-46). Further discussion of this California contention is not warranted.

Moreover, insofar as the language suggested by California as an addition to Article II (B) (7) of the Recommended Decree would require the issuance of contracts to holders of "present perfected rights" as defined by the Master, it is superfluous. Article I (G) and (H) of the Recommended Decree (Rep. 346) defines "present perfected rights" existing under state law as of the effective

---

[210] See the transcript of Conference before the Special Master on the Recommended Decree, August 19, 1960, pp. 8-14.

date of the Project Act. Article II (B) (5) and (6) (Rep. 348-49) gives priority to such rights in times of shortage, and Article VI (Rep. 359) makes provision for determining the existence and extent of "present perfected rights". Thus, the Decree recommended by the Special Master makes provision for holders of "present perfected rights". It provides that such holders shall be entitled to the delivery of water by the Secretary of the Interior in satisfaction of their rights and to preferences in the order of their priorities in times of shortage. The Decree implicitly requires that the Secretary do whatever is necessary to effectuate the delivery of water in satisfaction of "present perfected rights", including the execution of additional water delivery contracts, if necessary.

Brief reference is made by California to riparian rights which she says "may be senior to the appropriative rights recognized in the existing California water delivery contracts" (Cal. Op. Br. 290). If this be true, it poses no particular problem since the Master's definition of present perfected rights is broad enough to cover all uses which come within that definition, whether made under the law of prior appropriation or the riparian rights doctrine.

Likewise irrelevant is the California reference to claimed reliance by California users (unnamed and unspecified) on the language of the Acting Secretary of the Interior used in his correspondence with the Palo Verde District prior to the execution of the water delivery contract with that District. Whether or not others in California chose to rely on this opinion, even though the District to whom it was addressed did not, is of no moment. Those users who qualify as holders of "present perfected rights" are entitled to receive water under the Recommended Decree without any further showing and regardless of their reliance or lack of

reliance on claimed secretarial construction of the Project Act.[211]

VI

Contrary to the contention of the United States, the Secretary of the Interior is not authorized in allocating water from Lake Mead among Lower Basin main stream states to deduct the amount of upstream consumptive uses in Arizona and Nevada of water which would otherwise flow into Lake Mead.[212]

The United States argues that the Special Master erred in holding invalid Article 7(d) of the Arizona water delivery contract and Article 5(a) of the amended Nevada water delivery contract, which require that deliveries of water to Arizona and Nevada from Lake Mead or below shall be diminished to the extent that uses in those states above Lake Mead lessen the flow into Lake Mead.

The United States asserts that:

> ". . . under a proper construction of the Boulder Canyon Project Act, the Secretary is required to consider uses in Arizona and Nevada from the mainstream above Lake Mead and from tributaries entering the mainstream between Lee Ferry and Lake Mead. Thus we would include in the waters to be distributed to California, Arizona, and Nevada pursuant to Section 4(a) of the Project Act not only waters impounded in Lake Mead, but also all water

---

[211] Arizona does not agree with the Master's interpretation of the phrase "present perfected rights" in §6 of the Project Act. Her construction of the phrase is discussed at Ariz. Op. Br. 46-55 and pp. 53-57, *supra*.

[212] This point is directed to a refutation of Points I and II of the Opening Brief of the United States, pages 7-21 thereof.

which would have reached the mainstream above Hoover Dam except for consumptive uses in Arizona and Nevada." (U. S. Op. Br. 9)

However, the Special Master concluded that the water to be distributed among the three Lower Basin main stream states pursuant to the Project Act is limited to main stream water available for consumptive use from Lake Mead and below Hoover Dam. Accordingly, the Master's Recommended Decree provides for an apportionment only of main stream water in Lake Mead and below. The United States contends, to the contrary, for an apportionment of system water which includes the amount of water which Lower Basin tributaries would have contributed to storage in Lake Mead if there had been no uses in Arizona or Nevada on the tributaries above Lake Mead.

The United States, in this instance, misconceives the meaning and intent of the Project Act. As we have seen, the provisions and legislative history of the Project Act make manifest the intent of Congress to provide only for a division of main stream water without taking into account Lower Basin tributaries or the use of tributary water before its entry into the main stream (Rep. 173-80; Ariz. Op. Br. 57-67). It is enough simply to note once again that Congress dealt with and made provision only for water stored in Lake Mead. There is no indication that Congress intended to exercise control over the water of Lower Basin tributaries.

Congress was well aware that uses on Lower Basin tributaries above Lake Mead, while not large in quantity, were numerous and of long-standing not only in Arizona and Nevada but also in New Mexico and Utah.[213] There is nothing to indicate that Congress had any thought of wip-

[213] A 45, p. 31 (Tr. 254).

ing out these uses by exercise of its dominion over the main stream. Nor is there any indication that Congress intended to empower the Secretary to deduct from any state's apportionment of Lake Mead water the amount by which the state's tributary uses above Lake Mead deplete the flow into Lake Mead, whether on the theory that this tributary water is a part of the Lake Mead supply to which the Secretary must look in order to discharge his responsibilities with respect to his contractual allocation of water stored in Lake Mead or on any other hypothesis.

In an effort to sustain all the provisions of the Secretary's water delivery contracts, the United States contends for a construction of the Project Act which would cause numerous complications and which is fundamentally at odds with the interpretation of §4(a) for which the United States elsewhere contends.

Thus the United States ignores the fact that the waters of these tributaries flow in and are used in New Mexico and Utah. If, as the United States argues, the contribution which these streams might otherwise make to Lake Mead storage must be regarded as a part of "the waters to be distributed to California, Arizona, and Nevada pursuant to Section 4(a) of the Project Act", there is no justification for ignoring the depletions of main stream supply caused by uses on these tributaries in New Mexico and Utah, and the quantities of water represented by these depletions in Utah and New Mexico must in some fashion be included in "the waters to be distributed to California, Arizona, and Nevada pursuant to Section 4(a) of the Project Act" (U. S. Op. Br. 9). This poses a difficult problem indeed, since tributary water consumed in New Mexico and Utah never reaches Lake Mead and since neither New Mexico nor Utah receives any Lake Mead storage from

which the depletions of storage occasioned by such uses may be subtracted.

Far from solving this problem, Article 7(g) and (b) of the Arizona water delivery contract (Ariz. Op. Br. Appendix E, pp. 37a-38a) serves only to complicate it. Paragraph (g) states that Arizona "recognizes" the rights of New Mexico and Utah to an equitable share in two categories of water: (1) water apportioned by the Colorado River Compact to the Lower Basin and (2) water unapportioned by the Compact. Paragraph (b) provides for the deduction from Arizona's share of excess or surplus water unapportioned by the Compact of such quantities as may be the equitable shares of New Mexico and Utah in water unapportioned by the Compact. Enforcement of these provisions would require determination of what water is apportioned and what water is unapportioned by the Compact, ascertainment of the equitable shares of New Mexico and Utah in each category of water, and determination of the extent to which uses on the tributaries in these states fall within each category. The resolution of these questions is obviously unrelated to the Secretary's authority over water stored in Lake Mead. Some of them cannot be decided at all in the absence of the Upper Basin states.

Further complications are created by the fact that water of the Gila River and its tributaries flows through and is used in New Mexico. Although the United States agrees that the water of this tributary forms no part of the water to be distributed to the Lower Basin main stream states pursuant to § 4(a) of the Project Act, yet presumably the water of the Gila River within New Mexico constitutes a part of the supply under the concept of system water apportionment which paragraph (g) of Article 7 of Arizona's water delivery contract seems to envisage.

The labyrinth into which the theory of the United States —that water in Lower Basin tributaries above Lake Mead is included in the water to be distributed to the Lower Basin main stream states—leads, emphasizes the wisdom of the congressional decision to provide for the apportionment of main stream water only and the soundness of the Master's construction of the Project Act as limited in its application to this water.

The same reasoning by which the Master rejects as unsound the California contention that the water dealt with by the Project and Limitation Acts includes water of Lower Basin tributaries also demonstrates that the water used on the tributaries above Hoover Dam does not constitute a part of "the waters to be distributed to California, Arizona, and Nevada pursuant to Section 4(a) of the Project Act". The failure of Congress to make provision with respect to the entitlements of New Mexico and Utah in tributary water within their boundaries cannot be reconciled with either the California argument or the position of the United States.

The United States contends that the purpose of Congress in enacting the Project Act would be frustrated if some of the states could avoid the Act's allocations by taking the water prior to its entry into Lake Mead, and hence that the provisions of Articles 7(d) and 5(a) of the Arizona and Nevada contracts are necessary to carry out the objectives of the Project Act (U. S. Op. Br. 10). But, so far as water of Lower Basin tributaries above Lake Mead is concerned, the argument begs the question by assuming that it was the congressional intent that Lower Basin tributaries above Lake Mead should constitute a part of the water supply covered by the Project Act allocations. As we have seen, the congressional intent was to provide for the allocation of main stream water only.

Nor are these provisions of the Arizona and Nevada contracts necesary to prevent frustration of the purpose of the Project Act by diversions from the main stream above Lake Mead.

Although, as the Special Master concludes, Congress did not intend the water of the tributaries above Lake Mead to be a part of the water distributed to the Lower Basin main stream states pursuant to §4 (a) of the Project Act, it is nevertheless clear that to the extent that inflow from these tributaries reaches the main stream, Congress regarded that inflow as a part of the water to be allocated pursuant to §4(a) of the Project Act. Over all Lower Basin main stream water, whether it be water at Lee Ferry or tributary inflow entering the main stream between Lee Ferry and Lake Mead, Congress has exercised its dominant servitude under the Commerce Clause, and any interference therewith would be in violation of the Project Act. See *United States* v. *Appalachian Electric Power Co.*, 311 U. S. 377 (1940). Appropriate remedies are at hand to prevent or abate such violations. Nevertheless, the Secretary is without authority to override the command of Congress by sanctioning such violations provided that the resulting depletions of Lake Mead storage are offset against the state's contract entitlement.

In attacking the Master's conclusion that Articles 7(d) of the Arizona contract and 5(a) of the amended Nevada contract (Ariz. Op. Br. Appendix G, p. 56a) are "contrary to the command of Section 5 of the Project Act that contracts respecting water for irrigation and domestic use shall be for permanent service" (Rep. 237), the United States argues that "the flaw . . . is the assumption that upstream uses under new appropriations would cut into deliveries under existing contracts" (U. S. Op. Br. 16). The United

States appears to regard a contract right to Lake Mead storage as being in the nature of an appropriative right with a priority date as of the date of the contract. The Government argues from this that Arizona may insure permanent service for the Arizona holders of contract rights by refusing to permit "new" appropriations upstream which would be junior in priority date to the contract rights (U. S. Op. Br. 16).

This argument assumes that tributary uses under appropriative rights, which have priorities senior to contract rights to Lake Mead storage, will aggregate precisely the same quantity each year, regardless of the amount of tributary flow and other variable conditions, such as acreage in cultivation, volume of water available in storage reservoirs, local rainfall and economic conditions. The exact synchronization of contract rights and uses with tributary rights and uses, which the United States contends would insure permanent service under the Secretary's water delivery contracts, is obviously unattainable under the variable conditions affecting the uses of water in this arid region. Moreover, the argument entirely ignores depletions resulting from tributary uses in New Mexico and Utah which, under the United States concept of system water allocation, would include water apportioned to the three Lower Basin main stream states. Certainly Arizona and Nevada are powerless to control or prevent uses in New Mexico and Utah, whether by "new" appropriations or otherwise, or to insure permanent service to their contract users undiminished by uses in New Mexico or Utah.

The contention of the United States that the Master is in error in concluding that Article 7(d) of the Arizona contract and Article 5(a) of the Nevada contract violate §18 of the Project Act is supported by a reiteration of the United States claim that the Master improperly construes

these contract provisions as requiring that rights to the delivery of water under contract be terminated by later upstream appropriations (U. S. Op. Br. 17-18). The choice, which the United States asserts rests with the states of Arizona and Nevada (U. S. Op. Br. 17), is more illusory than real. Clearly it was not contemplated by Congress when it included §18 in the Project Act that any such "choice" be forced upon Arizona or Nevada.

As we understand it, the United States contends that it is entirely up to Arizona whether or not she permits "new" uses on the tributaries which deplete the supply otherwise available in Lake Mead for delivery to Arizona under her contract. The United States concludes, in view of this asserted choice, that Article 7(d) of the Arizona contract does not contravene §18 of the Project Act, which provides that nothing in the Act

> "shall be construed as interfering with such rights as the States now have either to the waters within their borders or to adopt such policies and enact such laws as they may deem necessary with respect to the appropriation, control, and use of waters within their borders, except as modified by the Colorado River compact or interstate agreement."

We perceive no connection between the premise which the United States asserts and the conclusion which it draws. The evident purpose of §18 was to insure that nothing in the Act or any water delivery contract should override the then existing rights of the states in at least the tributary streams within their borders, or should prevent the states from controlling the use of such water through whatever policies or laws each state might consider appropriate, subject to the provisions of the Colorado River Compact or any interstate agreement. Obviously, the control by the states of the water of their tributaries within their boundaries

is impaired if a right to use that water may be awarded only if the rights of other users within the state to Lake Mead storage are correspondingly reduced or terminated.

This argument of the United States reads into Article 7(d) of the Arizona contract a choice not justified by its plain terms and one which would operate to interfere with the rights of the state to control the use of the water of its tributary streams, contrary to the command of §18.

The Master's conclusion that these provisions of the Arizona and Nevada water delivery contracts "result in an allocation of mainstream water totally out of harmony with the limitation on California contained in Section 4(a)" (Rep. 237), and the reasoning by which he demonstrates that the enforcement of these provisions would result in water in storage which could not be used under the statutory and contractual limitations (Rep. 242-43) are briefly disposed of by the United States in its contention that the water apportioned to the Lower Basin main stream states pursuant to §4(a) of the Project Act is system water, rather than main stream water, and includes the water in tributaries above Lake Mead (U. S. Op. Br. 19-20). We have previously demonstrated that this concept is contrary to the intent of Congress as evidenced by the legislative history and the provisions of the Project Act.

Finally, the United States seeks to answer the Master's criticism that these provisions of the water delivery contracts and the views of the United States in support of their validity attempt to equate consumptive use measured by diversions less returns with depletion of the flow into Lake Mead (Rep. 243-44). The United States argues the appropriateness and fairness of charging Arizona and New Mexico for tributary uses only to the extent that they deplete Lake Mead storage and contends that a computa-

tion of the amount by which these tributary uses deplete the flow into Lake Mead is possible through the application of "concepts and standards which receive rather general acceptance in the engineering profession today" (U. S. Op. Br. 21).

All of this misses the point made by the Special Master: That the Project Act directs that accountability for the water apportioned pursuant to the Act shall be measured in terms of consumptive use (diversions less returns) and not in terms of depletion at a given point. If, as the United States claims, the water apportioned pursuant to the Project Act includes the water of the Lower Basin tributaries above Lake Mead, then the use of such water cannot, consistently with the provisions of the Project Act, be measured other than in terms of diversions less returns. The very fact that the water apportioned pursuant to the Project Act must be measured in terms of diversions less returns is itself an indication that tributary water was not within the contemplation of Congress; for, as the United States points out, if the states are to be charged with consumptive use on the tributaries, then they must be charged with use of a greater quantity of water than that by which such uses deplete the supply in Lake Mead. If Congress had intended to include tributary uses, it would have specified that such uses be measured in terms of depletion of the flow into Lake Mead and that the consumptive use measurement of diversions less returns specified in the Project Act should not apply to these tributary uses.

VII

Contrary to the contention of the United States, the Secretary of the Interior does not have uncontrolled discretion to create or determine priorities among intrastate users of Colorado River water.[214]

So far as the uses of Colorado River water within Arizona are concerned, the questions of who has the authority to determine (1) what particular projects or users within the state shall be entitled to the delivery and use of the state's apportionment of that water and (2) how much a particular project or user may receive out of the state's apportionment appear to have been settled by the water delivery contract between the Secretary of the Interior and Arizona.

Article 7(*l*) of the Arizona contract directs that:

> "Deliveries of water hereunder shall be made for use within Arizona to such individuals, irrigation districts, corporations or political subdivisions therein of Arizona as may contract therefor with the Secretary, and as may qualify under the Reclamation Law or other federal statutes or to lands of the United States within Arizona. All consumptive uses of water by users in Arizona, of water diverted from Lake Mead or from the main stream of the Colorado River below Boulder Dam, whether made under this contract or not, shall be deemed, when made, a discharge pro tanto of the obligation of this contract. . . ."

---

[214] This point is directed to a refutation of Point III of the Opening Brief of the United States, pages 21-47 thereof.

The United States has entered into water delivery contracts directly with various users in Arizona as thus contemplated by the Arizona contract. Although the Special Master refused to pass on the question as to the amount of water which these users are entitled to receive under their particular contracts or "to determine the right of any reclamation project or other user to receive water as against competing users in the same state" (Rep. 218-19), his Report does consider the validity of all contracts between the Secretary and Arizona users entered into prior to the completion of the trial of this case (Rep. 210-21). He holds that, with one minor exception, all these contracts are authorized by the Project Act and are valid (Rep. 218).

Construing Article 7(*l*) of the Secretary's contract with the State of Arizona, the Master finds that it "obligates him [the Secretary] to deliver a certain quantity of water for use within the state, but this contract leaves it to the Secretary to decide with which users within Arizona he will contract for the delivery of all or part of Arizona's allotment" (Rep. 216). The Master rejects Arizona's contention that the Secretary is confined to contracting with the State of Arizona and that it is for the state to decide which projects will share in the state's allotment of water; he concludes that under the Arizona contract "the Secretary is free, subject to statutory limitations, to contract with users in Arizona qualifying under the reclamation law for delivery to them of certain amounts of water out of the total amount allocated to Arizona" (Rep. 216).

Arizona agrees with the Special Master that these water delivery contracts with individual projects and users in Arizona are valid and she has not excepted to the foregoing construction by the Special Master of the contract between the Secretary and the State of Arizona. Accordingly, we

shall not undertake an analysis of what the Project Act provides, independently of contractual arrangements with the states or with users within a state, with respect to the authority to determine what projects or users shall receive Colorado River water or to decide how much a particular project or user shall receive.

However, the Arizona contract is silent on the power to fix relative priorities among Arizona intrastate users and, contrary to the position of the United States, we deny that the Secretary has full or indeed any authority to fix and determine relative priorities among such users.

We agree that Congress has full dominion and control under the Commerce Clause over the water stored by authority of the Project Act. But what Congress has done depends not upon the existence of its power, but upon the extent to which it elected to exercise that power in the Project Act. Consideration of the provisions of the Project Act and the intent of Congress establishes that, other than specifying preferences among different kinds of uses in §6 of the statute, Congress did not contemplate that there should be any preferences in the use of the water stored pursuant to the authority of the Act but rather intended that all contracts for the use of stored water for irrigation and domestic purposes should be on a parity. Section 6 of the Project Act directs:

> "That the dam and reservoir provided for by section 1 hereof shall be used: First, for river regulation, improvement of navigation, and flood control; second, for irrigation and domestic uses and satisfaction of present perfected rights in pursuance of Article VIII of said Colorado River compact; and third, for power."

Except for these directions there is no provision or implication in the Project Act that different users shall

have different kinds of rights in the water stored in Lake Mead. The Special Master has found and the United States and Arizona agree that, as to the allocation among the states, no preferences or priorities exist and that, if and when they occur, shortages shall be borne ratably by the Lower Basin main stream states (Rep. 306).[215] The same considerations which led the Master to conclude that the Project Act envisions a ratable sharing of water between the states in the event of shortage impels the conclusion that Congress contemplated that ratable sharing among the users within a state should also obtain in times of shortage.

The fact that the Secretary and the California agencies with the consent and approval of the Division of Water Resources of California have agreed by contract for priority of uses among California users does not mean, as the United States appears to argue, that such priorities among California users result solely from the acts of the Secretary or rest entirely within his discretion or that the Project Act authorizes him to impose priorities among users within a state even though the state and its users do not consent thereto. The fact that the Project Act does not expressly direct that there may be preferences among users of the water stored in Lake Mead and does not authorize the Secretary to impose such preferences constitutes no impediment to a voluntary arrangement between the Secretary on the one hand and the state and its users on the other whereby the state's allocation is to be distributed in the order of the priorities agreed upon.

---

[215] The Master has, of course, construed the "present perfected rights" clause of §6 of the Project Act to grant priority to holders of such rights as he defines them.

Nor do the provisions of the Reclamation[216] and Federal Power[217] Acts or the construction placed on those Acts by the Court aid in determining this question. These statutes were enacted to accomplish very different objectives from those intended by the Project Act and were designed to govern circumstances widely variant from those dealt with by that Act. Whatever the proper construction of the Reclamation and Federal Power Acts may be, they cannot be the vehicle for reading into the Project Act a purpose to authorize the Secretary of the Interior to impose, according to his uncontrolled discretion, preferences to the use of water contrary to the congressional intent that all uses of stored water for irrigation and domestic purposes shall be on a parity and that the principle of ratability shall govern if and when the supply of water is not sufficient to satisfy in full the entitlements of all users under their water delivery contracts.

VIII

The contention of the United States respecting water which it claims will be salvaged in the development of federal wildlife refuges is unsound.[218]

The United States asserts:

> "With respect to the Havasu Lake National Wildlife Refuge and the Imperial National Wildlife Refuge, both on the mainstream of the Colorado River, the

---

[216] Reclamation Act of 1902, 32 Stat. 388 (codified in scattered sections of 43 U. S. C.).

[217] Federal Power Act, 41 Stat. 1063 (1920), as amended, 16 U. S. C. §§791a-825r (1958).

[218] This point is directed to a refutation of Point V of the Opening Brief of the United States, pages 51-53 thereof.

> United States proved that the change in and control of the vegetation which will be effected by the development of these refuge areas will result in water consumption less than that which presently occurs in the overflow and undeveloped areas where the refuges are presently located." (U. S. Op. Br. 51-52)

The evidence proffered by the United States to support these claims was insubstantial; at least it did not convince the Special Master, for he did not adopt the relevant findings of fact proposed by the Government.

The modification of the Recommended Decree requested by the United States is to the effect that any water which it salvages may be used on federal wildlife refuges without regard to the priority date decreed for the respective refuge areas. The theory urged by the United States is that salvaged water belongs to the salvager. The water which the United States claims it will salvage will not consist of any of the water apportioned to the Lower Basin main stream states but will represent what otherwise would constitute losses to the supply which the Master's Recommended Decree directs shall be treated as diminution of supply (Rep. 313).

Under these circumstances it would not be proper to charge the use by the United States of salvaged water against the apportionment of the state in which the use occurs. While it might be thought that this would be of benefit to Arizona and to other states in which the use of salvaged water takes place, we are disturbed by the thought that the salvaged water doctrine is applicable to the situation which exists on the Colorado River in the Lower Basin, and we seriously question the wisdom and propriety of applying that principle in this case.

The situation at bar is not comparable to that which was before the Court in the cases cited by the United States in support of its argument under this point (U. S. Op. Br. 52). Here, the United States has exercised its dominion over the entire reach of the stream extending from Lee Ferry to the International Boundary and it has constructed great works to control, regulate and distribute the water of that portion of the river. It has also provided for the allocation of water among the states to be measured in terms of diversions less returns (Rep. 345). If the Court adopts the salvaged water concept urged by the United States, each state or user in the Lower Basin could contend that it should be charged, not in terms of diversions less returns, but for some lesser portion of its diversions based on expert opinion as to how much of the water diverted is salvaged by the use to which it is put and what portion of the water so diverted would have been lost if the user had not diverted it.

The principles applicable to salvaged water appear to run counter to the whole scheme of water allocation and accountability for uses against that allocation envisaged by the Project Act. We submit that a modification of the Recommended Decree which would depart from the measurement of diversions less returns and would incorporate into the Decree principles of water salvage not recognized or contemplated by the Project Act is not warranted.

CONCLUSION

The Report and Recommended Decree of the Special Master should be adopted by the Court, with the modifications requested by Arizona.

SUMMARY OF THE ARGUMENT 1

The Severance Issue 3

The Priority Issue 3

ARGUMENT

PART ONE

The Consequences of the Proposals Endorsed by Arizona, Nevada, and the United States 7

§ I. The Subject Ignored by Our Adversaries: The Distortion of Congress' Agreement With California Established by the Limitation Act 7

§ II. The Two Basic Sources of Error: (A) Severance of the Project Act From the Compact, and (B) Disregard of Rules of Priority Which Both the Compact and the Project Act Respected 17

A. The Issue of Severance of the Compact From the Limitation 18

1. The Upper Basin's Interest in the Inclusion of Lower Basin Tributaries in the Compact Accounting 22

2. California's Interest in the Inclusion of Lower Basin Tributaries in the Limitation Accounting 24

3. The Irrational Consequences of Severing Compact From Limitation 26

a. In terms of statutory construction 26

b. In terms of result 27

B. The Issue of Priorities in the Event of Shortage 29

§ III. Water Supply 31

PART TWO

Answer to the United States Opening Brief 33

§ I. The Severance Issue: The United States Position Is Irreconcilable With the Master's Conclusions 33

§ II. The Priority Issue: The Result for Which the United States Properly Argues Can Be Achieved Only by Full Recognition of Equitable Apportionment Principles 36

A. The United States Correctly Recognizes (1) That the Purposes of the Boulder Canyon Project Act Would Be Frustrated in the Absence of Protection to Rights to Water Which Supplies Lake Mead and (2) That the Priority Principle Is Essential to That Protection 39

B. Congress Did Not Delegate to the Secretary of the Interior Substantially Unlimited Power To Control Rights to "Mainstream" Water 46

1. The United States Misconstrues Section 5.... 49
a. Language of section 5..... 49
b. Constitutional background and legislative history of section 5..... 50
c. Administrative construction 57
2. The United States Misconstrues Sections 14 and 18 62
a. Section 8 of the Reclamation Act of 1902 63
b. Section 14 of the Project Act..... 68
c. Section 18 of the Project Act..... 70

PART THREE

Answer to the Arizona Opening Brief..... 77

§ I. The Severance Issue: The Limitation on California Cannot Refer to the Upper Division's Average Annual Delivery of 7,500,000 Acre-Feet at Lee Ferry Provided by Article III(d) of the Colorado River Compact 77

A. Arizona's Proposed Construction of the Colorado River Compact Founders on Both Legal and Physical Impossibility, as the Master Holds (Rep. 142-44) 79

1. Arizona's Construction of the Colorado River Compact Is Not Supported by Any Colorable Legal Argument..... 79
a. The language of the Compact..... 79
b. The reports of the Compact negotiators.. 80
c. The rational basis of the Compact's inclusion of all tributaries in the United States 83

2. Arizona's Rewritten Compact Cannot Physically Operate 84

B. Congress Did Not Unilaterally Amend the Colorado River Compact..... 87

C. Arizona's Legislative History Cannot Support Her Construction of the Limitation..... 96

§ II. The Priority Issue: Arizona's Arguments To Supplant Priority Principles on the Main Colorado River With Proration Are Unsupportable.....106

A. Principles of Equitable Apportionment Have Not Been Abrogated by the Boulder Canyon Project Act, by the Construction of Storage Reservoirs Which Regulate the Natural Flow, or by the Colorado River Compact.....106

1. Boulder Canyon Project Act.....106

a. Legislative history of section 5.....108

b. Section 6 110

c. Sections 14 and 18.....114

d. Administrative construction 114

2. Reservoirs Which Regulate the Natural Flow 118

3. Colorado River Compact.....121

B. Even if Priorities Derived From Appropriations Made Under State Law Are Disregarded, Nevertheless Equivalent Priority Principles Control Competing Rights of Holders of Federal Water Delivery Contracts.....123

§ III. Other Matters

A. The Prohibition Which Arizona Proposes on the Use of Otherwise Unused Water Is Unreasonable 129

B. On Each of the Three Major Issues Identified in Her Bill of Complaint Which Initiated This Suit, Arizona Has Now Reversed Her Pleaded Position and Agrees With the Pleaded and Present Position of the California Defendants..130

1. The III(b) Issue....130

2. The Beneficial Consumptive Use Issue....130

3. The Reservoir Evaporation Issue....132

PART FOUR

Answer to the Nevada Opening Brief....135

§ I. The Severance Issue: The Premises Advanced by Nevada Rebut the Master's Conclusion That the Limitation Can Be Divorced From the Systemwide Scope of the Colorado River Compact....135

§ II. The Priority Issue: Nevada's Argument for Equitable Apportionment Cannot Sustain the Master's Abrogation of "Mainstream" Priorities....136

§ III. Other Matters: The Availability of Alternative Sources of Water Supply Is Both Legally Irrelevant and Factually Wrong....140

CONCLUSION 143

APPENDIX: California Defendants Exhibit 7300 for Identification (Tr. 22,382, 22,384):

ANSWERING BRIEF

This consolidated answering brief of all eight California defendants in response to the opening briefs of the United States, Arizona, and Nevada is filed in accordance with the notice accompanying the order of the Court (364 U.S. 940), dated January 16, 1961.[1]

SUMMARY OF THE ARGUMENT

The Master's severance of the Compact from the limitation on California found in the Project Act and the Limitation Act, together with his proration of the shortage which this severance creates, produces this incredible result: Even if the lower basin enjoys the use of the full quantities aggregating 8.5 million acre-feet under Article III(a) and III(b) of the Compact, and Mexico is satisfied from surplus without invasion of that quantity, California would receive only 3.8 million acre-feet—not even the 4.4 million acre-feet to which the first part of the limitation on California refers.[2]

---

[1]In this brief, "Rep. 103" refers to page 103 of the Master's Report; "Rep. app. No. 2" refers to appendix number 2; "Rep. app. 416" refers to page 416 which is in the appendixes. "Op. Br." without a date refers to opening briefs before this Court, filed May 22, 1961.

In 1959, the parties simultaneously submitted to the Special Master proposed findings of fact, conclusions of law, and supporting briefs, and subsequently, simultaneous answering and rebuttal briefs. These are occasionally cited in the course of this brief.

[2]The first paragraph of § 4(a) of the Project Act (45 Stat. 1058 (1928), 43 U.S.C. § 617c(a) (1958), Rep. app. 381-82) required, as an alternative condition to the effectiveness of the act, that California, by legislation, agree to limit its annual consumptive use of Colorado River water to 4.4 million acre-feet of the "waters apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact" plus one half of

None of the three briefs which we are here answering deal with the incongruity of this result. Two of the briefs—those of Arizona and Nevada—purport to advance arguments to support the Master's decision, in addition to supporting those states' exceptions. All three briefs fail to disclose that the errors in the Master's Report which each party attacks are in fact essential to his result.

In Part One of this brief we consider the relationship of the limitation on California to the Colorado River Compact, and the consequence of the Master's severing these two inseparable documents. Restricting California to 3.8 million acre-feet instead of to the 4.4 million acre-feet plus one half of "excess or surplus" which the limitation expressly specifies results from two distinct parts of the Master's decision: (1) severance of the Compact from the limitation and relation of the latter to "mainstream" waters (Lake Mead and below), and (2) substitution of parity for priority in allocating the inevitable shortage which that severance creates.

In parts Two, Three, and Four we address ourselves to specific arguments presented in the respective briefs of the United States, Arizona, and Nevada. Each such part of our brief is divided into three sections, dealing respectively with positions in the opening briefs relating to (1) the severance of the Compact from the limitation, (2) the destruction of priorities of existing projects, and (3) miscellaneous matters, if any.

---

any "excess or surplus waters unapportioned by said compact"; those uses are "always to be subject to the terms of said compact." The California Limitation Act (CAL. STATS. 1929, ch. 16, p. 38 (Rep. app. No. 4) accepted that offer substantially *in haec verba.*

The Severance Issue

Both Arizona and Nevada in specific terms contradict the Master's conclusion that the Compact may be severed from the limitation. Arizona arrives at an equally untenable alternative conclusion by rewriting the Compact to delete the Compact's express application to lower basin tributary uses, an argument which the Master rejects. Contradicted by the Compact negotiators' reports which Arizona placed in evidence, by the legislative history of the Project Act, and by a decision of this Court,[3] Arizona's surgery produces a compact the operation of which is physically impossible.

Nevada argues that the documents constituting the law of the river are inseparable, and that the Compact applies to the entire river system, but avoids any attempt to reconcile those two sound propositions with the conclusion reached by the Special Master which Nevada says she supports. The United States avoids discussion of the Compact's construction or the severability of Compact and Project Act but resists the Master's conclusions which severance of the Compact from the limitation necessarily produces: truncation of the river at Lake Mead and separation of Lake Mead from its water supply.

The Priority Issue

The United States recognizes two essential premises: that the water supply to Lake Mead must be given effective protection, and that priorities above Lake Mead and priorities below Lake Mead must—to some extent at least—be recognized and integrated. We agree with the United States as far as its argument goes,

[3]Arizona v. California, 292 U.S. 341, 358 (1934).

but disagree with the tortuous route by which the United States seems to arrive in the vicinity of a correct result.

Arizona's argument that the construction of reservoirs which regulate the natural flow of the main stream destroys appropriative priorities is refuted, among other things, expressly by her own evidence and by necessary implication from this Court's decision in *Nebraska v. Wyoming,* 325 U.S. 589 (1945). Preexisting rights which could be satisfied from the natural flow without the conservation and regulation afforded by the reservoir are always protected. Arizona's argument that the Compact (which, she says, has only interbasin effect) destroyed intrabasin priorities within the lower basin leads only to the nihilistic conclusion that the Compact destroyed interstate water rights in the lower basin and left nothing to take their place. Arizona attempts to save the constitutionality of the Master's "contractual allocation scheme" by finding a mandatory statutory allocation in the abortive tri-state compact set forth in the second paragraph of section 4(a) of the Project Act, which no state has ratified. This produces a result more favorable to California than the Master's proposed decision, but attributes to Congress an indefensibly devious design to invite the states to accept by compact a statutory solution which is now imposed as the command of Congress although no state has ratified it. As the Master points out, both the language of the second paragraph of section 4(a) and its legislative history defeat the mandatory statutory allocation which Arizona urges.

Nevada erroneously contends that the Master's proposed decision can be sustained upon equitable apportionment principles. The Master's allocation, which abrogates the priorities of existing projects in California in favor of new projects in Arizona and Nevada, violates equitable apportionment principles which are well established in the interstate decisions of this Court. *E.g.*, *Nebraska v. Wyoming,* 325 U.S. 589, 617-18 (1945).

PART ONE

THE CONSEQUENCES OF THE PROPOSALS ENDORSED BY ARIZONA, NEVADA, AND THE UNITED STATES

ARGUMENT

PART ONE

THE CONSEQUENCES OF THE PROPOSALS ENDORSED BY ARIZONA, NEVADA, AND THE UNITED STATES

§ I. THE SUBJECT IGNORED BY OUR ADVERSARIES: THE DISTORTION OF CONGRESS' AGREEMENT WITH CALIFORNIA ESTABLISHED BY THE LIMITATION ACT

Before dealing separately with the opening briefs of the United States, Arizona, and Nevada (parts Two, Three, and Four of this brief, respectively), it is important to recognize that throughout their arguments, both before the Special Master and now before this Court, runs a common theme. They offer arguments which, if accepted, would produce the following ultimate result despite their basic differences with the Master in the methods of reaching that result:

California in 1929 accepted an express agreement offered by Congress[1] which limited this state to the

---

[1]The agreement which Congress offered to California (Project Act § 4(a), Rep. app. 381-82) and which California accepted (Calif. Limitation Act, Rep. app. 397), imposed a limitation upon the aggregate of California's (1) "uses under contracts made under the provisions of this Act" and (2) preexisting appropriative "rights which may now exist." The expression, "rights which may now exist," also appears in Article III(a) of the Compact *(infra)*. The quantitative limitation "shall not exceed four million four hundred thousand acre-feet of the waters apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact, plus not more than one-half of any excess or surplus waters unapportioned by said compact, such uses always to be subject to the terms of said compact."

Article III(a) of the Compact provides (Rep. app. 373):

"(a) There is hereby apportioned from the Colorado River System in perpetuity to the Upper Basin and to the Lower

annual consumption of 4.4 million acre-feet plus one half of "excess or surplus" and which conversely recognized our right to use water up to those limits.[2] The proposed decision would permit California to receive only *3.8 million acre-feet* even if the lower basin water supply were sufficient to sustain all of the Compact allocations in full, plus all Mexican Treaty requirements and all losses of every description.

The demonstration is simple.

Let us assume that the supply physically available in the lower basin, including the tributaries,[3] is adequate to sustain all of the following requirements:

Basin, respectively, the exclusive beneficial consumptive use of 7,500,000 acre-feet of water per annum, which shall include all water necessary for the supply of any rights which may now exist."

Article II(a) defines the "Colorado River System" as "that portion of the Colorado River and its tributaries within the United States of America" (Rep. app. 372).

[2]California's appropriative rights, in 1929, were already in excess of 4.4 million acre-feet (Calif. Op. Br. 12 n.5). The limitation was demanded of us because of the universal recognition that California's appropriations could and would rise much higher whenever Hoover Dam should regulate the river's flow (Rep. 165). California proved appropriations as of 1929 of projects then using water capable of satisfaction from the unregulated flow of the river, to the extent of approximately 4.5 million acre-feet per year (Calif. Op. Br. 12 n.5). In addition, the appropriations underlying Metropolitan Water District's aqueduct, aggregating 1,212,000 acre-feet per year, were being diligently and vigorously prosecuted; more than $1,600,000 had theretofore been spent on design and preliminaries to construction of the MWD aqueduct (*id.* at A29). The limitation was accepted in consideration of the passage of the Project Act, as § 4(a) of that act recites. Arizona's 1944 water delivery contract, ratified by the Arizona Legislature (Act of Feb. 24, 1944. ARIZ. LAWS 1944, ch. 4, p. 419, in evidence as Ariz. Ex. 11, Tr. 228), in article 7(h) recognizes the right of the United States and agencies of the State of California to contract for storage and delivery of water for beneficial consumptive use up to this limitation (Rep. app. 402). All of the California water delivery contracts had been executed prior to 1944. (Rep. 28.)

[3]The uses on the tributaries are included in the Compact account-

(1) 8.5 million acre-feet of consumptive use throughout the lower basin, which thus includes the full 7.5 million acre-feet apportioned to that basin by Article III(a), as well as the full 1 million acre-feet of additional consumptive use permitted by Article III(b)[4] of the Compact; plus

(2) 1.5 million acre-feet of scheduled deliveries at the Mexican boundary in full discharge of the Mexican Water Treaty guarantee;[5] plus

(3) all evaporation and other losses, whatever those losses may be.[6]

If the Compact were thus fully served, the lower basin allocation of 8.5 million acre-feet of consumptive

---

ing (Rep. 142-44), although excluded from the Master's limitation accounting (Rep. 173).

"[T]he plain words of the Compact permit only one interpretation—that Article III(a), (b), (c), (f) and (g) deal with both the mainstream and the tributaries." (Rep. 142.)

"The various arguments of Arizona fail before this unmistakable language of the Compact. The historical fact that the Upper Basin was primarily concerned with the mainstream will not nullify language of the Compact that subjugates both mainstream and tributaries to its rule." (Rep. 143.)

[4]Article III(b) of the Compact provides (Rep. app. 373):

"(b) In addition to the apportionment in paragraph (a), the Lower Basin is hereby given the right to increase its beneficial consumptive use of such waters by one million acre-feet per annum."

[5]Treaty With Mexico Respecting Utilization of Waters of the Colorado and Tijuana Rivers and of the Rio Grande, Feb. 3, 1944, art. 10(a), 59 Stat. 1237, T.S. No. 994 (effective Nov. 8, 1945); quoted in Sp. M. Ex. 4 for iden., Tr. 255 (WILBUR & ELY, HOOVER DAM DOCUMENTS, 1948 ed.), at A851.

For the purpose of this analysis, it does not matter where the 1.5 million acre-feet for Mexico comes from, whether out of the upper basin or out of the waters which the lower basin tributaries contribute to the main stream after sustaining the consumptive uses made by projects located along those tributaries.

[6]These losses are diminutions of supply, not beneficial consumptive uses within the meaning of either the Compact (Rep. 144, 147-49) or the Limitation Act (Rep. 187, 313).

use (item 1 above) would include about 2 million acre-feet of consumptive use on lower basin tributaries,[7] and

---

[7]The 2 million acre-foot figure for lower basin tributary uses represents the minimum contemplated by the Compact negotiators and by Congress. See, *e.g.*, Ariz. Ex. 49 (Tr. 257) (statement by Judge Sloan of Arizona, legal adviser to the Arizona Compact negotiator), at A69:

> "It may be of interest to know why the figures of 7,500,000 acre-feet for the upper basin and 8,500,000 acre-feet for the lower basin were reached. It grew out of the proposition made by the upper basin that there should be a fifty-fifty division of rights to the use of the water of the river between the upper and lower basins which should include the flow of the Gila, and the insistence of Mr. Norviel, commissioner from Arizona, that no fifty-fifty basis of division would be equitable unless the measurement should be at Lee's Ferry. As a compromise the known requirements of the two basins were to be taken as the basis of allotment with a definite quantity added as a margin of safety. The known requirements of the upper basin being placed at 6,500,000 acre-feet, a million acre-feet of margin gave the upper basin an allotment of 7,500,000 acre-feet. The known future requirements of the lower basin from the Colorado river proper were estimated at 5,100,000 acre-feet. To this, when the total possible consumptive use of 2,350,000 acre-feet from the Gila and its tributaries are added, gives a total of 7,450,000 acre-feet. In addition to this, upon the insistence of Mr. Norviel, 1,000,000 acre-feet was added as a margin of safety, bringing the total allotment for the lower basin up to 8,500,000 acre-feet."

Compare Calif. Exs. 26 (Tr. 4,972), 1302 (Tr. 11,442), 1371 for iden. (Tr. 11,436), and 1377 for iden. (Tr. 11,436); Calif. Op. Br. 20. See Calif. Findings and Conclusions, parts V-G and V-H, pp. V-35 through 48, showing the safe annual yield from the Gila River system in Arizona and New Mexico of 1,750,000 acre-feet per annum; part V-1, p. V-49 (see also Calif. Finding 4F:102, p. IV-55), re other lower basin tributary systems (Little Colorado, Virgin, Kanab Creek, and Bill Williams river systems) showing a safe annual yield of 200,000 acre-feet per annum.

Arizona's present pleadings establish substantially the same figure for consumptive use on the Gila. She alleged (Ariz. Reply, par. 8, p. 17), that these uses, measured by depletion of the main stream, were 960,000 acre-feet in 1929 and 1,170,000 in 1953, but if measured as diversions less returns the quantity would be greater by more than 1,000,000 acre-feet (Complaint, par. XXII, p. 26). The Master held: "Thus whether the limits fixed by Article III(a) and (b) have been reached or exceeded is to be determined by measuring the amount of each Basin's total appropriations through the formula, diversions less return flows" (Rep. 148).

consequently not more than 6.5 million acre-feet would be available for use from the main Colorado River in the lower basin within the "embargo" or "ceiling on appropriations" imposed by Article III(a) and (b) of the Compact.[8] Out of this 6.5 million acre-feet of consumptive use, the Master's recommended decree would allocate California only 44/75 (Rep. 347-48), or 3.8 million acre-feet. Arizona now endorses this ratio.[9]

The effect of the Master's formula, even when applied to a year in which the lower basin's supply is adequate for all components of the Compact in the lower basin, after satisfaction of the treaty requirements, is to repudiate every element of the bargain Congress exacted of California in the limitation. Thus:

(1) It denies California the right to use 4.4 million acre-feet even though the system supply available to the lower basin sustains much more than the 7.5 million

---

"[F]or Compact purposes, the accounting is made at the point of diversion" (Rep. 196). He applies the same rule in his limitation accounting (Rep. 313). Arizona's opening brief (p. 105) now says: "Arizona agrees with the Master's conclusion that the § 4(a) apportionment, including the California limitation, is to be measured in terms of consumptive use of water, defined as diversions from the river less return flow (Rep. 182-225)."

[8]"This apportionment is accomplished by establishing a ceiling on the quantity of water which may be appropriated in each Basin as against the other. Although Article III(a) and (b) is not expressed in terms of appropriative rights, this is the purport of that Article" (Rep. 140).

"....The Compact puts an embargo upon the acquisition of appropriative rights in excess of the limits set by Article III(a) and (b). The first call upon any remaining water goes to supply Mexico." (Rep. 196.)

Whether the III(a) apportionment is called a reservation in perpetuity, or a ceiling on appropriations, does not matter for the purpose of this analysis. *Cf.* Calif. Op. Br. 250; Ariz. Exception 1, pp. 3-4.

[9]Ariz. Op. Br. 105.

acre-feet of consumptive use apportioned to it by Article III(a) of the Compact;

(2) It denies California all participation in the million acre-feet of "III(b) water"[10] referred to in the Compact, even though the full 8.5 million of uses were supplied, and makes that million acre-feet available for use only in the other lower basin states. This occurs despite the Master's holding that the waters encompassed by Article III(b) are in the category of "excess or surplus," in which California may share one half (Rep. 196-97), a determination which Arizona now concedes is correct;[1]

(3) It curtails the supply to California's "rights which may now exist" in favor of junior projects in other states whose uses account for the "increase of use" referred to in Article III(b) (Rep. app. 373), notwithstanding (i) the assurance in Article III(a) that that apportionment encompasses "rights which may now exist" (*ibid.*) (the same recognition of "rights which may now exist" appears in the first paragraph of the Project Act's limitation on California) (Rep. app. 382), (ii) the assurance in Article III(c) of the Compact[2]

---

[10]We use "III(a) water" and "III(b) water" to refer to the quantities of water required to satisfy the beneficial consumptive use (diversions less returns to the river) specified in Article III(a) and (b), respectively, of the Colorado River Compact. In terms of the flow at any point the aggregate quantity of "III(a) water" and "III(b) water" is always greater than 8.5 million acre-feet.

[1]Ariz. Op. Br. 82. The Master limits the effect of this holding to the main stream supply in excess of that required to sustain 7.5 million acre-feet of consumptive use from the main stream (Rep. 196, 200).

[2]Article III(c) of the Compact provides (Rep. app. 373):

"(c) If, as a matter of international comity, the United States of America shall hereafter recognize in the United States of Mexico any right to the use of any waters of the Colorado River System,

that the Mexican burden must first be satisfied out of waters surplus to the *aggregate* of the quantities specified in III(a) and III(b), and that only in the event of a deficiency in such surplus and in III(b) water should uses of the III(a) apportionment be curtailed, and (iii) the physical existence of such a system surplus in quantity sufficient to supply the full Mexican burden without any curtailment whatever of use of the full III(a) and (b) allocations.[3]

---

such waters shall be supplied first from the waters which are surplus over and above the aggregate of the quantities specified in paragraphs (a) and (b); and if such surplus shall prove insufficient for this purpose, then, the burden of such deficiency shall be equally borne by the Upper Basin and the Lower Basin, and whenever necessary the States of the Upper Division shall deliver at Lee Ferry water to supply one-half of the deficiency so recognized in addition to that provided in paragraph (d)."

Article III(d) of the Compact provides (Rep. app. 373):

"(d) The States of the Upper Division will not cause the flow of the river at Lee Ferry to be depleted below an aggregate of 75,000,000 acre-feet for any period of ten consecutive years reckoned in continuing progressive series beginning with the first day of October next succeeding the ratification of this compact."

[3]Curtailment of California's use of III(a) water in consequence of the Mexican burden at a time when III(b) water is available is incongruous for another reason. In Arizona's brief in Arizona v. California, 283 U.S. 423 (1931), she said of Article III(b) (correctly we think) at 34 (reprinted in Calif. Ex. 2043, pp. 2-3 (Tr. 12,379)):

".... Paragraph (b) does not *apportion in perpetuity,* as does paragraph (a), any beneficial use of water. It is very careful not to do this. It is to be read with paragraph (c) and relates solely to the method of sharing between the basins any future Mexican burden which this Government might recognize. This burden is to be satisfied first out of 'surplus' waters, and surplus waters are defined not as surplus over quantities 'apportioned,' but as surplus over quantities '*specified* in paragraphs (a) and (b).' Any deficiency remaining is to be borne equally by the two basins. Thus the Lower Basin, which without paragraph (b) might use water in excess of its apportionment without acquiring any exclusive right in perpetuity thereto, is enabled to retain such uses to the extent of 1,000,000 acre-feet per annum against the first incidence of the Mexican burden. Thereafter it is entitled to require the Upper Basin to share from its apportionment equally in the satisfaction of any deficiency. In other words, all that paragraphs

Thus, even upon this hypothesis of water so abundant as to sustain the Compact allocation, California's limitation ceiling—after subjection to proration—on the interpretation of the Master and Arizona would not be 4.4 million acre-feet plus one half of surplus: rather, it would not exceed 3.8 million acre-feet of consumptive use altogether, and, unfortunately, California's half of the waters over and above 7.5 million acre-feet would not exist at all.[3a]

(b) and (c) accomplish is to require the Upper Basin to reduce its apportionment in favor of Mexico before the Lower Basin is required to do so, the Lower Basin being entitled to contribute first, to the extent of 1,000,000 acre-feet, water which it may have used but to which it has no exclusive right in perpetuity—that is, water not apportioned to it. The water apportioned is that to which exclusive beneficial use in perpetuity is given in paragraph (a), less any deductions which may have to be recognized as provided in paragraphs (b) and (c)."

This is another way of saying that III(b) uses must be curtailed before lower basin III(a) uses are reduced, if the satisfaction of the Mexican burden requires the reduction of the lower basin's consumptive use below 8.5 million acre-feet.

Arizona now says that all of the III(b) water is in the main stream, implying that it is geographically so identified by the Compact (Ariz. Op. Br. 81). If so, it is physically vulnerable to the Mexican Treaty demand. Arizona's geographical identification is approximately correct, but for the wrong reason. The correct reason is that (1) the "increase of use" referred to in Article III(b) commences after the lower basin is required to account, basinwide, for the 7.5 million acre-feet of use referred to in Article III(a); (2) the III(a) accounting is required to include the water to supply all "rights which may now exist" in 1929; (3) the rights (and uses thereunder) on the tributaries in 1929 approximated 2 million acre-feet, exhausting the safe annual yield of the Gila, plus 200,000 acre-feet on other tributaries. Uses on the main stream have already accounted for the margin of 5.5 million in the III(a) apportionment. Therefore, uses in the lower basin which "increase" its aggregate basinwide consumptive use above 7.5 million are main stream uses junior to 5.5 million acre-feet of consumptive use on the main stream. This "increase," under principles of equitable apportionment, would be sacrificed to satisfy the Mexican burden before sacrificing the 1929 "rights which may now exist," or indeed any other senior rights.

[3a]The following table illustrates the difference in result between the Master's allocation and that which we think is correct, if the

The legal drouth thus created in the main stream in the midst of physical plenty in the system is visited most acutely upon the Metropolitan Water District—every drop of its water supply, on the theory of the Master and Arizona, would be beyond the pale,[4] outside the III(a) and (b) ceiling of the Compact, subject to extinction whenever the Compact ceiling is enforced.

By contrast, Arizona's brief accurately quotes debates in which Senators spoke of California's "irreducible minimum" (Ariz. Op. Br. 93, 94), and a difference of only 400,000 acre-feet between California's claim to 4,600,000 acre-feet and Arizona's concession to California of 4,200,000 acre-feet, finally resulting in a compromise giving California 4,400,000 acre-feet, plus one

---

Compact allocations are fully served. It illustrates the allocation of consumptive uses available to the lower basin, assuming enforcement of the Compact "ceilings," and a supply adequate to sustain uses up to those "ceilings" (an aggregate of 8.5 million acre-feet of consumptive use, of which 2 million is used on the tributaries and 6.5 million on the main stream):

	Total	To Calif.	To all other lower basin states		
			Total	Main stream	Tributaries
On the Master's interpretation	8.5	3.8*	4.7	2.7	2
On California's interpretation	8.5	4.9**	3.6***	1.6	2

*44/75 of 6.5 million (8.5 million minus 2 million on tributaries)
**4.4 million plus ½ of the lower basin's consumptive use in excess of 7.5 million (8.5 minus 7.5)
***3.1 million apportioned by Article III(a) plus ½ of the lower basin consumptive use in excess of 7.5 million (8.5 minus 7.5)

[4]The Metropolitan Water District's Colorado River Aqueduct is the source of most of the water required for the municipal and industrial needs of 7,000,000 southern Californians. (Calif. Op. Br. A27-28.) Its rights are junior to 3,850,000 acre-feet of agricultural rights established before the aqueduct came into existence (*id.* at A3; Calif. Ex. 1811, Tr. 12,244), as well as to minor quantities for Indian reservations in California.

half of the excess or surplus (*id.* at 93-96). Here is Senator Hayden's explanation of the intended effect of the limitation:[5]

> "The bill itself provides that a million acre-feet may be used in the vicinity of Los Angeles, and some three and one-half million acre-feet through the all-American canal to irrigate the Imperial Valley. Then there is another half million acre-feet which may be used in the vicinity of Yuma and the Paloverde Valley . . . ."

This totals 5 million acre-feet of expected California consumptive use from the flow at the site of Hoover Dam, which Senator Hayden said was about 9.5 million.[6]

The allocation we would receive under the Master's recommended decree is less than Arizona spokesmen have conceded to be ours beyond all controversy. Governor Osborn of Arizona stated the concession in 1943, addressing the Arizona Legislature on the subject of Arizona's 1944 contract and Compact ratification:[7]

> "Now, of course, we would like to take from California some of that 4,400,000 acre feet of

---

[5]70 CONG. REC. 464 (1928). See Calif. Op. Br. 236-37 for the remainder of the quotation and footnotes explaining the figures.

[6]*Ibid.* Compare Hayden's flow of 9.5 million at the site of Hoover Dam with that required for full service of the Compact and treaty: 1.5 million for the treaty, 6.5 million for consumptive use from the main stream to serve the III(a) and (b) ceilings, more than 1 million for losses in excess of the tributary inflow, a total of 9 million plus. For the calculation of these losses, see Calif. Op. Br., plate 7 and accompanying notes.

[7]Letter of March 25, 1943, from Governor Sidney P. Osborn to Hon. Dan E. Garvey, Arizona Secretary of State, printed in ARIZ. LAWS 1943, at 231. The Governor reiterated substantially the same views in a message to the Arizona Legislature the following year in presenting the Arizona contract for ratification. Ariz. Senate Journal, 16th Legis., 1st Spec. Sess. 1944, at 16.

water. But neither unrecognized filings against it, nor wishful thinking on our part can accomplish that. Nothing can accomplish it. The Federal Government, having expended tens of millions of dollars of the people's money to provide irrigation and power facilities for the use of this water in one state, will not wipe out that investment and divert that water to another state. Arizona cannot compel that any more than we can turn back the pages of history. The time has long since passed when Arizona could obtain the water which California has already put to beneficial use."

With that explanation Arizona's Legislature ratified the Compact and her proposed contract. The contract recites that "present perfected rights to the beneficial use of waters of the Colorado River *system* are unimpaired by this contract" (art. 7(*l*), Rep. app. 403; emphasis added), and that it is without prejudice to the contention of any state as to "what limitations on use, rights of use, and relative priorities exist as to the waters of the Colorado River system" (art. 10(5), Rep. app. 405).

§ II. THE TWO BASIC SOURCES OF ERROR: (A) SEVERANCE OF THE PROJECT ACT FROM THE COMPACT, AND (B) DISREGARD OF RULES OF PRIORITY WHICH BOTH THE COMPACT AND THE PROJECT ACT RESPECTED

The bizarre result—converting a 4.4 million acre-foot limitation into a 3.8 million acre-foot maximum—is created by the combined effect of two basic elements of the Master's "contractual allocation scheme": (1) The creation of a shortage in "Article III(a)" waters by divorcing the limitation from the Colorado River Compact,

and (2) the proration of that shortage, imposing 44/75 of it upon California. (Arizona and Nevada agree with his result, but they disagree with the premise that the Compact can be severed from the limitation: See parts Three and Four of this brief.)

A. The Issue of Severance of the Compact From the Limitation

The creation of an automatic shortage by the Master's formula is achieved as follows:

The limitation which is stated in the first paragraph of section 4(a) identifies specifically the resource which California may consume—4.4 million acre-feet per year of the 7.5 million acre-feet of consumptive use apportioned by Article III(a) of the Colorado River Compact, plus one half of the excess or surplus waters unapportioned by that Compact—and, on the other hand, the resource from which California is precluded and which only the other lower basin states may appropriate: 3.1 million acre-feet of the 7.5 million acre-feet of consumptive use apportioned by Article III(a), plus the other half of the excess or surplus.

This is the issue: Are the consumptive uses which are made out of the tributaries in the states which those tributaries traverse chargeable against the 3.1 million acre-feet and the one half of excess or surplus from which California is precluded?

We say "Yes." The 7.5 million acre-feet against which both California and the other states assert these claims is identified by the reference in section 4(a) of the Project Act and the reciprocal provisions of the California Limitation Act to Article III(a) of the Compact. Article III(a) of the Compact, as the Master

correctly holds, encompasses the tributaries as well as the main stream (Rep. 142-44, 173). The necessary result is that the quantities which the states other than California may claim from the main stream within the lower basin's "ceiling" are reduced to the extent of their uses on the tributaries.

The Master says "No." The other states may claim all of the 3.1 million acre-feet and all of the one half of excess or surplus from the waters released from Lake Mead, undiminished by their uses upon the tributaries (including as a "tributary" the main stream above Lake Mead): The limitation's reference to Article III(a) of the Compact is "inappropriate" (Rep. 173),[1] and is therefore excised. The reference to Article III(a) means "the water stored in Lake Mead and flowing in the mainstream below Hoover Dam" (Rep. 173).

Manifestly, if the Compact requires accounting for uses on the tributaries against the lower basin's III(a) ceiling of 7.5 million acre-feet, the lower basin states cannot claim against the upper basin (which is their major source of supply) the whole 7.5 million acre-feet out of the main stream as within that ceiling. Thus, if the limitation on California and the secretarial contracts effectuate an allocation of 7.5 million acre-feet from Lake Mead and below, this allocation exceeds the Compact "ceiling" or "embargo" (Rep. 140, 196). Since

---

[1]The United States says that depletions on tributaries and the main stream above Lake Mead are deductible from "allocations" to Arizona and Nevada from the "mainstream," but does not deduct the uses on other tributaries, *e.g.*, the Gila (U.S. Op. Br. 7-21). Arizona and Nevada agree with the Master's result. (See parts Three and Four of this brief.)

the Secretary is required by statute[2] to operate Lake Mead (and each of the dams above Lake Mead) in conformity with the Compact, shortage in the allocations made by the Master's "contractual allocation scheme" is automatic and certain whenever the Secretary restricts either the inflow to, or releases from, Lake Mead to enforce the Compact "ceiling."[3]

Put another way, water to supply 7.5 million acre-feet of consumptive use from Lake Mead and below can only be found if it is assumed that the Compact ceiling on lower basin appropriations will never be enforced. If the Compact is enforced, the Master's formula produces a built-in shortage.[3a] His formula presupposes (1) that the act of Congress that gave consent to the Compact simultaneously created this anomalous result; and (2) that the California Legislature in 1929, after passage of the Project Act, ratified these two inconsistencies,[4] and agreed that California's rights might be reduced, not to 4.4 million acre-feet, but to 44/75 of a quantity which could never be as great as 7.5 million acre-feet if the Compact is enforced.

---

[2]Project Act §§ 8(a) (Rep. app. 389) and 13(b) (Rep. app. 393); Colorado River Storage Project Act of 1956, §§ 7 and 14, 70 Stat. 109, 110, 43 U.S.C. §§ 620f, 620m (1958).

[3]The proposed decree would permit Arizona to divert for the Central Arizona Project any quantity it pleased between Lake Mead and Lee Ferry, without accounting for it against Arizona's allocation; if the diversion is made there, the shortage is to that extent deepened.

[3a]Arizona agrees that the Compact controls main stream supply legally available in the lower basin. Ariz. Op. Br. 26.

[4]Ariz. Ex. 12 (Tr. 230), Act of Jan. 10, 1929, CAL. STATS. 1929, ch. 1, p. 1 (ratifying Colorado River Compact as a seven-state agreement); Ariz. Ex. 13 (Tr. 230), Act of March 4, 1929, CAL. STATS. 1929, ch. 15, p. 37 (ratifying Compact as six-state agreement); Ariz. Ex. 14 (Tr. 232), Act of March 4, 1929, CAL. STATS. 1929, ch. 16, p. 38 (California Limitation Act).

Arizona and Nevada apparently recognize that the limitation and the Colorado River Compact must somehow be harmonized.[5] Arizona suggests a method for harmonizing them, in an argument sometimes identified as an alternative ground to sustain the Master's conclusions.

The Arizona alternative would write lower basin tributaries out of the Compact instead of writing the Compact out of the limitation. Arizona insists that it makes little difference which alternative is selected. This is a major error.

The Master's decision and the Arizona alternative argument are contradictory in almost every essential respect. Arizona arrives at a limitation which refers to a "mainstream" from Lee Ferry to Mexico.[6] The Secretary's physical control of the main stream beginning at Lake Mead and an allocation based on that control by means of Lake Mead water delivery contracts cannot physically apply to a main stream which begins at Lee Ferry 275 miles above Lake Mead.

The effect of the Master's construction of the limitation is to defeat every rational purpose to be served by the Limitation Act. California could use any quantity of water diverted between Lee Ferry and Lake Mead, in addition to quantities specified in the limitation. Arizona could use any quantity from the same source without regard to any "contractual allocation." Plans for such diversions by both California and Ari-

[5]"The Master construes the Compact as a separate and independent document wholly apart from and without reference to the Project Act (Rep. 138-51). In this we believe he is in error." Ariz. Op. Br. 67.

Nevada makes essentially the same argument (Nev. Op. Br. 35-36) but apparently fails to recognize that the Master does not harmonize these two documents.

[6]Ariz. Op. Br. 72-81.

zona were under active study when the Project Act was under consideration, as Congress well knew. (Calif. Op. Br. 124-27 and plate 2.)

The Master's decision and the Arizona alternative argument have in common, however, the failure to recognize the purpose and the proper motive of both the Colorado River Compact ar . the limitation accepted by California for including lower basin tributaries.

1. *The Upper Basin's Interest in the Inclusion of Lower Basin Tributaries in the Compact Accounting*

Manifestly the upper basin states have never had any hope or expectation of using water from lower basin tributaries. The Compact, however, was negotiated in the recognition that supplying water to Mexico was an obligation of both basins.

Article III(c) provides (Rep. app. 373):

> "If, as a matter of international comity, the United States of America shall hereafter recognize in the United States of Mexico any right to the use of any waters of the Colorado River System, [1] such waters shall be supplied first from the waters which are surplus over and above the aggregate of the quantities specified in paragraphs (a) and (b) [of Article III]; and [2] if such surplus shall prove insufficient for this purpose, then, the burden of such deficiency shall be equally borne by the Upper Basin and the Lower Basin, and whenever necessary the States of the Upper Division shall deliver at Lee Ferry water to supply one-half of the deficiency so recognized in addition to that provided in paragraph (d) [of Article III]."

The inclusion of the lower basin tributaries in the Compact accounting serves two important and rational purposes for the upper basin, as our bracketed numbers indicate (see upper basin views quoted *infra* at 99-100):

[1] The quantity of consumptive uses on lower basin tributaries affects the quantity of "surplus" water, if any, in the system over and above the aggregate of the quantities specified in Article III(a) and (b). Article III(c) requires that "surplus" water be first yielded to supply Mexico. [2] The quantity of consumptive uses on lower basin tributaries affects the determination of whether there is any "deficiency" in the "surplus" to supply Mexico, and, if so, whether that "deficiency" is being "equally borne" by the upper and lower basins, as Article III(c) also requires.[1]

---

[1]The relationship of the lower basin tributaries to the Colorado River Compact was carefully explained by Arizona herself on p. 33 of her brief in Arizona v. California, 283 U.S. 423 (1931) (reproduced in Appendixes to Calif. Answer to Ariz. Bill of Complaint, app. 28 (pp. 386-99), at 398):

> "This 75,000,000 acre-feet is not apportioned to the Lower Basin. It may not be appropriated in the Lower Basin. Only so much of it may be appropriated as together with existing and future appropriations of water in or from tributaries entering the river below Lee Ferry will total 7,500,000 acre-feet per year. The 75,000,000 acre-feet includes all surplus waters which under paragraph (c) must first bear any Mexican burden, which may not be appropriated, and which are subject to apportionment after 1963. It is fundamental to an understanding of the Compact that the annual beneficial consumptive use in perpetuity of 7,500,000 acre-feet of water apportioned by it to the Lower Basin includes all beneficial consumptive use in perpetuity which may be made from the whole river system, and is not merely an apportionment of such uses in main stream water flowing at Lee Ferry. The agreement not to deplete the flow at Lee Ferry below the specified amount does not mean, and cannot under the plain words of the Compact be construed to mean, that the guaranteed flow is apportioned to the Lower Basin or may be appropriated there. As to this, at least, there can be no shadow of doubt."

These two points can be illustrated by one example: Assume that the supply from the main stream and tributaries will sustain 8.5 million acre-feet of consumptive use in the lower basin after satisfaction of the full Mexican Treaty burden:

a. If the lower basin tributaries are included in the Compact allocations, there is no deficiency in the lower basin allocation after satisfaction of the Mexican burden; the treaty requirement has been met out of "surplus." Hence, the lower basin cannot call upon the upper states to deliver additional water at Lee Ferry.

b. If the lower basin tributaries which support 2 million acre-feet of consumptive uses are excluded from the Compact allocations, the remaining lower basin main stream supply will sustain only 6.5 million acre-feet (8.5 million acre-feet minus 2 million acre-feet) of the lower basin's 8.5 million acre-foot allocation under Article III(a) and (b). The deficiency thus created is exactly equal to the measure of the lower basin tributary uses (2 million acre-feet) which are excluded from the accounting. Hence the lower basin can call upon the upper states to deliver additional water at Lee Ferry so that the burden of the deficiency is borne equally under the provisions of Article III(c).[2]

2. *California's Interest in the Inclusion of Lower Basin Tributaries in the Limitation Accounting*

Our interest may most simply be illustrated by the same example given above; 8.5 million acre-feet of con-

[2]The exact measure of that additional delivery at Lee Ferry depends upon (1) the extent of Article III(a) uses in the upper basin (*i.e.*, the deficiency in the upper basin allocation) and (2) certain questions of interpretation of the meaning of "deficiency" and "equally borne" in Article III(c). We do not probe these questions here.

sumptive use throughout the lower basin, of which 2 million acre-feet is from tributaries and 6.5 million acre-feet is from the main stream:

a. If the lower basin tributaries are included in the limitation accounting:

(1) Our 4.4 million acre-feet out of the first 7.5 million acre-feet is assured because there is no shortage even if the main stream supply should be reduced to 5.5 million acre-feet (this is the residue of the III(a) apportionment after deducting therefrom 2 million acre-feet of uses on the tributaries), or 1 million acre-feet below the Compact ceiling of 6.5 million acre-feet on main stream uses.

(2) There is excess or surplus in half of which California may share whenever the main stream supply exceeds 5.5 million acre-feet. One million acre-feet of "excess or surplus," *i.e.*, the million acre-feet referred to in Article III(b), exists within the Compact ceiling of 6.5 million acre-feet on main stream uses.

b. If the lower basin tributaries are excluded from the limitation accounting:

(1) Our 4.4 million acre-feet is subject to reduction if proration is adopted because the main stream supply within the Compact ceiling (which encompasses 2 million acre-feet of uses on the tributaries) is only 6.5 million acre-feet per annum. The problem of shortage in "Article III(a) waters" faces California unless the main stream supply is 7.5 million acre-feet[3] which ex-

[3]The Lee Ferry flow necessary to sustain 7.5 million acre-feet of consumptive use in Arizona, California, and Nevada from the main river must exceed 10 million acre-feet, because more than 2.5 million acre-feet of the Lee Ferry flow cannot be used in the United States. 1.5 million must be passed on to Mexico. In addition, losses below Lee Ferry exceed tributary inflow below

ceeds the Compact III(a) and (b) ceiling by 1 million acre-feet of "surplus."

(2) There can be no excess or surplus, of which we may take one half, unless the main stream supply exceeds the Compact ceiling (6.5 million acre-feet) by more than 1 million acre-feet.

Thus, in effect, the inclusion of lower basin tributaries in the limitation accounting insulates *pro tanto* our rights from being cut back to supply the Mexican Treaty requirement, just as the inclusion of those tributaries in the Compact insulates *pro tanto* the upper basin's Compact apportionment from the impact of the treaty. In each instance the inclusion of tributaries is both rational and fair.

3. *The Irrational Consequences of Severing Compact From Limitation*

Arizona and Nevada, in asserting that the Compact and limitation must be harmonized, at least concede the necessity of avoiding a construction which is incredible in terms of statutory construction and incredible in terms of result.

a. In terms of statutory construction

Under the Master's construction which severs Compact from limitation this result is accomplished in terms of the agreement which California accepted: California is limited to the annual consumption of

> "four million four hundred thousand acre-feet of the waters apportioned to the lower basin States

---

that point by about 1 million acre-feet, and if water to supplant those losses is not furnished at Lee Ferry, downstream consumptive use must be curtailed to do so. Calif. Op. Br. plate 7 and accompanying notes. The historic excess of losses over inflow is substantially greater than 1 million acre-feet. For historic inflow, see Rep. 119-23. For historic losses, see Rep. 124-25.

by paragraph (a) of Article III of the *Colorado River compact,* plus not more than one-half of any excess or surplus waters unapportioned by *said compact,* such uses always to be subject to the terms of *said compact.*"

We have italicized three references to the Colorado River Compact in the course of the 53 quoted words. Whether appropriate or inappropriate, those three references—"Colorado River compact" and "said compact" (twice)—must mean the same thing. The Master, however, arrives at the incredible result that "Colorado River compact" and "said compact" are inappropriate references to the Compact in the first two instances, but not in the third instance. "Such uses"—*i.e.,* all California uses of "III(a)" and "excess or surplus"—are subject to the terms of "said compact," and in the third instance this means the systemwide Colorado River Compact. Section 8(a) of the Project Act[4] leaves no room for doubt, and nothing in the Master's proposed decision purports to relieve California or the lower basin of the restrictions of the Compact.

b. In terms of result

The terms of the limitation which we quote above are the operative part of the limitation. If the Compact includes lower basin tributaries, as the Master

---

[4]Section 8(a) of the Project Act provides (Rep. app. 389): "The United States, its permittees, licensees, and contractees, and all users and appropriators of water stored, diverted, carried, and/or distributed by the reservoir, canals, and other works herein authorized, shall observe and be subject to and controlled by said Colorado River compact in the construction, management, and operation of said reservoir, canals, and other works and the storage, diversion, delivery, and use of water for the generation of power, irrigation, and other purposes, anything in this Act to the contrary notwithstanding, and all permits, licenses, and contracts shall so provide."

says, the lower basin rights against the upper basin are diminished by uses on the lower basin tributaries. The lower basin cannot demand from the upper basin water consumed under the Compact allocation from lower basin tributaries.

Under the Master's decision "Compact" means "Compact" in the limitation when the result is to restrict the lower basin, and hence restrict California as a participant in the lower basin's right. "Compact" is an inappropriate reference when the effect would be to make California's right coextensive with the lower basin right. The result, as we have seen, coupled with the destruction of priorities, is that California cannot possibly approach 4.4 million acre-feet which the limitation specifies even though the lower basin's Compact right is fully supplied with the full 8.5 million acre-feet which III(a) and (b) specify.

Arizona's obligation to account for her tributary uses in the allocation of the Mexican burden is inseparable from her reliance upon a contract which, by state and federal statutes, is subject to the Compact,[5] as well as from her asserted ratification of the Colorado River Compact itself. If she effectively ratified that agreement, she assumed its burdens. Among its burdens is the "plain" mandate "that Article III(a), (b), (c), (f) and (g) deal with both the mainstream and the tributaries" (Rep. 142). That obligation runs to all six of the other states, including California. The Compact was not altered by enactment of the Project Act or the Limitation Act. The effect of rewriting either the Limitation Act as the Master proposes or the Compact

---

[5]Project Act § 8(a), Rep. app. 389; ARIZ. LAWS 1944, ch. 4, p. 419 (Ariz. Ex. 11 (Tr. 228)), ratifying Ariz. 1944 contract; see also art. 13 of that contract, Rep. app. 406.

as Arizona proposes, to exclude the tributaries, would amount to unjustifiable judicial legislation,[6] and would abrogate the bargain of the Limitation Act. But if that is done with respect to "III(a) water in the Project Act sense" (Rep. 149), then it must be done with respect to III(a) water in the "Compact sense" *(ibid.)*, and vice versa.

B. The Issue of Priorities in the Event of Shortage

If the supply which is available from Lake Mead in any given year is inadequate to sustain 4.4 million acre-feet of consumptive use in California, plus the main stream claims of Arizona and Nevada within the Compact ceiling, how is the burden of the shortage to be borne?

The Master says that shortages are to be borne pro rata, in ratios which assume that the 4.4 million acre-feet which California may use, and the 3.1 million from which she is precluded, were all intended to be used from the main stream, on a basis of parity,[7] except for the protection of "present perfected" rights which must not be impaired (but these rights are nevertheless included in his allocation ratios with exactly the same weight as the claims for projects not yet built or authorized).[8] (Rep. 305-12.)

---

[6]"It is our judicial function to apply statutes on the basis of what Congress has written, not what Congress might have written." United States v. Great Northern Ry., 343 U.S. 562, 575 (1952). See also United States v. Calamaro, 354 U.S. 351, 357 (1957); Crooks v. Harrelson, 282 U.S. 55, 59-60 (1930).

[7]Rep. 305-14. He derives this ratio, however, not from § 4(a) of the Project Act, which he declines to treat as a mandatory allocation formula (Rep. 162-63, 202), but from a "contractual allocation scheme" of the Secretary which substantially but not precisely followed the pattern suggested in § 4(a) for an interstate compact never consummated (Rep. 221-24).

[8]Arizona alleged that 1.7 million acre-feet of the main stream

California says that the burden of shortages is to be borne in accord with the principles of equitable apportionment, applied interstate, whether the competing claims are rooted in state law or in federal contracts, and that the primary elements of equitable apportionment are (i) interstate priorities of appropriation and (ii) the principle that existing uses which support a going economy are not to be destroyed.

The United States position is ambiguous on this point, conceding the existence of priorities as between projects above and below Hoover Dam, asserting that some of the priority attributes of appropriations attach to federal water contracts, insisting on the Government's right to determine intrastate priorities of its contract holders, but stopping short of recognition of interstate priorities. (U.S. Op. Br. 16-17, 21-47.)

Arizona endorses the principle of proration[9] except for her insistence that her projects' priorities as against Indian reservations survived the enactment of the Project Act.[10] Nevada endorses the Master's scheme but concedes, in discussing the legislative history of the Project Act, that the Senators—

> "unquestionably believed that they were taking effective action on the amount of water which California would have as a *prior right* and thus guaran-

---

water she claimed (2.8 million) was "not being presently used and consumed in Arizona." (See Complaint, par. XVII, p. 21; Ariz. Reply, par. 8, pp. 16-17.)

[9]Ariz. Op. Br. 105. However, Arizona finds a mandatory proration formula in § 4(a) of the Project Act (*id.* at 83-99), contrary to the Master (Rep. 162-63). She says that if the act did not lay down such a mandatory formula, the authorization for contracts in § 5 lacks necessary constitutional directions to the Secretary (Ariz. Op. Br. 88-89, 99).

[10]Ariz. Op. Br. 181.

tee [*sic*] the allocation of the balance available to the other two States." (Nev. Op. Br. 42. Emphasis added.)

§ III. WATER SUPPLY

In our opening brief (pp. 232-61), we stated the reasons why we believe that the dependable supply of the main stream will not support, on a permanent basis, as much as 6 million acre-feet annually of consumptive use—some 500,000 acre-feet less than the Compact's ceiling on main stream appropriations (*supra* pp. 8-11).

The other parties do not, in their opening briefs, expressly meet this major problem of the determination of the dependable water supply; however, their arguments, significantly, assume the existence of shortage.

Nevada, for example, asserts that her allocation under the Master's formula should not be reduced to supply "present perfected rights" in the other states. Nevada further asserts that, in the alternative, the decree should provide that her allocation should never be reduced below a minimum of 250,000 acre-feet. (Nev. Op. Br. 56-58.) Arizona also contends that "present perfected rights" should not be accorded interstate protection and, in the alternative, argues that such rights are to be measured as of November 24, 1922, rather than as of June 25, 1929 (Ariz. Op. Br. 46-56), so that (she apparently assumes) the quantity of such rights in California would be smaller. The United States contends that the Master's proposed invalidation of the deduction clauses in the Arizona and Nevada water delivery contracts (reducing their deliveries of Lake Mead water because of upstream consumptive uses) will have an "adverse effect upon California's estab-

lished projects" which "ought not to be imposed in the absence of a clear requirement therefor" in the Project Act or its legislative history (U.S. Op. Br. 21).

All of these arguments would be of no practical consequence if the Master's assumption of an abundant water supply into the indefinite future were correct. This paradox suggests that each of these parties is in fact concerned that the supply may indeed be less than 7.5 million acre-feet—a possibility that becomes a certainty whenever the Compact ceiling of 6.5 million acre-feet on main stream consumptive uses is enforced, and that becomes an even bleaker prospect when the main stream supply shrinks to its permanently dependable regimen which will sustain less than 6 million acre-feet annually of consumptive use. The result to California of the Master's proposed "mainstream" allocation, in the face of this inadequate dependable supply, is detailed in our opening brief (pp. 261-77).

PART TWO

ANSWER TO THE UNITED STATES OPENING BRIEF

PART TWO

ANSWER TO THE UNITED STATES OPENING BRIEF

§ I. THE SEVERANCE ISSUE: THE UNITED STATES POSITION IS IRRECONCILABLE WITH THE MASTER'S CONCLUSIONS

The major premise for the Master's construction of the limitation on California and for his "contractual allocation scheme" is that Congress intended the Project Act, particularly sections 4(a) and 5, to apply only to those waters of the Colorado River which could be delivered from Lake Mead and the main stream below Hoover Dam (Rep. 173-74, 183-84). From this premise, the Master reasons that Congress truncated the main stream of the Colorado River at Lake Mead and excluded all tributaries in the lower basin as well as the main stream above Lake Mead, which is redefined as a "tributary." Upon the same reasoning, the Master concludes that uses in Arizona and Nevada above Lake Mead cannot be taken into account by the Secretary of the Interior as deductions in deliveries from Lake Mead in each state. (Rep. 246-47.)

The United States disagrees with the Master's premise and his conclusions that follow. Congress, it argues, did not limit the application of the Project Act to waters physically controlled by Hoover Dam (U.S. Op. Br. 12):

> "[The Master's analysis] . . . appears to attribute to Congress a disregard for anything which might

happen above the reservoir to frustrate or partially to frustrate the purposes of the dam."

Consequently, the United States apparently argues that the Project Act did not truncate the main stream at Lake Mead. We say "apparently" because the United States does not explicitly state its own definition of "mainstream," and its references to the waters to which section 4(a) refers are not consistent.[1]

The United States likewise asserts that various consumptive uses of water above Lake Mead, both on the main stream and the tributaries, must be taken into account (U.S. Op. Br. 20):

> "This is necessary to achieve Congress' purpose to impound and regulate 'substantially all the mainstream water' and to accomplish the interstate allocation established by the Section 4(a) limitation on California and the delivery contracts with Nevada and Arizona. We urge the Court to adopt this view."

The United States thus attacks major premises of the Master's Report: his construction of the limitation and his contractual allocation scheme which, he declares,

---

[1]For example, the United States says it agrees with the Master that "the waters contemplated by Congress in enactment of Section 4(a) of the Project Act are mainstream waters" (U.S. Op. Br. 11), but its statement is found in a section of the United States brief devoted to proving that the Master errs by defining "mainstream" to exclude consideration of all waters above Lake Mead. In answer to the Master's conclusion that depletions of the flow, for instance, of the Little Colorado River into Lake Mead are excluded from the purview of the Project Act, the United States says: "We suggest that the 100,000 acre-feet of Little Colorado depletions is part of the total mainstream supply available for allocation. . . ." (U.S. Op. Br. 20.)

would founder upon the premises then and now asserted by the Government. The Master said:

> "Articles 7(d) and 5(a) [of the Arizona and Nevada contracts, respectively, which the United States asserts are valid] are inconsistent with the Section 4(a) limitation on California's use of mainstream water, and indeed, defeat the basic purpose of the delivery contracts themselves; namely, to provide for the allocation in fixed proportions among Arizona, California and Nevada of all the mainstream water released for use in the United States." (Rep. 241; bracketed material added.)[2]

> "[T]he United States' suggestion [requiring accountability for uses above Lake Mead under articles 7(d) and 5(a) of the Arizona and Nevada contracts, respectively] would violate the interpretation of Section 4(a) proposed in this Report, an interpretation to which the United States herself agrees. Thus Section 4(a) limits California to 4.4 plus half of surplus out of the total consumptive use of water diverted from the *mainstream;* it establishes a mainstream, not a system-wide, method of accounting. But the United States' suggestion would import tributary considerations into the Section 4(a) limitation. . . . " (Rep. 244, emphasis in original; bracketed material added.)

We agree with the United States that Congress did not build the great dam and reservoir at Black Canyon without regard to the right of the United States or the water users served to protect the water supply. How-

[2]See also Rep. 183, 185.

ever, the United States has deliberately postponed its major brief on these issues for its answering brief to be filed August 14, 1961. (U.S. Op. Br. 6.) Accordingly, we reserve our further response.

§ II. THE PRIORITY ISSUE: THE RESULT FOR WHICH THE UNITED STATES PROPERLY ARGUES CAN BE ACHIEVED ONLY BY FULL RECOGNITION OF EQUITABLE APPORTIONMENT PRINCIPLES

The United States accepts the premise that the application of principles of priority in a contest between water users above and those below Lake Mead is necessary to protect the Lake Mead water supply and to accord protection to established projects (U.S. Op. Br. 16-17, 21). We agree. But the same necessity compels full recognition of priorities between water users below Lake Mead. The acceptance of the initial premise inevitably leads to that very conclusion.

The United States argument reaches substantially the destination urged by California, but by a route indefensibly tortuous. California argues that the Project Act preserved—within the ceiling established by the limitation—the principles of equitable apportionment and priority of appropriation preexisting that act. Those principles, developed over a period of more than 100 years, clearly define the rights of water users *inter sese* when shortages in water supply occur. Their application requires no semantic exercise, no dubious inferences, and raises no constitutional difficulties. The United States, however, insisting that equitable apportionment was destroyed below Hoover Dam and that rights in water impounded by Lake Mead depend solely upon secretarial water delivery contracts, finds it neces-

sary by implication, inference, and other interpretive techniques to mold water delivery contracts into instruments having the effect of recreating equitable apportionment.

The legislative history and contemporaneous construction of section 5 of the Project Act conclusively demonstrate that the water delivery contracts contemplated by that section were to be executed with water users in the pattern previously established under other provisions of the reclamation law. (See Calif. Op. Br. 175-77.) Nevada has accurately pointed out that the "historical pattern followed under the general Reclamation Law has, of course, been one in which the Secretary has contracted for the delivery of specific quantities of water to the various entities who would be entitled to divert and use them." (Nev. Op. Br. 41.) The Government characterizes such contracts as "definitive contracts for the delivery of specified quantities for specific projects." (U.S. Op. Br. 17.) Such contracts are neither patents nor grants. They evidence the consent of the United States to the initiation of a right of which beneficial use is expressly made "the basis, the measure, and the limit"[3] as under any other appropriation.

If Congress intended secretarial water delivery contracts to be the sole basis of rights to water impounded by Hoover Dam, its choice of language in section 4(a) of the Project Act is incomprehensible. In establishing, as alternative conditions to the effectiveness of the Project Act, seven-state ratification of the Colorado River Compact or six-state ratification of the

[3]Reclamation Act of 1902, § 8, 32 Stat. 390, 43 U.S.C. § 372 (1958).

Compact plus the enactment of the California Limitation Act, Congress declared in section 4(a):

> "[N]o water rights shall be claimed or *initiated* hereunder, and no steps shall be taken by the United States or *by others to initiate or perfect* any claims to the use of water pertinent to such works or structures unless and until . . . ." (Emphasis added.)

The words "initiate" and "perfect" used in connection with "water rights" are words of art which refer to successive steps in acquiring appropriative rights: The term "initiate" refers to the act of filing a notice of appropriation; the term "perfect" relates to the completion of works and (in some instances) the application of water to land. The two steps, in the nature of things, are usually separated by a considerable lapse of time—often many years. Those words cannot refer to a right both initiated and perfected simultaneously in one step by the Secretary's signing a water delivery contract. Moreover, how could "others" than the United States have "initiated" and "perfected" a federal water delivery contract?

The Nevada and Arizona contracts on which the Master and the United States rely in discovering an interstate contractual allocation scheme do not fit that pattern. They do not purport to do so. The United States says that they are documents "designed primarily to allocate waters for use within those States." (U.S. Op. Br. 17.) Manifestly, they are not contracts "for the storage of water in said reservoir and for the delivery thereof at such points on the river as may be agreed on" authorized by section 5 of the Project Act. As "allocations" they are *ultra vires:* Water "alloca-

tion" contracts with states are not contemplated by the Project Act at all. Congress did not delegate power to the Secretary to make interstate allocations of waters of the Colorado River, and the Secretary did not purport to exercise any such power.[3a]

A. The United States Correctly Recognizes (1) That the Purposes of the Boulder Canyon Project Act Would Be Frustrated in the Absence of Protection to Rights to Water Which Supplies Lake Mead and (2) That the Priority Principle Is Essential to That Protection

The Master's decree would allocate among Arizona, California, and Nevada pro rata shares of the water that the Secretary of the Interior may make available for consumptive use from whatever water may happen to reach Lake Mead. The United States attacks two basic aspects of the Master's proposed decision in points I and II of its opening brief (pp. 7-21): (1) the Master's definition of "mainstream" and the limitation of his adjudication to a segment of the main Colorado River in the lower basin; (2) the Master's invalidation of the provisions of the secretarial contracts which provide deductions on account of Arizona and Nevada uses above Lake Mead. The United States objections are well taken.

The United States properly recognizes that neither Congress nor the California Legislature disregarded either the water or the water rights above Lake Mead. The United States likewise recognizes that the Master's

---

[3a]The United States confines itself to a statement of its conclusion that secretarial contracts with Arizona and Nevada are interstate allocations. The conclusion cannot be sustained. However, the Government apparently defers its argument in support of this conclusion to a later brief (U.S. Op. Br. 6), and we accordingly defer our reply.

invitation to protect the rights of downstream users and the water supply of Lake Mead by future equitable apportionment suits is entirely unrealistic (U.S. Op. Br. 21):

> "Any problems in administration of the 7(d) and 5(a) contract provisions (Report, p. 246) [the provisions of the Arizona and Nevada contracts invalidated by the Master] would be relatively slight in comparison with the complications which might well be involved in case of suit by California to protect itself against 'undue depletions on the tributaries and the mainstream above Lake Mead * * * .' (Report, p. 247.)[4]
>
> "The adverse effect upon California's established projects of the ruling with respect to the Article 7(d) and 5(a) contract provisions ought not to be imposed in the absence of a clear requirement therefor in the controlling statute or its legislative history. We believe no such requirement exists." (Bracketed material added.)

The vice in the Master's scheme is not its application of equitable apportionment and priority in the rights above Lake Mead. Indeed, there is no discoverable difference among the Master, the United States, and California in respect of those rights. The Master's error

---

[4] (Footnote ours.) What the United States calls "complications" might better be described as impossibilities. The Master foresees a suit by California, based on appropriations by California projects, to prevent water from being intercepted before it reaches Lake Mead. If such a suit were successful, however, the priorities would precipitate like silt from the water when it reached the storage reservoir, under the Master's scheme, for 31/75 of that water by the terms of the recommended decree would go to Arizona and Nevada, defendants in the hypothetical suit, irrespective of the priorities of their water users. See Calif. Op. Br. 228-31.

is in substituting parity for priority as the basic characteristic of water rights from Lake Mead to Mexico.

The United States perceives the Master's error and takes the first essential steps to remedy it when it correctly maintains that priorities attach both to water rights above Lake Mead and to water rights from Lake Mead to Mexico. In attacking the Master's invalidation of the deduction clauses in the Arizona and Nevada contracts,[5] the United States asserts (U.S. Op. Br. 16):

> "If the contract rights preceded in time the upstream appropriations, the Special Master recognizes (Report, p. 241) that under the law of both States the contract rights would be senior. Thus there would not be permitted any diversion upstream that would interfere with the senior contract use and thus there would be no occasion for any reduction of deliveries under the contracts and no impairment of their permanence. If, on the other hand, new upstream appropriations should precede the execution of contracts for the full allocations to these States, then the Secretary would be authorized to refuse to enter into contracts for the full allotments. Although this would reduce the quantity of water which the Secretary would contract to deliver, it would not affect the permanency of contracts already made."[6]

---

[5]The Master gives three reasons for invalidating these deduction clauses: (1) They offend the requirement of § 5 of the Project Act that contracts "shall be for permanent service," (2) they violate § 18 of the Project Act (which the Master says compels recognition of intrastate priorities), and (3) they result in an allocation "totally out of harmony" with the limitation on California. Rep. 237-47.

[6]See also U.S. Op. Br. 4.

These points are implicit in the United States argument:

(1) Appropriative priorities attach to and control rights in the Colorado River system above Lake Mead. The Special Master and California both agree.

(2) Priorities attach to "definitive contracts for the delivery of specific quantities [of water] for specific projects" (U.S. Op. Br. 17), although they do not attach to en bloc contractual "allocations" to states.[7] Apparently, in the United States view, these are not appropriative priorities, but priorities arising on "the execution of contracts." (*Id.* at 16.) We agree with the result urged by the United States but not with its rationale.

---

[7]The United States recognizes that there is a sharp distinction between such "definitive contracts" (that is, contracts which comply with the provisions of § 5 of the Project Act for the delivery of water stored in Lake Mead) and contracts like the contract executed by the Secretary with the State of Arizona; to the former the United States attributes the characteristics of water rights, to the latter the United States does not.

Accord, opening statement of Mr. Warner for the United States (Tr. 12,429): "We think that under the Boulder Canyon Project Act the contracts made in conformity to Section 4(a) for delivery of specified quantities to particular projects or districts are the equivalent, for this purpose at least, of valid appropriations for such projects and districts of the navigable waters of the Colorado River, subject only to the exercise by the United States of the navigation servitude and such reservations ahead of the contracts as may have been made and preserved.

"We do think, however, that the Nevada and Arizona contracts do not have this effect, at least to the extent of requiring the United States to pay compensation to anyone if, in pursuance to their constitutional powers a portion of the waters with which those contracts are concerned not previously appropriated to a specific purpose is applied to a proper Federal purpose within either of those States. . . ."

We agree that the latter category of contracts bears no resemblance to water rights. We disagree, however, that those contracts are interstate allocations.

(3) Priorities to the use of water above Lake Mead and to the use of water from Lake Mead and below, whatever the basis of the rights, must necessarily be integrated into a common schedule of priorities. We agree.[8]

The United States explicit and implicit acceptance of these propositions should lead to one, and only one, conclusion: The priority principle (based either on appropriation or on contract) is the fundamental ingredient of water rights of users who face each other across the river as well as those of users who are neighbors on the same bank. But apparently the United States

---

[8]A century of experience has demonstrated the practical wisdom of the priority principle, which does not depend on the label attached to the appropriator's piece of paper or the identity of the sovereign issuing that paper. The principle has been applied in a contest between the holder of a state permit to appropriate water and the holder of a prior federal water delivery contract executed under the Warren Act. In Ramshorn Ditch Co. v. United States, 269 Fed. 80 (8th Cir. 1920), the United States was defending its right to dispose of seepage or return flow water from Pathfinder reservoir in Wyoming by Warren Act contract with users in Nebraska against a Nebraska ditch company which asserted rights under a later Nebraska appropriation. The United States prevailed on alternative grounds: (1) The seepage water not abandoned belonged under the law of Nebraska to the United States as the original appropriator and (2) the Warren Act contract and initiation of deliveries under it antedated the ditch company's appropriation. With respect to the second ground, the court said (*id.* at 88):

> "We are also of the opinion that by virtue of the so-called Warren Act, approved February 21, 1911 (36 Stat. 925 [Comp. St §§ 4738-4740]), and the Nebraska act of April 10, 1911 (Laws 1911, c. 151), apparently passed in aid of the Warren Act, that the contract between appellee and the Tri-State Land Company for the delivery of the water in controversy after the completion of the necessary ditches and controlling works was a valid contract, and gave appellant the right to furnish water for the irrigation of lands under the Farmers' or Tri-State ditch. The date of the contract August 20, 1912, and the furnishing of water thereunder July, 1914, are all prior to September 22, 1916, the date of the permit to the Ramshorn Ditch Company."

does not take the jump at which its argument runs. It injects one dubious and unexplained assertion in footnote 10 on page 30:

> "These contracts[8a] made no provision as to relative priority. *Presumably, then, the rule of ratability would apply as between them* except as the Project Act requirement for satisfaction of 'present perfected rights' establishes a different order." (Emphasis added.)

The United States hint that the chasm between its premises and the Master's conclusions can be closed by some species of presumption whose basis is unexplained[9] founders on impossibility: If priority exists between users above and users below Lake Mead, there must be priority *inter sese* among water users (appropriators or contractees) below Lake Mead. There *cannot* be priority as between contractees below Lake Mead and appropriators above Lake Mead but proration between contractees with respect to each other below Lake Mead. An example will suffice to give the reason:

Suppose that *A, B,* and *C* are water users with rights to 100,000 acre-feet each, initiated in 1945, 1950, and 1955, respectively. *A* and *C* are served by water delivery contracts of 1945 and 1955 below Lake Mead.

[8a] (Footnote ours.) The United States refers to "contracts with a water users association and four irrigation districts in Arizona." U.S. Op. Br. 30.

[9] Some of the "definitive contracts" with water users specify priority; some specify proration. (U.S. Op. Br. 29-34.) We fail to see the basis of any presumption, or even inference, that silence is the equivalent of proration even when wholly intrastate problems are concerned. A fortiori, where interstate rights are involved, we think that silence is merely silence, and the result of silence is to leave undisturbed the principles of priority, absent any specific modification thereof.

B, intervening in time, has an appropriation with 1950 priority above Lake Mead. Now comes a shortage, and only 200,000 acre-feet of water is available to serve the rights of *A*, *B*, and *C*, aggregating 300,000 acre-feet.

Who goes short?

We find it impossible to say, under the mutually contradictory rules suggested by the United States.

Surely not *A*. He has priority over *B*.

Surely not *B*. He is upstream and senior to *C*, and there is enough water by hypothesis to satisfy both himself and *A* who is senior to *B*.

Surely not *C*, if the United States hint is taken seriously, because *C* is on a parity with *A*, and *A* has a full supply.

We do not believe that the United States seriously suggests that Congress or the Secretary of the Interior intended to impose this unworkable system of water rights upon users of water below Hoover Dam.

Moreover, all of the considerations which have historically made the principle of first in time, first in right, universally applicable to appropriations apply also to contracts, assuming *arguendo* that contracts entirely displaced appropriations and were the exclusive source of water rights. The integrity of contracts "for 'permanent service'" requires the same result. If "permanent service" in section 5 on this hypothesis means anything, it means that the United States, having sold a water right to *A*, cannot sell the same water right to *C*. Although *C*, after the fact, might argue for proration in order to find water for himself out of a

supply adequate only to sustain *A*, it is an argument that *C* cannot very well win. The Secretary, by adopting the same principle, can indefinitely dilute *C's* rights (as well as *A's*) by executing further contracts with *D*, *E*, *F*, *et al.* This is impermanent service.

The priority principle stems first of all from practical necessity in the arid West—the universal recognition that proration of shortages destroys the value of the resource for everyone. (Calif. Op. Br. 54-60.)

With the elimination of footnote 10, the United States reaches a sound result but by an indefensibly devious route. The United States creates its own labyrinth by its insistence that Congress intended to delegate to the Secretary of the Interior power to allocate interstate water rights by contracts like these with the states of Arizona and Nevada. We think it clear that Congress did not intend anything of the sort. Hence we turn to our next inquiry to show that the rationale of the United States argument about the basis of water rights is unsound. The power to allocate water rights was not delegated to the Secretary, and the Secretary never purported to exercise such power.

B. Congress Did Not Delegate to the Secretary of the Interior Substantially Unlimited Power To Control Rights to "Mainstream" Water

In proposing that intrastate priorities (and, by inference, principles of equitable apportionment) were supplanted on the Colorado by congressional delegation of unlimited discretion to the Secretary of the Interior, the United States abandons the language of the Project Act, distorts the function of section 8 of the Reclamation Act of 1902, and suggests a concept of secre-

tarial power which we think is both fundamentally in error and capable of far-reaching and mischievous consequences. The United States arguments are made in the course of a section of its brief attacking a determination of the Special Master which is not dispositive of any issue in this case: "'[S]tate law governs intrastate rights and priorities to water diverted from the Colorado River.' (Rept. 216, 303.)"[1]

Over one half of the United States brief (pp. 21-47) is nominally devoted to wresting the word "state" from Article II(C)(1) of the recommended decree and substituting the word "applicable" in its stead, so that the United States would be enjoined from releasing water for "any use or user in violation of *applicable* [not state] law" (U.S. Op. Br. 23-24). The modification sought is no more than a semantic quibble: It is a matter of insignificant moment, if indeed it makes any difference at all, whether the label affixed is "state law," "federal law adopting state law," or "applicable law."[2] But the United States makes broad assertions to reach a result which would otherwise be innocuous.

The United States implies that there is here presented a contest between state and federal powers and

---

[1]Quoted in U.S. Op. Br. 22.

[2]For 75 years, a theoretical argument has been carried on about whether western appropriative rights arise under an original title created under state law by acts of appropriation or under a federal grant found in the Desert Land Act, 19 Stat. 377 (1877), as amended, 43 U.S.C. §§ 321-39 (1958), and related legislation. There are a number of cases where the choice of theory might affect the result, but the case has not yet arisen where it necessarily does so. *Compare* Howell v. Johnson, 89 Fed. 556 (C.C. D. Mont. 1898) (interstate recognition of appropriations on federal law theory), *with* Willey v. Decker, 11 Wyo. 496, 73 Pac. 210 (1903) (interstate recognition of appropriations on state law theory).

that the Court is called upon to resolve that conflict by its choice of federal or state law.[3] The United States misidentifies the contest. California does not contend that state law, as such, controls the disposition of the waters impounded in Lake Mead. The power which we challenge is the power the United States argues was delegated to the Secretary of the Interior. The United States argues that Congress delegated to the Secretary virtually unlimited power to dispose of the waters impounded by Hoover Dam.[4] We contend that Congress, in the Project Act and the reclamation laws of which it is an integral part, gave the Secretary specific directions controlling his disposition of the waters impounded by Hoover Dam. Among those directions is the command of section 8 of the Reclamation Act, incorporated into the Project Act—a federal command—that the Secretary must proceed in conformity with state law, and that "beneficial use shall be the basis, the measure, and the limit of the right." The Master's proposed "contractual allocation scheme" of perpetual allocations irrespective of use ignores these directions.

The United States suggests that an interpretation of the Project Act to require the Secretary to conform to state law intrastate creates a federal-state conflict on constitutional grounds. No such constitutional question

---

[3]See U.S. Op. Br. 36-40. The United States appears to suggest that there is some significant, though unidentified, conflict between priority principles embodied in state law (which the Secretary was commanded to follow by § 8 of the Reclamation Act of 1902) and the federal powers exercised in the Project Act. The conflict is illusory. Moreover, the suggestion ignores the salient fact that the Project Act and most, if not all, of the water delivery contracts executed pursuant to it were written with fastidious regard for avoiding any possible federal-state conflict.

[4]U.S. Op. Br. 25-27.

is presented.[5] The only constitutional question which could be reached is created by the United States interpretation of the Project Act as a delegation to the Secretary of substantially unlimited power to control the disposition of water and water rights.

Nothing in the terms of the Project Act, its legislative history and constitutional background, or its administrative construction lends support to the United States contentions.

1. *The United States Misconstrues Section 5*

a. Language of section 5

The United States argument is nominally based upon the terms of section 5 of the Project Act (U.S. Op. Br. 26-27). But the contentions it makes are primarily inferences the United States draws from language not found in the Project Act at all. The United States thus discusses the powers delegated by Congress to the Secretary in terms of his control of "project water supply" and "project operation." The United States supplies no comprehensible definitions for its new vocabulary;[6] the use of these coined terms obscures the United

[5]The United States appears to argue that the United States under the Constitution has unlimited power to control and dispose of water rights to water impounded by Hoover Dam; that Congress exercised that power in the Project Act and delegated all of its power to the Secretary; any restriction upon the powers of the Secretary is an unwarranted interference with the powers of the United States. The premises are wrong. It is entirely unnecessary to decide the constitutional limits of the United States to control water rights. Congress very clearly did not press its powers to constitutional limits in the Project Act (Arizona v. California, 298 U.S. 558, 570 (1936), discussed in Calif. Op. Br. 142 n.4). Moreover Congress did not purport to delegate any such unrestricted power to the Secretary of the Interior.

[6]The term "project water supply" is a label for peculiarly flexible concepts. Sometimes the United States describes "project water supply" as the "mainstream waters available in the Lower

States analysis. Whatever meaning the United States may assign to its phrases, it is apparent that Congress' intent in the Project Act cannot be divined by an exegesis of words that Congress did not use.

The principal difficulty with the United States rationale is that Congress not only wrote section 5, but sections 14 and 18 of the Project Act as well. In the latter sections, Congress made clear that the "applicable" law controlling the disposition of water rights and controlling the Secretary was founded on the principles of priority of appropriation and equitable apportionment.[7]

b. Constitutional background and legislative history of section 5

The constitutional background and legislative history of the Project Act refute the United States contention that Congress intended to delegate authority to the Secretary of the Interior to make either an interstate or intrastate allocation of the waters of the Colorado River. The constitutional climate prevailing during the 1920's was directly opposed to the Government's conten-

---

Basin" (U.S. Op. Br. 4); "substantially all the water of the mainstream" (*id.* at 10); and elsewhere as "the total mainstream supply available for allocation" of which "the 100,000 acre-feet of Little Colorado depletions is [a] part" (*id.* at 20). The meaning the United States ascribes to its term "project operation" is equally uncertain. The United States sometimes appears to suggest that all works and projects in the lower basin (past, present, and prospective) depending upon "project water supply," are one project—the Boulder Canyon Project—and distinctions between projects are thus obliterated. Elsewhere the United States recognizes, correctly, that the several projects and water uses below Lake Mead are not in any sense "one project," a point this Court has clearly recognized. See United States v. Arizona, 295 U.S. 174, 185-87 (1935); *cf.* United States v. Gerlach Live Stock Co., 339 U.S. 725, 733, 737-39 (1950). See U.S. Op. Br. 17, 25 n.6, 43.

[7]See discussion of §§ 14 and 18 *infra* at 62-75.

tions. (See Calif. Op. Br. 179 n.8, 181-82, 183, 186.)

To sustain its construction of section 5 of the Project Act, the United States relies upon remarks of two opponents of the bill denouncing it as an unwarranted assertion of federal power and upon an asserted failure of the proponents of the measure to protest their adversaries' statements. Following a quotation from the remarks of Mr. Colton of Utah, the United States comments: "The proponents of the bill made no response to this interpretation," (U.S. Op. Br. 27 n.8.)

Even if the United States comment were accurate, the inference it draws would be unfounded. Views expressed by opponents of an act are not persuasive legislative history.[8]

In fact, however, this United States comment is inaccurate. Mr. Colton's charges which the United States takes as a guide to construction were refuted by Mr. White of Colorado, a proponent of the bill[9] (and,

---

[8]See Schwegmann Bros. v. Calvert Distillers Corp., 341 U.S. 384, 394-95 (1951), per Mr. Justice Douglas: "The fears and doubts of the opposition are no authoritative guide to the construction of legislation. It is the sponsors that we look to when the meaning of the statutory words is in doubt."

In Mastro Plastics Corp. v. NLRB, 350 U.S. 270 (1956), the Court quoted with approval the foregoing statement from *Schwegmann* and restated the basis for the rule (350 U.S. at 288 n.22): "An unsuccessful minority cannot put words into the mouths of the majority and thus, indirectly, amend a bill."

[9]Mr. White was a member of the committee which considered the fourth Swing-Johnson bill (*Hearings on H.R. 5773 Before the House Committee on Irrigation and Reclamation*, 70th Cong., 1st Sess., pt. 1, at II (1928)) and which reported favorably on the bill. H.R. REP. No. 918, 70th Cong., 1st Sess., pt. 1 (1928). He spoke in favor of the bill (69 CONG. REC. 9781) and voted against a motion to recommit, which would have defeated it (*id.* at 9989). He voted for the bill as amended by the Senate, which became the Project Act (70 CONG. REC. 837).

in effect, by Mr. Colton himself), in the following colloquy which occurred between the two quotations of Mr. Colton which are selected by the United States (69 CONG. REC. 9648-49):

> "Mr. COLTON. Congress can not allocate water. . . .
>
> ". . . .
>
> "Mr. WHITE of Colorado. A while ago the gentleman stated that he doubted whether or not Congress had the power at this late date to nullify, abrogate, or change the doctrine of priority in the use of the water.
>
> "Mr. COLTON. I think they have not that power.
>
> "Mr. WHITE of Colorado. *There is no attempt to do anything of that kind by this bill.* On the contrary, the bill expressly provides for a compact among six States, and the only State that has shown the slightest tendency to stay out of the compact is Arizona. Now, how can that affect a State that is not a member of the compact?
>
> "Mr. COLTON. It can not." (Emphasis added,)

Shortly before the quoted exchange between Mr. Colton and Mr. White, similar assertions by Mr. Colton were denied by Mr. Bankhead[1] who also favored the

---

[1] "Mr. COLTON. . . . You are saying that you are going to take it [control] away from the States and place it in the Federal Government, and section 5 of this bill asserts that very principle. It provides that the Secretary of the Interior shall have control of all of the water stored in the reservoir and its delivery to any part of the river below. We deny that in principle and say it is against the very contract that this country has entered into with our Western States and contrary to the decisions of the United States Supreme Court.

fourth Swing-Johnson bill.[2]

Mr. Swing of California, the House author, responded as follows to Mr. Douglas' long and detailed speech,[3] from which the United States extracts a few lines (69 CONG. REC. 9635):

> "I only wish I had the time to go fully into each and every one of the contentions made by the gentleman from Arizona [Mr. Douglas].[4] They ought to be answered. They can be answered. They have been answered in the investigations made of the project and in the hearings held on this bill. No project has ever been presented to Congress which has been so thoroughly studied."

As Mr. Swing pointed out, the very contentions made by Mr. Douglas on the floor of the House had been challenged and thoroughly refuted in detailed hearings held on the bill; hostile Congressmen denounced the bill in hearings, debates, and lengthy filibusters on many grounds, including interference with states' rights. The charges had been and continued to be repeatedly denied by those favoring the bill.

"Mr. BANKHEAD. As I understand, the whole theory of this bill is predicated on the recognition of the right that the gentleman is now asserting, for the reason that nothing can be done by Congress under this bill until the States acting through this compact shall determine what their respective rights are in reference to this matter." 69 CONG. REC. 9648 (1928).

[2]Mr. Bankhead supported the measure and voted for the bill, 70 CONG. REC. 837 (1928).

[3]Mr. Douglas' full speech appears at 69 CONG. REC. 9623-35.

[4](Footnote ours.) H.R. Res. 208, 70th Cong., 1st Sess. (1928), had limited general debate on the Swing-Johnson bill (H.R. 5773) to eight hours, to be divided equally between opponents and proponents of the bill (69 CONG. REC. 9486, 9490), and part of the time of the proponents had expired (*id.* at 9491-99, 9506-09, 9510-13).

For example, Representative Swing had earlier given a conclusive answer to the United States contention concerning intrastate rights:[5]

> "[The water user] . . . will acquire his water right, if he acquires one, from the State and under the laws of the State, in which he puts the water to a beneficial use. There is nothing in this bill which puts the Government in conflict with the water laws of Arizona or Utah or any other State. As a matter of fact, the reclamation law is adopted by section 13 [section 14 as enacted] of this bill, and section 8 of the reclamation act says that what the Government does must not be in conflict with the water laws of the States, so there can be no violence done State laws on this score.
>
> "If the water is used in Arizona, the water right must be acquired under the laws of Arizona; if in Nevada, under the laws of Nevada; if in California, under the laws of California."

At the time Mr. Swing made this statement, the first paragraph of section 5 of the bill as reported by the House Committee on Irrigation and Reclamation[6] was substantially identical with the first paragraph of section 5 of the act (Rep. app. 384).

It is unlikely that any member of the House took seriously Mr. Douglas' diatribe. For example, Mr. Douglas charged (69 CONG. REC. 9627):

---

[5]*Hearings on H.R. 9826 Before the House Committee on Rules,* 69th Cong., 2d Sess., pt. 3, at 116 (1927). *Accord,* Mr. Swing's statement in *Hearings on H.R. 5773 Before the House Committee on Irrigation and Reclamation,* 70th Cong., 1st Sess. 56-57 (1928) (reproduced in Calif. Ex. 1804 (Tr. 12,237), at 2-4).

[6]H.R. REP. No. 1657, 69th Cong., 2d Sess., pt. 1, at 31 (Dec. 22, 1926); Calif. Ex. 2053 for iden. (Tr. 11,177) at 19.

> "[The bill] . . . vests in the Secretary of the Interior complete control over the waters of the Colorado in and below Boulder Dam. In doing that . . . there will be erected upon the ruins of the rights of States a great tyrannical, socialistic bureaucracy. Democracy will be in its throes of death."

The proponents of the bill did not directly respond to this interpretation. Would the United States therefore argue that the Secretary's power is intended to be coextensive with that of a "tyrannical, socialistic bureaucracy"?

Fears expressed by opponents of the measure in the House were echoed in the Senate. The charge that the bill gave control of water rights to the Secretary of the Interior was repeatedly answered by the proponents of the measure. Senator King offered an amendment, accepted as part of the bill, which became section 18 of the Project Act,[7] preserving state law as the foundation of water rights. Senator King's views, stoutly opposing federal control of water rights, were well known to the Senate.[8]

---

[7] 70 CONG. REC. 593 (Dec. 14, 1928). Section 18 provides: "Nothing herein shall be construed as interfering with such rights as the States now have either to the waters within their borders or to adopt such policies and enact such laws as they may deem necessary with respect to the appropriation, control, and use of waters within their borders, except as modified by the Colorado River compact or other interstate agreement." Section 18 is discussed *infra* pp. 70-75.

[8] For example, eight days before Senator King offered § 18, he told the Senate, 70 CONG. REC. 169: "If the Senator [Hayden] means by his statement that the Federal Government may go into a stream, whether it be the Colorado River, the Sacramento River, or a river in the State of Montana, and put its powerful hands down upon the stream and say, 'This is mine; I can build a dam there and allocate water to whom I please, regardless of other rights, either suspended, inchoate, or perfected,' I deny the position which the Senator takes."

Senator King voted for the bill. 70 CONG. REC. 603 (1928).

Senator Hayden, at all times denying that Congress had the power to allocate the waters of the Colorado River, attacked the bill as an attempted assertion of unwarranted federal power; Senator Borah of Idaho totally rejected Senator Hayden's characterization of the bill.[9]

---

[9]"Mr. HAYDEN. . . . We look upon the passage of the bill as an assault upon the sovereignty of the State of Arizona. It could be based upon no other theory than that Congress has the right to apportion the waters of the Colorado River *and its tributaries* in accordance with a certain document, regardless of the wishes of the State of California. It seeks to impose the terms of the Colorado River compact upon the State of Arizona without the consent of that State. Therefore we resist it. . . . [W]e feel justified in opposing the passage of any proposed legislation that in any manner may seek to divide the waters of the Colorado River, in which the State of Arizona has an interest, without the consent of that State.

"Mr. BORAH. Mr. President, I do not desire to argue the question, but lest I may be misunderstood in the future—because this question is likely to come back here in another form with reference to some other bill—when I shall vote for this bill I shall vote for it upon the supposition that a mere act of Congress can not take away any rights of the State of Arizona." 70 CONG. REC. 390-91 (1928). (Emphasis added.) Senator Borah voted for the bill. *Id.* at 603 (1928).

Later, during the same colloquy with Senator Hayden, Senator Borah said, *id.* at 391-92: "I can see how Arizona might lose her rights, not by reason of this legislation, but by reason of acts of appropriation going on in carrying out the terms of this bill in case Arizona did not assert her rights in court. If she stood by and water were appropriated to beneficial use in other States, she might lose her rights. She would not lose them, however, by reason of this legislation, but by reason of the acts of appropriation."

Senator Borah amplified his remarks shortly thereafter, *id.* at 392: "Undoubtedly, if Arizona stands idly by and does not protect her rights, either by appropriation or by such action in the courts as will protect them, she will lose her rights ultimately. That is one of the penalties of living under the doctrine of prior appropriation. If an individual has a farm or ranch, and the water is running by it, if he does not use it, his neighbor below him or above him can appropriate it and take it away from him, ultimately. So here, I presume, if Arizona should not act, she perhaps would be prejudiced by this legislation in the sense that the acts carrying it out would result in appropriations by others. *It would not be the act of Congress which took away her rights, however, but the acts of appropriation following as a result of it.*" (Emphasis added.)

c. Administrative construction

The United States contends that administrative practice establishes that the rule of ratability, not the principle of priority, applies to the rights intrastate of federal contractees *inter sese,* absent express contractual provisions to the contrary. The United States argument, if we understand it, is this: Administrative practice on the Colorado River, as evidenced by secretarial water delivery contracts, has been to disregard state law and to treat "applicable federal law" as controlling. There is no "applicable federal law" dictating how shortages shall be borne among "mainstream" contractees *inter sese,* except the water delivery contracts themselves. Provisions for ratability frequently appear in federal water delivery contracts with water users in a particular project. (U.S. Op. Br. 30-34.) Contracts containing no provisions relating to how shortages shall be borne "presumably [apply] the rule of ratability," says the Government in footnote 10, page 30.

Both the United States premises and its conclusions are unsound.[1]

The "applicable federal law" contains express provisions about how shortages are borne. The Boulder Canyon Project Act and the Reclamation Act of 1902 of which it is a part adopt state law with respect to intrastate water rights, and this, in turn, in the absence of express statutory or contractual provisions to the contrary, establishes priority as the basic characteristic of water rights.

The Reclamation Act was designed by Congress to

[1]See discussion *supra* pp. 42-46.

insure priorities for each individual reclamation project initiated under that law.[2] Since its enactment in 1902,

---

[2]Congress recognized that priorities were necessary to insure the integrity of the water right for each project. Representative Mondell of Wyoming, the House manager for the bill which became the Reclamation Act of 1902, explictly told the House (35 CONG. REC. 6678 (1902)):

"Section 8 follows the well-established precedent in national legislation of recognizing local and State laws relative to the appropriation and distribution of water, and instructs the Secretary of the Interior in carrying out the provisions of the act to conform to these laws. This section also clearly recognizes the rule of prior appropriation which prevails in the arid region and, what is highly important, specifies the character of the water right which is provided for under the provisions of the act."

See also Calif. Rebuttal Brief (filed with the Special Master, June 30, 1959) at 65-72 for a fuller discussion of the legislative history of § 8.

In the same vein, the United States argued in Kansas v. Colorado, 206 U.S. 46, 74 (1906), the principles of the riparian doctrine, which include proration, "would have the result of preventing the reclamation and cultivation of public arid lands and defeat the policy of the Government with respect thereto and would obstruct the administration of the so-called Reclamation Act of June 17, 1902." The Government told the Court that priority of appropriation, applied interstate, was the only appropriate doctrine to apply in that dispute (*id.* at 74-75):

"When, therefore, a dispute arises in respect to the waters of an interstate stream, such as involved in the present proceeding, the question to be determined is, What rule of law shall be applied, and what tribunal has the power to enforce the rule? The Government contends that this court has the power to find, apply and to enforce the proper rule. That it should find the same outside of the law of either State, not within the common law doctrine of riparian rights, strict or modified, but within the maxim *salus populi est suprema lex.* The rule to be applied should be one capable of enforcement and uniform application in both States. The rule which meets the requirements is not 'water runs; let it run'; but that 'water irrigates; let it irrigate.' In other words, that such waters may be appropriated and used . . . subject, also, to the limitation that priority of time of appropriation determines priority of right, irrespective of state lines."

It is apparent that Congress' effort to reclaim the public lands would be severely hampered if each federal reclamation project were required to prorate its water supply in times of shortage with junior users on a particular stream system, many of which are nonfederal projects against which the Secretary has no effective protection except the priority acquired pursuant to §§ 8 or 7 of the act.

each individual reclamation project throughout the West has acquired a priority under state law vis-a-vis other projects on that same stream system. The contracts executed with the appropriate entity representing the water users on a particular project or a division thereof (see, *e.g.*, Rep. 211-14), of course, make no reference to relative priorities as between that project and others, because such priorities have been established among them under the principle of priority embodied in state law in accordance with the directive of section 8. We would not expect the Government (at least the Secretary of the Interior) to seriously contend that the projects on other stream systems where the Government has complied with state law are on a parity with one another because the water delivery contracts serving those projects say nothing about relative inter-project priorities. Such a contention could never be sustained.

Moreover the United States inaccurately describes the administrative practice on the Colorado River. The United States suggests that water right application contracts with individual non-Indian landowners in the Reservation Division of the Yuma Project demonstrate the Secretary's practice to prorate shortages among "mainstream" federal contractees. It quotes from a water right application contract which provides an "equitable proportionate share * * * of the water actually available at the time for all of the area being watered from the same source of supply, *such proportionate share to be determined by the project manager.*" (U.S. Op. Br. 31, quoting Calif. Ex. 380; emphasis by the United States.) California Exhibits 378, 379, and 380 are water right applications bearing dates respectively of 1917, 1910, and 1948. All relate to the

same project and all relate to an appropriation by J. B. Lippincott for the United States, recorded July 13, 1905 (Calif. Ex. 13 (Tr. 8,833)).[3] Those exhibits refer to a proportionate share in a right with a 1905 priority under the United States appropriation. They do not refer to a proportionate share in "project water supply" in the Boulder Canyon Project—a project which did not come into existence until decades after many of the contract applications, of which these are illustrative, were written.

The United States reliance in footnote 11, page 31, upon the Secretary's 1959 contract with the city of Yuma, Arizona, is equally puzzling.[4] The city of

---

[3]U.S. Finding 7.1.6, pp. 146-47, recited these facts:

"On July 8, 1905, J. B. Lippincott, Supervising Engineer, United States Geological Survey, for and on behalf of the United States of America, posted a notice of appropriation on the left bank of the Colorado River claiming three thousand cubic feet per second of the water of the Colorado River for irrigation, domestic, power, mechanical, and other beneficial uses in and upon lands in Yuma County, Arizona Territory which were to be served by the construction of Laguna Dam and a canal system extending from the Dam. On the same day a similar notice was posted on the right bank of the Colorado River claiming six thousand cubic feet per second of the water of the Colorado River for irrigation, domestic, power, mechanical, and other beneficial uses in and upon lands in 'the Yuma Valley adjacent to the Colorado River, below the point of diversion, and in the Imperial Valley, all situated in San Diego County, State of California,' which were to be served by the construction of Laguna Dam and a canal system extending from the Dam.

"Calif. Exs. 12, 13; U.S. Ex. 5, Tr. 15,366-15,369

"The lands described in these notices included the lands of the Reservation Division and almost all of the lands of the Valley Division of the Yuma Project. . . ."

[4]The text of the 1959 Yuma contract is reproduced in Calif. Ex. 7611 for iden. (Tr. 22,760). The contract (art. 6(a)(1), p. 4 of second pagination) is expressly subject to the prior fulfillment of all contracts for diversion at Imperial Dam for irrigation in Arizona; it subordinates Yuma's 1893 priority for 1,000 miner's inches (about 14,500 acre-feet annually at continuous flow) and substitutes a contract right to 50,000 acre-feet subordinate to all Arizona

Yuma, before the execution of the contract, had an appropriation senior to those agricultural districts under which she had been continuously using "mainstream" water for more than half a century. The city nevertheless, by specific contract, was required to subordinate not only her appropriative priorities but her preference under Arizona law as a domestic user to competing agricultural districts in Arizona which have water contracts with the Secretary even though those districts' contracts say nothing about priority. Whatever may be said for this curious "administrative practice," it is certainly not an example evidencing that (a) silence implies proration, or (b) proration is a better dogma than priority.

There is an additional reason why the Government's suggestion that contractees "presumably" prorate with each other should not be taken seriously. That suggestion is entirely inconsistent with the priorities vigorously advocated by the United States and adopted by the Master for Indian reservations and other federal establishments. Rights for Indian reservations and other federal establishments derive from federal law, precisely like the rights the United States says arise from water delivery contracts. Although the incidents

---

rights to divert at Imperial Dam. The notice of Yuma's appropriation is Ariz. Ex. 316A (Tr. 19,980).

The United States reliance upon the Yuma contract is likewise curious in view of the express disclaimer in the contract "that this contract is not intended, nor shall it be construed as affecting adversely any claim or contention in the Colorado River litigation [earlier defined as the pending case of "Arizona v. California, et al., No. 9 Original in the United States Supreme Court"] of any contractor for Lake Mead storage outside of the State of Arizona." Art. 27(2). California offered this city of Yuma contract as evidence that the city of Yuma had diverted and used Colorado River water for over 60 years, under an ancient appropriation, *without* a contract. Calif. Op. Br. plate 3 n.17.

of these federal rights, as adjudicated by the Master, are antithetical to appropriative rights in almost every respect, there is one respect in which these federal rights are identical to appropriative rights: Each bears a priority of the date of its creation, even though not one word was spoken in the creation of such rights about priority. The United States supports priorities for these exclusively federal rights, and it does not suggest that there is a lurking presumption that ratability applies to them.[5]

The presumption from contractual silence is priority, not parity; and this cannot be transmuted into the opposite inference when a parallel is drawn with respect to interstate water rights.

2. *The United States Misconstrues Sections 14 and 18*

To sustain its argument that federal water delivery contracts are the source of water rights, interstate and

[5]The United States would reach this incomprehensible result: Although the Colorado River Indian Reservation has a water right with priorities of 1865, 1873, 1874, 1876, and 1915 for the respective areas reserved to the Indians on those dates, and Fort Mohave Indian Reservation has a water right with priority dates of 1890 and 1911 on the same basis, the Valley Division of the Yuma Project in Arizona by contrast would be forced to prorate a water shortage with a future Central Arizona Project for which a future similar contract may be written. This is because the Valley Division's water delivery contract written in 1951 fails to specify either priority or proration, and "presumably" (U.S. Op. Br. 30 n.10) therefore the rule of ratability applies. Water rights of the Valley Division initiated by appropriation beginning in 1890 and bought by the United States for the Yuma Project in 1908, another appropriation by the United States in 1905, the construction of project works long before the Project Act was passed, and beneficial use of water throughout this century, all avail the Valley Division nothing. The other projects in the Yuma area whose water contracts specify neither priority nor proration (*id.* at 30) are in the same perilous situation. The United States evidence establishing the appropriative right of the Valley Division is detailed in Calif. Finding 14C:104, p. XIV-25, with record citations.

intrastate, and that those contracts do not embody or recognize state law, the United States is compelled to eliminate the provisions of sections 14 (with its incorporation of section 8 of the Reclamation Act of 1902) and 18 of the Project Act, by limiting the effect of those provisions to matters which are irrelevant to this case.

a. Section 8 of the Reclamation Act of 1902

Despite its recognition that the Project Act is a part of the reclamation laws, including the Reclamation Act of 1902 (U.S. Op. Br. 32-33), the United States attempts to divorce section 8 of the Reclamation Act of 1902 from the Project Act. It contends that section 8, like section 27 of the Federal Power Act, is relevant only insofar as it supplies an analogy useful in construing section 18 of the Project Act (U.S. Op. Br. 40-41).

Section 27 of the Federal Power Act (unlike section 8 of the Reclamation Act of 1902) is framed in terms of a saving clause. It contains no command to the Secretary, but provides:[1]

> "[N]othing herein contained shall be construed as affecting or intending to affect or in any way to interfere with the laws of the respective States relating to the control, appropriation, use, or distribution of water used in irrigation or for municipal or other uses, or any vested right acquired therein."

It might be said of section 27 of the Federal Power Act that "freedom of the States to enact laws does not compel the conclusion that the [United States] . . . is bound by those laws" (U.S. Op. Br. 39),

[1] 41 Stat. 1077 (1920), 16 U.S.C. § 821 (1958).

but this cannot be said of section 8 of the Reclamation Act.

Section 8 of the Reclamation Act of 1902 is not merely a useful tool in construing the provisions of the Project Act, it is incorporated by sections 12 and 14 as an integral part of the Project Act itself. Section 8 does not merely state that Congress does not intend to interfere with state law; it specifically commands the Secretary to proceed in conformity with that law:[2]

> "[N]othing in this Act shall be construed as affecting or intended to affect or to in any way interfere with the laws of any State or Territory relating to the control, appropriation, use, or distribution of water used in irrigation, or any vested right acquired thereunder, and *the Secretary of the Interior, in carrying out the provisions of this Act, shall proceed in conformity with such laws . . . .*" (Emphasis added.)

The United States effort to eliminate the command of section 8 by restricting its operation to the "acquisition of rights to use water for a reclamation project" is unsupportable. Nothing in the language of section 8 lends itself to the interpretation urged by the United States. This Court in *Ivanhoe Irrigation District v. McCracken,* 357 U.S. 275 (1958), did not hold that state law is made controlling by section 8 *only* where the United States follows state procedure to appropriate water, or where the United States acquires water rights within a state by purchase or in the exercise of its power of eminent domain. The Court had no occasion to pass upon the construction of section 8 here

[2] 32 Stat. 390 (1902), 43 U.S.C. § 383 (1958).

urged by the United States, and it did not do so. The United States itself recognizes, in a footnote, that the *Ivanhoe* case is not here in point. (U.S. Op. Br. 42 n. 19.)

The United States fails to recognize that this Court in *Ickes v. Fox,* 300 U.S. 82 (1937), definitively rejected the United States interpretation of section 8 here urged. The Court held that title to water rights within a reclamation project vests in the project landowners, in accordance with principles of state law, and not in the United States. The Government's attempt, in footnote 19, page 43, to construe that holding to the contrary is also refuted by the interpretation placed on *Ickes v. Fox* by the court of appeals in a subsequent installment of the same litigation:[3]

> "Reading the Reclamation Act in the light of the decision in Ickes v. Fox, we find the situation in this case to be as follows: The water-rights of appellants are not determined by contract but by beneficial use. The Secretary of the Interior . . . must distribute the available water according to the priorities among the different users which are established by the law of the State of Washington. He has no concern in disputes between the various entrymen which concern their respective priorities, other than as a stakeholder."

In *Nebraska v. Wyoming,* 325 U.S. 589, 612-16 (1945), the Court confirmed its construction of section 8 by quoting with approval its language in the decision of *Ickes v. Fox.* The Court again made clear that principles of priority of appropriation embodied in

[3]Fox v. Ickes, 137 F.2d 30, 33 (D.C. Cir. 1943), *cert. denied,* 320 U.S. 792 (1943).

state law controlled the title and disposition of water rights and that the Secretary was bound to conform to those principles by the operation of section 8;[4] moreover, these principles were held dispositive of an *interstate* controversy.

The Government argues that this Court's decision in *Nebraska v. Wyoming,* construing and applying section

---

[4]Nebraska v. Wyoming, 325 U.S. 589, 614, 615 (1945): "The property right in the water right is separate and distinct from the property right in the reservoirs, ditches or canals. The water right is appurtenant to the land, the owner of which is the appropriator. The water right is acquired by perfecting an appropriation, i.e., by an actual diversion followed by an application within a reasonable time of the water to a beneficial use. . . . Indeed § 8 of the Reclamation Act provides as we have seen that 'the right to the use of water acquired under the provisions of this Act shall be appurtenant to the land irrigated, and beneficial use shall be the basis, the measure, and the limit of the right.'"

The Court in Nebraska v. Wyoming made an allocation of the natural flow only and did not make any allocation of the stored water. (325 U.S. at 630, 631.) However, the Court did indicate that the rights of the United States to the stored water were governed by state law (*id.* at 629-30): "The United States claims that it is at least entitled to be recognized as the owner of the storage water with full control over its disposition and use under Wyoming law. That seems to be true under Wyoming law. . . . The decree which is entered will in no way cloud such claim as it has to storage water under Wyoming law; nor will the decree interfere with the ownership and operation by the United States of the various federal storage and power plants, works, and facilities. We repeat that the decree is restricted to an apportionment of the natural flow." The Court later stated (*id.* at 639-40): "Certainly an apportionment of storage water would disrupt the system of water administration which has become established pursuant to mandate of Congress in § 8 of the Reclamation Act that the Secretary of the Interior in the construction of these federal projects should proceed in conformity with state law. In pursuance thereto all of the storage water is disposed of under contracts with project users and Warren Act canals. It appears that under that system of administration of storage water *no State and no water users within a State are entitled to the use of storage facilities or storage water unless they contract for the use. See Wyo Rev Stats (1931), §§ 122-1504, 122-1508, 122-1602.*" (Emphasis added.) *Compare* the emphasized language *with* the last sentence of the first paragraph of § 5 of the Project Act: "No person shall have or be entitled to have the use for any purpose of the water stored as aforesaid except by contract made as herein stated."

8, is not here in point. We disagree. The Government identifies the distinction which it perceives as follows (U.S. Op. Br. 43 n.19):

> " 'We intimate no opinion whether a different procedure might have been followed so as to appropriate and reserve to the United States all of these water rights. No such attempt was made. * * * [In this case, it is to be noted, an entirely different procedure has been followed. The United States has *not* followed State prescribed procedures to appropriate the Boulder Canyon Project water supply.] The rights so acquired are as definite and complete as if they were obtained by direct cession from the federal Government. Thus even if we assume that the United States owned the unappropriated rights,[5] they were acquired by the landowners in the precise manner contemplated by Congress.' (325 U.S. 614-615.)" (All bracketed material supplied by the United States.)

The question upon which the Court in *Nebraska v. Wyoming* thus intimated no opinion was the power of Congress to appropriate and reserve to the United States all of these water rights by enacting a statute providing some procedure different from that stated in section 8 of the Reclamation Act. The Court was not adverting to any assumed power of the *Secretary* to acquire title

---

[5](Footnote ours.) In Nebraska v. Wyoming, 325 U.S. 589, 611 (1945), the Government had argued that it owned all of the unappropriated water in the river prior to the time it filed appropriations for the North Platte and Kendrick projects; therefore its underlying ownership entitled it to an apportionment free from state control. In the Government's brief in this case, it asserts (U.S. Op. Br. 38 n.15): "We do not argue the question of federal ownership of the rights to use the waters of the Colorado River or the unappropriated rights to use the waters of the tributaries. . . ."

for the United States or to affect the title of water users by his choice of some procedure other than that stated in section 8. Contrary to the United States suggestion, section 8 controls the Secretary; the Secretary does not control the applicability of section 8.[6]

> In *Nebraska v. Wyoming* and here, the water rights "were acquired by the landowners in the precise manner contemplated by Congress." (325 U.S. at 615.)

The precise manner Congress contemplated was the acquisition of water rights in conformity with the principles of state law adopted by section 8 of the Reclamation Act.

b. Section 14 of the Project Act

Section 14 expressly makes the Project Act a part of the reclamation laws. Congress' purpose in integrating the Project Act into the federal reclamation laws was to incorporate the directive found in section 8 of the Reclamation Act of 1902: The Secretary of the Interior shall conform to the laws of the states relating to the control, appropriation, use, and distribution of water used in irrigation. The rights of landowners to receive and use the waters developed by a federal reclamation project, whether confirmed or initiated by

---

[6]The contentions of the United States are by no means clear. The Government appears to suggest that so long as the Secretary of the Interior does not choose to file an appropriation on behalf of the United States, § 8 is not applicable to control the incidents of water rights either in contests between water users *inter sese* or between water users and the United States. If this is the Government's contention, it is wrong.

The Secretary's omission to comply with the mandate of § 8 could not, and does not, affect the command of Congress that the Secretary obey § 8. His omission could not, and does not, affect the incidents of water rights "acquired by the landowners in the precise manner contemplated by Congress" either in respect of each other or in respect of their rights against the United States.

federal water delivery contracts, were to be controlled by section 8.[7]

Significantly, the United States fails to mention *United States v. Arizona,* 295 U.S. 174, 183 (1935), where the Court dealt with this very question:

> "Arizona owns the part of the river bed that is east of the thread of the stream. *New Jersey v. Delaware,* 291 U.S. 361, 379 *et seq.* Her jurisdiction in respect of the appropriation, use and distribution of an equitable share of the waters flowing therein is unaffected by the Compact or federal reclamation law."[8]

---

[7]Senator Johnson, sponsoring the legislation in the Senate, made clear the effect of § 14 when in February 1927 he addressed the Senate stating, 68 CONG. REC. 4291: "I repeat to you that this is a reclamation measure, made so by section 13 [now 14] of the bill. Adverting, then, to section 8 of the reclamation law, let us see how much there is in this statement that is made about appropriating the water of Arizona and taking the property of that State.

"Section 8 of the reclamation act provides:

" 'That nothing in this act shall be construed as affecting or intended to affect or to in any way interfere with the laws of any State or Territory relating to the control, appropriation, use, or distribution of water used in irrigation, or any vested right acquired thereunder, and the Secretary of the Interior, in carrying out the provisions of this act, shall proceed in conformity with such laws, and nothing herein shall in any way affect any right of any State or of the Federal Government or of any landowner, appropriator, or user of water in, to, or from any interstate stream or the waters thereof.'

"So, first, our act is a reclamation act.

"Secondly, under the reclamation law we can no more affect the rights of Arizona in the waters that flow through Arizona than we could affect the title of any Arizona resident to any particular property. In passing, I may remark that it is entirely a misnomer to say that Arizona or any other State in the West, after all, has title to water. Under western law, the appropriator of water has a title to the use when the application is beneficially made of the water that he thus appropriates; but to talk of title of the State to water is entirely a misapprehension and misapplication of terms."

[8]The Court's footnote 2, 295 U.S. at 180, said: "By §§ 12 and 14 of the Boulder Canyon Project Act, the Reclamation Law is defined to mean the Act of June 17, 1902, 32 Stat. 388, and Acts amendatory thereof and supplemental thereto, including the Boulder Canyon Project Act."

c. Section 18 of the Project Act

The Master limits the effect of section 18 to intrastate consequences; the United States argues that section 18 has no consequences.

Section 18 of the Project Act provides (Rep. app. 395):

> "Nothing herein shall be construed as interfering with such rights as the States *now* have either to the waters within their borders or to adopt such policies and enact such laws as they may deem necessary with respect to the appropriation, control, and use of waters within their borders, except as modified by the Colorado River compact or other interstate agreement." (Emphasis added.)

The United States ask the Court to read the word "now" as if Congress had said "used to."[9] Nothing in the history of the statute lends the slightest support to the United States argument.[10]

---

[9]The United States seems to read § 18 to permit the states to enact only ineffective legislation (U.S. Op. Br. 39): "Statutory language which merely preserves 'such rights as the States now have' cannot be construed as a grant to the States of any part of the federal government's authority to control the operation of its own projects. Freedom of the States to enact laws does not compel the conclusion that the Secretary of the Interior is bound by those laws." Section 8 says the Secretary *shall* comply with those laws. What more compelling language could have been chosen?

[10]A Government footnote points out that one draft of the third Swing-Johnson bill contained a former § 8(a) which was omitted from the act ultimately passed (U.S. Op. Br. 35-36 n.13). Former § 8(a) provided that appropriations of Colorado River water in connection with the works authorized by the act shall be made in conformity with the laws of those states "which may or shall have approved the Colorado River compact." Former § 8(a) was proposed and omitted because of interbasin considerations; it had nothing at all to do with the question of what law governs intrastate rights within the lower basin.

Former § 8(a) was inserted by the upper basin representatives in an effort to cajole Arizona into ratifying the Compact for the protection of the upper basin states, as upper basin spokesman,

The United States relies (U.S. Op. Br. 35) upon Senator Johnson's remarks when he accepted section 18 in his bill (70 CONG. REC. 593):

> "Mr. President, with the understanding that the verb relates to the present—the rights they now have to do all of the things that subsequently follow—I have no objection to the amendment."

The United States apparently contends that Senator Johnson meant to say that he agreed to the amendment so long as the "verb relates to the past." It would have been fatuous for Senator Johnson to receive assurance that states' rights not yet in existence were unimpaired.

Delph E. Carpenter, very clearly explained. *Hearings on H.R. 6251 and H.R. 9826 Before the House Committee on Irrigation and Reclamation*, 69th Cong., 1st Sess. 113, 184-85 (1926). See also Calif. Op. Br. 179 n.8, 180-81, 178 n.4. Upper basin states obviously had no interest in intra-lower basin allocation of water or the water rights of users in the lower basin *inter sese*.

On March 20, 1928, the Senate Committee on Irrigation and Reclamation, without comment, proposed in its favorable report on the bill a committee amendment to strike former § 8(a) from the fourth Swing-Johnson bill. S. REP. No. 592, 70th Cong., 1st Sess., pt. 1, at 3 (1928); Calif. Ex. 201 (Tr. 7,712), at 10; Calif. Ex. 2001 (Tr. 11,173), at 13. It is not credible that the committee report intended, without one word of explanation, to make the major change in the bill suggested by the United States in the elimination of this language that state law does not govern intrastate rights and priorities, contrary to the views of both of its authors (*supra* pp. 54, 69 note 7). See Trailmobile Co. v. Whirls, 331 U.S. 40, 61 (1947): "[T]he most important committee changes relied upon were made without explanation. The interpretation of statutes cannot safely be made to rest upon mute intermediate legislative maneuvers."

Furthermore, the Senate committee hearings, *Hearings on S. 728 and S. 1274 Before the Senate Committee on Irrigation and Reclamation*, 70th Cong., 1st Sess. 33, 39-40 (1928), suggest that former § 8(a) was dropped from the bill because it was coercive in requiring Arizona to ratify the Compact before she could receive the benefits of stored water. The committee undoubtedly considered that the provisions retained in the bill (present §§ 8(a) and 13(b), (c), and (d)) subjecting the United States and all claiming under it to the Compact would adequately accomplish the purpose of former § 8(a) to protect the upper basin's Compact apportionment against a nonratifying Arizona.

Senator Johnson very obviously intended to preserve for the future all of the rights which the states then had.[11] Statements of Senator Johnson[12] and Senator King,[1] author of section 18,[2] make clear their intention that state law should be preserved and applied prospectively and that nothing in the Project Act should be construed as if the act "otherwise herein provided" (section 14).

Again, the United States ignores the fact that this Court has already construed section 18 in accordance with its plain and explicit terms:[3]

> "The claim strenuously urged is that the existence of the Act, and the threatened exercise of the authority to use the stored water pursuant to its terms, will prevent Arizona from exercising its right to control the making of further appropriations. . . .
>
> "This contention cannot prevail because it is based not on any actual or threatened impairment of Arizona's rights but upon assumed potential invasions. The Act does not purport to affect any legal right of the State, or to limit in any way the exercise of its legal right to appropriate any of the unappropriated 9,000,000 acre-feet which may

---

[11]Congress had been repeatedly informed about the bases and characteristics of western water rights (Calif. Op. Br. 65-66). Moreover, it must have been aware of the principle, settled for more than 100 years by this Court, that in absence of specific federal legislation, the power of the states to promote, limit, or destroy navigability of the waters within their boundaries is unlimited. *E.g.*, Wilson v. The Black Bird Creek Marsh Co., 27 U.S. (2 Pet.) 245 (1829); Gilman v. Philadelphia, 70 U.S. (3 Wall.) 713 (1866).

[12]68 CONG. REC. 4291 (1927), quoted *supra* note 7.

[1]70 CONG. REC. 169 (1928), quoted *supra* p. 55 note 8.

[2]*Id.* at 593.

[3]Arizona v. California, 283 U.S. 423, 460-62 (1931).

flow within or on its borders. On the contrary, section 18 specifically declares that nothing therein 'shall be construed as interfering with such rights as the States now have either to the waters within their borders or to adopt such policies and enact such laws as they may deem necessary with respect to the appropriation, control, and use of water within their borders, except as modified' by interstate agreement. As Arizona has made no such agreement, the Act leaves its legal rights unimpaired."

This decision has been the consistent basis of administration of the Colorado River by the Secretary of the Interior. In a memorandum adopted by the Commissioner of Reclamation, and which was the basis for withdrawing 1933 regulations offering Arizona a contract, the above passage from the Court's opinion was quoted, somewhat more fully, with this conclusion:[4]

"From this quotation it is apparent that the State of Arizona is entitled to take water from the Colorado River for beneficial use *subject to the rights of prior appropriators.* It appears to me that it is not desirable for the Secretary of the Interior to endeavor to limit or qualify this right except by lawful diversions from the river which may be made by the United States for appropriate use." (Emphasis added.)

In 1937 the Acting Solicitor of the Interior Department analyzed the same decision for Secretary Ickes:[5]

"The decision of the Supreme Court seems to leave Arizona in a position to appropriate any un-

[4]Calif. Ex. 7600 for iden., Tr. 22,760.
[5]Calif. Ex. 7754 for iden., Tr. 22,760.

appropriated water of the Colorado River if it could put such water to beneficial use, and this *without reference to authority given by Congress in the Boulder Canyon project act.*

"It is my opinion that the Secretary of the Interior, in making a contract for repayment of construction costs with landowners on the Gila project, or with an irrigation district comprising a similar area may agree to sell water from Boulder Canyon Reservoir, *but such sale must be subject to prior rights* and to the Colorado River compact." (Emphasis added.)

The authorization for the Gila Project in 1937 subsequently signed by the Secretary and the President did exactly that:[3]

"In all sales of water rights it will be necessary to prescribe that the water supply of the [Gila] project is subject to the Colorado River compact, and to the Boulder Canyon Project Act and to the sales of water under the compact and said act and to the treaty which it is anticipated will be made with Mexico fixing that country's rights in the flow of the Colorado River."

The United States now appears to suggest that if the principles which have been long and consistently recognized are applied to control the title and incidents of water rights of water users *inter sese,* the power of the Secretary effectively to control the dam and reservoir for the purpose of "controlling the floods, improving navigation and regulating the flow of the Colorado River, providing for storage and for the delivery

[3]Ariz. Ex. 60 (Tr. 269), p. 123.

of the stored waters . . . and for the generation of electrical energy" (Project Act § 1) is somehow impaired. (U.S. Op. Br. 36-40.) The United States fails to explain how appropriation, long recognized as applicable to the Colorado River and other streams on which federal projects are located, will somehow hamper the Secretary in fulfilling the purposes of the act made dominant by section 6. The Secretary has had no uncertainty about the basis of water rights since Mr. Justice Brandeis delivered the opinion of this Court in 1931.

We do not insist upon any doctrinaire distinction between federal and state law. We think that appropriations under state law, which control intrastate rights, applied across state lines as a matter of "federal common law," to use Mr. Justice Brandeis' term,[7] are the basis of water rights within the limitations accepted by agreement of the affected states. But if federal water delivery contracts are the exclusive basis of water rights and if those water rights have the same attributes as rights under federal common law, we do not care whether it is Mr. Justice Brandeis' or the Government's label which is affixed to the result. The Master's denial of interstate priorities is contrary to the rationale of both.

PART THREE

ANSWER TO THE ARIZONA OPENING BRIEF

PART THREE

ANSWER TO THE ARIZONA OPENING BRIEF

§ I. THE SEVERANCE ISSUE: THE LIMITATION ON CALIFORNIA CANNOT REFER TO THE UPPER DIVISION'S AVERAGE ANNUAL DELIVERY OF 7,500,000 ACRE-FEET AT LEE FERRY PROVIDED BY ARTICLE III(d) OF THE COLORADO RIVER COMPACT

Arizona offers a rewritten version of the Colorado River Compact apparently as an alternative basis for the conclusion which the Master reaches by rewriting the words of the limitation. The only merit in Arizona's argument is that it attempts to harmonize the scope of the Compact and the limitation. (See pp. 18-29 *supra*.) This commendable effort fails, however, for a number of reasons given by the Master himself, any one of which is conclusive; Arizona fails even to mention the most important of these—that her proposed construction is physically impossible.

Arizona asserts:

1. The annual beneficial consumptive use of 7,500,000 acre-feet of water apportioned to the lower basin states by Article III(a) of the Colorado River Compact is the same as the average annual flow of 7,500,000 acre-feet at Lee Ferry specified in Article III(d) of the Compact.[1] (Ariz. Op. Br. 62-63, 72-81.)

---

[1]Article III(d) provides, Rep. app. 373: "The States of the Upper Division will not cause the flow of the river at Lee Ferry to be depleted below an aggregate of 75,000,000 acre-feet for any period of ten consecutive years reckoned in continuing progressive series beginning with the first day of October next succeeding the ratification of this compact."

2. If this were not the meaning of the Compact as negotiated, it is the meaning that must be given to the Compact because Congress so understood it in giving its constitutionally required consent to the Compact in the Project Act; indeed, Congress accordingly amended or modified the Compact. (Ariz. Op. Br. 67-72.)

Arizona's argument thus rejects the Master's patentable novelty, which divorces the Compact from the limitation, and substitutes one of her own invention disclosed for the first time after 30 years of controversy in so-called "amended" pleadings tendered to the Master at the close of trial (Rep. 136-37).[2]

The fundamental conflict between Arizona and the Master is masked by the variable content Arizona's brief gives to the term "main stream." Sometimes Arizona uses the term in the Master's unique sense to mean only the main Colorado River below Lake Mead (Rep. 183), and sometimes in the dictionary sense to mean the entire main Colorado River from Lee Ferry to the Mexican boundary. In argument that the Colorado River Compact apportions water at Lee Ferry, excluding tributaries, Arizona uses the term in the dictionary sense. Geographically, the two definitions are 275 river miles apart, but in terms of the ultimate decision and the reasoning which produces it, the gap between the two definitions is even greater.

Our answers to Arizona's arguments are simple:

1. The Colorado River Compact does not and cannot mean what Arizona says it means.

2. Congress did not so amend it.

---

[2]See Calif. Ex. 7302A for iden. (Tr. 22,384), a comparison of Arizona's original and proposed "amended" Bill of Complaint.

A. Arizona's Proposed Construction of the Colorado River Compact Founders on Both Legal and Physical Impossibility, as the Master Holds (Rep. 142-44)

The apportionment made to the lower basin by Article III(a) of the Colorado River Compact encompasses beneficial consumptive uses throughout the Colorado River system (main stream and tributaries) in the lower basin. Arizona's attempt to write the lower basin tributaries out of the Compact falls before its clear and explicit language, the reports of its negotiators, and the rational character of its literal meaning. But even if Arizona's proposed construction were legally permissible, it is physically impossible.

1. *Arizona's Construction of the Colorado River Compact Is Not Supported by Any Colorable Legal Argument*

a. The language of the Compact

The Master correctly concludes that the "unmistakable language" of the Compact "subjugates both mainstream and tributaries" to its rule (Rep. 143).[3] The

---

[3]Here is the language of Article III(a) with the express definitions of "Colorado River System" from Article II(a) and "Lower Basin" from Article II(g) italicized and bracketed after those terms:

"There is hereby apportioned from the Colorado River System [*that portion of the Colorado River and its tributaries within the United States of America*] in perpetuity to the Upper Basin and to the Lower Basin [*those parts of the States of Arizona, California, Nevada, New Mexico, and Utah within and from which waters naturally drain into the Colorado River System below Lee Ferry, and also all parts of said States located without the drainage area of the Colorado River System which are now or shall hereafter be beneficially served by waters diverted from the System below Lee Ferry*], respectively, the exclusive beneficial consumptive use of 7,500,000 acre-feet of water per annum, which shall include all water necessary for the supply of any rights which may now exist."

Article III(b) gives the lower basin "the right to increase its

Court has already held that the Compact means what it says, as against an earlier Arizona effort to perpetuate testimony of the Compact negotiators that it means something different. *Arizona v. California,* 292 U.S. 341 (1934) (alternative holding).

Arizona's argument based on the Compact's use in Article III(a) of the phrase, *"from* the Colorado River System," rather than *"of* the Colorado River System" (Ariz. Op. Br. 75) is a sophistry: The words "of" and "from" have identical meanings in this context.[4] "Waters *of* the Colorado River System *not covered by* the terms of this Compact" referred to by Article VI (italicized thus in Ariz. Op. Br. 75) are the system waters "unapportioned by paragraphs (a), (b), and (c)" of Article III which are the subject of further equitable apportionment after October 1, 1963. (See Articles III(f) and III(g) of the Compact.)

b. The reports of the Compact negotiators

The reports of many of the Compact negotiators—Arizona's evidence[5]—make explicitly clear that the

---

beneficial consumptive use *of such waters* by one million acre-feet per annum." (Emphasis added.)

[4]"Of" according to Webster's New International Dictionary (2d ed. unabridged) means "from." "From," according to the same source, means "out of." If Article III(a) said "there is hereby apportioned *of* the Colorado River System in perpetuity," it would make neither good sense nor good grammar. Thus, Article III(b) permits the lower basin to increase its beneficial consumptive use *"of* such waters" by one million acre-feet per annum. Articles III(a) and III(b) obviously refer to the same waters. See Arizona v. California, 292 U.S. 341, 358 (1934): "Paragraph (a) apportions waters 'from the Colorado River system,' i.e., the Colorado and its tributaries, and (b) permits an additional use 'of such waters.'" *Accord,* Mr. Hoover's answer to Mr. Hayden's questionnaire, reported to Congress, quoted *infra* p. 81 note 6.

[5]Arizona put these Compact negotiators' reports in evidence at the outset of the trial. Although Arizona did not reproduce them

Compact was intended to encompass lower basin tributaries as well as the main stream.[6] Neither in these

---

in the bound volumes of her exhibits which she supplied the Special Master and the Court, California has included all of them in volume 24 of her own set of exhibits supplied to the Court.

[6]The most explicit discussion of the systemwide scope of the Compact is found in Ariz. Ex. 55 (Tr. 260), answers to 26 questions propounded by [then] Representative Carl Hayden of Arizona to Hon. Herbert Hoover, federal representative to and chairman of the commission which negotiated the Compact, questions 4 (A33), 6 (A34), and 8 (A35):

> *"Question 4. Why was the term 'Colorado River system' used in paragraph (a) of Article III, wherein 7,500,000 acre-feet of water is apportioned to the upper and lower basins, respectively?*
>
> "[Answer:] This term is defined in Article II as covering the entire river and its tributaries in the United States. No other term could be used, as the duty of the commission was to divide all the water of the river. It serves to make it clear that this was what the commission intended to do and prevents any State from contending that, since a certain tributary rises and empties within its boundaries and is therefore not an interstate stream, it may use its waters without reference to the terms of the compact. The plan covers all the waters of the river and all its tributaries, and the term referred to leaves that situation beyond doubt."
>
> *"Question 6. Are the 1,000,000 additional acre-feet of water apportioned to the lower basin in paragraph (b) of Article III supposed to be obtained from the Colorado River or solely from the tributaries of that stream within the State of Arizona?*
>
> "[Answer:] The use of the words 'such waters' in this paragraph clearly refers to waters from the Colorado River system, and the extra 1,000,000 acre-feet provided for can therefore be taken from the main river or from any of its tributaries."
>
> *"Question 8. As a matter of fact more than 1,000,000 acre-feet of water from the tributaries of the Colorado below Lee Ferry are now being beneficially used and consumed within the State of Arizona. Will the excess above that amount be accounted for as a part of the 7,500,000 acre-feet first apportioned to the lower basin from the waters of the 'Colorado River system' as provided in paragraph (a) of Article III?*
>
> "[Answer:] By the provisions of paragraphs (a) and (b), Article III, the lower basin is entitled to the use of a total of 8,500,000 acre-feet per annum from the entire Colorado River system, the main river and its tributaries. All use of water in that basin, including the waters of tribu-

reports nor in any other evidence of the intent of the negotiators is there a scintilla of evidence supporting the present Arizona view. Some of these reports were before Congress.[7]

Arizona tries only obliquely to rely upon one Compact negotiator, Frank C. Emerson of Wyoming, to support her novel contention,[8] but her reliance is com-

---

taries entering the river below Lee Ferry, must be included within this quantity. The relation is reciprocal. Water used from these tributaries falls within the 8,500,000 acre-feet quota. Water obtained from them does not come within the 75,000,000 acre-feet 10-year period flow delivered at Lee Ferry, but remains available for use over and above that amount."

See also Ariz. Ex. 46 (Tr. 255), at A78, report of Delph E. Carpenter, Compact negotiator for Colorado; Ariz. Ex. 47 (Tr. 256), at A110, report of Stephen B. Davis, Compact negotiator for New Mexico; Ariz. Ex. 49 (Tr. 257), at A69, statement by Richard E. Sloan, legal adviser to Arizona's Compact negotiator; Ariz. Ex. 50 (Tr. 258), at A58, statement by W. S. Norviel, Compact negotiator for Arizona; Ariz. Ex. 51 (Tr. 258), at A127, report of Frank C. Emerson, Compact negotiator for Wyoming; Ariz. Ex. 57 (Tr. 262), at A114, A117, report of R. E. Caldwell, Compact negotiator for Utah.

[7]Carpenter's report (Ariz. Ex. 46, *supra* note 6) appears at 70 CONG. REC. 577-84 (1928). Hoover's answers to Hayden (Ariz. Ex. 55, *supra* note 6) are quoted in full at 64 CONG. REC. 2710-13 (1923) and are repeated in part during the December 1928 debates on the fourth Swing-Johnson bill at 70 CONG. REC. 460 (Senator Hayden quoting question and answer 10 re surplus) and 466 (Senator Johnson quoting question and answer 4 re Colorado River system).

[8]In her discussion of the upper division governors' proposal to divide 7,500,000 acre-feet of flow at Lee Ferry among Arizona, California, and Nevada, Arizona asserts (Ariz. Op. Br. 62-63): "It is . . . plain that the water referred to was that apportioned by Article III(a) of the Compact, for the total quantity dealt with by the Governors aggregated 7,500,000 acre-feet per annum, exactly the same quantity which was apportioned to the Lower Basin by Article III(a).[27]" In support of this statement, Arizona's footnote 27 asserts: "The Governors were contemporaries of the negotiators of the Compact. Indeed, Governor Emerson of Wyoming, who voted for the resolution passed at the Governors' Conference, had been the Compact Commissioner for Wyoming."

The upper division governors' proposal, as the Master points

pletely misplaced. In fact, Governor Emerson made clear during congressional hearings on the Project Act that he considered the "Colorado River system" to include the main Colorado River and *all* tributaries.[9]

c. The rational basis of the Compact's inclusion of all tributaries in the United States

Arizona argues that "the only water available to both the Upper and Lower Basins and to *which both could lay claim* was water rising in the Upper Basin and descending to the Lower." (Ariz. Op. Br. 74.)

Obviously, no one contends that water from lower basin tributaries will flow upstream to the upper basin. This does not mean, however, that a Compact whose purpose was to allocate benefits of the Colorado River system resource should disregard any portion of that

---

out, related to the delivery of water to be made under Article III(d) and had nothing to do with the apportionment made by Article III(a) (Rep. 188-89). The Master relates the limitation neither to III(d) nor to III(a), but to a body of water quite different from that described in either of these paragraphs—the water in Lake Mead and below.

[9]Here is what Governor Emerson told the Senate Committee on Irrigation and Reclamation on December 19, 1925. Senator Ashurst of Arizona had been arguing that the Gila River is of no interest to the upper basin since its waters cannot be used there. Said Mr. Emerson (*Hearings Pursuant to S. Res. 320 Before the Senate Committee on Irrigation and Reclamation,* 69th Cong., 1st Sess. 765 (1925)): "I am not able to see your argument in regard to the Gila River—I think it is as much a part of the Colorado River system as our [Wyoming's] Green River."

Senator Ashurst was not satisfied, and a little later returned to the fray (*id.* at 767):

"Senator ASHURST. I regret to see so well informed a man as yourself go into the domain of speculation and imagination and think that we are going to injure Colorado by using the waters of the Gila River or injure Wyoming by using the waters of the Gila River. . . .

"Mr. EMERSON. As a witness here before your committee, I shall have to assert again that the Gila River is just as much a tributary of the Colorado River as are the various other small tributaries thereof."

resource. In fact, the Compact was negotiated with the future Mexican Treaty very much in the negotiators' minds,[10] as Article III(c) makes clear.[1] As to Mexico, all of the states are upstream users.

The principle familiar in water law which gives an upstream appropriator an interest in the use of water from a downstream tributary, although the upstream appropriator can never physically use such water, also gives the upper basin an interest in lower basin tributaries. (See Calif. Op. Br. 99-100.) We need only add that every reason to include tributaries in the Compact applies to the limitation. The limitation is expressly for the benefit of the upper as well as the lower states, and was insisted upon by the upper states to fill a void left in protection afforded to the upper basin by the Compact if Arizona failed to ratify it (Rep. 165).

2. *Arizona's Rewritten Compact Cannot Physically Operate*

Arizona says that the III(a) apportionment to the lower basin is only from the main stream at Lee Ferry.[2]

---

[10]See Ariz. Ex. 46 (Tr. 255), at A78, A81, report of Delph E. Carpenter, Compact negotiator for Colorado; Ariz. Ex. 49 (Tr. 257), at A70, statement by Richard E. Sloan, legal adviser to Arizona's Compact negotiator; Ariz. Ex. 50 (Tr. 258), at A61-62, statement by W. S. Norviel, Compact negotiator for Arizona; Ariz. Ex. 51 (Tr. 258), at A127, report of Frank C. Emerson, Compact negotiator for Wyoming; Ariz. Ex. 53 (Tr. 259), at A28, report of Herbert Hoover, federal representative to and chairman of the commission which negotiated the Compact; Ariz. Ex. 55 (Tr. 260), at A35, Hoover's answers to Hayden.

[1]The effect of the system concept upon the impact of the Mexican Treaty burden under Article III(c) of the Compact is described at 22-24 *supra*.

[2]Ariz. Op. Br. 80-81: "It is Arizona's position that the terms of the Compact, when considered in relation to the conflict between the two basins, the purposes which the framers sought to achieve and the geographical and physical facts confronting them,

The compact Arizona describes bears little resemblance to the Colorado River Compact which, in Article III(a), apportions the "beneficial consumptive use" of 7,500,000 acre-feet per annum of Colorado River system water. The Master says (Rep. 148-49), and all parties now agree:

> "In the Compact, 'beneficial consumptive use' means consumptive use (as opposed to non-consumptive use, *e.g.* water power) measured by the formula of diversions less return flows, for a beneficial (that is, non-wasteful) purpose. This understanding of the term is reflected in several of the commissioners' reports. (See Ariz. Exs. 46, 52, 54, 57.)"

This definition is indistinguishable from the meaning of "consumptive use," which is the yardstick for the allocation of the recommended decree (Decree art. I(A), Rep. 345), and of "aggregate annual consumptive use (diversions less returns to the river)" which is the measure specified for the limitation on California (Rep. 185-94; Rep. app. 382).[3]

So long as the sun shall shine and water evaporate and transpire, a compact such as Arizona describes could

---

lead directly to the conclusion that Article III(a) apportions to the Lower Basin in perpetuity 7,500,000 acre-feet of water per annum from the main stream of the Colorado River at Lee Ferry and that tributary water is not included in this apportionment."

[3]Arizona lists the definition of "consumptive use" as one of six "questions presented" (Ariz. Op. Br. 9), but her argument explicitly states (*id.* at 105): "Arizona agrees with the Master's conclusion that the § 4(a) apportionment, including the California limitation, is to be measured in terms of consumptive use of water, defined as diversions from the river less return flow (Rep. 182-225)."

The only criticism of the Master's definition of "consumptive use" in the recommended decree is our own—its possible ambiguity in failing expressly to include uses of underground water. See Calif. Op. Br. 289-90.

never operate: Because of natural diminutions of supply between Lee Ferry and downstream points of diversion and use, 7,500,000 acre-feet of flow at Lee Ferry could never supply 7,500,000 acre-feet of beneficial consumptive use *(diversions less returns)* below Lee Ferry.[4]

Arizona does not attempt to explain how the impossible could work. Instead, in the following passage of her opening brief, Arizona represents by ". . ." the Master's dispositive refutation of her argument; we restore (with emphasis) the Master's sentence which Arizona omits (Ariz. Op. Br. 79):

> "Article III(d) was incorporated into the Compact to insure the Lower Basin that the apportionment made to it by Article III(a) would be satisfied out of main stream water originating in the Upper Basin and to assure that this apportionment would be met even during those periods when the water supply rising in the Upper Basin was insufficient to fulfill the total apportionment made to both basins by Article III(a).
>
> "In finding this position unacceptable, the Master held:
>
> "'Since Article III(a) imposes a limit upon appropriation whereas III(d) deals with supply at Lee Ferry, an interpretation which makes these two provisions correlative one to another is inadmissible. *Since a substantial quantity of water is lost through reservoir evaporation and channel losses as it flows from Lee Ferry, the point*

[4]Arizona expressly agrees with the Master "that losses of water which occur *before* diversion are a diminution of available supply under § 4(a) and are not a consumptive use (Rep. 187)." (Ariz. Op. Br. 106; emphasis added.)

where the III(d) obligation is measured, to the diversion points downstream from Hoover Dam, where most of the appropriations are made, 7,-500,000 acre-feet of water at Lee Ferry will supply a considerably smaller amount of appropriations below Hoover Dam.[5] Moreover, III(a) extends to appropriations on Lower Basin tributaries as well as the mainstream. Such appropriations cannot possibly have any relation to the quantative [*sic*] measurement of the flow of water at Lee Ferry.' (Rep. 144)"[6]

B. Congress Did Not Unilaterally Amend the Colorado River Compact

Congress did not purport to enact Arizona's amendment to the Colorado River Compact. No intent can be

---

[5](Footnote ours.) Our own water supply studies showed that an average Lee Ferry flow of 8,700,000 acre-feet per year will produce about 6,000,000 acre-feet for consumptive use from Hoover Dam to Mexico. Other water supply studies also produced a large margin between Lee Ferry flow and the quantity available from the main stream for consumptive use in Arizona, California, and Nevada. (See Calif. Op. Br. plate 7.)

[6]We need not speculate how the limitation would operate if the limitation's specification of "paragraph (a)" were read "paragraph (d)." The Master says (Rep. 187):

"The United States at one time urged a different conclusion, namely, that Section 4(a) limits California to a part of the water flowing at Lee Ferry.[48] It would necessarily follow that this water must be segregated for California at Lee Ferry and traced downstream, through Lake Mead, to California's diversion works. This interpretation measures the Section 4(a) limitation, not to a portion of aggregate consumptive use, but to a portion of a body of water 650 miles upstream from some of California's diversion works, and 355 miles upstream from Hoover Dam, the operation of which the Project Act was designed to regulate. Furthermore, it charges California for evaporation and channel losses which occur before the water is diverted from the mainstream for use in California, despite the statutory language which limits California to a quantity determined by the measurement of 'diversions less returns to the river.'"

"[48]The United States, in its Comment on the Draft Report, al-

imputed to Congress to render the Compact internally inconsistent and physically inoperative.

Conclusive internal evidence in the Project Act that Congress attempted no such thing is the express definition in section 4(a) of consumptive use: "'diversions less returns to the river.'" If the water of which California may use 4.4 million acre-feet is from a quantity of 7.5 million acre-feet flowing at Lee Ferry, then one of two mutually exclusive alternatives must be accepted:

(1) Congress erred egregiously when it wrote "diversions less returns to the river" into the limitation. No one contends that it erred, and the Master holds "diversions less returns to the river" means what it says.

(2) There cannot be 4.4 million acre-feet for California and 3.1 million acre-feet for Arizona and Nevada, computed by "diversions less returns to the river," out of 7.5 million acre-feet of water flowing at Lee Ferry.

Furthermore, the Project Act is explicit in repeated recognition that the Colorado River Compact covers both the main stream and the tributaries—sometimes referred to as "the Colorado River,"[7] sometimes "the Colorado River *and* its tributaries,"[8] sometimes "the Colorado River *or* its tributaries,"[9] and sometimes

---

though it recognizes that this position is fairly implied from its opening brief, says that it altered its position in its reply brief."

[7]"Colorado River" in § 19 of the Project Act obviously includes tributaries. Congress consents to negotiation of compacts for development of the "Colorado River" among all seven named Colorado basin states, although New Mexico and Wyoming have access only to Colorado River tributaries. See also § 4(a) of the Project Act.

[8]§§ 13(b), 15.

[9]§§ 13(c), 13(d).

"Colorado River system."[10] Each of these expressions in the Project Act means the same thing.

Nothing in the Project Act purports to modify the systemwide scope of the Compact approved in section 13(a) (Rep. app. 392). The legislative history reveals that no such amendment was attempted.

During debates on Senator Hayden's proposed amendment which, with modifications,[1] became the second paragraph of section 4(a), the following colloquy between Senators Johnson and Hayden indicates that Senator Hayden did not intend that his proposed amendment modify (unilaterally) the systemwide scope of the Compact (70 CONG. REC. 466, reproduced in Ariz. Legis. Hist. 116-19):

> [Senator Johnson]: "Let us see what the Colorado River compact relates to. I read first from the purposes of the Colorado River compact, Article 1:
>
> " 'The major purposes of this compact are to provide for the equitable division and apportionment of the use of the waters of the Colorado River system.'
>
> "Now, what is the Colorado River system? The Colorado River system then, with meticulous care, is described in the compact in Article II:
>
> " 'As used in the compact (a) the term "Colo-

[10] § 16.

[1] The tri-state compact offered by Senator Hayden was accepted into the bill only after his proposal was modified, first, by making California's ratification thereof permissive only and not a mandatory condition to the effectiveness of the act, and second, by making the effectiveness of the tri-state compact dependent upon ratification of the Colorado River Compact by *Arizona* California, and Nevada. (See *infra* p. 126 note 3 and accompanying text.)

rado River system" means that portion of the Colorado River and its tributaries within the United States of America.'

"Again, sir, we find in Article III the reference to the Mexican situation, and I read it because I have in my hand at the present time the compact itself. We find in paragraph (c) of Article III the following:

"'If, as a matter of international comity, the United States of America shall hereafter recognize in the United States of Mexico any right in the use of any waters of the Colorado River system, such waters shall be supplied first from the waters which are surplus over and above the aggregate of the quantity specified in paragraphs (a) and (b); and if such surplus shall prove insufficient for this purpose, then, the burden of such deficiency shall be equally borne by the upper basin and the lower basin, and whenever necessary the States of the upper division shall deliver at Lees Ferry water to supply one-half of the deficiency so recognized in addition to that provided in paragraph (d).'

"We find, therefore, that the compact toward which we are all devoting our efforts in order to get everybody satisfied and to unite in agreeing upon it provides for a division of the water of the Colorado River basin, and we find, sir, that in this compact the Colorado River basin embraces not alone the main stream, but embraces the tributaries of the main stream as well.

"Sir, the distinguished Senator from Arizona (Mr. Hayden) read remarks that were made in an-

swer to queries of his in writing of Mr. Herbert Hoover, who is to be inaugurated soon as President of the United States. He laid great stress upon Mr. Hoover's ability. He said Mr. Hoover knew more about the Colorado River and its intricacies and all the technical aspects of it then probably any other one man, and read to his purposes, as was his right, certain questions that he had propounded in writing to Mr. Hoover and answers which Mr. Hoover had in writing made to him.

"But, Mr. President, in reading the queries that thus the Senator put in writing to Mr. Hoover, and which he says were answered so elaborately, so well, so intelligently, and so accurately, the Senator omitted to read one of the very first of the queries that thus he propounded to President-elect Hoover. This is one of the queries that he then propounded to Mr. Hoover that Mr. Hoover in writing answered to him:

" 'Question 4. Why was the term "Colorado River system" used in paragraph (a) of Article III, wherein 7,500,000 acre-feet of water is apportioned to the upper and lower basins respectively?'

"That is the question propounded in writing by the junior Senator from Arizona to Mr. Herbert Hoover, who at that time was the president of the Colorado River Commission, and here is the reply that was made by Mr. Hoover to the distinguished Senator from Arizona:

" 'This term is defined in Article II—'

"I have just read Article II to Senators—
'as covering the entire river and its tributaries in

the United States. No other term could be used, as the duty of the commission was to divide all the water of the river. It serves to make it clear that this was what the commission intended to do and prevents any State from contending that, since a certain tributary rises and empties within its boundaries and is therefore not an interstate stream, it may use its waters without reference to the terms of the compact. The plan covers all the waters of the river and all its tributaries, and the term referred to leaves that situation beyond doubt.'

"What is the Senator asking by this amendment? He is asking, indeed, that we amend the Colorado River compact by the action of the Congress of the United States; and then, followed to its logical conclusion, what must occur? Every State must in like fashion take up the amendment of the Colorado River compact, possibly, and thereafter amend it in conformity with this particular amendment.

"Mr. Hayden. Mr. President, if the Senator from California will be kind enough to yield, I am sure he does not want to overstate my position. *I am not asking that the Colorado River compact be amended in any particular.*

"Mr. Johnson. I am stating the effect of the Senator's amendment.

"Mr. Hayden. I am asking that this effect be secured: That the State of California, which has and will have no interest in the Gila River, waive any claim to the waters of that stream." (Emphasis added.)

Earlier, in the hearings on the third Swing-Johnson bill, during discussion of the provisions of what is now section 13(c), the following exchange took place among Representative Hayden of Arizona, Representative Swing of California (author of the bill), and Delph E. Carpenter (Colorado's Compact negotiator and spokesman for the upper basin interests):[2]

> "Mr. Hayden. What is intended by specifically mentioning the 'tributaries.' Is this another attack upon the much abused Gila?
>
> "Mr. Carpenter. As a matter of fact the Gila is much misrepresented.
>
> "Mr. Swing. I might add parenthetically that there would be no river except for the tributaties. The tributaries make the river.
>
> "Mr. Carpenter. I accept the suggestion of Representative Swing. Tributaries include every branch. The inclusion of the words 'and tributaries' would make the act effective off the main stem of the river. The words, 'and the tributaries' may be something of surplusage. The use of the word 'river' probably includes its tributaries. But lest some hyper-technical person (at a future date) bobs up and says that the tributaries are not affected, we have included the words 'and the tributaries.'
>
> ". . . .
>
> "I am utterly unable to comprehend the peculiar viewpoint of the people of the State of Arizona in that respect. More than 12,000,000 acre-feet of

---

[2] *Hearings on H.R. 6251 and H.R. 9826 Before the House Committee on Irrigation and Reclamation,* 69th Cong., 1st Sess. 208-10 (1926).

water of the Colorado River falls upon the soil of the State of Colorado and the principal tributaries have their origin wholly in that State. A large percentage of the water of the Colorado River falls wholly on the soil of Wyoming. Most of the tributaries of the Green have their origin in that State and in the State of Utah. So we might take each one of these States. The river is made up of the water contributed to it by its branches or tributaries and the tributaries flowing through Arizona are no whit different than the tributaries that flow out of Colorado, Wyoming or Utah. I have heard it said that the Gila River is an Arizona stream because it rises in Arizona and yet geographic boundaries and all other sources of information show that the Gila rises in New Mexico. It is primarily a New Mexico river from the standpoint of origin. My recollection is that the Little Colorado also rises in New Mexico.

"Mr. Hayden. Some of its tributaries do.

"Mr. Carpenter. Yes; so that the Gila River is not exclusively an Arizona stream even in the matter of origin. Secondly, the Gila and every other river mentioned contributes, if uninterrupted, its water supply to the main river above the largest diversion canal in America—the Imperial Valley Canal heading now below Yuma. Gila water is of importance to the Imperial Valley Canal. The canal naturally looks to the more stable flow from the main river, but I am informed that Gila water is frequently diverted, and it has been my privilege to see water coming from the Gila River and flowing into the Colorado and down into the Imperial

Valley Canal. That water is just as wet and just as serviceable as the water from the Green River in Utah. The waters of the Gila River are waters of the Colorado River just as much as the waters of the Green River. So that when you look at these facts squarely you are brought to the proposition that there is not a single tributary of the entire Colorado River that does not enter the river above Yuma, and the greatest diverter from this river, or from any river in America, or the world, is the canal of the Imperial Valley, located below Yuma.

"Now the thought is advanced that, because the Imperial Valley people eventually propose to move their heading up to Laguna Dam, therefore the Gila is not a tributary and its waters are not involved. But a canal for the irrigation of lands in Mexico would head below the mouth of the Gila. The whole theory of the Laguna Dam connection is founded upon an all-American canal.

"I will not go into the matter of international relations, because that is for the Department of State, and the Senate; but, even if the Imperial Valley people were to move their headgate up to Laguna Dam and at a point above the mouth of the Gila, and even though there were no Mexican lands, you could yet divert the water. The old and present Imperial canal would remain. Nevertheless, the rule is well fixed that he who changes his point of diversion up stream can not do so to the injury of other appropriators. If the Imperial Valley people see fit to move up stream, and the rights of the States were not fixed by compact,

which they most assuredly should do at an early date; if those rights were still as they are in a chaotic condition, bristling with opportunities for interstate conflict, the Gila River would still be charged against the Imperial Valley in any suit against the upper States, and the Gila would still be a tributary of the Colorado so far as the Imperial Valley is concerned, even if that diversion were voluntarily moved by the Imperial Valley people up to the Laguna Dam, because in moving that dam, the Imperial Valley people well know that they do so at their peril and the peril of loss of the Gila water. I have gone into this matter because there seems to be an idea or a dream that the Gila is not a tributary—an idea that because the all-American Canal will ultimately hook up with the Laguna Dam that therefore the Gila is a river unto itself. Secondly, I can but feel, as an observer, that the rights of New Mexico have not been duly considered by Arizona in the matter of the Gila. They are allowing development on that river to become a potential source of future litigation. I think that answers the question."

C. Arizona's Legislative History Cannot Support Her Construction of the Limitation

On the basis of extracts from legislative history, Arizona contends that Congress intended the words "waters apportioned by paragraph (a) of Article III of the Colorado River compact" to mean 7.5 million acre-feet of average annual flow at Lee Ferry. Arizona apparently contends that the Master's interpretation of the limita-

tion, rewriting the first two references to the Compact,[2a] nevertheless substantially effectuates Congress' intent as reflected in the legislative history Arizona quotes. This is the same legislative history which Arizona says effected an amendment to the Colorado River Compact to exclude the tributaries in the lower basin from the Colorado River system. Arizona misreads the Compact, the legislative history, and the Master's Report.

Arizona's legislative history argument rests on this sequence of events (Ariz. Op. Br. 62-65): In 1927, the governors of all seven Colorado River basin states met in Denver, Colorado, in an attempt to secure seven-state ratification of the Colorado River Compact. As a result of this conference, the governors of the four upper division states (Colorado, New Mexico, Utah, and Wyoming) made a proposal which clearly was limited to the III(d) *flow* at Lee Ferry.[3] Arizona concludes (Ariz. Op. Br. 63):

> "Congress was well aware of the resolution adopted at the Governors' Conference, and in fact

---

[2a]The third and final reference to the Compact—"such uses always to be subject to the terms of said compact"—the Master has not suggested rewriting.

[3]Ariz. Legis. Hist. 158: "The governors of the States of the upper division of the Colorado River System suggest the following as a fair apportionment of water between the states of the lower division subject and subordinate to the provisions of the Colorado River Compact in so far as such provisions affect the rights of the upper basin states:

"1. Of the average annual *delivery of water* to be provided by the states of the upper division *at Lees Ferry,* under the terms of the Colorado River Compact

(a) To the State of Nevada, 300,000 acre-feet.

(b) To the State of Arizona, 3,000,000 acre-feet.

(c) To the State of California, 4,200,000 acre-feet." (Emphasis added.)

Article III(d), Rep. app. 373, provides: "The States of the

> the division of water among the Lower Basin states recommended by the Governors of the Upper Division states was the starting point for the compromise finally worked out in the Senate and incorporated in § 4(a) of the Project Act."

The Master explains very clearly why this Arizona legislative history does not support his conclusions. The Master would divide the first 7.5 million acre-feet of water which the Secretary of the Interior makes available for consumptive use from Lake Mead and the main Colorado River below. As we have seen (*supra* pp. 85-87), 7.5 million acre-feet of flow at Lee Ferry (which the upper division governors proposed to divide) cannot physically supply 7.5 million acre-feet of water for consumptive use from Lake Mead and below or from anywhere else below Lee Ferry.

For that very reason, Arizona's legislative history cannot be relevant to any construction of the limitation, which is in terms of consumptive use, defined as diversions less returns to the river.[4]

The Master states that "Congress never clearly understood" that the governors' recommendation related to their Article III(d) obligation. Senator Pittman "did not adopt, or perhaps failed to grasp, that portion of the governors' resolution which expressly found the source of the allocated waters in the Article III(d) obligation of the Upper Division" so that he described the governors' proposal "in apparent misunderstanding

---

Upper Division will not cause the flow of the river at Lee Ferry to be depleted below an aggregate of 75,000,000 acre-feet for any period of ten consecutive years reckoned in continuing progressive series beginning with the first day of October next succeeding the ratification of this compact."

[4]Rep. app. 382; see Ariz. Op. Br. 105.

of the governors' recommendation." Finally, the Master concludes that "all subsequent discussion in the Senate flowed in the same channel." (Rep. 189-90.) If Arizona is right that the governors' proposal is the correct basis for the construction of section 4(a) of the Project Act, the construction proposed in the Master's Report, by his own analysis, is wrong.

Furthermore, the recommendation of the upper division governors did not exempt any lower basin tributaries from the Mexican Treaty burden.[5] The upper states representatives explained to Congress during the hearings on the fourth Swing-Johnson bill their opposition to Arizona's attempt to exempt her tributaries from the treaty burden. For example, Governor Dern of Utah explained:[6]

> "The conference at Denver for the most part was devoted to a question of dividing the waters of the river. . . . There was one point in connection with the tributaries that the governors repeatedly threw out; but Arizona always came back with that proposal for reconsideration. We have not been able to accept the viewpoint of Arizona regarding that point. She maintained that the tributaries of the

---

[5]Paragraph 1 of the upper division governors' recommendation divided the Lee Ferry flow among Arizona, California, and Nevada (*supra* p. 97 note 3). Paragraph 2 also apportioned 1 million acre-feet to Arizona from lower basin tributaries and provided that "said 1,000,000 acre-feet shall not be subject to diminution by reason of any treaty with the United States of Mexico, except in such proportion as the said 1,000,000 acre-feet shall bear to the entire apportionment in [paragraphs] 1 and 2 [of the governors' recommendation] of 8,500,000 acre-feet." Ariz. Legis. Hist. 158. Nothing in the governors' recommendation purported to amend the Colorado River Compact.

[6]*Hearings on H.R. 5773 Before the House Committee on Irrigation and Reclamation,* 70th Cong., 1st Sess. 264-65 (1928).

> Colorado River in Arizona are distinct from the main river. We take the opposite view of it. We say that, under the compact, the tributaries of the Colorado River in all the States are parts of the Colorado system. We are bound by that rule in the upper basin, and the lower basin should be governed by the same principle."

Francis C. Wilson, representative of Governor Dillon of New Mexico, gave the same explanation:[7]

> "Now, as to this 3,000,000 acre-feet [recommended by the governors as Arizona's share of the III(d) delivery], they [Arizona] said that they were not satisfied but they would accept it, placing upon it certain conditions. We met those conditions in the main, but the condition which they attached, that their tributaries should be released from the burden of the Mexican allocation which might be arrived at by treaty; that their tributaries should be free from that burden, we could not consent to, because in the compact there is no such distinction; the entire system, divided as I have read it to you, is subject to that burden when the United States reaches the point of determining by treaty with Mexico what Mexico's allotment or allocation should be."

This aspect of Arizona's opening brief also demonstrates the impossibility of using the legislative history to overturn the express command of section 4(a) of the Project Act. (See Calif. Op. Br. 110-24.) Arizona has filed with the Court a 159-page printed document entitled "Arizona's Legislative History of Sections 4(a),

[7] *Id.* at 292.

5 (1st Paragraph), and 8 of the Boulder Canyon Project Act," and her opening brief is replete with extensive citations to and quotations from that compilation.

On the basis of this same legislative history compilation, Arizona for the last four years has consistently maintained that the limitation's express reference to the Colorado River Compact means Compact. We agree. Her quarrel with California turned upon her construction of the Colorado River Compact. The same history cannot now support her contention that the Master is correct in severing the Compact from the limitation.

On the basis of this same legislative history compilation, Arizona has derived support for her shifting and contradictory interpretations of the meaning of "excess or surplus waters unapportioned" by the Compact. On the same history, she now takes, simultaneously, two inconsistent positions about the meaning of those terms: They mean (1) all waters in the main stream (Lee Ferry and below), and (2) all waters in the "mainstream" (Lake Mead and below)—a reversal in both instances of her still earlier positions that some "excess or surplus" could be found on lower basin tributaries. She has also reversed her earlier position that California could not share in the increase in use specified in Article III(b), which she sometimes said could not be found in main stream, but only in the lower basin tributaries.

Here is a chronicle of Arizona's uses of the same legislative history compilation:

On August 5, 1957, Arizona filed with the Special Master the first edition of the same compilation of legislative history. This history was then offered in support of two documents Arizona filed simultaneously, entitled

(1) "Amended and Supplemental Statement of Position"[8] and (2) "Memorandum on the *Decisive* Application of the *Compact* and Project Act." (Emphasis added.) Arizona's 1957 position, which she asserted on the basis of this legislative history, was in part:

(1) Section 4(a) of the Project Act and the California Limitation Act incorporate provisions of the Colorado River Compact by reference.[9]

(2) The "excess or surplus waters unapportioned" by the Compact are on lower basin tributaries, at least in part.[10]

(3) California is precluded from participating in the increase in use permitted to the lower basin by Article III(b), which increase in use (from lower basin tribu-

---

[8]Amended and Supplemental Statement of Position by Complainant, State of Arizona (filed with Special Master, Aug. 5, 1957). This statement was marked for identification as Calif. Ex. 7300 (Tr. 22,382, 22,384). We reproduce it in the appendix to this brief.

In her amended and supplemental statement, Arizona asserted (p. 1): "Arizona considers its Statement of Position heretofore filed herein and certain legal conclusions and arguments set forth in its various pleadings filed herein unsound and not supported in the law in relation to the proper interpretation of Sections 4(a), 5 and 8 of the Project Act and Articles III and VIII of the Compact."

[9]*Id.* pt. II, at 2-4, which presents interpretations of various provisions of the Colorado River Compact. *E.g.*, par. e, p. 3, gives Arizona's definition of Article III(b) waters under the Compact, and par. f, p. 3, states that "California by reason of her Self Limitation Act is barred from any claim on *this* lower basin water." (Emphasis added.)

See also title of "Memorandum on the *Decisive* Application of the *Compact* and Project Act" accompanying Arizona's amended statement of position. (Emphasis added.)

[10]Amended statement of position, *supra* note 8, at 4, par. g: "Any water used by Arizona from the Gila River or other Arizona tributaries above said perfected rights and Article III(b) water (if such, by stretch of the imagination there be) would be surplus or excess waters and not subject to a charge against water allotted Arizona from the main stream of the River."

Arizona did not discuss where any other "excess or surplus" may be found, if at all.

taries) is not "excess or surplus unapportioned" by the Compact.[11]

On August 13, 1958, Arizona tendered to the Special Master amended pleadings accompanied by a motion for leave to file those pleadings. From April through June 1959, Arizona filed with the Special Master proposed findings of fact and conclusions of law and supporting briefs asserting the same position proposed in her tendered amended pleadings. Arizona's 1958-1959 position which she asserted on the basis of this legislative history was in part:

(1) Section 4(a) of the Project Act and the California Limitation Act incorporate provisions of the Colorado River Compact by reference.[1]

(2) The "excess or surplus waters unapportioned" by the Compact are in the main stream (Lee Ferry and below) only.[2]

(3) California is precluded from participating in the increase in use permitted to the lower basin by Article III(b), which increase in use (from the main stream only) is not "excess or surplus unapportioned" by the Compact.[3]

---

[11] *Id.* at 3, par. f. *Id.* at 3, par. e: "Article III(b) permits the lower basin users to *increase* their beneficial consumptive use by 1,000,000 acre-feet yearly (over and above perfected rights existing on the effective date of the Compact) on lower basin tributaries."

[1] Ariz. Op. Br. 52 (April 1, 1959); *accord*, p. 44; see also p. 20, noting importance of settling "precisely what water was apportioned by the Compact, i.e., what water is referred to by Section 4(a)."

[2] See Ariz. Proposed Amended Bill of Complaint, par. XXII(3) (Calif. Ex. 7302-A for iden., Tr. 22,383-84, at 14-15), referring to Arizona's claim to half "of the water of the main stream which is excess or surplus above the aggregate of the amounts apportioned by Article III of the Compact." She necessarily assumed that such excess or surplus as may exist is main stream water in the lower basin over and above the 8.5 million of III(a) and (b).

[3] Ariz. Op. Br. 29, 33-34, 45, 52 (April 1, 1959).

Finally, on May 22, 1961, Arizona filed with this Court a printed version of the same legislative history compilation accompanying her opening brief purportedly directed to sustaining the Master's proposed decision either on his rationale or on alternative premises now argued by Arizona.

Arizona's 1961 alternative position which she asserts on the basis of this legislative history is in part:

(1) Section 4(a) of the Project Act and the California Limitation Act incorporate provisions of the Colorado River Compact by reference.[4]

(2) The "excess or surplus waters unapportioned" by the Compact are in the main stream (Lee Ferry and below) only.[5]

(3) Apparently California may share in the increase in use permitted to the lower basin by Article III(b), which increase in use (from the main stream only) is treated by the Project Act, but not by the Compact, as "excess or surplus waters unapportioned."[6]

---

[4]Ariz. Op. Br. 73 (May 22, 1961).

[5]*Id.* at 74, 76, 82.

[6]Although Arizona still contends that III(b) waters are "apportioned" by the Compact (*id.* at 81), she now asserts (*id.* at 82):

"Before the Special Master, Arizona argued that Congress properly regarded the water dealt with by Article III(b) as water 'apportioned' by the Compact and that, when Congress by § 4(a), divided 'excess or surplus waters unapportioned by said compact' equally between Arizona and California, it did not intend to include in the surplus 'unapportioned' waters the water which had been apportioned by Article III(b); hence that § 4(a) of the Project Act excluded California from the consumptive use of Article III(b) water. However, after further reflection, we are persuaded by the Special Master's reasoning that Arizona's original position is untenable (see Rep. 194-200).

"Therefore we now concede that the phrase, 'excess or surplus waters unapportioned by said compact,' as used in § 4(a), includes consumptive use of all main stream water above the first 7.5 million acre-feet available for use by the Lower Basin states in any one year."

Arizona's 1961 position which she asserts on the basis of this legislative history in support of the Master's rationale is in part:

(1) Section 4(a) of the Project Act and the California Limitation Act do not refer to the Colorado River Compact which is thus irrelevant in this suit.[7]

(2) The "excess or surplus waters unapportioned" by the Compact are in the "mainstream" (Lake Mead and below) only.[8]

(3) California may share in the increase in use permitted to the lower basin by Article III(b), which increase in use (from the main stream only) is treated by the Project Act, but not by the Compact, as "excess or surplus waters unapportioned."[9]

The results of Arizona's reliance upon her legislative history compilation may be summarized as follows:

(1) Project Act section 4(a) and the California Limitation Act incorporate Compact provisions by reference, a position which Arizona consistently maintained in 1957-1959, prior to the Master's Report and to which she still adheres in 1961, at least alternatively.

(2) "Excess or surplus waters unapportioned" by the Compact can variously be found

(a) Partly on lower basin tributaries (1957)

(b) Wholly on the main stream (*Lee Ferry and below*) (1958-1959, and sometimes in 1961)

(c) Wholly on the "mainstream" (*Lake Mead and below*) (sometimes in 1961)

(3) Participation by California in the increase in use provided in Article III(b) is

(a) Not permitted (1957, and 1958-1959)

(b) Permitted (1961)

---

[7] *Id.* at 26-27, 67.

[8] *Id.* at 58.

[9] *Id.* at 26, 81-82.

We think that Arizona's use of this legislative history compilation proves the danger of attempting to construe the Project Act and the California Limitation Act without a firm anchor in the words of the statute.

The Master's conclusion and the Arizona argument that Congress amended the Compact seem to be based on a common premise: Congress failed to understand the defined terms of the Compact. Arizona's solution is to change "paragraph (a)" in the limitation to read "paragraph (d)." The Master, recognizing this impossibility, excises the entire reference to the Compact and writes a limitation that does not refer to the Compact. In either case the effort to rewrite an act of Congress and an act of the California Legislature on the basis of what Congress might have said had it understood the Compact differently is unjustified and dangerous.[10]

§ II. THE PRIORITY ISSUE: ARIZONA'S ARGUMENTS TO SUPPLANT PRIORITY PRINCIPLES ON THE MAIN COLORADO RIVER WITH PRORATION ARE UNSUPPORTABLE

A. Principles of Equitable Apportionment Have Not Been Abrogated by the Boulder Canyon Project Act, by the Construction of Storage Reservoirs Which Regulate the Natural Flow, or by the Colorado River Compact

1. *Boulder Canyon Project Act*

We shall not duplicate here the argument in our opening brief that the Project Act preserves equitable ap-

[10] "It is our judicial function to apply statutes on the basis of what Congress has written, not what Congress might have written." United States v. Great Northern Ry., 343 U.S. 562, 575 (1952). See also United States v. Calamaro, 354 U.S. 351, 357 (1957); Crooks v. Harrelson, 282 U.S. 55, 59-60 (1930), commenting on Church of the Holy Trinity v. United States, 143 U.S. 457 (1892).

portionment and priority principles (within the quantitative ceiling on California established by the limitation) and that the Master's conclusion abrogating those principles on the "mainstream" is unsound (Calif. Op. Br. Part Three). We answer the arguments Arizona now advances to buttress the Master's conclusions.

Obviously, sections 5 and 6 of the Project Act could not and did not abrogate equitable apportionment and priority principles in Arizona's "main stream," which extends from Lee Ferry to the Mexican boundary.[1] Section 5, insofar as relevant here, deals with contracts for the storage and delivery of waters impounded by Hoover Dam in Lake Mead; section 6 deals with the priorities for the operation of Hoover Dam and Lake Mead. By their terms, neither section 5 nor section 6 relates to water or rights to the water in the 275-mile reach between Lee Ferry and Lake Mead before that water reaches the reservoir. Control of this section, in any event, is dependent upon principles of equitable apportionment.

Nor do Arizona's arguments support the abrogation of those principles in the Master's "mainstream," Lake Mead to the Mexican boundary. Arizona herself disagrees with the Master's conclusions whenever the competing rights are those of the United States: Part II of her opening brief denies the Government's constitutional power to reserve navigable waters for federal

---

[1]Arizona contends, in effect, that the 7,500,000 acre-feet of "Article III(a) waters" specified in the Compact, in the limitation accepted by California, and in the abortive tri-state compact set forth in the second paragraph of § 4(a) all refer to 7,500,000 acre-feet per annum of water of the main Colorado River at Lee Ferry. (See Ariz. Op. Br. 61-81.)

purposes within a state[2] and asserts that those federal rights should be measured by principles of equitable apportionment.[3]

a. Legislative history of section 5

Arizona argues that the background of section 5 shows a clear congressional intent *not* to recognize appropriative rights as the basis of any claim to water stored in Lake Mead.[3a]

Arizona's conclusion is not supported by the legislative history. (See Calif. Op. Br. 175-82.) The changes in the provisions of section 5 which Arizona describes (*supra* note 3a) were proposed by the upper basin representatives.[4] Obviously, the upper basin had

---

[2]Ariz. Op. Br. 121: "After Arizona was admitted to statehood, the United States had no power to reserve water of the main stream of the Colorado River for the use of federal establishments within Arizona."

[3]*Id.* at 181: "Should the Court find there was no reservation of water for use on Indian Reservations, or, should the Court find such a reservation of water but reject Indian needs as the test of the quantity reserved, the amount of water to which the Reservations are entitled should be determined in accordance with principles of equitable apportionment."

[3a]Ariz. Op. Br. 42-43: "As introduced in the 69th Congress, § 5 of the third Swing-Johnson bill provided in part that 'contracts respecting water for domestic uses may be for permanent service but subject to rights of prior appropriators.' However, the clause subjecting contracts to prior appropriative rights was deleted in committee, the permissive provision, 'may be for permanent service', was stricken and the mandatory provision, 'shall be for permanent service', was substituted. At the same time that Congress deleted the provisions recognizing rights of prior appropriators, it added the following requirement:

> " 'No person shall have or be entitled to have the use for any purpose of the water stored as aforesaid except by contract made as herein stated.'

Congress, by refusing recognition to appropriative rights and by denying any right to the use of water except by contract, evidenced a clear intent that appropriative rights should not be recognized as the basis of any claim to water stored in Lake Mead."

[4]Calif. Ex. 1801 (Tr. 12,234), a committee print of the third Swing-Johnson bill showing the source of proposed amendments, pp. 1, 7.

no interest in the rights of the lower basin states *inter sese* to the waters available for use in that basin consonant with the Colorado River Compact;[5] the purpose of the amendment was to protect the upper basin apportionment under the Colorado River Compact. Delph E. Carpenter, Colorado's Compact Commissioner, acting as the upper basin spokesman[6] to explain these upper basin amendments to the House Committee on Irrigation and Reclamation, made it abundantly clear that the last sentence of the first paragraph of section 5,[7] relied on by Arizona, "has nothing to do with the interstate relations between Arizona and California."[8]

---

[5]*Cf.* Ariz. Ex. 2 (Tr. 216), the Upper Colorado River Basin Compact, 63 Stat. 31 (1949), which makes an interstate allocation within the upper basin—without representation of lower basin interests.

[6]See *Hearings on H.R. 6251 and H.R. 9826 Before the House Committee on Irrigation and Reclamation,* 69th Cong., 1st Sess., pt. 1, at 82, and pt. 2, at 120 (1926).

[7]The upper basin amendment accepted as the last sentence of the first paragraph of § 5 provides, Rep. app. 385: "No person shall have or be entitled to have the use for any purpose of the water stored as aforesaid except by contract made as herein stated."

[8]*Hearings on H.R. 6251 and H.R. 9826, supra* note 6, pt. 2, at 163; quoted in context in Calif. Op. Br. 178-79, and in Calif. Ex. 1802 (Tr. 12,236), at 2:

"Mr. CARPENTER. 'Except by contract made as herein stated' means this: If the flow of the Colorado River is controlled and regulated by the construction of the Black Canyon Dam, and any person in the State of Arizona attempt to take any water out of the stream which has been discharged from the reservoir and is being carried in the stream bed, as a natural conduit, for delivery to lower users, this law would be brought into effect and he would be prevented from using any of that water independent of the Colorado River compact but unincumbered by any other condition for the benefit of California and Nevada. In other words, the compact does not disturb the rights between Arizona, California, and Nevada, *inter sese,* as to their portion of the water.

"Mr. SWING. The water which is stored by the Government at its own expense would be disposed of by contract as provided in this bill. There should be that privilege given Arizona to

The same views were later expressed by Mr. Swing, the House author of the bill.[9]

b. Section 6

Arizona says (Ariz. Op. Br. 41-42):

> "If the Secretary in managing the reservoir and dam were compelled to meet the demands of appropriative rights in point of time and quantity, it would be impossible for him to comply with the mandate of the Project Act that 'the dam and reservoir . . . be used: First, for river regulation, improvement of navigation and flood control; second, for irrigation and domestic uses *and satis-*

---

secure water on the same terms as is afforded to Nevada and California.

"Mr. HAYDEN. How tight would you tie Arizona?

"Mr. CARPENTER. The thought of this amendment is that any water stored in this reservoir under the terms of the compact, when released from storage shall be burdened by the compact wherever it goes. As far as water is concerned, existing claims of the lower States are protected by the compact. *Water must pass through this reservoir to take care of the present existing lower claims.*

"As to future development from the main river, we insist that water stored in this structure by the United States be stored and released upon the express condition that the persons who receive the water shall respect and do so under the compact. *It has nothing to do with the interstate relations between Arizona and California.*" (Emphasis supplied.)

Section 8(a) of the Project Act, Rep. app. 389 (§ 8(c) of the draft Mr. Carpenter was discussing), provides:

"The United States, its permittees, licensees, and contractees, and all users and appropriators of water stored, diverted, carried, and/or distributed by the . . . . works herein authorized, shall observe and be subject to and controlled by said Colorado River compact . . . and all permits, licenses, and contracts shall so provide."

[9] *Hearings on H.R. 9826 Before the House Committee on Rules,* 69th Cong., 2d Sess., pt. 3, at 116 (1927), quoted *supra* p. 54; and *Hearings on H.R. 5773 Before the House Committee on Irrigation and Reclamation,* 70th Cong., 1st Sess., pt. 1, at 57 (1928), reproduced in Calif. Ex. 1804 (Tr. 12,237), at 3-4.

faction of present perfected rights in pursuance of Article VIII of said Colorado River compact;[1] and third, for power.'"

Arizona refutes her own argument. Arizona agrees with the Master that section 18 of the Project Act requires "that state law shall govern intrastate water rights and priorities." (Ariz. Op. Br. 99.) If Arizona were correct about the physical difficulties in observing priorities, it would be impossible for the Secretary of the Interior to honor intrastate priorities. The practical problems of adhering to a priority schedule in releasing water from Lake Mead, Lake Mohave, and Havasu Lake are identical whether two users whose respective priorities must be observed are on the same side of the river or on opposite sides.

Pursuant to section 6 of the Project Act, navigation, flood control, and river regulation are paramount rights to the use of the dam and reservoir as against irrigation and domestic uses, which are junior. The prior satisfaction of paramount or senior rights, of course, affects the supply of water which will be available to satisfy the rights of junior users, but fluctuations in water supply do not destroy the rights depending upon that supply. In other words, once these senior obligations have been satisfied, there is no incompatibility in supplying irrigation and domestic users *inter sese* in relative order of interstate (as well as intrastate) priorities. Thus, water may be released in the month of January to satisfy a paramount obligation such as flood control; to the extent that it is not required for consumptive use at that time, it would waste to the sea.

[1] (Footnote ours.) In Arizona's quotation the italicized words are represented by ellipsis.

None of that water would be available in the irrigation season in July for a lower priority irrigation use. But once the paramount rights have been satisfied in January, then supplying water for irrigation and domestic uses from the remaining water made available in July, in relative order of priority, does not interfere with operation of the dam and reservoir specified in section 6 of the Project Act.

This practice can be demonstrated from experience on many projects. Here, for example, is the act authorizing the Central Valley Project in California:[2]

> "That the entire Central Valley project, California, heretofore authorized and established . . . is hereby reauthorized and declared to be for the purposes of improving navigation, regulating the flow of the San Joaquin River and the Sacramento River, controlling floods, providing for storage and for the delivery of the stored waters thereof, for the reclamation of arid and semiarid lands . . . *Provided further,* That . . . provisions of the reclamation law . . . shall govern the repayment of expenditures . . . and the Secretary of the Interior may enter into repayment contracts . . . with State agencies, authorities, associations . . . including all agencies with which contracts are authorized under the reclamation law, and may acquire by proceedings in eminent domain, or otherwise, all lands . . . water rights, and other property necessary for said purposes: *And provided further, That the said dam and reservoirs shall be used, first, for river regulation, improve-*

[2]Rivers and Harbors Act of 1937, § 2, 50 Stat. 850.

ment of navigation, and flood control; second, for irrigation and domestic uses; and, third, for power." (Emphasis added.)

Arizona argues that "present perfected rights" recognized by section 6 of the Project Act have no intra-lower basin consequences.[3] If her contention is correct, then the italicized language of the above quoted act authorizing the Central Valley Project is identical in its operation to that of the corresponding language of section 6 of the Project Act in the present litigation.[4] This Court definitively construed that language in *United States v. Gerlach Live Stock Co.*, 339 U.S. 725, 734 (1950):

> "We cannot disagree with claimants' contention that in undertaking these Friant [referring to a unit of the Central Valley] projects and implementing the work as carried forward by the Reclamation Bureau, Congress proceeded on the basis of full recognition of water rights having valid existence under state law. By its command that the provisions of the reclamation law should govern the construction, operation, and maintenance of the several construction projects, Congress directed the Secretary of the Interior to proceed in conformity with state laws, giving full recognition to every right vested under those laws.[7] Cf. Nebraska v. Wyoming, 295 U.S. 40, 43; California Oregon Power Co. v. Beaver Portland Cement Co. 295 U.S. 142, 164; Nebraska v. Wyoming, 325 U.S. 589, 614; Silas Mason Co. v. Tax Com. 302 U.S. 186."

---

[3]Ariz. Op. Br. 47-52, 56. Nevada makes the same contention. Nev. Op. Br. 57-58.

[4]The Central Valley Project legislation does not, of course, refer to the Colorado River Compact.

The Court's footnote 7 quotes section 8 of the Reclamation Act of 1902, and adds:

> "To the extent that it is applicable [*i.e.*, to the 17 western states] this clearly leaves it to the State to say what rights of an appropriator or riparian owner may subsist along with any federal right."

c. Sections 14 and 18

Arizona's opening brief is noteworthy for its failure to treat Project Act sections 14[5] and 18 in the discussion of the purported abrogation of equitable apportionment and priority principles.[6] Both sections preserve those principles[7] and conclusively refute Arizona's contentions to the contrary. (See Calif. Op. Br. 139-58.)

d. Administrative construction

Arizona says (Ariz. Op. Br. 46):

> "The evidence is uncontradicted that, since construction of Hoover Dam, the reservoir and dam have been operated consistently without regard to claimed appropriative rights (Tr. 828-29). The record is clear that no water users in California or

---

[5]Section 14 of the Project Act, Rep. app. 394, expressly makes that act a supplement to the "reclamation law" which law "shall govern the construction, operation, and management of the works herein authorized, except as otherwise herein provided." Section 12, Rep. app. 392, defines "reclamation law" to mean the Reclamation Act of 1902 and acts amendatory thereof and supplementary thereto. Section 8 of the Reclamation Act of 1902 is thus incorporated into the Project Act.

[6]Contrast Arizona's argument in the section of her brief devoted to federal reserved rights (Ariz. Op. Br. 144): "Section 8 of the Reclamation Act also prescribes that 'beneficial use shall be the basis, the measure, and the limit of the right'. This requirement cannot be reconciled with the concept that a water right may be acquired by reservation without any physical application of water to a beneficial use."

[7]Arizona v. California, 283 U.S. 423, 464 (1931); United States v. Arizona, 295 U.S. 174, 183 (1935).

elsewhere have demanded the release of water in accordance with and in satisfaction of asserted appropriative rights.

"This practical construction reflects a realization on the part of all concerned that since enactment of the Project Act rights to stored water have as their basis the Act and the water delivery contracts, if made pursuant thereto, rather than any prior appropriations of water."

There is no evidence that Hoover Dam and Lake Mead have been operated without regard to appropriative rights, nor may any such inference be drawn from the evidence. Consequently, there is no practical construction that all rights to "mainstream" waters rest upon water delivery contracts or that none of the rights to those waters rest upon prior appropriations. Only in the event of a shortage to supply all claimed rights does any water rights question have to be answered, and there has never been any such shortage on the main Colorado River in the lower basin. The Master accurately points out (Rep. 320):

"[I]t is clear that up to the present time, no existing mainstream project has been refused water, the delivery of which it has demanded."

He might have added that no one, with or without a contract, has ever been prohibited from diverting and using "mainstream" water.

No water users have demanded the release of water in accordance with and in satisfaction of "present perfected rights," and the Master holds that these rights must be satisfied with their priorities (Rep. 311-12). The reason again is that there has never been any short-

age of water to supply these "present perfected rights" or any other rights served by the Government's main stream reservoirs.

If any significance can be attributed to the fact that all main stream contractees have always received a full supply for their needs, the proper inference is the one drawn by the court in *United States v. Tilley*.[8] That case involved a Warren Act contract executed by the Secretary of the Interior on the North Platte project. The contract contained an express provision (article XI) such as Arizona would apparently read into our contracts:[9]

> "The delivery of the water supply provided for in this contract will be accepted by the Company as in full satisfaction of all its rights to the water of the North Platte River, both natural flow and surplus storage from the Pathfinder Reservoir and other Reservoirs of the Reclamation Service constructed in connection with the North Platte Project."

The United States sought an injunction against Nebraska officers and against an irrigation district, successor to the contracting company, and a decree that the appropriative right of the district to natural flow waters had been transferred to and vested in the United States by reason of the cited provision. The court of appeals, affirming the district court, held that the contract applied only to supplemental storage water and that the contract did not transfer the irrigation district's natural flow appropriative right to the United States. The

---

[8]124 F.2d 850 (8th Cir. 1941), *cert. denied*, 316 U.S. 691 (1942).

[9]124 F.2d at 854.

court relied *inter alia* on the negotiations surrounding the drafting of the contract,[10] other provisions of the contract, [11] and the administrative and practical construction by the Secretary and the district with respect to deliveries under the contract:[12]

> "A further reason why we think the contention of the United States can not reasonably be adopted here is found in the subsequent actions of the parties under the contract, through a long period of years, which seem to us to evidence a recognition and acceptance of the construction for which the District is contending. From 1912 to 1936, when the present controversy first arose, the District . . . had regularly used the natural flow appropriation as it saw fit, and had merely called upon the United States for a release of storage waters as an auxiliary supply, when there was a shortage in the amount fixed by the contract schedule. At

---

[10] *Id.* at 854-55. Compare the Secretary's assurance to attorneys for the Palo Verde Irrigation District in California on July 21, 1930, during the negotiations for the California water delivery contracts, that "those possessed of prior rights to the unregulated flow of the river will be privileged to continue the enjoyment of those rights without interference by storage in the Boulder Canyon reservoir." Calif. Ex. 351 (Tr. 9,929), at 2, discussed in Calif. Op. Br. 172-73.

[11] The Tilley contract expressly provided for delivery by the United States of an amount of water which *"with all the water the Company may be entitled to by reason of any appropriations* and all water to which the lands of said Irrigation District are entitled" would aggregate a specified quantity. 124 F.2d at 854. Compare the language in the Palo Verde contract, representative of the language in each of the California contracts, executed after the assurances to the district noted in note 10 *supra,* by which the Secretary agrees to deliver from Lake Mead "so much water as may be necessary to supply the District a total quantity, including all other waters diverted for use of the District from the Colorado River," in the amounts and with priorities thereafter specified. Art. 6 (Rep. app. 424); see Calif. Op. Br. 171-72.

[12] 124 F.2d at 855.

no time during this period is the United States shown to have disputed the District's right to use the natural flow waters as such, or in an amount up to the limit of its claimed appropriative rights in such waters. The District has acted on the theory and construction that Article XI merely fixed or limited the scope of the obligation of the United States; that its effect was simply to prevent the District from calling upon the United States for water, if the available natural flow under its appropriative rights equaled or exceeded the contract schedule; and that when the District had received the amount of water prescribed by the contract, during the period specified, no matter from what source it was derived, the obligation of the United States was thereby satisfied, under the provisions of Article XI. These actions of the parties over a period of almost twenty-five years are strongly indicative of a mutual interpretation, which necessarily is entitled to weight here in settling a subsequent dispute as to the intended meaning of the contract provision."

The foregoing analysis is equally applicable to deliveries under the Project Act contracts, and refutes Arizona's contention that deliveries from Lake Mead cannot be considered to have been made in satisfaction of natural flow priorities.

2. *Reservoirs Which Regulate the Natural Flow*

Arizona says (Ariz. Op. Br. 51):

"Since an appropriative right is fixed and measured in relationship to the supply available from the natural flow of the stream, once the natural

flow is destroyed no standard survives by which to determine the users who may take or how much each may divert."

Arizona later concludes (Ariz. Op. Br. 52):

"The conclusion, therefore, is clear that users in the Lower Basin surrendered their claimed prior appropriative rights in the natural flow of the river (which was silt-laden, given to violent floods and prone to seasonal fluctuations in supply) in exchange for rights to receive from storage a guaranteed average supply of desilted water from a flood-controlled river."

It is undeniably true that flow below a reservoir is interrupted and its regimen changed as soon as a storage reservoir comes into operation, but the same waters, modified in their seasonal or annual occurrence, are brought down by gravity as before. Western streams not now regulated by reservoirs are few in number, and soon will be even fewer. However, the regulation of the natural flow does not destroy preexisting rights which could be enjoyed from the natural flow without the regulation and conservation benefits of a later constructed dam and reservoir; that is, the right to demand quantities of water to the extent that reasonable use could be made of them at the time when they would have been available absent the reservoir. If this is prevented by the reservoir operation, for delivery of the water to another user, there is a taking of the natural flow right which is either subject to injunction or, failing that remedy, is compensable. See *United States v. Gerlach Live Stock Co.*, 339 U.S. 725, 737 (1950):

"[W]e need not ponder whether, by virtue of a highly fictional navigation purpose, the Government

could destroy the flow of a navigable stream and carry away its waters for sale to private interests without compensation to those deprived of them. We have never held that or anything like it, and we need not here pass on any question of constitutional power . . . ."

A typical example in the lower Colorado River basin, in evidence in this case, is the operation of the Salt River Project on the Salt River (a Gila tributary) in Arizona. In a physical sense, natural flow (except on the occasions that the reservoir was full and spilling) has not reached that project's diversion works since 1909, when Roosevelt Dam was closed. The natural flow rights are nevertheless recognized and preserved. The project operation is described in *Adams v. Salt River Valley Water Users' Ass'n,* 53 Ariz. 374, 89 P. 2d 1060 (1939).[13] Water is supplied to the project from three sources: (a) natural flow of the river; (b) stored flood waters, unavailable for use before Roosevelt and the other project dams were built; and (c) pumped percolating ground water (not subject to appropriation in Arizona). Different water users in the project, depending on their locations and the constructed works, receive water of each category in different proportions. The aggregate quantity of project water from the three sources varies proportionately from time to time, as do proportionate components of the water supplied to each user. Nevertheless, a water user with

[13]The Kent decree of 1910, described in the opinion, is Ariz. Ex. 101 (Tr. 380). The trial court's opinion in the *Adams* case is Calif. Ex. 1842 for identification (Tr. 12,234). Contracts between the United States and the Water Users' Association are Calif. Exs. 3 and 4 (Tr. 1,816). Arizona's witness McMullin testified about the project's operation in serving natural flow rights. Tr. 2,164-67.

rights in natural flow receives his full requirement according to quantity and priority, whether his water is physically supplied from natural flow, stored water, or pumped percolating ground water. His rights attach to whatever water he receives from the substituted sources.

In *Nebraska v. Wyoming,* 325 U.S. 589 (1945), this Court equitably apportioned the natural flow of the North Platte River. The Court pointed out that "priority of appropriation is the guiding principle" in an equitable apportionment (*id.* at 618). Yet, the Pathfinder reservoir with "a capacity of . . . 79 per cent of the average annual run-off of the North Platte River at that point" had been completed in 1913 (*id.* at 594-95). If Arizona were correct in her contention, the Court's 1945 decree in that suit was a physical impossibility.

3. *Colorado River Compact*

Arizona says (Ariz. Op. Br. 50):

> "Instead of preserving appropriative rights of main stream users, the Compact contemplated that those rights, if any, would be extinguished once storage was provided 'within or for the benefit of the Lower Basin.'"

The Master provides a conclusive answer to Arizona's contention (Rep. 316):

> "The Compact does not govern the relations, *inter sese,* of the states having Lower Basin interests. Therefore, it could not have displaced the principles of equitable apportionment as decisive of the question of rights in Lower Basin tributary supply."

The Master's premise (developed at length at Rep. 139-41) establishes equally well that the *Compact* could not have displaced the principles of equitable apportionment in the main stream supply for the same reasons that it could not do so with respect to the tributary supply in the lower basin.

The Compact words which Arizona quotes ("within or for the benefit of the Lower Basin") are from Article VIII of the Compact. Arizona's argument based on the language of Article VIII—that the Compact contemplated extinguishment of the appropriative rights of main stream users when storage was provided—conflicts directly with her assertion that Article VIII of the Compact "regarding satisfaction of perfected rights is limited to rights basin versus basin and does not apply to intrabasin rights (Rep. 141)" (Ariz. Op. Br. 50).[14]

In the following quotation of Article VIII we italicize the words which also refute the Arizona contention:

> "Present perfected rights to the beneficial use of waters of the Colorado River System are unimpaired by this compact. Whenever storage capacity of 5,000,000 acre-feet shall have been provided on the main Colorado River within or for the benefit of the Lower Basin, then claims of such rights, if any, by appropriators or users of water in the Lower Basin against appropriators or users of water in the Upper Basin *shall attach to and be satisfied from water that may be stored* not in conflict with Article III." (Emphasis added.)

[14] *Cf.* Arizona's contentions in her Amended and Supplemental Statement of Position, dated Aug. 5, 1957 (reproduced as an appendix to this brief), pars. II(a) and (c).

Article VIII speaks of rights of "appropriators." "Attach to and be satisfied from" is strange language to use if the intended meaning were "wiped out." Furthermore, the Article III(a) apportionment, like California's limitation, includes "all water necessary for the supply of any rights which may now exist." What "rights," if the Compact or limitation contemplated their extinguishment?

Article VI of the Compact also refutes Arizona's contention. After describing negotiation as a means for settling controversies in a number of situations, the final paragraph of Article VI provides:

> "Nothing herein contained shall prevent the adjustment of any such claim or controversy [between any two or more signatory states] *by any present method* or by direct future legislative action of the interested States." (Emphasis added.)

The "present method" contemplated by the Compact clearly refers to an equitable apportionment suit in the original jurisdiction of this Court.

Even if the language and the purpose of the Compact permitted the construction proposed by Arizona, that construction would have to be rejected as completely irrational. The Compact could not have been intended to extinguish the "appropriative rights of main stream users" without substituting any alternative basis for water rights.

B. Even if Priorities Derived From Appropriations Made Under State Law Are Disregarded, Nevertheless Equivalent Priority Principles Control Competing Rights of Holders of Federal Water Delivery Contracts

Arizona advances elaborate arguments to support the major premises and conclusions of the Master's Report

with which she says she agrees. In striking contrast, she confines her discussion of one essential element of the Master's "mainstream" allocation—the substitution among contractees of parity for priority—to one cryptic comment (Ariz. Op. Br. 105):

> "We further agree that, in the event there is in any year less than 7,500,000 acre-feet of main stream water available for use by Arizona, California and Nevada, California's entitlement under its contract is 4.4/7.5 of the quantity available (Rep. 306)."

The reasons for this vacuum are not hard to find: Arizona cannot agree with the Master's rationale, but is unable to discover independently any alternative basis for proration among contractees.[1]

First, Arizona disagrees with the protection which the Master accords to "present perfected rights" within the "mainstream." (Ariz. Op. Br. 46-56.) Yet, the Master relies upon that very protection (Rep. 234-35), improperly we say (Calif. Op. Br. 217-21), as a major element of his argument to abrogate all other priorities and establish proration. Arizona apparently realizes that she cannot have it both ways.

Second, Arizona has said that "we certainly disagree with the Special Master's statement that 'the Compact treats the Upper and Lower Basins on a parity one to the other in regard to the division of water . . .' (Rep. 235)" (Ariz. Exceptions, p. 2 n.1). Yet the quoted statement of the Master with which Arizona disagrees is another basis for the Master's proration con-

[1]Even if water delivery contracts somehow replace equitable apportionment, there remains the issue of relative priorities among contractees.

clusion. We agree with Arizona that the Master's premise is faulty.

Third, the Master has rejected Arizona's contention that section 5 of the Project Act contains a mandatory direction to the Secretary of the Interior that his water delivery contracts make the allocation which Arizona perceives in section 4(a) of the Project Act (Rep. 162-63, 202); Arizona reiterates her contention (Ariz. Op. Br. 83-99). Arizona bases her argument on the language of section 5 which requires that the Secretary's water delivery contracts "shall conform to paragraph (a) of section 4 of this Act" and contends that thereby "Congress prescribed specific standards which the Secretary was to follow—the formula for the apportionment of water approved by Congress in § 4(a)." (Ariz. Op. Br. 84.) Arizona quotes extensively from portions of the Senate debates on the fourth Swing-Johnson bill (Ariz. Op. Br. 90-99) to support her contention that the language "can relate only to the division of water set out in § 4(a)" (*id.* at 98) and must be so interpreted to save what Arizona contends is otherwise an unconstitutional delegation of legislative functions by section 5. (*Id.* at 88-89.)

If Arizona were correct, California would bear only 50 per cent of any "mainstream" shortage under clause (4) of the second paragraph of section 4(a),[2] not 44/75 (or 58⅔ per cent) as under the Master's formula.

---

[2]Clause (4) provides "that the waters of the Gila River and its tributaries, except return flow after the same enters the Colorado River, shall never be subject to any diminution whatever by any allowance of water which may be made by treaty or otherwise to the United States of Mexico but if, as provided in paragraph (c) of Article III of the Colorado River compact, it shall become necessary to supply water to the United States of Mexico from waters over and above the quantities which are surplus as defined

Arizona indeed perceives the constitutional infirmity in the "contractual allocation scheme" described by the Master. The Master's "contractual allocation scheme" is unconstitutional, unless the Project Act explicitly directed it or provided adequate standards by which the Secretary would be guided in creating it. Arizona's proposed solution is to convert Congress' invitation for a tri-state compact in the second paragraph of section 4(a) into a mandatory apportionment by statute to which the Secretary must conform.

The Master rejected Arizona's solution for two irrefutable reasons: The proposal requires the Court both to rewrite the language of the second paragraph of section 4(a) and to ignore the history of that section (Rep. 162-63). The second paragraph of section 4(a) was included in the Project Act only after explicit agreement that "this amendment shall not be construed hereafter by any of the parties to it or any of the States as being the expression of the will or the demand or the request of the Congress of the United States."[3] Its language,

---

by said compact, then the State of California shall and will mutually agree with the State of Arizona to supply, out of the main stream of the Colorado River, one-half of any deficiency which must be supplied to Mexico by the lower basin . . . ."

[3]This was the statement by Senator Johnson, 70 CONG. REC. 472 (1928), to which Senator Pittman replied, "Exactly, not. . . . It is not the request of Congress." *Ibid.* No Senator voiced any objection. Senator Johnson then accepted the amendment, which was then adopted without a roll call vote. See Ariz. Legis. Hist. 132.

Arizona inaccurately states on page 98 of her opening brief that "Senator Johnson of California agreed to accept the Hayden amendment [the second paragraph of § 4(a)] as long as it was understood that California was not being coerced into entering into a compact." In fact, the quotation in our text above shows that Senator Johnson accepted the amendment on a completely different understanding which conclusively disproves Arizona's contention. Although her opening brief quoted copiously from

which merely authorizes a tri-state compact, aptly reflects this result.

The legislative history also demonstrates that Congress could not have intended the language to have the constitutional significance Arizona suggests: The "conform to" provision in section 5 was offered before the language of the second paragraph of section 4(a) was offered; the genesis of each was unrelated to the other.[4]

---

the legislative history, Arizona does not quote the exact language of Senator Johnson, set forth above in our text.

The Master correctly answers Arizona (Rep. 163): "But the second paragraph of Section 4(a) *is plain in that it* merely *authorizes* a tri-state compact for the division of water; it does not compel it; nor does it condition approval of the Colorado River Compact upon acceptance of the proposed tri-state compact. *Indeed, the second paragraph was specifically amended on the floor of the Senate to make the suggested division permissive rather than mandatory.* The suggested compact which Congress was willing to approve in advance is of no compelling force or effect since no such compact has ever been agreed to. In so far as Section 5 refers to the second paragraph of Section 4(a) it is for the purpose of requiring the Secretary to respect the compact if ratified by the states. See also Section 8(b). Arizona's contention in this respect must therefore be rejected." (First and last emphasis added.)

Arizona purports to quote the Master's argument (Ariz. Op. Br. 87-88); our emphasis adds what Arizona omits: (1) The Master states that the second paragraph "is plain" in merely authorizing a tri-state compact; (2) the Master points out that the legislative history, which Arizona's quotation represents by ellipsis, supports this plain meaning.

[4]The phrase "shall conform to paragraph (a) of section 4 of this Act" first appears in an amendment proposed by Senator Phipps of Colorado on May 19, 1928, but never offered. This amendment (Calif. Ex. 2004 (Tr. 11,173)) proposed to put a limitation provision in § 4(a) and add to §5 the phrase "and shall conform to paragraph (a) of section 4 of this Act." On May 25, 1928, Senator Phipps' colleague from Colorado, Representative Taylor, added the "shall conform" language to § 5 of H.R. 5773 (Calif. Ex. 2005 (Tr. 11,173), p. 8), the House version of the bill, as a "clarifying amendment." 69 CONG. REC. 9988. Section 4(a) of H.R. 5773 provided only for a six-state ratification of the Colorado River Compact. (Calif. Ex. 2005 (Tr. 11,173), p. 6.)

H.R. 5773 passed the House and was transmitted to the Senate where, on December 5, 1928, for parliamentary reasons H.R. 5773 was substituted for S. 728 and the text of S. 728 then substituted

The constitutional dilemma that Arizona futilely attempts to resolve was not created by Congress, but by the Master's effort to change an authorization to deliver water from Lake Mead into a delegation of authority to make an interstate allocation of waters of the Colorado River in the lower basin, and his eradication of the interstate effect of sections 14 and 18 of the Project Act and section 8 of the Reclamation Act of 1902.

We say that the Project Act is constitutional as it is written. The section 5 authorization to the Secretary to execute contracts "for the storage of water in said reservoir and for the delivery thereof at such points on the river and on said canal as may be agreed upon" (the normal sort of contract with water users, familiar in the reclamation law) cannot be tortured into a direction to the Secretary to effectuate an interstate compact, which none of the states entered, by means of a contract with a state inferentially determining the rights of other states not parties thereto. Moreover, the Secretary was adequately guided by Congress in sections 14 and 18 to perform the task which Congress in fact delegated: The execution of service contracts with actual water users for the orderly administration and financing of the project serving the same purposes and

---

for that of H.R. 5773. 70 CONG. REC. 67-68. On December 11, 1928, Senator Phipps reoffered an amendment providing (1) a limitation on California, (2) addition to § 5 of the language "and shall conform to paragraph (a) of section 4 of this Act," and (3) an embargo on Federal Power Commission licenses on the Colorado River system until the act became effective. 70 CONG. REC. 324, 382. After some parliamentary maneuvers, Senator Hayden's tri-state compact authorization was subsequently added to the Phipps amendment, 70 CONG. REC. 472 (1928).

Significantly, Senator Hayden's original amendment to § 4(a), which included a limitation on California, and a second unnumbered, unlettered paragraph, embodying his tri-state compact, did not include any amendment to § 5 requiring contracts to conform to any paragraph of § 4. Calif. Ex. 2011 (Tr. 11,173).

having the same effect as such contracts have served on reclamation projects throughout the West since 1902.[5]

§ III. OTHER MATTERS

A. The Prohibition Which Arizona Proposes on the Use of Otherwise Unused Water Is Unreasonable

Arizona renews a proposal rejected by the Special Master whereby the Secretary of the Interior would be prohibited from releasing and California would be prohibited from using water not usable in another state (Ariz. Op. Br. 106-08). This is inherently unreasonable. (See Rep. 314.)

The Secretary now has authority, and the Master's recommended decree would leave him that authority, to store or release water in the exercise of the discretion he must have if the project purposes enumerated in section 6 of the Project Act are to be served. Under the Arizona amendment to the recommended decree, however, if flood control conditions required the release of water from Lake Mead, the Secretary might be forced to compel the waste of that water to the ocean rather than to permit its use by a state thereby exceeding its allocation.

No law, no decree, no statute, no compact, no contract has ever—to our knowledge—compelled such a wasteful result.

---

[5]Calif. Op. Br. 175-77. Water delivery contracts written with Arizona and California water users decades before the Project Act was passed satisfy the requirements of § 5 of the Project Act. Rep. 212, 218. Calif. Op. Br. 153-57 and *supra* pp. 59-60.

B. On Each of the Three Major Issues Identified in Her Bill of Complaint Which Initiated This Suit, Arizona Has Now Reversed Her Pleaded Position and Agrees With the Pleaded and Present Position of the California Defendants

1. *The III (b) Issue*

Arizona in 1952 identified the issue and her position as follows (Ariz. Bill of Complaint, par. XXII(1), p. 25):

> "(1) Is the water referred to and affected by Article III(b) of the Colorado River Compact apportioned or unapportioned water? The complainant says that it is apportioned water and hence the Project Act and the California Limitation Act, which limits California's rights to 4,400,000 acre-feet annually of water apportioned by Article III (a) plus not more than one-half of the surplus unapportioned by that Compact, preclude California from any rights to water covered by Article III (b). Complainant further says that its position in this regard is sustained by the decision of this Court in the case of *Arizona v. California,* 292 U.S. 341."

Our answer to Arizona asserted that the limitation does not preclude California from sharing in the Article III(b) waters (Calif. Answer, par. 27(d), p. 27), a position we have consistently maintained.

Arizona now in effect concedes that the limitation does not preclude California from sharing in the Article III(b) waters (Ariz. Op. Br. 82).

2. *The Beneficial Consumptive Use Issue*

Arizona in 1952 pleaded (Ariz. Bill of Complaint, par. XXII(2), pp. 25-26):

"(2) How is beneficial consumptive use to be measured? Article III of the Compact does not apportion water. Rather it apportions the beneficial consumptive use of water. The Compact contains no definition of beneficial consumptive use and does not establish any method of measuring beneficial consumptive use. Arizona says that beneficial consumptive use is measured in terms of main stream depletion, that is, the quantity of water which constitutes the depletion of the stream by the activities of man. Water salvaged by man is not chargeable as a beneficial consumptive use. The point is most pertinent when applied to the use of waters of the Gila River, a tributary of the Colorado River. In a state of nature the Gila River was a losing stream with large quantities of water lost to the stream before its confluence with the Colorado River. Arizona has salvaged this water by putting it to beneficial consumptive use before it is lost and is chargeable only with the depletion of the stream at the state line. The amount of water involved in the controversy over the method of measurement of beneficial consumptive use exceeds 1,000,000 acre-feet annually."

California answered that the term "beneficial consumptive use" in the Compact means "diversions less returns to the river," the same meaning which the California limitation expressly gives to "aggregate annual consumptive use (diversions less returns to the river)" (Calif. Answer, par. 8, pp. 11-12), a position we have consistently maintained.

Arizona now "agrees with the Master's conclusion that the § 4(a) apportionment, including the California

limitation, is to be measured in terms of consumptive use of water, defined as diversions from the river less return flow (Rep. 182-225)" (Ariz. Op. Br. 105). Consequently, Arizona would appear to agree that the term "beneficial consumptive use" in the Compact (which is expressly referenced in the second paragraph of section 4(a)) also means diversions less returns to the river. *Cf.* Ariz. Ans. Br. 60-61 (June 1, 1959).

3. *The Reservoir Evaporation Issue*

In 1952 Arizona pleaded (Ariz. Bill of Complaint, par. XXII(3), p. 26):

> "(3) How are evaporation losses from Lower Basin main stream storage reservoirs to be charged? Such reservoir losses amount to over 700,000 acre-feet of water annually. Arizona says that such losses of water should be apportioned among the users of water from the main stream storage reservoirs in the Lower Basin in the same proportion as the consumptive use of each is to the total consumptive use of such storage water in the Lower Basin."

California answered that the quantities specified in the limitation are not to be reduced by reservoir losses occurring prior to delivery at points of diversion in California (Calif. Answer, par. 27(f), pp. 27-28), a position we have consistently maintained.

Arizona now concurs "with the Master's holding that the delivery obligations under the Secretary of the Interior's water delivery contracts are to be measured, as provided in those contracts, at the points of diversion (Rep. 186)" (Ariz. Op. Br. 105). Arizona does not oppose the Master's direction "that each user of water

shall be charged only for the amount of water actually diverted and which does not return to the main stream and that losses of water which occur before diversion are a diminution of available supply under § 4(a) and are not a consumptive use (Rep. 187)" (Ariz. Op. Br. 105-06).[6]

[6]Arizona does propose one modification not relevant in the context: Users should be charged for water ordered but not, in fact, diverted and used. Ariz. Op. Br. 106.

PART FOUR

ANSWER TO THE NEVADA OPENING BRIEF

PART FOUR

ANSWER TO THE NEVADA OPENING BRIEF

§ I. THE SEVERANCE ISSUE: THE PREMISES ADVANCED BY NEVADA REBUT THE MASTER'S CONCLUSION THAT THE LIMITATION CAN BE DIVORCED FROM THE SYSTEMWIDE SCOPE OF THE COLORADO RIVER COMPACT

The Master's construction of the limitation, as severed from the Compact, is precluded by these two sound premises advanced by Nevada: First, Articles III(a) and III(b) of the Colorado River Compact "make an apportionment of the amount of water that could be applied to beneficial consumptive use in each [of] the Upper and Lower Basins . . . out of the entire Colorado River System" (Nev. Op. Br. 36).[1] Second, the Compact and the Project Act, parts of an "intermingled, interrelated and correlated body of statutory law . . . must always be construed together and are, in effect, one overall statutory enactment" (Nev. Op. Br. 35-36).

The inevitable conclusion from these premises is that the limitation proposed in section 4(a) of the Project Act must be construed consistently with the meaning of the Compact which encompasses all Colorado River system waters in the lower basin. Nevada's premises are thus irreconcilable with her support of the Master's decision.

---

[1] *Accord,* Nev. Finding V, p. 10: "That the Compact provides (Art. II(a)) that 'the term Colorado River System means that portion of the Colorado River and its tributaries within the United States of America.' It provides that the water apportioned by Articles III(a) and III(b) are waters from 'the Colorado River System.'"

§ II. THE PRIORITY ISSUE: NEVADA'S ARGUMENT FOR EQUITABLE APPORTIONMENT CANNOT SUSTAIN THE MASTER'S ABROGATION OF "MAINSTREAM" PRIORITIES

Under the topic heading that "the recommended decree is in reality an equitable apportionment of Colorado River water" (Nev. Op. Br. 49), Nevada asserts (p. 51):

> "Assuredly, if the Special Master's determination, that this is a purely statutory allocation suit,[2] is in error, then the only other alternative would be to treat it as an action for equitable apportionment. Viewed in that light the Master's proposed decree, is entirely correct and proper, fully supported by the evidence and a proper exercise of the judicial authority."

The Master's Report itself demonstrates that principles of equitable apportionment cannot sustain the "mainstream" allocation proposed in his Report.

The Master's Report marshals the relevant authorities to establish that priority of appropriation is "the guiding principle of equitable apportionment in the arid regions of the United States" and that "the Court, in an equitable apportionment suit, has never reduced junior upstream existing uses by rigid application of priority of appropriation" (Rep. 326).

---

[2](Footnote ours.) Nevada states that "Arizona and the United States urged a theory substantially like that adopted by the Special Master" (p. 49) which Nevada (quoting Rep. 100) describes (p. 50) as a "statutory" allocation or apportionment. The "contractual allocation scheme" (Rep. 232) proposed by the Master must, however, be distinguished from the *mandatory* statutory allocation urged by Arizona (Ariz. Op. Br. 83-98), which the Master rejects (Rep. 162-63).

It is equally clear that this Court will not "earmark" or reserve water for future appropriation and use. In *Arizona v. California,* 283 U.S. 423, 463-64 (1931), this Court declared:

> "There is no occasion for determining now Arizona's rights to interstate or local waters which have not yet been, and which may never be, appropriated. . . . This court cannot issue declaratory decrees."

The Master's Report makes quite clear that the proposed "mainstream" allocation is not based on priority of appropriation (except insofar as the Master finds a statutory directive in section 6 of the Project Act to preserve the priorities of "present perfected rights") or protection of existing uses. The recommended decree quite clearly reserves large blocks of "mainstream" water for Arizona and for Nevada over and above the uses or the requirements of their existing projects diverting from that resource.

On the other hand, the Master's equitable apportionment of Gila River system waters between Arizona and New Mexico does take into account both priority of appropriation and protection of existing uses (Rep. 325-31). Furthermore, the Master refuses to reserve water for any of the party states from other lower basin tributaries on which he concedes equitable apportionment principles still apply—both as against "mainstream" states and as against other tributary states (Rep. 316-24).

Nevada says that in any equitable apportionment of waters stored in Lake Mead the water delivery contracts executed by the Secretary of the Interior "would be as much evidence of the rights of the parties to the

mainstream water as any other water right they might present, whether State appropriations, actual use or whatever." (Nev. Op. Br. 51.) However, this principle, even if fully acceptable, would not sustain the Master's "mainstream" allocation for three reasons: First, principles of priority, the fundamental ingredient of equitable apportionment—not proration—govern rights created, recognized, or confirmed by water delivery contracts. (See Calif. Op. Br. 150-52, 169-75; see also our response to U.S. Op. Br. *supra* pp. 36-46.) Second, priorities attach not to "contracts with the respective States," but to "definitive contracts for the delivery of specified quantities for specific projects." (See U.S. Op. Br. 16-17, discussed *supra* pp. 37, 42.) Nevada goes part of the way in recognizing that the "historical pattern" followed under the reclamation laws with respect to water delivery contracts "has, of course, been one in which the Secretary has contracted for the delivery of specific quantities of water to the various entities who would be entitled to divert and use them." (Nev. Op. Br. 41.) However, Nevada does not explain her apparent assumption that priorities do not attach to such contracts.[3] In any event, there are no "definitive" contracts with users in Nevada. Third, section 8 of the Reclamation Act (incorporated by section 14 of the Project Act) declares that "beneficial use shall be the basis, the measure, and the limit of the right."[4]

---

[3] *Cf.* Nevada's discussion of the legislative history of the § 4(a) limitation on California: Nevada asserts that the Senators "unquestionably believed that they were taking effective action on the amount of water which California would have as a *prior right* and thus guarantee the allocation of the balance available to the other two States." Nev. Op. Br. 42. (Emphasis added.)

[4] 32 Stat. 390 (1902), 43 U.S.C. § 372 (1958).

One other aspect of Nevada's argument should be briefly noted here. Nevada argues that her allocation under the decree should be insured against reduction below a minimum of 250,000 acre-feet per annum.[5] This anomalous inversion of the priority principle is necessary, says Nevada, because (Nev. Op. Br. 56-57):

> "Nevada users of mainstream water are, and will be of the type which it is necessary to maintain, i.e., municipal, domestic or industrial. In other words, there will not be uses, such as irrigation uses, which can be temporarily suspended without disaster. Uses such as domestic and municipal cannot be arbitrarily cut off, or even heavily reduced, for a period of time, as can agricultural uses."

However, the same equitable considerations which would call for protection of *future proposed uses* in Nevada for domestic, industrial, and municipal purposes

---

[5]There is no rational basis for Nevada's figure. If Nevada wants to insure the protection of "'existing present diversions" (Nev. Op. Br. 100) for domestic, municipal, and industrial purposes, it would seem that her minimum should be only 24,370 acre-feet (pp. 100-01: 8,810 + 15,560). (For purposes of this discussion, "domestic" is taken to include "industrial" in accordance with the definition in Article II(h) of the Compact, Rep. app. 372.) On the other hand, if the object is to protect Nevada's claimed ultimate net consumptive use requirements for the stated purposes, it seems that the claimed minimum should be 402,700 acre-feet per annum (Nev. Op. Br. 103: 305,700 + 97,000). Since this is more than the recommended allocation to Nevada, logic would seem to require that Nevada's entire allocation be claimed as a minimum.

California proposed that Nevada be awarded the beneficial consumptive use of 171,500 acre-feet per annum from both Lake Mead and Nevada's tributaries, all from safe annual yield. Calif. Conclusion 12E:201, table 3, p. XII-26. Such an allocation would give proper weight to the factors significant in equitable apportionment, would protect existing uses in Nevada, and would assure a full supply to all appropriators who are proceeding diligently to completion of their existing projects. See Calif. Op. Br. 18-19; Calif. Findings and Conclusions, Part XV.

apply, a fortiori, to similar *presently existing uses* by the completed Colorado River Aqueduct (serving the southern California coastal basin) whose curtailment is a virtual certainty under the recommended decree endorsed by Nevada (Calif. Op. Br. 260-61, 272-76, and table 6).

§ III. OTHER MATTERS: THE AVAILABILITY OF ALTERNATIVE SOURCES OF WATER SUPPLY IS BOTH LEGALLY IRRELEVANT AND FACTUALLY WRONG

Nevada vigorously contends that she alone depends solely upon Colorado River system waters to supply that portion of Nevada within the Colorado River basin, while Arizona and California both have alternative sources of supply available (Nev. Op. Br. 13, 24, 32). Nevada apparently contends that the portions of southern California which are dependent upon Colorado River water can, in the event of shortage, call upon surplus waters from northern California through the Feather River Project[6] and upon desalinized salt water to replace part or all of our Colorado River supply (pp. 32-34).

Alternative sources of water supply are immaterial and irrelevant to the allocation of the Colorado River supply. The issue, if any, concerning alternative sources has not been litigated; the Special Master repeatedly excluded all evidence thereon.

---

[6]The 1.75 billion dollar Feather River Project, approved by voters of California in November 1960, will divert surplus waters in northern California to areas of deficiency in various parts of the state including counties in the San Francisco Bay area, the San Joaquin Valley, and the southern coastal basin. See CAL. WATER CODE §§ 12930-42. Design of the project is now under way.

The Master correctly excluded (Tr. 5,948) Arizona's offer of evidence concerning alternative sources of supply in California,[7] and stated (Tr. 5,945):

> "[I]f we admit it [evidence on California's Feather River Project], manifestly it means that we are going to try the entire water problem of each of the States party to the suit. That is going to be a very extensive operation."

Later, the Master gave the same answer to Nevada's offer of such evidence (Tr. 17,212):

> "I think studying the Colorado River is a big enough task for all of us without also studying the entire California Watershed and all its rivers."[8]

---

[7]It is true that volumes 1 and 2 of Bulletin No. 2, published in June 1956 by the California Water Resources Board, were received in evidence (Ariz. Exs. 89 and 89-A, Tr. 354, 1,012) but not on the issue of alternate sources of supply and the Feather River Project. Instead, this bulletin dealt with water needs and methods of use, as its title ("Water Utilization and Requirements of California") suggests and as the context in which it was received makes clear.

The issue before the Special Master was the admissibility of evidence generally tending to show recent growth of Arizona and increased water needs, Tr. 1,001 (Mr. Kiendl), and specifically our objection to the following question put to Arizona witness Leggett, Tr. 1,000:

"Q During the ten years following the end of World War II has the population of the State of Arizona increased substantially?"

The Special Master overruled our objection, primarily because of the character of the parties to this litigation, Tr. 1,011-11A; we immediately withdrew any objections to Bulletin No. 2, in view of that ruling, Tr. 1,012, and it was received in evidence. *Ibid.*

Its reception was no precedent for admission of exhibits relating to the California Feather River Project, and the Special Master correctly rejected this argument when made by Arizona (Tr. 5,941-48) and later repeated by Nevada (Tr. 17,210-17).

[8]Near the close of the trial, Nevada reoffered three exhibits relating to the Feather River Project, Tr. 22,384-85, and filed a written argument in support thereof. Memorandum on Nevada's Proof on California Water Plan (Aug. 28, 1958). She advanced

The time and effort required to try the Colorado River problem now before this Court (Rep. 1-6) underscore the wisdom of the Special Master's ruling.

Nevada's contention was rejected, and no specific exception has been made to that decision. If the issue of alternative sources of supply is to be litigated, a new reference is necessary for this "very extensive operation." It cannot be tried on an *ex parte* presentation in briefs by Nevada.

If the matter were tried, the evidence would prove: First, the Feather River Project, which will transport surplus waters from northern California to many areas of deficiency in this state, is now designed to meet the requirements until about 1990 of the southern California coastal basin after Metropolitan Water District's full contract quantity from the Colorado River has been put to use—not to replace that Colorado River supply. Second, economically feasible salt water conversion on a large enough scale to be significant here is now impossible, and future advances in technology are highly speculative.[9] Thus, neither northern California's

---

the same contention which she now advocates when the case was being argued before the Special Master: Nev. Finding XXVII, p. 61; Nev. Brief Re Findings and Conclusions, pp. 126-28; Calif. Response to Nevada, pp. 53-56; see also Nev. Comments on Draft Report (June 6, 1960), p. 6: "Nevada has no recourse to retirement of irrigation or desalting of ocean waters to preserve development, once effected."

[9]If Nevada's salt water predictions are as optimistic as her population forecasts, both should be taken with a large grain of salt. Nevada's prediction for the population of Clark County is a case in point. In 1957, Nevada's evidence predicted that this population would increase from 115,000 in 1957 (Nev. Ex. 801 (Tr. 16,790), table 2, col. 6, and table 3, col. 2) to 150,000 in 1960 (*id.* graphs 2 and 3), an increase of 35,000. In fact, the population increased by only 12,000 (Nev. Op. Br. 14, giving a 1960 figure of 127,016), falling short of the projected estimate by about 66%. If within the short space of three years Nevada's

streams nor the Pacific Ocean constitutes an alternative source to replace our Colorado River supply.

CONCLUSION

For these reasons the California defendants urge that their exceptions which they have jointly made to the Report of the Special Master should be approved by this Court, and that the decree to be entered in this case should be in conformity with those exceptions and the views presented in this brief and the California defendants' Opening Brief.

"AMENDED AND SUPPLEMENTAL STATEMENT OF POSITION BY COMPLAINANT, STATE OF ARIZONA," FILED WITH SPECIAL MASTER, AUGUST 5, 1957

(Bracketed numbers show page numbers in original.)

[1]

Arizona considers its Statement of Position heretofore filed herein and certain legal conclusions and arguments set forth in its various pleadings filed herein unsound and not supported in the law in relation to the proper interpretation of Sections 4(a), 5 and 8 of the Project Act and Articles III and VIII of the Compact. Without attempting either a formal revision of all of its pleadings at this point in this proceeding or to set forth other than generally what Arizona considers to be the proper, logical and legal construction and effect of the Colorado River Compact and the Boulder Canyon Project, Arizona states the following:

I.

We are filing herewith an extensive memorandum on the application of the Compact and Project Act, setting forth our comments and arguments as to the proper interpretations of Sections 4(a), 5 and 8 of the Project Act. We are also filing herewith a legislative history of those sections. Section 5 requires that no water use may be made of stored water except by con-

tract and requires that all contracts conform to Section 4(a). Section 4(a) directs that Arizona shall receive 2,800,000 acre-feet and Nevada 300,000 acre-feet in full measure from storage in Lake Mead and that California shall receive the balance remaining of the 7,500,000 acre-feet to be supplied annually by the upper basin; it also requires that the Gila shall be recognized as completely legally utilized by Arizona and that its uses and water supply shall not be considered by the Secretary in contracting for water from storage, thereby excluding it from consideration when surplus water computations and contracts were under consideration.

Since the Memorandum filed amplifies the foregoing we will not further elaborate on the position therein stated.

[2]

II.

With reference to Articles VIII and III of the Compact, Arizona states:

a. Article VIII of the Compact treats of "perfected rights" existing as of its effective date generally; and then of perfected rights so existing of lower basin users *as against upper basin users only.*

b. Lower basin users of water diverted from tributaries of the Colorado River in the lower basin, since the streams from which such uses were made did not receive any waters from the upper basin, of necessity could not have any claims against upper basin users nor could their claims attach to or be satisfied out of any storage of the main stream of the River in or for the benefit of the lower basin; and for like physical

reasons, the claims and rights of such lower basin tributary users could not be satisfied from water delivered at Lee Ferry by the upper basin, i.e., Article III (a) water.

c. The perfected rights of lower basin users, diverting their water from lower basin tributaries of the River, were unimpaired by the Compact in all particulars and respects. Lower basin users who had then perfected claims against upper basin users, i.e., users of water diverted from the main stream of the river and hence of water which was supplied from the upper basin were required to satisfy such then perfected rights from storage when provided in or for the benefit of the lower basin.

d. The apportionment of water found in Article III (a) of the Compact is a basin versus basin apportionment; it evidences the understanding of the lower basin users as to how much water they had the right to receive annually on the average out of the river supply which arose in the upper basin and the understanding of the upper basin users as to how much the upper basin was required to deliver on the average annually to

the lower basin. It served as a ceiling on the rights which the lower basin users might obtain by putting upper basin water to beneficial use and as a floor below which the upper basin might not go in refusing to release water to the lower basin. Out of this supply the lower basin users having a legal claim upon waters arising in the upper basin then existing or thereafter arising or perfected must satisfy all of their legal claims against the upper basin and its water users for a dependable, firm water use.

e. Article III(b) permits the lower basin users to *increase* their beneficial consumptive use by 1,000,000 acre-feet yearly (over and above perfected rights existing on the effective date of the Compact) on lower basin tributaries. Since the limit or ceiling on the water supply which the upper basin was *legally obligated* to supply to the lower basin was 7,500,000 acre-feet per year, or 75,000,000 acre-feet per ten year segments of time, delivered at Lee Ferry, this additional 1,000,000 acre-feet must arise in the lower basin since, as a matter of fundamental water law, a user cannot perfect a right to a beneficial use in water as to which the user has no legal right to require that it be made available. If the lower basin user had no right to demand delivery or release of the water he could not perfect a right to its use. The "increase" referred to is over and above the perfected uses on the tributaries of the lower basin preserved unimpaired by Article VIII.

f. California by reason of her Self Limitation Act is barred from any claim on this lower basin water.

g. Arizona would therefore be entitled under the Compact to have its title quieted to the rights on the Gila and other lower basin tributaries in Arizona perfected on the effective date of the Compact, plus 2,800,000 acre-feet of water from the main stream of the Colorado

River, plus an additional 1,000,000 acre-feet of waters arising in the lower basin as presently beneficially used by Arizona or as may be needed to offset reservoir or channel losses charged to Arizona. Any water used by Arizona from Gila River or other Arizona tributaries above said perfected rights and Article III(b) water

(if such, by stretch of the imagination there be) would be surplus or excess waters and not subject to a charge against water allotted Arizona from the main stream of the River.

In any event, no uses by Arizona from the Gila River or other Arizona tributaries are chargeable against Arizona's share of the main stream Colorado River water.

h. Sections 4(a), 5 and 8 of the Project Act reflect the recognition by Congress that Arizona by virtue of perfected rights preserved by Article VIII of the Compact and beneficial use authorized by Article III(b) of the Compact had completely utilized the water of the Gila and its tributaries. Section 5 requires that no water use may be made of stored water except by contract and requires that all contracts conform to Section 4(a). Section 4(a) directs that Arizona shall receive 2,800,000 acre-feet and Nevada 300,000 acre-feet in full measure from storage in Lake Mead and that California shall receive the balance remaining of the 7,500,000 acre-feet to be supplied annually by the upper basin; it also requires that the Gila shall be recognized as completely legally utilized by Arizona and that its uses and water supply shall not be considered by the Secretary in contracting for water from storage, thereby excluding it from consideration when surplus water computations and contracts were under consideration.

The position and proof of the United States, the states of Utah, New Mexico and Nevada is as yet undeveloped and therefore the full issues as between said parties and Arizona are presently uncertain.

[5]

By reason thereof and since the amendments, supple-

ments and changes to Arizona's position above set forth are in the nature of changes as to legal position and contentions rather than factual matters, Arizona does not attempt at this time a partial amendment of its pleadings but such amendment will be proffered when the proof has been completed so that piecemeal change and amendment may be avoided.

This Amended and Supplemental Statement is filed at this time so that all parties hereto may be advised that Arizona withdraws from the legal positions heretofore taken in its pleadings, insofar as they are inconsistent with the position herein indicated, as legally unsound.

	Page
Introduction	1
Questions presented	1
Interest and position of the United States	2
Statement	4
1. Background of case	5
2. The Colorado River Compact	8
3. The Boulder Canyon Project Act	9
4. Claims of the United States	12
5. Report of the Special Master and proposed decree	13
6. Present claims of the parties	15
Summary of argument	17
Argument:	
I. The waters of the Boulder Canyon Project are lawfully allocated by the Project Act and the contracts made thereunder by the Secretary of the Interior	21
A. Congress has the constitutional authority to authorize a federal allocation of the waters of the Colorado River	22
B. Section 5 of the Project Act authorizes an allocation of the mainstream waters of the Colorado River	27
1. Section 5 authorizes the Secretary of the Interior to make an allocation	27
2. The allocation authorized by Section 5 and the provisions of the California Limitation Act apply only to mainstream waters	28
(a) The statutory provisions	34
(b) The legislative history	38
C. The contracts executed by the Secretary of the Interior make a valid allocation of the mainstream waters	46
1. The contracts constitute interstate allocations	46
2. The contracts conform to the requirements of Section 6 for the satisfaction of present perfected rights	49

Argument—Continued

D. The allocation made in the contracts executed by the Secretary of the Interior supports those portions of the decree relating to the interstate division of mainstream waters... Page 52

II. The Special Master's recommended allocations of water for use on federal reservations sufficient in amount to accomplish the purposes of the reservations are correct... 54

A. Under the Project Act the Secretary of the Interior has the same power to allocate water for use on federal establishments as he has to allocate water to other users... 58

B. The United States has reserved, from its original proprietary rights, the right to use sufficient quantities of the appurtenant waters to satisfy the ultimate needs of Indian reservations and to accomplish the purpose of other federal reservations. These reserved rights are "present perfected rights" for which water must be made available under the Project Act... 61

1. Ownership of rights to use waters of the Colorado River and its tributaries on the public domain was acquired by the United States through treaties with Mexico... 61

2. The United States has never surrendered its proprietary right to use the waters of the Colorado River appurtenant to its reservations... 64

3. The establishment of the Indian and other federal reservations here involved has resulted in the reservation of the appurtenant water rights necessary to accomplish the purposes of the reservations... 65

(a) The United States may apply its retained rights to the use of the water to the purposes of the reservations... 65

Argument—Continued

(b) The President has authority to set apart reservations of public lands and to reserve rights to use the appurtenant navigable waters — Page 68
(1) Indian reservations — 69
(2) Other federal reservations — 71
(c) Water rights have been reserved for the particular reservations here involved — 72
(1) The Colorado River Indian Reservation — 73
(2) Other mainstream Indian reservations — 76
(3) The Gila National Forest — 76
(d) The water rights reserved include at least sufficient water to accomplish the purposes of the reservations — 79
4. The attempted distinction between navigable and non-navigable waters lacks merit; therefore, the United States' right to use appurtenant navigable waters on its public and reserved lands was not surrendered upon the admission of Arizona, California, or Nevada to statehood — 84
5. The reserved rights appurtenant to federal reservations are "present perfected rights" for the satisfaction of which water must be released under Section 6 of the Project Act — 89
6. The principles of equitable apportionment are inapplicable to adjudication of rights reserved by the United States for use in Arizona *vis-à-vis* other users in Arizona — 91
C. The rights of the United States to water for federal establishments must be safeguarded, whatever apportionment may be decreed among the States — 93

Argument—Continued Page
III. Miscellaneous matters 94
A. Boundaries of the Colorado River Indian Reservation and the Fort Mohave Indian Reservation 94
B. Response to Nevada's proposal for amendment of the decree 96
Conclusion 96

No. 8 Original

STATE OF ARIZONA, COMPLAINANT

v.

STATE OF CALIFORNIA, ET AL.

ANSWERING BRIEF OF THE UNITED STATES

INTRODUCTION

In its brief in support of exceptions to the Special Master's Report, the United States urged acceptance of its position on the few points on which it disagrees with the Special Master's Report. However, in large part we agree with the Special Master's findings and conclusions, and in this brief we shall attempt to support them against the attacks of the States. Although designated as an answering brief, in substance this is our main brief.

QUESTIONS PRESENTED

1. Whether, under the Boulder Canyon Project Act, the United States is authorized to deliver from Lake Mead or the mainstream of the Colorado River below Hoover Dam sufficient water to permit consumptive use of 4,400,000 acre-feet in California, 2,800,000 acre-feet in Arizona, and 300,000 acre-feet in Nevada from

the first 7,500,000 acre-feet available annually, without deducting uses from the tributaries below Lake Mead.

2. Whether the Indian reservations and other federal facilities on the Colorado River have rights to water adequate for their ultimate needs.

INTEREST AND POSITION OF THE UNITED STATES

The controversy among the States of the Lower Basin over the use of the Colorado River has been an impediment to the full development of that area for many years. Efforts to settle the controversy by agreement among the States were unavailing. Settlement by litigation was foreclosed by the indispensability of the United States as a party. *Arizona* v. *California,* 298 U.S. 558. Intervention of the United States makes the present suit, initiated by Arizona in 1952, jurisdictionally possible and thus enables the Court to resolve the important issues involved.

The United States has in the course of the trial of this case necessarily advocated its own claims and rights. It has also sought to aid the Special Master in reaching a solution which would, consistently with the purposes and provisions of the Boulder Canyon Project Act and other applicable federal law, advance the best interests of the Lower Colorado River Basin as a whole and, from that standpoint, accomplish an appropriate distribution of the precious water resources marshaled by the construction of the Boulder Canyon Project. The positions taken by the United States were not taken because of any desire to intrude on the functions of the Special Master or

the Court, but because of our concern that this gigantic federal project be used for the benefit of the entire region it was designed to serve and to achieve reconciliation of conflicting interests within that region.

We believe that a solution which divides the first 7,500,000 acre-feet of consumptive use of mainstream water available annually on a ratable basis in proportions of 4,400,000 to California, 2,800,000 to Arizona, and 300,000 acre-feet to Nevada and permits water in excess of the first 7,500,000 acre-feet per annum to be shared equally by California and Arizona (subject to possible use in Nevada of a small percentage of Arizona's one-half of the surplus) is in accord with the purposes and provisions of the Boulder Canyon Project Act and the contracts made under its authority, and will make possible the optimum development of the entire region so far as the available water resources will permit. This position is, of course, at variance with that taken by California. However, to follow the solution proposed by California would stymie further development in Arizona and Nevada, including the effectuation of present federal projects, and permit California, by default, to exceed the limitation on use in that State which, as a condition precedent to authorization of the Boulder Canyon Project, Congress imposed in anticipation of California's ability to expand its uses of mainstream waters more rapidly than the other States.

Basically the difference in approach between California and the United States is that California treats

this case as a typical problem of allocating the waters of an interstate river between competing States. The United States, on the other hand, views the case as one involving its power and authority to make an appropriate distribution of waters made available by the construction of tremendous federal conservation projects which regulate the river and save its waters for productive uses. The United States believes the distribution made by the Secretary of the Interior and approved by the Special Master in his report[1] falls within the federal power and the terms of the Boulder Canyon Project Act.

STATEMENT

Hoover Dam, the principal feature of the Boulder Canyon Project Act, impounds and regulates substantially all the flow of the Colorado River. Section 1 of the 1928 Act authorizing the Project enumerates the purposes to be served as follows:

> * * * for the purpose of controlling the floods, improving navigation and regulating the flow of the Colorado River, providing for storage and for the delivery of the stored waters thereof for reclamation of public lands and other beneficial uses exclusively within the United States, and for the generation of electrical energy as a means of making the project herein authorized a self-supporting and financially solvent undertaking * * *.

The rights in the distribution of water from this Project are the subject of the dispute in this case.

---

[1] But note our exceptions to the Report and supporting brief.

1. *Background of case*

The Lower Basin of the Colorado, consisting of parts of California, Nevada, New Mexico, and Utah, and practically all of Arizona, is almost entirely arid country, requiring artificial irrigation for productive use. In its natural state the Colorado was utilized for irrigation by both the Indians and the early settlers. In 1867, the federal government appropriated money for diversions from the river for the use of the Colorado River Indian Reservation. Later, irrigation was commenced in the Palo Verde Valley in California, the Yuma Valley in Arizona, and the Imperial Valley in California. After the passage of the Reclamation Act of 1902, projects were authorized on the Salt River, a tributary of the Colorado, near Phoenix, and on the Colorado itself in the vicinity of Yuma.

The early projects suffered from both flood and famine. The Colorado River Indian Reservation and Palo Verde Valley Projects were suspended because of difficulties with flood waters, and a levee system for the Mohave Valley was destroyed by floods in 1914. The problems with the transport of water to the Imperial Valley were even more spectacular. As a result of the diversion works the river twice broke from its bed and altered its course from its former channel to the Gulf of California to a new course emptying into the Salton Basin, flooding large areas of Mexico and the United States. After considerable time, the breakthroughs were repaired, but difficulties in maintaining the canal were enhanced by the fact that a part of the system passed through Mexico. While not

as spectacular as the damage from floods, the irrigation projects suffered also from acute shortages of water at the times the river was at low stage. During these periods all, or practically all, of the river waters reaching the intake of the Imperial canal were diverted and applied in irrigation of the Valley.

The ensuing studies recommended building an all-American canal and also storage reservoirs to equalize the flow of the river. In 1919 the All-American Canal Board (California Ex. 185) recommended:

> 1. That the all-American canal, or an equivalent high-line canal, from the Laguna Dam [2] into the Imperial Valley be constructed * * *, and that Congress pass such laws as may be necessary to put into effect any plan that may be agreed upon between the Secretary of the Interior and the Imperial Irrigation District.
>
> * * * * *
>
> 7. The United States should undertake the early construction of storage reservoirs on the drainage basin of the Colorado River as a part of a comprehensive plan for the betterment of the water-supply conditions throughout the entire basin of this river. The stored water should be made available for power and irrigation at a fair charge for this service. By storage on a large scale in well-distributed reservoirs the peak of the lower river's flood discharge will be cut down and the menace to the submersible lands along the Colorado

[2] (Footnote added.) Laguna Dam had been constructed by the United States Reclamation Service as the diversion structure for the Yuma Reclamation Project. It is located on the mainstream of the Colorado River about 10 miles northeast of and 13 miles upstream from Yuma, Arizona.

River below the Grand Canyon, and in particular to the delta region and the Imperial Valley, will be reduced.

Pursuant to Congressional direction, the Secretary of the Interior made an investigation, and the resulting Fall-Davis 1922 Report recommended a canal entirely on American soil and a reservoir at or near Boulder Canyon. The report suggests that river regulation and flood control should be the primary object of future development, with irrigation a secondary objective, and development of power as the third.

The report opens with this statement:

> The control of the floods and development of the resources of the Colorado River are peculiarly national problems for several good reasons:
>
> 1. The Colorado River is international.
> 2. The stream and many of its tributaries are interstate.
> 3. It is a navigable river.
> 4. Its waters may be made to serve large areas of public lands naturally desert in character.
> 5. Its problems are of such magnitude as to be beyond the reach of other than national solution.

The needs of flood control and water storage were called "urgent and vital."

Yet there was a serious political obstacle in the path of further development in the Lower Basin. The States in the Upper Colorado Basin were apprehensive that they would be shut out of their share in the water of the river under claims of prior appropria-

tion because of the more rapid development below which the proposals for improvement would accelerate. In order to eliminate this obstacle, Congress authorized the seven States involved to negotiate a compact providing for an equitable division of the water supply of the Colorado River.

2. *The Colorado River Compact*

On November 24, 1922, compact commissioners representing the seven States of the Colorado River Basin and the representative of the United States executed the Colorado River Compact. It was promptly ratified by the legislatures of all of the seven States except Arizona.

The Colorado River Compact did not accomplish a division or apportionment of the waters of the river system between the States of the Basin. Instead, it provided for division of the river basin into an Upper Basin and a Lower Basin, and apportioned "the use of part of the water of the Colorado River System * * * to each of them with the provision that further equitable apportionments may be made" (Article I and Article III). The matter of interstate allocation of the water included in the respective Basin apportionments was left to some other means unspecified in the Compact. The basic division between the Basins (Article III) was:

> (a) There is hereby apportioned from the Colorado River System in perpetuity to the Upper Basin and to the Lower Basin, respectively, the exclusive beneficial consumptive use of 7,500,000 acre-feet of water per annum,

which shall include all water necessary for the supply of any rights which may now exist.

(b) In addition to the apportionment in paragraph (a) the Lower Basin is hereby given the right to increase its beneficial consumptive use of such waters by one million acre-feet per annum.

* * * * *

(d) The States of the Upper Division will not cause the flow of the river at Lee Ferry to be depleted below an aggregate of 75,000,000 acre-feet for any period of ten consecutive years reckoned in continuing progressive series beginning with the first day of October next succeeding the ratification of this compact.

3. *The Boulder Canyon Project Act*

In 1928, while the disagreement among the States still persisted, Congress passed the Boulder Canyon Project Act and thereby authorized the construction of an all-American canal and the Boulder and Imperial Dams. By Section 6 of this Act Congress provided:

> * * * The title to said dam, reservoir, plant, and incidental works shall forever remain in the United States, and the United States shall, until otherwise provided by Congress, control, manage, and operate the same * * *.

The same section provided for the uses of the dam as follows:

> First, for river regulation, improvement of navigation, and flood control; second, for irrigation and domestic uses and satisfaction of present perfected rights in pursuance of Article

VIII of said Colorado River compact; and third, for power.

Section 4(a) provided that the Act would not take effect and no authority would be exercised thereunder until (1) the States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming ratified the Compact, or (2) if any of these States failed to ratify the Compact within six months after passage of the Act, then until the Compact should be ratified by six States, including California, and California should agree to limit its annual consumptive use of water from the Colorado River to

> four million four hundred thousand acre-feet of the waters apportioned to the Lower Basin States by paragraph (a) of Article III of the Colorado River Compact, plus not more than one-half of any excess or surplus waters unapportioned by said compact, such uses always to be subject to the terms of said compact.

Arizona did not ratify within the six-month period. By its so-called Limitation Act, passed March 4, 1929, California agreed to the limitation upon its aggregate annual consumptive use. Since the other six States had ratified the Compact, the Project Act became effective by Presidential proclamation upon June 25, 1929.

Section 5 authorized the Secretary to make distribution of stored water through contracts and stated:

> No person shall have or be entitled to have the use for any purpose of the water stored as aforesaid except by contract made as herein stated.

Contracts for the delivery of water for use in California have been made between the Secretary of the Interior and Metropolitan Water District of California (Pl. Ex. 38, 39), Imperial Irrigation District (Pl. Ex. 34), Palo Verde Irrigation District (Pl. Ex. 33), the City of San Diego (Pl. Ex. 40, Calif. Ex. 486) and Coachella Valley County Water District (Pl. Ex. 36). In the aggregate they provide for delivery of 5,362,000 acre-feet per annum of "beneficial consumptive use," subject to the availability of the water for use in California, in accordance with the amounts and priorities established by agreement with the State under the so-called "Seven Party Agreement."

Under date of February 9, 1944, a contract was executed between the United States and the State of Arizona for the delivery of stored water for use in Arizona (Pl. Ex. 32; Rept., App. 5). The contract was unconditionally ratified by an Act of the Legislature enacted on February 24, 1944, and approved by the Governor of Arizona the same day. At the same time Arizona also unconditionally ratified the Colorado River Compact. (Sp. Master's Ex. 4 (p. A559).)

The Arizona contract of February 9, 1944, provides:

> 7. (a) Subject to the availability thereof for use in Arizona under the provisions of the Colorado River Compact and the Boulder Canyon Project Act, the United States shall deliver * * * each calendar year from storage in Lake Mead * * * so much water as may be necessary for the beneficial consumptive use for irrigation and domestic uses in Arizona of a maximum of 2,800,000 acre-feet [plus] one-

> half of any excess or surplus waters unapportioned by the Colorado River Compact * * *.

The Arizona contract also stipulated:

> (d) The obligation to deliver water at or below Boulder Dam shall be diminished to the extent that consumptive uses now or hereafter existing in Arizona above Lake Mead diminish the flow into Lake Mead, and such obligation shall be subject to such reduction on account of evaporation, reservoir and river losses, as may be required to render this contract in conformity with said compact and said act.

As provided for in subdivision (l) of Article 7 of the Arizona water delivery contract, the United States has made a number of contracts for the delivery of water to individuals, irrigation districts, corporations and political subdivisions within the State of Arizona. Deliveries have also been made to lands of the United States (Rept. 212–214, 254–300).

On January 3, 1944, the United States contracted with the State of Nevada for the delivery of water from storage in Lake Mead in quantities not to exceed 300,000 acre-feet annually. (Rept. 209.)

4. *Claims of the United States*

Before the Special Master:

(a) The United States sought recognition of its right to use and control the use of the waters of the mainstream for purposes of navigation, river regulation, flood control, and power generation. No quantitative claims for such purposes were asserted.

(b) The United States asserted, as an overriding claim against the entire supply of water, its obliga-

tion and right to deliver water to Mexico according to the terms of the 1944 treaty with that country. The quantity required to satisfy the treaty may vary according to certain circumstances specified in the treaty, but for practical purposes, it is 1,500,000 acre-feet per annum measured in the limitrophe section of the river.

(c) The United States claimed rights to use mainstream waters for irrigation and other uses on the Chemehuevi, Cocopah, Yuma, Colorado River, and Fort Mohave Indian Reservations.

(d) The United States claimed rights to use mainstream waters on the Havasu Lake National Wildlife Refuge, Imperial National Wildlife Refuge, and Cibola Valley Waterfowl Management Area.

(e) The United States claimed rights to use mainstream waters on the Lake Mead National Recreation Area.

(f) The United States claimed rights to divert and deliver mainstream waters for the Yuma Reclamation Project in Arizona and California, the Yuma Auxiliary Reclamation Project in Arizona, the Gila Reclamation Project in Arizona, Boulder City, Nevada, and areas served by the All-American Canal System in Imperial and Coachella Valleys in California.

5. *Report of Special Master and Proposed Decree*

So far as the issues covered by this brief are concerned, the Special Master found that the water to be distributed under the Project Act consisted of the "mainstream" of the Colorado River, which he defined as including Lake Mead and the mainstream

of the Colorado River below Lake Mead, thus excluding the Gila River and other tributaries and leaving out all consideration of Arizona and Nevada uses thereof. The Special Master found that the Act authorized the Secretary of the Interior to contract for distribution of the mainstream water without being bound by considerations of equitable apportionment or prior appropriations, but that his contracts must give recognition to "present perfected rights" and must be made in accord with California's Limitation Act by which it agrees to accept only 4,400,000 acre-feet out of the first 7,500,000 acre-feet available, plus one-half of the surplus or unapportioned waters. The Special Master found that the Secretary of the Interior had validly contracted to deliver, out of the first 7,500,000 acre-feet of mainstream water, 4,400,000 acre-feet to California, 2,800,000 acre-feet to Arizona, and 300,000 acre-feet to Nevada, the surplus to go one half to California and one half to Arizona, subject to Nevada's right to contract for a small share.

The Decree recommended by the Special Master adopts the priorities of use stated in Section 6 of the Boulder Canyon Project Act, the first being the right of the United States to use mainstream waters for river regulation, improvement of navigation and flood control. The recommended Decree further provides that the United States may release water in satisfaction of its obligations to Mexico under the treaty of February 3, 1944, without regard to such priorities. (Rept. 347.)

The Special Master also makes specific provisions within his recommended Decree for the claims of the

United States for use of water on the specified mainstream Indian Reservations, Havasu Lake National Wildlife Refuge, Imperial National Wildlife Refuge, and the Lake Mead National Recreation Area. The Special Master concluded that the uses of the United States within each State are limited by that State's allocation, except to the extent that the uses are protected by Section 6 of the Project Act as "present perfected rights." (Rept. 302.) The United States' claims of right based on reservations of public lands made before the Project Act became effective are accorded this status (Rept. 310).

The Special Master also held that these federal uses are "chargeable to the state within which the water is consumed, and this consumption is included within each state's apportionment" (Rept. 312–313).

5. *Present Claims of the Parties*

Arizona accepts the Special Master's allocation of mainstream water as among the Lower Basin States. It now concedes that one-half of all mainstream water in excess of 7,500,000 acre-feet may be used in California. Arizona continues to dispute the validity of the provisions of her contract insofar as they recognize rights in Nevada, Utah, and New Mexico with respect to excess or surplus waters unapportioned by the Compact. Arizona supports the Special Master's determination that uses from the mainstream or tributaries above Lake Mead are not to be included in her accounting—a ruling to which the United States excepts for reasons stated in its opening brief. Arizona disputes the Special Master's conclusions as to

the reserved rights of the United States for the federal reservations.

California[3] asks that the "safe annual yield"[4] of mainstream water available for use in the Lower Basin be fixed at 5,850,000 acre-feet of beneficial consumptive use (diversions less returns to the River) and that this supply be allocated as follows:

4,600,000 acre-feet for use in California
1,129,500 acre-feet for use in Arizona
120,500 acre-feet for use in Nevada

From the "provisional supply"—water presently available in the Lower Basin on a "safe annual yield" basis but subject ultimately to use in the Upper Basin—California asks that the following allocations be made:

778,000 acre-feet per annum for use in California
80,000 acre-feet per annum for use in Arizona
None for use in Nevada

---

[3] Throughout the trial of the case, and in the briefing for the Special Master, California's presentation has involved a number of alternative positions. The quantity of consumptive use of mainstream water to which it claims to be entitled varies according to the particular theory advanced. However, with its proposed findings and conclusions it proposed a form of decree. (Calif. Proposed Findings and Conclusions, Vol. I, pp. Decree–1 to Decree–26.) We have referred to that proposed decree as the best indication of California's basic claim in terms of water quantity.

[4] Defined at I H.(2) of California's proposed decree as "that quantity of Colorado River system water which may reasonably be expected to be permanently available at an equal annual rate for beneficial consumptive use within the lower basin * * * net of all diminutions of supply."

Nevada in effect accepts the Special Master's Report.

The United States agrees with the major part of the Special Master's Report. As pointed out in our exceptions and brief in support thereof, we submit that the contracts between the United States and Arizona and Nevada, which charge their share of the water with uses from the mainstream and tributaries above Lake Mead are valid and that, contrary to the Special Master's ruling, intra-state distribution pursuant to the contracts is not controlled by State law.

SUMMARY OF ARGUMENT

A. The first portion of our argument deals with the interstate allocation of the Colorado River water made available for use by Hoover Dam. Three States in the Lower Basin are so situated that they can make use of this water, namely, California, Arizona, and Nevada. The Special Master upheld the validity of an allocation effected through contracts executed by the Secretary of the Interior pursuant to the Boulder Canyon Project Act granting California 4,400,000 acre-feet, Arizona, 2,800,000 acre-feet, and Nevada 300,000 acre-feet, out of the first 7,500,000 acre-feet available annually, with California and Arizona evenly dividing any surplus or unapportioned water, subject to Nevada's right to contract for a small part thereof.

Congress has the constitutional power under the Commerce Clause, the General Welfare Clause, and the Property Clause to govern the distribution of the waters of the Colorado River which it has brought under control through the construction of Hoover

Dam and related facilities. By the Boulder Canyon Project Act Congress authorized the Secretary of the Interior to distribute the stored water among the States by contract. One of the limitations on the Secretary in making these contracts was that uses in California must comply with a limitation which it was required to accept as a condition for the effectiveness of the Act. This limitation provided that California's use of water from the Colorado River should not exceed 4,400,000 acre-feet of the water "apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact," plus "one-half of any excess or surplus waters unapportioned by said compact." This Section of the Act is properly construed to refer solely to waters of the mainstream of the Colorado River. The allocation permitted by the Act has no reference to the Gila River. This appears not only from the provisions of the Act itself but also from consideration of its legislative history, which demonstrates that Congress had in mind only the water which would be delivered from the Upper Basin to the Lower Basin at Lee Ferry and which could be impounded by Hoover Dam. Arizona's use of the Gila was not included.

The contracts executed by the Secretary of the Interior with Arizona and Nevada and with the several users in California comply with the provisions of the Project Act in this respect. California asserts that these contracts and the decision of the Special Master do not provide the necessary protection for existing uses in California. Insofar as these uses constitute

"present perfected rights," the Secretary of the Interior is required to satisfy them, as the Special Master held. But this is the limit of the obligation placed upon the Secretary by the Project Act to recognize claims of appropriative rights under State law. He is not required otherwise to give priority to California uses on any principle of prior appropriation or equitable apportionment.

The decree proposed by the Special Master would terminate the dispute among the Lower Basin States by affirming the apportionment made by the Secretary of the Interior under authority of Congress. California's assertions that the decree will result in disaster for the Metropolitan Water District are based on the assumption that the Upper Basin States will utilize their entire allotment in the near future. The right of the Upper Basin to all the water apportioned by the compact is not to be questioned but, as a practical matter, it is at best uncertain when Upper Basin developments will reach this point. It would be undesirable to abandon needed development in Arizona and Nevada in order to protect against possible future shortages which by reason of scientific discoveries or other factors may never occur.

B. The second portion of our argument deals with the right of the United States to utilize the impounded waters on federal reservations, including Indian reservations. This right is supported by the power of the United States delegated to the Secretary of the Interior to make an appropriate distribution of waters which are the product of a federal conservation project. The same reasoning which supports

the allocation of the water between the States supports the use of it on federal reservations.

In the alternative, regardless of such power, the United States has a proprietary interest in the use of the waters of the Colorado River and its tributaries appurtenant to its reservations which supports its right to deliver water to them in the quantity necessary to fulfill the purposes for which the reservations were established. The proprietary rights of the United States to the use of waters on the public domain apply to both navigable and non-navigable streams and, at least with respect to the use of the waters reserved for federal establishments from navigable waters, there has not been any surrender of that right. When the United States established the reservations here involved, it withheld from any other use sufficient water to accomplish their purposes. The right to use that water in this way is a "present perfected right" under the terms of the Boulder Canyon Project Act. The principles of equitable apportionment are not applicable to satisfaction of this claim against the water, and it is required to be recognized by the Secretary of the Interior.

The rights of the United States to water for use on these federal establishments, including the Indian reservations, must be safeguarded whatever apportionment is decreed among the States. The Special Master took account of these rights in the apportionment that he approved. It is the position of the United States that, regardless of the interstate division, these rights are entitled to be fulfilled.

ARGUMENT

I

THE WATERS OF THE BOULDER CANYON PROJECT ARE LAWFULLY ALLOCATED BY THE PROJECT ACT AND THE CONTRACTS MADE THEREUNDER BY THE SECRETARY OF THE INTERIOR

The Report of the Special Master is predicated upon this central thesis. By act of Congress and the exercise by the Secretary of the Interior of powers delegated to him by Congress, the United States has allocated the mainstream waters of the Colorado River impounded and controlled by the Hoover Dam and related works. This federal allocation is binding and supersedes all rights which might otherwise be claimed in the natural flow of the River by a State on behalf of its citizens under the law of prior appropriation or equitable apportionment.

In this portion of our brief we show that the central thesis of the Report is essentially correct. We submit first that Congress has the power, under the Constitution, to allocate among the citizens of different States waters which have been brought under control as a federal project by the expenditure of federal funds, notwithstanding State laws of prior appropriation or interstate doctrines of equitable apportionment. If Congress has exercised this power over the waters of the Colorado River, the elaborate arguments of California based upon prior appropriation and equitable apportionment are irrelevant to the disposition of this controversy.

We then go on to show that this federal power has in fact been validly exercised. Section 5 of the Boulder Canyon Project Act authorizes the Secretary of the Interior to make an allocation of the waters of the Colorado River subject to control by Hoover Dam and, contrary to California's view, does not require charging to Arizona any use of the waters of the Gila River. The Secretary of the Interior made such an allocation under Section 5 by entering into contracts with the States and individual users. The contracts permit the satisfaction of "present perfected rights" as required by Section 6 and are also valid and binding in all other respects.

It follows that the Special Master correctly based his recommendations for a decree upon the allocation made by the Secretary and, in our submission, these aspects of the recommendation should be approved by the Court.

A. CONGRESS HAS THE CONSTITUTIONAL AUTHORITY TO AUTHORIZE A FEDERAL ALLOCATION OF THE WATERS OF THE COLORADO RIVER

Congress has Constitutional power to regulate the navigable waters of the United States for the purposes of flood control, navigation, power production, and watershed and river development. *Oklahoma* v. *Atkinson Co.*, 313 U.S. 508; *Arizona* v. *California*, 283 U.S. 423; *United States* v. *Appalachian Power Co.*, 311 U.S. 77. Congress may also promote the general welfare through large scale projects for reclamation, irrigation and other internal improvement, *United States* v. *Gerlach Live Stock Co.*, 339 U.S. 725; *Ivanhoe Irrigation District* v. *McCracken*, 357 U.S. 275,

and dispose of and make all needful rules and regulations respecting property belonging to the United States. Constitution, Art. IV, Sec. 3, Cl. 2; *Ivanhoe Irrigation District* v. *McCracken, supra; United States* v. *Grand River Dam Authority,* 363 U.S. 229; *Winters* v. *United States,* 207 U.S. 564; *Federal Power Commission* v. *Oregon,* 349 U.S. 435; *United States* v. *Rio Grande Irrigation Co.,* 174 U.S. 690.

The Colorado River is a navigable stream. The Boulder Canyon Project Act authorized the construction and operation of the entire project, including Hoover Dam, Imperial Dam and the All-American Canal System,[5] for the purpose of controlling floods, improving navigation, delivering impounded waters for reclamation of public lands and other beneficial uses, and generating electric energy as a means of making the project financially self-supporting. The enactment of this legislation, therefore, was indisputably within the power of Congress, *Arizona* v. *California,* 283 U.S. 423.

The project involves the storage and disposition of waters amounting to substantially the entire flow of the Colorado River below Lee Ferry. In every real sense the availability of waters for use downstream results from the project and is controlled by its manager, the Secretary of the Interior. Accordingly, Section 5 of the Project Act, as we demonstrate below, authorized the Secretary to determine the disposition of the waters by contract. Section 5 also provides—

---

[5] And see, 49 Stat. 1039; 61 Stat. 628; 68 Stat. 1045; H. Doc. 415, 80th Cong., 1st Sess.; the Mexican Water Treaty, 59 Stat. 1219.

> No person shall have or be entitled to have the use for any purpose of the water stored as aforesaid except by contract made as herein stated.

These arrangements for the allocation of the Colorado River waters controlled by Hoover Dam plainly constitute reasonable conditions and limitations on the use of federal funds, federal property and federal privileges. *Ivanhoe Irrigation District* v. *McCracken,* 357 U.S. 275. Referring to earlier precedents the Court said (p. 295)—

> The lesson of these cases is that the Federal Government may establish and impose reasonable conditions relevant to federal interest in the project and other over-all objectives thereof. * * *

A federal allocation of the waters of a project built and managed by the United States pursuant to the exercise of Congressional power excludes all inconsistent claims. "* * * a State cannot compel use of federal property on terms other than those prescribed or authorized by Congress * * *. Article VI of the Constitution, of course, forbids state encroachment on the supremacy of federal legislative action." *Ivanhoe Irrigation District* v. *McCracken,* 357 U.S. 275, 295.

The principles of priority of appropriation and equitable apportionment are irrelevant, therefore, once it is shown that Congress has made or authorized a federal allocation. Recognition of this proposition removes the underpinning from California's attack upon the decree recommended by the Special Master,

for the essence of California's claim is that the principles of prior appropriation and equitable apportionment, when applied to the waters of the Colorado River, give her a right to a water supply adequate to permit full utilization of the capacities of her present projects, which should not be at the hazard of sharing shortages in the total main stream supply with future projects in Arizona and Nevada.

There is no merit in California's claim that her citizens could acquire "prior rights" (Calif. Opening Br., p. 37) in the navigable waters of the Colorado River before the United States exercised its powers over the stream. Any claimed rights recognized under State law were subject to, and could be displaced by, the exercise of the superior federal authority. In *United States* v. *Appalachian Power Co.*, 311 U.S. 377, 423, although the respondent had "as complete a right * * * as can be obtained under state law", the Court nevertheless held the right subject to federal control because "the state and respondent, alike * * * hold the waters and the lands under them subject to the power of Congress to control the waters for the purpose of commerce." The principle is well established by both prior and subsequent decisions. *E.g.*, *United States* v. *Chandler-Dunbar Co.*, 229 U.S. 53, 69 ("that the running water in a great navigable stream is capable of private ownership is inconceivable"); *United States* v. *Willow River Power Co.*, 324 U.S. 499, 510; *United States* v. *Twin City Power Co.*, 350 U.S. 222, 228; *Tacoma* v. *Taxpayers of Tacoma*, 357 U.S. 320, 334.

Such cases as *Wilson* v. *Black-bird Creek Marsh Co.*, 2 Pet. 245, and *Gilman* v. *Philadelphia*, 3 Wall. 713, relied on by California, are immaterial because they hold at most that the States have implied power to act with respect to purely local facilities in the absence of Congressional legislation. Nor is the point affected by *Federal Power Commission* v. *Niagara Mohawk Corp.*, 347 U.S. 239, and *United States* v. *Gerlach Live Stock Co.*, 339 U.S. 725, which hold only that the destruction of uses recognized by State authority is compensable if Congress has indicated an intent to provide compensation. The only prior state-recognized rights in the waters of the Colorado River provided for by the Project Act are the "present perfected rights" protected under Section 6 and, as we show below, the contracts negotiated by the Secretary of the Interior and the decree recommended by the Special Master accord these rights their full statutory protection. In any event, the issue of compensation is not involved in the present controversy. Cf. *Ivanhoe Irrigation District* v. *McCracken*, 357 U.S. 275, 296–297.

The principles underlying the *Chandler-Dunbar* case and later authorities dealing with claims for compensation are equally applicable to any argument that the federal allocation invades state sovereignty. As the Court said of a similar contention in *Oklahoma* v. *Atkinson Co.*, 313 U.S. 508, 534—

> * * * the suggestion that this project interferes with the state's own program for water development and conservation is likewise of no avail. That program must bow before the "superior power" of Congress. * * *

B. SECTION 5 OF THE PROJECT ACT AUTHORIZES AN ALLOCATION OF THE MAINSTREAM WATERS OF THE COLORADO RIVER

1. *Section 5 authorizes the Secretary of the Interior to make an allocation.*

Section 5 of the Project Act authorizes the Secretary under such general regulations as he may prescribe—

> to contract for the storage of water in said reservoir and for the delivery thereof at such points on the river and on said canal as may be agreed upon * * *.

Section 5 then specifies the purposes for which water may be delivered and prescribes in considerable detail both the conditions under which contracts may be let for the use of water for generating electric energy and also the terms that shall be included in contracts for the sale of electric energy. Section 5 also stipulates—

> No person shall have or be entitled to have the use for any purpose of the waters stored as aforesaid, except by contract made as herein stated.

These plain words make it too clear for argument that Section 5 authorizes the Secretary to apportion the consumptive use of the waters impounded and controlled by the Boulder Canyon Project. A contract, to be valid, would have to conform to the requirements of the other sections of the Project Act, but any contracts which satisfied those requirements would constitute binding allocations and no person could have any rights to the water of the lower Colorado River except as provided by a contract with the

Secretary.[6] We explored this at greater length at pages 24–34 of our brief in this Court in support of our exceptions to the Special Master's Report.

It may be urged to the contrary that the allocation of the waters of the Colorado River among the citizens of several different States was too controversial and important a problem for Congress to delegate the determination to the Secretary of the Interior. But the Project Act does not leave the Secretary at large. The first paragraph of Section 4(a) places specific limits upon the aggregate annual consumptive use for which water may be delivered to users in California. The limitation necessarily implies that the remainder is to go to Arizona and Nevada since Utah and New Mexico have no access to the mainstream. Furthermore, the second paragraph of Section 4(a) indicates the kind of apportionment which the Congress would deem proper by granting Congressional consent in advance to a proposed interstate compact between California, Nevada, and Arizona. While this paragraph never became operative because the tri-state compact was never negotiated, it supplied guidance for the Secretary's exercise of discretion by indicating the kind of division which Congress considered equitable.

2. *The allocation authorized by Section 5 and the provisions of the California Limitation Act apply only to mainstream waters.*

---

[6] Section 6 directs the Secretary to respect "present perfected rights." The meaning of this provision is discussed at pp. 49–50, *infra*.

Section 5 of the Project Act requires, *inter alia,* that contracts made by the Secretary "shall conform to paragraph (a) of Section 4 of this Act." The critical passage in Section 4(a) provides that California's

> aggregate annual consumptive use (diversions less returns to the river) of water of and from the Colorado River * * * shall not exceed four million four hundred thousand acre-feet of the waters apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact, plus not more than one-half of any excess or surplus waters unapportioned by said compact * * *.

The contracts made by the Secretary of the Interior allocate only water from Lake Mead and from the mainstream below Hoover Dam, except that, to protect against upstream use decreasing project water, the contracts require Arizona and Nevada to deduct from their allotments for uses above Lake Mead whether from the mainstream or from tributaries. We submit that this limitation was authorized by the Project Act and that the Special Master erred in refusing to accept it. See our Brief in Support of Exceptions pp. 7–21. This issue does not affect the present point which relates to Lake Mead and waters below Hoover Dam. The contracts rest upon the proposition that the quoted passage from the Project Act and the corresponding language of the California Limitation Act refer only to mainstream waters, with the result that California is limited to—

> (i) four million four hundred thousand acre-feet annually out of the first seven million five hundred thousand acre-feet of mainstream

water available to the Lower Basin States, plus—

(ii) one-half of the mainstream water in excess of seven million five hundred thousand acre-feet.

Since the Master's Report adopts this first interpretation and the recommended decree rests upon it, we deem it important to show that the interpretation is correct.

It is plain that the critical passage in Section 4(a) cannot be read literally. Indeed, as the Special Master observed, no one argues for a completely literal interpretation.[7] California proposes a second construc-

---

[7] The interpretation of Section 4(a) submitted by the United States and approved by the Special Master would not depart from the literal meaning of the words if Arizona's contention that Article III (a) and (b) of the Compact apportions only mainstream water were ultimately upheld. But notwithstanding the Master's observations respecting the meaning of various Compact provisions (Rept. 138–151), many of the questions presented by the conflicting contentions of California and Arizona respecting Compact interpretations are questions in which the Upper Basin States have a substantial interest and which cannot be finally answered in their absence. Among these, in addition to those on which the Master has expressed his opinion, is the question whether "beneficial consumptive use" is to be measured for Compact accounting purposes at site of use or by depletion of flow at some downstream point. Another is whether uses by the United States on its Indian reservations are chargeable to either basin for purposes of interbasin accounting. (See Article VII of the Compact.) Still another is whether reservoir losses of water in storage for use in either basin are chargeable for purposes of interbasin accounting. As observed by the Special Master with respect to the Upper Basin's delivery obligation under Article III(c) of the Compact (Rept. 145), these are all questions which "ought not to be

tion. It construes the Compact as an apportionment of all the waters in the Colorado Basin and, reading the first phrase in the critical passage literally, contends that "waters apportioned to the lower basin States by paragraph (a) of Article III of the * * * compact" means the first 7,500,000 acre-feet of annual consumptive uses of Colorado River system water in the Lower Basin, including all uses from the Gila River and other tributaries. Since California calculates the present average annual consumptive uses on the tributaries at approximately 1,950,000 acre-feet and treats them as apportioned by Article (a), it argues that the waters in the mainstream "apportioned to the lower basin States by paragraph (a) of Article III of the * * * compact" do not exceed 5,550,000 acre-feet of consumptive use annually.[8] Of this water, says California, the limitation of use in California only precludes use of any part over 4,400,000 acre-feet. All waters in the mainstream in excess of those required for consumptive use of 5,550,000 acre-feet are, according to California's contention, "excess or surplus waters unapportioned by"

---

answered in the absence of the states of the Upper Basin" and which need not "be answered in order to dispose of this litigation affecting only Lower Basin interests." Here it is necessary to determine only what Congress meant by the language in question. Whether or not such meaning accords with the meaning of the Compact provisions referred to need not be determined in this case.

[8] The figure is obtained by subtracting the 1,950,000 acre-feet of consumptive use on the tributaries from the total figure of 7,500,000.

the Compact.[9] But California is unwilling to read the second phrase in the critical passage literally. A literal construction of "one-half of any excess or surplus waters unapportioned by said compact" would exclude California from any share of the next 1,000,000 acre-feet of consumptive use annually because this water is apportioned by Article III(b).[10]

Arizona offers still another interpretation. It argues that by the first phrase, "waters apportioned to the lower basin States by paragraph (a) of Article III of the * * * compact," Congress meant the first 7,500,000 acre-feet of annual consumptive uses in the Lower Basin States *from the mainstream.* Therefore, says Arizona, by consenting to the Compact with this understanding of the meaning of Article III, Congress modified the Compact even if Article III were otherwise construable as effecting

---

[9] Since use in California is limited to "*not more than one-half* of any excess or surplus waters unapportioned by" the Compact, we are unable to state the argument on which California urged the Special Master to recommend a decree which would allocate the consumptive use of mainstream waters in excess of 4,400,000 acre-feet in proportions of

978,000 acre-feet to California
152,000 acre-feet to Arizona
28,000 acre-feet to Nevada

[10] In view of Arizona's present concession (Opening Br. 82) that the phrase "excess or surplus waters unapportioned" by the Compact includes all mainstream water above the first 7,500,000 acre-feet available for use in the Lower Basin States in any one year, there would appear to be no further need to review the legislative history which supports the Special Master's rejection of the argument which would have excluded California from sharing in the Article III(b) water.

an apportionment of system, as distinguished from mainstream, waters. Alternatively, Arizona argues that the Compact apportionment for use in the Lower Basin refers only to the use of waters in the mainstream and is exclusive of Lower Basin tributary uses. Under either of these alternative arguments, consumptive uses in California out of the first 7,500,000 acre-feet of mainstream waters available annually in the Lower Basin would be limited to 4,400,000 acre-feet, with the remaining 3,100,000 acre-feet available for use in Arizona and Nevada.

The choice between the conflicting interpretations depends upon the true Congressional intent in the enactment of Section 4(a). Even if Congress used the words "apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact" or the words "excess or surplus waters unapportioned by said compact" in a sense entirely different from the Compact use, it is the understanding and purpose of Congress that is important here. The meaning of the negotiators of the Compact need not be resolved in this case, because the case is controlled by the meaning which Congress attributed to the words. An analysis of Section 4(a) itself, including the relationship of its two main paragraphs, and its legislative history demonstrate that Congress intended the reference to waters apportioned by the Compact to mean the first 7,500,000 acre-feet of annual consumptive use from the mainstream available in the Lower Basin.

(a) *The statutory provisions*

The Boulder Canyon Project as a whole deals with the portion of the Colorado waters delivered from the Upper Basin to the Lower at Lee Ferry and otherwise reaching the mainstream below that point. The purpose of the project was to build a reservoir of sufficient size to control the waters of the river above the dam, so as to eliminate the devastating floods and reduce the shortages in order that all of the mainstream waters available could be devoted to beneficial uses, including delivery through the new All-American Canal. No part of the project touched the Gila River[11] or the other downstream tributaries. The waters which the Secretary would control would be essentially mainstream waters. It is reasonable to suppose, therefore, that Congress, in preparing this statute, was thinking of the waters of the Colorado River itself, *i.e.*, the mainstream waters, not the waters of the river system or the entire Lower Basin.

The words of Section 4(a) themselves bear out this inference. The provision in question limits the aggregate annual consumptive use in California "of water of and from the Colorado River." It is to the "Colorado River," and not to the river system or Lower Basin, that the limitation explicitly refers.

The second paragraph of Section 4(a), in which Congress gave advance consent to a prospective tri-state compact, shows that the first paragraph refers

[11] The Gila actually joins the Colorado at a point below the present diversion point for the All-American Canal so that, in any event, any water which might join the mainstream from the Gila would not be available for that project.

only to mainstream waters. Arizona, California, and Nevada were authorized to enter into an agreement which would provide that of the 7,500,000 acre-feet apportioned to the Lower Basin by paragraph (a) of Article III of the Colorado River compact there should be apportioned to Nevada 300,000 acre-feet and to Arizona 2,800,000 acre-feet of annual consumptive use, with Arizona to have the exclusive use of the Gila River within that State. Since California was to receive 4,400,000 acre-feet under the first paragraph, the authorized compact would divide among these three States all the water to which Congress referred at the start of the second paragraph in the phrase—

> 7,500,000 acre-feet annually apportioned to the lower basin by paragraph (a) of Article III of the Colorado River compact * * *.

To interpret this phrase literally to mean the first 7,500,000 acre-feet out of all the waters of the Lower Basin, including the tributaries, would attribute to Congress an intent to authorize California, Nevada, and Arizona to divide this water among themselves and thereby entirely exclude New Mexico and Utah from Lower Basin tributary waters which were being consumed in those States at the time the Project Act was enacted. The only reasonable inference is that Congress used the phrase as a way of referring to 7,500,000 acre-feet of water *out of the mainstream.* This is the water which the draftsman, rightly or wrongly, supposed Article III(a) to apportion.[12]

[12] See p. 30, *supra*, especially note 7.

The first of the critical phrases in the first paragraph of Section 4(a) is substantially the same as the phrase in the second paragraph, *viz.*—

> apportioned to the Lower Basin States by paragraph (a) of Article III of the Colorado River compact * * *.

It is impossible to believe that this phrase does not refer to the same waters as those described in the second paragraph, even though the number of acre-feet is not mentioned. Therefore, in the first paragraph Congress must have used the phrase "waters apportioned to the Lower Basin States by paragraph (a) of Article III of the Colorado River compact" as a way of referring to 7,500,000 acre-feet of water out of the mainstream.

The inference is confirmed by item (3) in the second paragraph of Section 4(a), which authorizes the three States to give Arizona the exclusive beneficial consumptive use of the Gila River and its tributaries within the boundaries of Arizona. Congress obviously believed that the division of 4,400,000 acre-feet to California, 300,000 acre-feet to Nevada, and 2,800,000 acre-feet to Arizona would complete the disposition of the water which the Upper Basin undertook to deliver to the Lower Basin by Article III(d). The allocation of the Gila River to Arizona was therefore additional. The only interpretation which permits the Gila water to be treated as additional, in accordance with the obvious intent, is to read the 7,500,000 acre-feet as referring to the mainstream. Senator Johnson recognized this during the debates upon the second

paragraph of Section 4(a), when he said (Calif. Compilation, p. 175)—

> When Arizona says that she has but 2,800,000 acre-feet of water, to that must be added the Gila River with its 3,500,000 acre-feet.

The second paragraph of Section 4(a) also provides that the tri-state compact authorized by Congress may divide between Arizona and California all the "waters unapportioned by the Colorado River compact." If this reference were to be taken literally and if the Compact were to be construed, in the manner for which California contends, as an apportionment of all the water in the system, then the proposed tri-state compact authorized by Congress would be inconsistent with the Compact, for Article III(f) of the Compact reserved the future division of waters "unapportioned" by the Compact to a new agreement between the States of the Upper and Lower Basins. Again, inconsistency and resulting unfairness can be avoided only by understanding that Section 4(a) refers to 7,500,000 acre-feet of mainstream waters.

The relationship between the first and second paragraphs of Section 4(a) was appreciated during the debate upon the Project Act. The second paragraph is the result of an amendment offered by Senator Hayden which he described as "a mere corollary to the amendment" which was adopted as the first paragraph of Section 4(a) (Arizona Compilation of Legislative History, p. 65).

(b) *The Legislative History.*

The legislative history of Section 4(a) of the Project Acts supports our conclusion that Congress intended to limit the annual consumptive use in California to 4,400,000 acre-feet of the first 7,500,000 acre-feet of mainstream waters available for use in the Lower Basin. In debates of such duration, participated in by many individuals, representing competing interests, it is inevitable that many arguments were advanced and statements of intention made which confuse the picture. The Special Master reviews some of this contradictory matter (Rept. 189–194) and California makes the most of it (Calif. Opening Br., pp. 110–124). Since all the materials are before the Court, we shall content ourselves with a review of the salient features of the debate which we believe require our conclusion.

Before examining the debates, it is important to understand the situation facing Congress when the Project Act was under consideration. The Colorado River Compact had not been ratified by all the signatory States as required by Article XI. Arizona was unwilling to ratify. Arizona may well have feared that California, which was growing far more rapidly, would gobble up the largest part of the 7,500,000 acre-feet which the Compact proposed to apportion to the Lower Basin. Although the development of Arizona had lagged behind that of California, it was fairly to be anticipated that Arizona's use of water would develop more rapidly than the Upper Basin States' and therefore, in the absence of the Compact, Arizona would be able to establish a basis for making

a claim for appropriative rights having priority over uses in the Upper Basin. The representatives of the Upper Basin States were therefore reluctant to enact legislation that would facilitate increased use of waters in the Lower Basin before something was done to protect the interests of the Upper Basin.

The best way out of the impasse would be for Arizona, California, and Nevada to negotiate an interstate compact dividing the river below Lee Ferry. Obviously the Upper Basin had no interest, either direct or indirect, in the division between the Lower Basin States of the water from the mainstream *and tributaries;* once Arizona's interest in the mainstream was secured, her opposition to the Compact would relax. After a conference in Denver, Colorado, in the summer and autumn of 1927, the Governors of the four Upper Basin States recommended "the following as a fair apportionment of water between the States of the lower division, subject and subordinate to the provisions of the Colorado River Compact:

> 1. *Of the average annual delivery of water to be provided* by the States of the upper division at *Lees Ferry* under the terms of the Colorado River compact: (a) To the State of Nevada, 300,000 acre-feet, (b) To the State of Arizona, 3,000,000 acre-feet, (c) To the State of California, 4,200,000 acre-feet." [Arizona Compilation, pp. 33 and 34, and p. 105; emphasis added.]

While this recommendation was followed by recommendations that the waters of Lower Basin tributaries be apportioned to the States in which those tributaries flowed (Arizona Compilation, pp. 35 and 105), the factor of most significance here is that this

starting point for the ultimate figure of 4,400,000 acre-feet of Article III(a) water for use in California was expressly related to the average annual delivery of 7,500,000 acre-feet at Lee Ferry under the terms of the Colorado River Compact.

These recommendations played an important part in the evolution of present Section 4(a). Their substance was introduced in a committee amendment to Section 5 of S. 728, reported on March 20, 1928, by the Senate Committee on Irrigation and Reclamation in S. Report No. 592, 70th Congress, 1st Session, which was "designed to give further assurances to the various states, *particularly those in the Upper Basin,* against any undue advantages or rights to California." (Calif. Compilation of Legislative History, p. 6.) This amendment would have provided that contracts under Section 5 should not "provide for an aggregate annual consumptive use in California of more than 4,600,000 acre-feet of the water allocated to the Lower Basin by the Colorado River compact * * * and one-half of the unallocated, excess and/or surplus water: * * *." (Calif. Ex. 2001.)

This amendment was offered in Committee by Senator Kendrick of Wyoming "for the purpose of protecting the water rights of the four upper States" against the possibility that otherwise "California would only be restricted by *the 7,500,000 acre-feet that went down*" and, if Arizona stayed out of the Compact, "she would have her legal right to appropriate as much water as she could put to beneficial use." Such might have been the result "unless there was an agreement as to exactly how much water should go to

the lower States out of *the 7,500,000 acre-feet that went down to them.*" See also the explanation by Senator Pittman during the debate on the Bratton amendment to the Phipps amendment, which was approved and became the first paragraph of Section 4(a). (Arizona Compilation, p. 59; Calif. Compilation, pp. 107 and 108.)

While the 4,600,000 acre-foot limitation proposed in the committee amendment to Section 5 was the quantity demanded by California's representatives at the Denver conference, rather than the quantity recommended by the Upper Basin Governors as a compromise (see discussions by Senator Hayden, Arizona Compilation, p. 38, and Senator Pittman, California Compilation, p. 109), it is obvious that the water which was considered available for possible use by California and which was in the Committee's contemplation in proposing the limitation as to both "allocated" and "unallocated, excess and/or surplus water" was water in the mainstream, just at is was in the contemplation of the Upper Basin Governors.

The compromise recommended by the Governors' Conference was placed before the Senate in full by Senator Hayden early in the debate on the proposed Hayden amendment to Section 4(a) of the pending bill.[13] The Phipps amendment was later substituted

[13] The recommendation of the Governor's conference was frequently referred to on other occasions during the debates on the various amendments of which the first paragraph of Section 4(a) was the fruition. See the remarks of Senator Pittman of Nevada (Arizona Compilation, pp. 13 and 14, p. 60), Senator Hayden of Arizona (Arizona Compilation, pp. 33 and 34), Senator King of Utah and Senator Bratton of New Mexico (Arizona Compilation, p. 47).

(Arizona Compilation, pp. 13 and 14). The Phipps amendment fixed the limitation at 4,600,000 acre-feet. The dispute over whether the limitation upon California should be 4,200,000 acre-feet or 4,600,000 acre-feet continued, but everyone agreed that the total amount to be apportioned was the 7,500,000 average annual flow to come down the mainstream to the Lower Basin. The dispute was resolved by the Bratton amendment which substituted the compromise figure of 4,400,000 acre-feet for the 4,600,000 acre-feet proposed by Senator Phipps. With minor changes the Phipps amendment became the first paragraph of Section 4(a). The Hayden amendment, with minor alterations, became the second paragraph.

Throughout the debate Senators spoke as if the universe to be divided was the mainstream waters. Senator Pittman repeatedly referred to the 7,500,000 acre-feet that "went down" to the Lower Basin. (Arizona Compilation, p. 59; Calif. Compilation, pp. 107–108.) An amendment to Section 5 proposed by Senator Waterman of Colorado during the first Session of the 70th Congress, but not debated or voted upon (Calif. Compilation, p. 14), would have required California to agree to furnish, from her 4,600,000 acre-feet and one-half of the unallocated water, any water required by Arizona "out of the main stream" in excess of 2,900,000 acre-feet per annum plus one-half the unallocated water, "so that in no event shall there ever be demanded or required, *out of the main stream of the Colorado River,* by the States of Arizona, California, and Nevada * * * any water in excess of the amount apportioned to

them by Article III of the Colorado River compact, to be delivered to them * * * at Lee Ferry * * * or elsewhere." (Emphasis added.)

In discussing Arizona's contention for 4,200,000 acre-feet, Senator Pittman on December 7, 1928, said: "Arizona, as I understand, will ratify the agreement whenever there shall be a provision in the bill or a separate agreement between Nevada and Arizona and California *dividing the water let down to the three lower States. Of the 7,500,000 acre-feet of water let down that river* they have gotten together within 400,000 acre-feet. They have got to get together, and if they do not get together Congress should bring them together." (Arizona Compilation, p. 44; emphasis added.)

On December 8, 1928, Senator Bratton was explaining a proposed amendment to Section 4(a) which would have limited California to 4,400,000 acre-feet of III(a) water, 500,000 acre-feet of III(b) water, and one-half of the excess or surplus waters unapportioned by the Compact. (Arizona Compilation, pp. 46–47.) The following colloquy occurred:

> MR. KING. I will ask the Senator if it is not a fact that at the time when the governors' conference considered the matter and recommended a settlement upon a basis of 4,200,000 acre-feet to California there had not been fully discussed and fully appreciated the fact *that there was probably a million acre-feet subject to capture* which, under the compact, was allocated to Arizona and to California, so that if 4,200,000 acre-feet were awarded out of the 7,500,000 there would be an additional 500,000 acre-feet out of this 1,100,000 acre-feet which,

> under the compact, was to be allocated to the two States, so California in the aggregate would get 4,700,000 acre-feet? [Emphasis added.]
>
> MR. BRATTON. That is true if the estimated surplus actually exists. At the same time, Arizona would get her 3,000,000 acre-feet agreed to by the governors as her just share of the allocated water, plus 500,000 acre-feet, being one-half of the unallocated surplus, so that while California would get 4,700,000 acre-feet Arizona would get 3,500,000 acre-feet. The surplus to which the Senator from Utah refers would be equally divided between Arizona and California. Neither State would get an advantage by reason of the division of the surplus. [Arizona Compilation, p. 47.]

The existence of the estimated surplus could be doubtful only if the area of discourse was limited to the mainstream waters of the Colorado River. In that event the proposed figures would exhaust the 7,500,000 acre-foot annual average of which the Lower Basin was alone assured. If the subject of the discussion also included the 3,500,000 acre-feet then supposed to be available in the Gila River (see Senator Johnson's statement, *supra,* p. 37), no one could have doubted for a moment the existence of a surplus in excess of the 7,500,000 acre-feet.

The subject matter of the discussion was again made clear by Senator Phipps on May 2, 1928, in response to a comment by Senator Johnson of California:

> MR. PHIPPS.
>
> * * * * *

> The Senator from California referred to the limit of 4,600,000 acre-feet of water written in this bill as the maximum amount which California might use per annum out of the stream. I think in that statement he was disregarding the fact that California would be entitled to at least her one-half of the surplus or additional waters *which are known to pass through the stream annually,* to the extent, it is estimated, of at least 1,000,000 acre-feet. [Calif. Compilation, p. 12; emphasis added.]

And after the Bratton amendment to the Phipps amendment to Section 4(a) had been approved but before final adoption of the Phipps amendment, Senator Pittman said:

> The Senate has already determined upon the division of water between those States. How? It has been determined how much water California may use, and the rest of it is subject to use by Nevada and Arizona. Nevada has already admitted that it can use only an insignificant quantity, 300,000 acre-feet. That leaves the rest of it to Arizona. As the bill now stands it is just as much divided as if they had mentioned Arizona and Nevada and the amounts they are to get * * *. [Arizona Compilation, p. 80.]
>
> As I understand this amendment, *Arizona today has practically allocated to it 2,800,000 acre-feet of water in the main Colorado River.* It is there for their use * * *. [Arizona Compilation, p. 82.]
>
> We have already decided as to the division of the water, and we say that if the States wish they

can enter into a subsidiary agreement confirming that. * * * [Arizona Compilation, p. 85]

As the Special Master states (Rept. 180), "every expression of intent made by any Senator who had anything to do with the legislation" indicates that Congress was thinking only of mainstream waters when it placed limitations upon California and divided the surplus by the first paragraph of Section 4(a).

It follows that the allocation which the Secretary is authorized to make by Section 5 is an allocation of mainstream water which limits California to (i) 4,400,000 acre-feet of the first 7,500,000 acre-feet annually available in the mainstream and (ii) one-half of any surplus of mainstream waters in excess of 7,500,000 acre-feet.

C. THE CONTRACTS EXECUTED BY THE SECRETARY OF THE INTERIOR MAKE A VALID ALLOCATION OF THE MAINSTREAM WATERS

1. *The contracts constitute interstate allocations.* Since California's access to the Colorado River is restricted to the mainstream, it is obvious that contracts for delivery of water to users in California have no bearing on the controversy as to whether the allocations made by the Secretary are limited to mainstream waters. The only issue with respect to them is whether they conform to the Limitation Act and recognize present perfected rights.

Nevada has no access to tributaries entering the river below Lake Mead, and we have discussed in our opening brief (pp. 7–21) our reason for urging that uses from the tributaries entering above Lake Mead should be deducted from Nevada's share.

However, Arizona does have access to the lower tributaries, principally the Gila, and if the Project Act were properly interpreted to cover allocations of water from those sources, the Secretary of the Interior would have to consider uses on the tributaries in making his contract with Arizona. In 1944, the Secretary of the Interior entered into a contract with Arizona providing for the delivery from storage in Lake Mead of so much water as may be necessary for beneficial consumptive use in Arizona of a maximum of 2,800,000 acre-feet, taking into account the extent to which consumptive uses of water above Lake Mead diminish the flow into the reservoir. While the 1944 contract does not specifically refer to the Gila River, it in effect excludes water used from it because of its omission to provide for any reduction on account of such use.[14] It is our understanding that this contract with Arizona does not by itself authorize the actual delivery of water in compliance with Section 5 of the Project Act, since that Section requires that the contracts be entered into with the actual

[14] The "General Regulations for the Storage of Water in Boulder Canyon Reservoir and the Delivery Thereof in Arizona" issued by the Secretary of the Interior on February 7, 1933 (Pl. Ex. 28) provided for the delivery from storage in Lake Mead of "so much available water as may be necessary to enable the beneficial consumptive use in Arizona of not to exceed [2,800,000] acre-feet annually by all diversions affected from the Colorado River and its tributaries below Lee Ferry (but in addition to all uses from waters of the Gila River and its tributaries) * * *." These regulations were withdrawn when Arizona did not accept the proposed contract within a few months after their issuance.

users of the water. Rather, this contract is in the nature of a commitment by the Secretary to enter into contracts with users in Arizona up to the limit of 2,800,000 acre-feet. In this sense it is an allocation by the Secretary of that amount of water for future contractual use.

The important thing is that the Secretary's contract to deliver 2,800,000 acre-feet to Arizona, when added to the 300,000 acre-feet included in the Nevada contract and the 4,400,000 acre-feet permitted to California under its Limitation Act and the contracts made with users there, totals 7,500,000 acre-feet, the amount of mainstream water initially available for apportionment. Since all of these undertakings involve mainstream use, these contracts in fact exclude tributary use below Lake Mead from the Secretary's calculations.

It is true that in the contracts with Arizona and Nevada the Secretary has disclaimed any intention to resolve the dispute among the States respecting the meaning of the Project Act and the Colorado River Compact. It is also true that the contracts are specifically made subject to the availability, legally and physically, of water to fulfill the Secretary's obligations. As we interpret the Project Act, these contracts are in full conformity with the requirements of Section 4(a). What the Secretary said in order to preserve any prior rights of the States, is less important than what he did. And he did make an apportionment under the authority delegated to him by the Project Act. Therefore, the Special Master was entirely justified in finding, as he did, that the

allotments of project water to the contending States were validly made by the terms of the Project Act and the contracts executed thereunder.

2. *The contracts conform to the requirements of Section 6 for the satisfaction of present perfected rights.*

Section 6 of the Project Act requires that stored water be used for the "satisfaction of present perfected rights in pursuance of Article VIII of said Colorado River compact." California raises the question whether it is necessary for the Secretary of the Interior to protect all existing California projects as "present perfected rights" by limiting allocations for future uses in other States.

In our Brief in Support of Exceptions to the Special Master's Report and Recommended Decree, pp. 24–47, we have demonstrated that neither Section 14 nor Section 18 of the Project Act makes State laws of prior appropriation applicable to the distribution of the water supply of the Boulder Canyon Project. In the same context we have demonstrated that there is nothing in federal reclamation law or in 59 years of administration of that law to support the California contention that State laws relating to the appropriation, control, and distribution of water govern the administration of the water supplies of federal reclamation projects. We refer to, but do not repeat here, the arguments presented in that brief.

It is apparent that by the use of the term "present perfected rights" Congress meant to state the full extent of the obligation of the Secretary of the Interior to recognize priorities established through ap-

propriation and use. By not accepting the usual language of "prior appropriation", or making reference to State law as such, Congress showed that it intended to accomplish a different result than would have been achieved by adopting those criteria. Under the law generally applied in the States recognizing prior appropriation, a landowner may establish a right to water superior to subsequent claims by filing a notice and diligently proceeding to construct a project to put the water to use. His right to the full amount of water which the project could ultimately use relates back to the time he makes the initial appropriation, even though he does not get the water until the completion of the project. By using the term "present perfected" Congress indicated that the projects it intended to recognize must not only have been initiated, but have been carried through to completion before the effective date of the Project Act. Thus, the Special Master concluded that a "present perfected right" is one "acquired in compliance with the formalities of state law" and constituting "an actual diversion and beneficial use of a specific quantity of water applied to a defined area of land or to a particular domestic or industrial use." (Rept. 308.)[15]

---

[15] We are not concerned here with reserved rights of the United States, which differ from appropriative rights in that they are not dependent upon affirmative action to bring them into existence. The water rights already exist and are reserved for a particular use by reason of an express or implied reservation. The Special Master quite properly found that the federal reserved rights should also be considered "present perfected rights" under the Act. See *infra*, pp. 65–66, 89–90.

But it is unnecessary to determine whether all or part of California's projects are to be considered "present perfected rights" within the meaning of the Project Act. California cannot complain that these rights are not given sufficient recognition because in its Limitation Act it specifically accepted, as the Project Act required, the 4,400,000 acre-foot allocation, plus one half of the surplus, in satisfaction of "any rights that may now exist." So long as California gets its 4,400,000 acre-feet, plus one-half of the surplus over 7,500,000 acre-feet, it cannot complain that its rights are not being fully met.

The priorities as between users in California are established by the Seven-Party Agreement which accords with the recommendation of the Chief of the Division of Water Resources of the State of California. Therefore, California's only claim that its present perfected rights are being interfered with must be based on the theory that when the water available to it falls below 4,400,000 acre-feet, all of its uses must be met in full before any new uses in other States can be recognized. It is not conceivable that Congress had any such intention in the use of the phrase. Since the contracts with California users do give full recognition to the State's own agreement as to priority, California is in no position to complain with regard to recognition of perfected rights.

It should also be noted that the decree recommended by the Special Master in paragraph II(B)(5) gives ample protection to all present perfected rights as between States. Under this provision, if the amount of water available in a State's allotment proves to be insufficient to satisfy its present perfected rights, it

is entitled to draw from the allotments to the other two States to make up the deficiency. In California's case this right is limited by its own Limitation Act setting a ceiling of 4,400,000 acre-feet even with respect to its perfected rights. Therefore, under the contracts, as interpreted by the decree, California's rights in this respect are fully protected.

D. THE ALLOCATION MADE IN THE CONTRACTS EXECUTED BY THE SECRETARY OF THE INTERIOR SUPPORTS THOSE PORTIONS OF THE DECREE RELATING TO THE INTERSTATE DIVISION OF MAINSTREAM WATERS

The decree proposed by the Special Master, if adopted, would terminate the dispute among the Lower Basin States by affirming and enforcing the interstate allocations made by the Secretary of the Interior through his contracts under the Project Act.

Specifically, the decree by Section II(B) would affirm by order of this Court the apportionment from the first 7,500,000 acre-feet available in the mainstream of the Colorado River of 2,800,000 acre-feet for use in Arizona, 4,400,000 acre-feet for use in California, and 300,000 acre-feet for use in Nevada. Further, it would provide for suitable allocations if surplus water is available.

The decree orders a pro rata reduction of these quantities if insufficient water is available to meet the full allotments. Although it might have been argued that the Secretary of the Interior is authorized by the Project Act to determine how deficiencies should be met, just as he is authorized to make the allotments in the first place, the pro rata reduction of allotments in the case of deficiencies has been the practice gen-

erally followed by the Secretary of the Interior for 59 years in his administration of reclamation projects. It is reasonable to construe these contracts in the light of this history.

California argues that the allocations approved by the Special Master are "based on error", the consequence of which can only be described by the word "disaster". (California Opening Br., p. 50.) California amplifies this conclusion by a prediction of the effect of the decree on the future operation of the Metropolitan Water District, which pumps Colorado River water over the mountains to the South Coastal Plain in California. (California Opening Br., pp. 266–277.) The very foundation of California's argument is that the Upper Basin States will in the near future utilize the entire 7,500,000 acre-feet allotted to them by the Compact. Surely the Upper Basin has every right to do so, and presumably the development of the country will be advanced by this area's putting to productive use its fair share of the water of the Colorado River. But even the California argument does not predict this result before 1990 (California Opening Br., p. 261), and the Bureau of Reclamation is much more conservative as to the time when the Upper Basin will achieve use of its full apportionment. (Tr. 21343–21344; S. Doc. 101, 85th Cong., 2d Sess., p. 13.) The dangers depicted by California must be discounted on the basis of remoteness. In the intervening years there may well be many advances in science leading to better conservation and more efficient storage, transportation, and use of water. Other

sources of water may be developed, such as saline conversion plants. California would go too far in mortgaging the present to protect the remote future, perhaps because it is Arizona's present that will be sacrificed as security for California's future. We agree with the Special Master's conclusion (Rept. 102):

> * * * the record in this case gives no indication that the "chaotic disaster" which California fears will, or is likely to, materialize. Her dire predictions appear to be unfounded.

II

THE SPECIAL MASTER'S RECOMMENDED ALLOCATIONS OF WATER FOR USE ON FEDERAL RESERVATIONS SUFFICIENT IN AMOUNT TO ACCOMPLISH THE PURPOSES OF THE RESERVATIONS ARE CORRECT

The United States entered this litigation partly because the case involves the disposition of water controlled by the Secretary of the Interior under the Boulder Canyon Project Act and the contracts executed under Section 5. The United States is also interested as the guardian of Indian Tribes and as the proprietor of Indian and other federal reservations. We deal with the latter interests in this portion of our brief.

Under the decree recommended by the Special Master the Secretary is authorized to release water in specified quantities for the benefit of five Indian reservations, two national wildlife refuges, and a national recreation area. The decree also secures the right of the United States to divert water from the

mainstream of the Gila and San Francisco Rivers in quantities necessary to fulfill the purposes of the Gila National Forest with a priority as of the dates of the establishment of each forest area. We excepted to a small part of this portion of the decree (see United States Brief in Support of Exceptions, pp. 51 to 53), but are satisfied that in other respects the decree adequately protects the claims of the United States for Indian and other federal reservations.

The portions of the decree relating to Indian and other reservations may be supported upon either of two independently sufficient lines of reason. If, as we sought to demonstrate in Point I, the Secretary of the Interior is authorized to allocate the waters of the mainstream of the Colorado River for use by citizens of the lower basin, then the Secretary necessarily has the same power to use, or to reserve the use of, a portion of those waters for the lands of the United States. The only restriction upon his discretion in this regard is the duty under Section 6 to protect "present perfected rights."

The rights of the United States to waters for these federal establishments also stem from its property rights in the waters of the Colorado River and its tributaries. Ownership of the right to use these waters on the public domain was acquired by the United States through the original treaties of cession with Mexico. These property rights were not abandoned upon opening the public domain, nor were they surrendered to California, Nevada and Arizona upon

their admision to statehood. When the reservations were established, the United States reserved the rights to use adjacent waters on the reservations in quantities sufficient to satisfy their ultimate needs.

The logic of this line of argument, which we develop at pages 61 to 93 below, would seem to require an allocation to the United States for the satisfaction of these rights separate from the allocations to Arizona, California and Nevada. Before the Special Master the United States did indeed, at one time, make this contention. We do not press the point here because the recommended decree appears sufficient for all practical purposes to protect the federal establishments. It treats the rights appurtenant to Indian reservations as "present perfected rights" under Section 6 of the Project Act, and therefore, accords them their appropriate priorities along with other "present perfected rights" in time of shortage, when present perfected rights can be satisfied only through use of waters otherwise allocated to another State. Rights reserved for reservations established subsequent to the Project Act are recognized as having priorities, intrastate, as of the respective dates of establishment of the reservations.

We wish to emphasize, however, that the property rights of the United States to use of the waters of the Colorado River and its tributaries on behalf of federal establishments are entitled to recognition, with the priorities the Report accords them, under the reasoning just outlined regardless of whether the in-

terstate allocation be made upon the central thesis adopted by the Special Master or upon the theory advocated by California or, indeed, upon any other theory. Yet there is no inconsistency between the Master's thesis concerning the effect of the Project Act and recognition of the property rights to the use of water of the United States by virtue of implied reservations. The rights of the United States appurtenant to the reservations are "present perfected rights" within the meaning of Section 6 and the Secretary is therefore not only entitled, but obliged, to deliver the necessary water. The nub of the matter is that the rights of the United States appurtenant to the federal establishments are to be safeguarded whatever disposition is made of other issues.

Arizona's Opening Brief is divided into two parts. Part I, relating to the "controversy among Arizona, California and Nevada," generally supports the Special Master's Report, upholding the power of the United States to construct and operate the Boulder Canyon Project and to make a "statutory [interstate] apportionment" of the waters controlled by the project. This has been done, Arizona asserts, in exercise of the United States' "dominion and plenary power over navigable waters of the United States." (Arizona Opening Brief, pp. 24, 30.) Part II relates to a different subject. Here, Arizona assesses the "claims of the United States to water." In doing so, counsel appear to forget all that is asserted

in the 100 pages of Part I in an effort to show that the United States is without power to use its navigable waters on federal establishments.[16]

The inconsistency between the two arguments is apparent, and we urge that the principal arguments in Part I are right and those in Part II are wrong.

A. UNDER THE PROJECT ACT THE SECRETARY OF THE INTERIOR HAS THE SAME POWER TO ALLOCATE WATER FOR USE ON FEDERAL ESTABLISHMENTS AS HE HAS TO ALLOCATE WATER TO OTHER USERS

The same principles which support the power of the United States to construct and operate the Boulder Canyon Project and to contract for the delivery of stored waters to others support its power to use the water itself and to reserve it for use on Indian and other reservations. In a prior portion of this brief, we have argued that this power exists under the Commerce Clause, the General Welfare Clause and the Property Clause. (*Supra,* pp. 22–26, *et seq.*) Decisions of this Court with respect to comparable projects sustain that power. See, *e.g., Ivanhoe Irrigation District* v. *McCracken,* 357 U.S. 275. In fact, in the original litigation as to this very project, though

[16] At p. 283 of its opening brief, California notes its disagreement with, but does not argue, the Master's recommendations respecting the reserved rights of the United States. Because Arizona vigorously disputes those recommendations as to the reservations in Arizona, we refer in this part of the brief especially to the reservations located there. The arguments made, of course, equally support the United States' reserved rights to use water on the several reservation areas in California.

the opinion was carefully limited, the decision goes far toward sustaining the power here in question. *Arizona* v. *California,* 283 U.S. 423. Since the Secretary of the Interior has the power to contract for the delivery of stored water "for irrigation and domestic uses," it seems clear that he derives power from the same sources to use mainstream water for similar purposes on federal lands.

Under these circumstances, there is no foundation for Arizona's attack upon the United States' power to use a part of the mainstream waters for its own purposes, including the sustenance of its Indian wards. Surely, if Congress has the power to provide by statute for a contract system to govern allocation of the waters of the Colorado River, it likewise has the power to provide for the use of those waters on federal lands. Just as surely, if Congress by its direction for the "satisfaction of present perfected rights" can breathe life into claims of appropriative rights under state law to use the navigable waters of the Colorado River, *supra,* pp. 49 to 52,[17] it can by the same method cure any asserted defects in the United States' claims of reserved rights to use those waters on federal establishments.

Congress has expressly indicated its intention to exercise its powers so that the Project waters are

---

[17] In its opening brief, p. 34, Arizona says: "Congress in the exercise of this power and dominion [under the Commerce Clause of the Constitution] may abolish, limit or preserve, as it deems fit, pre-existing rights to the use of navigable water."

available for use on lands of the United States. One of the purposes expressly enumerated in Section 1 of the Project Act is "providing for storage and for the delivery of the stored waters * * * for reclamation of public lands and other beneficial uses * * *."[18] In addition to the reclamation of "public lands," the reclamation of Indian reservations is specifically referred to in Section 2 of the Act of August 30, 1935, 49 Stat. 1039, by which Parker and Headgate Rock Dams were authorized.

Under these statutory provisions, it is plain that the Secretary of the Interior has full authority to release project waters for use on the mainstream Indian reservations and other lands of the United States.

At page 312 of the Report, fn. 3a, the Special Master observes: "Of course the Secretary need not contract with himself, and hence no contracts are required for Indian Reservations and similar federal establishments." Indeed, the Arizona 1944 contract, subdivision (1) of Article 7, in addition to providing for deliveries to individuals, irrigation districts, corporations or political subdivisions under contract with the Secretary of the Interior, specifically provides that deliveries of water may be made under the contract "to lands of the United States within Arizona."

---

[18] See, also, the discussion, *infra*, pp. 89–90, respecting the inclusion of federal reserved rights in the Section 6 requirement for "satisfaction of present perfected rights."

B. THE UNITED STATES HAS RESERVED, FROM ITS ORIGINAL PROPRIETARY RIGHTS, THE RIGHT TO USE SUFFICIENT QUANTITIES OF THE APPURTENANT WATERS TO SATISFY THE ULTIMATE NEEDS OF INDIAN RESERVATIONS AND TO ACCOMPLISH THE PURPOSE OF OTHER FEDERAL RESERVATIONS. THESE RESERVED RIGHTS ARE "PRESENT PERFECTED RIGHTS" FOR WHICH WATER MUST BE MADE AVAILABLE UNDER THE PROJECT ACT

1. *Ownership of rights to use waters of the Colorado River and its tributaries on the public domain was acquired by the United States through treaties with Mexico.*

The territory comprising the Lower Colorado River basin was acquired by the United States through treaties with Mexico. The major portion of the territory was ceded in 1848 by the Treaty of Guadalupe Hidalgo. 9 Stat. 922. A small portion south of the Gila River in Arizona was acquired by the Gadsden Purchase in 1854. 10 Stat. 1031. When the United States acquired this territory by cession from Mexico, it became the owner not only of the land itself, but of all rights pertaining thereto as well, except for those lands and appurtenant rights granted to individuals by the previous sovereign. *Borax Consolidated, Ltd.* v. *Los Angeles,* 296 U.S. 10, 15–16; *Knight* v. *United States Land Ass'n,* 142 U.S. 161, 183–184. The right to use the appurtenant waters was one of the whole bundle of rights so acquired.[19]

[19] When the United States became owner of the lands in this territory, there was no other government or person with authority to assert any right to use the water on the lands except those individuals holding rights previously granted by the Spanish or Mexican governments. There was no authority in others to assert title because the doctrine of appropri-

The federal proprietorship has long been recognized. Kinney, one of the leading authorities on water rights, stated in 1912:

> The Government is still the owner of the surplus of the waters flowing upon the public domain, or rather the owner of all the waters flowing thereon remaining after deducting the rights to the use of the same which have vested in and accrued in some legal way to individuals and companies. * * * [Kinney, *Irrigation and Water Rights,* Vol. 1, 2d ed., pp. 692–693.]

And, as recently as 1960, this Court in *United States* v. *Grand River Dam Authority,* 363 U.S. 229, in denying the Authority's assertion that it had compensable rights to use the waters of the Grand River under an act of the Oklahoma Legislature, declared at p. 235:

> Moreover, no water rights condemned under this Act are shown to have passed to Oklahoma and from Oklahoma to respondent. Yet the Federal Government was the initial proprietor in these western lands and any claim by a State or by others must derive from this federal title. See *United States* v. *Gerlach Live Stock Co.,* 339 U.S. 725, 747; *Federal Power Commission* v. *Oregon,* 349 U.S. 435. * * *

See also *Lux* v. *Haggin,* 69 Cal. 255, 338–339; *United States* v. *Gerlach Live Stock Co.,* 339 U.S. 725, 746–

---

ation was not yet adopted by the United States and, as the Court said in *Atchison* v. *Peterson,* 20 Wall. 507, 512: "* * * the government being the sole proprietor of all the public lands, whether bordering on streams or otherwise, there was no occasion for the application of the common-law doctrine of riparian proprietorship * * *."

747; *California Oregon Power Co.* v. *Beaver Portland Cement Co.*, 295 U.S. 142, 162; *United States* v. *Rio Grande Dam and Irrigation Company*, 174 U.S. 690, 703.

The federal proprietorship of the rights to the use of waters in the territory acquired from Mexico is the predicate of the Desert Land Act of 1877, and its precursor Acts of 1866 and 1870. In this legislation Congress provided for the acquisition from the United States of rights to use the surplus unappropriated non-navigable waters on the public lands in certain States by appropriation in accordance with local laws and customs. *California Oregon Power Co.* v. *Beaver Portland Cement Co.*, 295 U.S. 142. As the Court explained in *Federal Power Commission* v. *Oregon*, 349 U.S. 435, 447–448:

> The purpose of the Acts of 1866 and 1870 was governmental recognition and sanction of *possessory rights* on public lands asserted under local laws and customs. *Jennison* v. *Kirk*, 98 U.S. 453. The Desert Land Act severed, for *purposes of private acquisition*, soil and water rights on public lands, and provided that *such water rights* were to be acquired in the manner provided by the law of the State of location. *California Oregon Power Co.* v. *Beaver Portland Cement Co.*, 295 U.S. 142. See also, *Nebraska* v. *Wyoming*, 385 U.S. 589, 611–616. [Emphasis added.]

The decision of this Court involving the reservation of rights to the use of water for Indian reservations is founded upon the federal ownership of the usufruct of the unappropriated waters upon the pub-

lic domain in the public land States. In *Winters* v. *United States,* 207 U.S. 564, 577, the Court said:

> The power of the Government to reserve the waters and exempt them from appropriation under the state laws is not denied, and could not be. * * *

If the government had not already owned the water rights, it could not have reserved them. Reservation of the right to use the water upon the reserved land, like severance of the land and the water thereon for purposes of private acquisition, is legally dependent upon ownership of the interest reserved. See also group of Ninth Circuit cases cited *infra,* p. 66. The settlement of Indians upon the reservations would have been impractical had it not been possible for the United States as owner of the reservation lands to assure the use of the appurtenant waters so that the Indians for whom the reservations were established could obtain a sustenance.

2. *The United States has never surrendered its proprietary right to use the waters of the Colorado River appurtenant to its reservations.*

The rights of the United States to use the waters on the public domain, being property rights, may be acquired by others only as authorized by Congress. Constitution, Art. IV, Sec. 3; *Utah Power & Light Co.* v. *United States,* 243 U.S. 389; *Van Brocklin* v. *Tennessee,* 117 U.S. 151, 168; *United States* v. *California,* 332 U.S. 19, 27. As observed above, the Desert Land Act is such an authorization with respect to *non-navigable* waters on the *public* lands in certain States. But this Act is not applicable with respect

to waters upon *reserved* lands (*Federal Power Commission* v. *Oregon,* 349 U.S. 435, 448), and by its express terms it does not authorize the appropriation of rights to use *navigable* waters anywhere. Nor is there any other federal statute which has transferred these proprietary rights from the United States. Arizona claims that its admission to the Union had that result, but we shall deal with that assertion below. See *infra,* pp. 84–89.

3. The establishment of the Indian and other federal reservations here involved has resulted in the reservation of the appurtenant water rights necessary to accomplish the purposes of the reservations.

(a) *The United States may apply its retained rights to the use of the water to the purposes of the reservations.*

The establishment of a federal reservation of lands out of the public domain also reserves, contemporaneously, the right to use the appurtenant waters for the purposes of the reservation. Thereafter the resulting federal right to use the appurtenant waters is not subject to defeasance through appropriation by others, even if the waters were previously subject to private acquisition under the Desert Land Act. In *Winters* v. *United States,* 207 U.S. 564, this Court held that the very establishment of an Indian reservation out of public lands itself implied a Congressional intention also to reserve the use of all appurtenant waters necessary for the fulfillment of the purposes for which the lands were reserved. The implication was found in the circumstances surrounding the establishment

of the Indian reservation, with principal emphasis upon the geographical fact that without the use of the waters on the reservation the lands would be worthless and incapable of supporting the Indians. Sources of water supply on lands reserved out of the public domain cannot be appropriated under the Desert Land Act even when there is no indication of the intention with which the reservation was established, because the Act is expressly restricted to "sources of water supply upon the public lands * * *" and reservations are not "public lands." *Federal Power Commission* v. *Oregon,* 349 U.S. 435, 448; see also *United States* v. *Winters,* 143 Fed. 740 (C.A. 9), affirmed, 207 U.S. 564; *Conrad Investment Co.* v. *United States,* 161 Fed. 829 (C.A. 9); *United States* v. *McIntire,* 101 F. 2d 650 (C.A. 9); *United States* v. *Walker River Irrigation District,* 104 F. 2d 334 (C.A. 9); *United States* v. *Ahtanum Irrigation District,* 236 F. 2d 321 (C.A. 9), certiorari denied, 352 U.S. 988.

The application of these principles to the present case is not affected by the navigability of the waters. The only real difference in this respect between navigable and non-navigable waters may be that as to the former there is no need for reservation to preserve the rights against appropriation by others because there is no statute which provides for their transfer or appropriation. As noted above, the Desert Land Act by its express terms applies only with respect to non-navigable waters on the public lands. Its precursor Acts of 1866 and 1870 have been similarly construed by this Court. *California Oregon Power Co.* v. *Beaver Portland Cement Co.,* 295 U.S. 142;

United States v. *Rio Grande Irrigation Co.*, 174 U.S. 690.[20]

But the fact that the United States has not generally authorized the acquisition by others of rights to use the navigable waters *vis-à-vis* the United States does not mean the United States itself is precluded from using such waters for its own purposes. Neither does it mean that the United States is precluded from establishing along a navigable stream a reservation of federal lands for federal purposes requiring the use of such waters. It simply means that no claim of privately owned appropriative right to use such waters to which Congress has not given its consent can be asserted against use by the United States on a reservation, regardless of whether the private claim of right was initiated before or after the date of establishment of the reservation. The same considerations which establish the power of the United States to reserve rights to use non-navigable waters compel this conclusion with respect to navigable waters. The use of navigable waters for the benefit

[20] In the *Rio Grande* case, the Court, at pp. 706–707, said: This legislation must be interpreted in the light of existing facts—that all through this mining region in the West were streams, not navigable, whose waters could safely be appropriated for mining and agricultural industries, without serious interference with the navigability of the rivers into which those waters flow. * * * To hold that Congress, by these acts, meant to confer upon any State the right to appropriate all the waters of the tributary streams which unite into a navigable watercourse, and so destroy the navigability of that watercourse in derogation of the interests of all the people of the United States, is a construction which cannot be tolerated.

of government property bordering on the stream is undoubtedly subject to their use for purposes of commerce at the direction of Congress, but this qualification does not militate against the right of the United States to make use of the water upon the reservation if it chooses.[21]

(b) *The President has authority to set apart reservations of public lands and to reserve rights to use the appurtenant navigable waters.*

Arizona questions the authority of the President to "reserve navigable water" by executive order (Ariz. Opening Br., pp. 129, *et seq.*). The argument

---

[21] *United States* v. *Winans*, 198 U.S. 371, involved an actual reservation of a water right, in that case the right to take fish, in the navigable waters of the Columbia River prior to the admission of Washington to the Union. At page 384, the Court said:

> * * * surely it was within the competency of the Nation to secure to the Indians such a remnant of the great rights they possessed as "taking fish at all usual and accustomed places." * * *

And in *United States* v. *Rio Grande Irrigation Co.*, 174 U.S. 690, when dealing with interference by an upstream structure with the use of the stream at a point where it was navigable, this Court said (p. 703):

> Although this power of changing the common law rule as to streams within its dominion undoubtedly belongs to each State, yet two limitations must be recognized: First, that in the absence of specific authority from Congress a State cannot by its legislation destroy the right of the United States, as the owner of lands bordering on a stream, to the continued flow of its waters; so far at least as may be necessary for the beneficial uses of the government property. Second, that it is limited by the superior power of the General Government to secure the uninterrupted navigability of all navigable streams within the limits of the United States. * * *

is really directed toward the authority of the President to establish federal reservations for, as is demonstrated by the Court's decisions discussed above (and see Rept. 257–266, 291–294, 296–298), the reservation of the use of waters appurtenant to federal areas results from the reservation of the land.

(1) *Indian reservations.*

Arizona's argument necessarily excepts the original 75,000 acres of the Colorado River Indian Reservation which were set apart by Congress in the Act of March 3, 1865 (13 Stat. 541, 559; U.S. Ex. 501). This is a substantial exception since the area of the original statutory reservation adjacent to the Colorado River in Arizona includes within it a great part of the irrigable acreage of this reservation for which the Special Master recommends water rights be decreed. The Congressional intent to reserve rights to use water of the Colorado River manifested both in the selected location of this reservation and the many appropriation bills to finance irrigation works on such lands will be demonstrated *infra*, pp. 73–75.

With respect to the remainder of the Colorado River Indian Reservation added by executive orders, as well as the other mainstream Indian reservations, the power of the President to reserve public lands for the Indians was recognized and confirmed by Congress as early as 1887. The General Indian Allotment Act then enacted (Act of February 8, 1887, 24 Stat. 388) authorized the President to allot lands for "any reservation created for their [Indian] use, either by treaty stipulation or by virtue of an act of Congress

or executive order setting apart the same for their [Indian] use." The Court of Appeals for the Ninth Circuit in *United States* v. *Walker River Irrigation District,* 104 F. 2d 334, recognized that the effect of the Allotment Act was to make applicable to reservations created by acts of Congress or by executive order the same rules applying to reservations established by treaty.

Later Congressional enactment reposed extensive powers in the President to reserve public lands for various public purposes. By the Act of June 25, 1910, 36 Stat. 847, 43 U.S.C. 141, the President was specifically authorized to reserve public lands of the United States for "water-power sites, irrigation, classification of lands, or other public purposes * * * and such * * * reservations shall remain in force until revoked by him or by an Act of Congress." The presidential authority to establish Indian reservations was specifically terminated with regard to the States of New Mexico and Arizona by the Act of May 25, 1918, 40 Stat. 561, 570, 25 U.S.C. 211, and by the general Act of June 30, 1919, 41 Stat. 3, 34, providing as follows:

> That hereafter no public lands of the United States shall be withdrawn by Executive Order, proclamation, or otherwise, for or as an Indian reservation except by act of Congress.

These statutes constituted a clear change in the Congressional policy with regard to the establishment of Indian reservations by executive order. Until that time, Congress had imposed no restrictions on the President in this respect.

The extent of the practice of creating Indian reservations by executive order is reflected in the Court's opinion in *United States* v. *Midwest Oil Company,* 236 U.S. 459, 470, where it is stated that prior to the year 1910 there had been issued 99 executive orders establishing or enlarging Indian reservations. The congressional acquiescence which the Court found to apply to such an extensive practice can be demonstrated with regard to the individual reservations here involved. For example, there are over 50 appropriation acts specifically providing for the development of irrigation of the Colorado River Indian Reservation, none of which distinguishes between the original reservation and the area added by executive orders. (U.S. Ex. 507 for identification.)

(2) *Other federal reservations.*

As is evident from the text of the Act of June 25, 1910, 43 U.S.C. 141, quoted in part *supra,* p. 70, Congress there confirmed the broad powers of the President to deal with public lands. These powers continued to apply to reservation of public lands for all public purposes except that as to Indian reservations they were terminated by the Acts of May 25, 1918 and June 30, 1919, *supra,* p. 70. Accordingly, there can be no question of the authority of the President to establish by executive order the Lake Mead National Recreation Area (Executive Orders dated May 3, 1929 (No. 5105) and April 25, 1930 (No. 5339)), the Havasu Lake National Wildlife Refuge (Executive Order of January 22, 1941 (No. 8647)), and the

Imperial National Wildlife Refuge (Executive Order of February 14, 1941 (No. 8685)).[22]

In the case of the Gila National Forest located on the mainstream of the Gila River, the Forest was established by Presidential Proclamation dated March 2, 1899, pursuant to the express provisions of Section 24 of the Act of March 3, 1891 (26 Stat. 1103, 16 U.S.C. 471). The area of the forest reserve was later enlarged and modified (U.S. Exs. 2720A–2720B).

(c) *Water rights have been reserved for the particular reservations here involved.*

In sustaining the claims of the United States for use of water on mainstream Indian reservations, the Special Master has applied the *Winters* doctrine which holds, as explained above, that the creation of an Indian reservation out of the public domain, whether by treaty, statute, or executive order, in arid country also implies a reservation of the beneficial use of the quantity of water necessary to effectuate the purposes of the reservation. Confronted with this established rule, Arizona seeks to distinguish the degree of proof required to show the intent of Congress, arguing that there must be a "clear manifestation of intent to reserve *navigable* water." (Arizona Opening Br., p. 135, emphasis added.) No logical reason is advanced for requiring an express intent to reserve rights with respect to navigable waters when implied

[22] Attention is invited to pages 51 to 53 of the United States' Brief in Support of Exceptions. The United States is entitled, without regard to the matter of reservation, to use the waters salvaged by development of the Havasu and Imperial Wildlife Refuges for the operation of those refuges.

intent is sufficient for all others. The considerations which have resulted in the finding of intent by implication in the decided cases require that the same implications be found when the waters are navigable. If there is to be any difference, it should be in favor of the reservation of navigable waters because the Desert Land Act does not open them to private appropriation.

(1) *The Colorado River Indian Reservation.*

Although it is not necessary to find express intent to reserve navigable waters, the Congressional intent is easily demonstrated with respect to the Colorado River Indian Reservation by examination of events contemporaneous with the creation of the Reservation. The Superintendent of Indian Affairs for Arizona had been authorized to select a reservation for Indians of the Colorado River (U.S. Ex. 511). He caused an engineering survey to be made of 75,000 acres of valley lands on the eastern bank of the Colorado River from "Corner Rock to Halfway Bend." (U.S. Ex. 513, p. 157.) The conclusion of the survey was that the lands were most fertile and highly suitable for irrigation from the Colorado River (U.S. Ex. 514). This report was transmitted to, and considered by, Congress (U.S. Ex. 502). By the Act of March 3, 1865, there was set apart in the Territory of Arizona 75,000 acres from Half-Way Bend to Corner Rock on the Colorado River for an Indian reservation "for the Indians of said river and its tributaries" (U.S. Ex. 501; 13 Stat. 541, 559).

A need for water for irrigation to make the reservation habitable was at least as plain from the geography of the area as was the need on which the Court based its implication of intent in *Winters*. This was articulated by the Delegate from the Territory of Arizona in arguing, contemporaneously with approval of the Act creating the Reservation, for an appropriation with which to initiate irrigation on the Reservation.[23]

> Irrigating canals are essential to the prosperity of these Indians. Without water there can be no production, no life; and all they ask of you is to give them a few agricultural implements to enable them to dig an irrigating canal by which their lands may be watered and their fields irrigated, so that they may enjoy the means of existence. * * * [Cong. Globe, March 2, 1865, p. 1321; U.S. Ex. 502.]

Notwithstanding this manifest concern with irrigability of the reservation thus created, Arizona finds it significant that neither the statute of creation nor later executive orders mention "water of the Colorado River much less any reservation of that water" (Arizona Opening Br., p. 140).[24] But Arizona neglects to mention that the Executive Order of May 15, 1876 (U.S. Ex. 505), enlarged the reservation by *including* within its boundaries the Colorado River.

---

[23] The first appropriation, of $50,000, was made by the Act of March 2, 1867. (U.S. Ex. 507 for identification.)

[24] The same argument was advanced in *Winters*, but the Court found the omission did not defeat the reservation implied by the circumstances. 207 U.S. at 576; 143 Fed. 740, at 745.

Continuation of the intent to reserve a quantity of water sufficient to irrigate a large area is demonstrated by appropriation acts commencing in 1867, which financed construction of works of various sorts for the diversion of Colorado River water to Reservation lands, culminating in the completion in 1941 of Headgate Rock Dam by which 105,000 acres of the Reservation can be irrigated by gravity. (U.S. Ex. 507 for identification; Tr. 13,992.)

Arizona seeks to detract from this continuous policy based on the original purpose to enable the Indians to obtain a livelihood dependent on irrigation on the Reservation by referring to the Act of April 21, 1904, 33 Stat. 224, which authorizes inclusion of lands of the Colorado River Indian Reservation in a reclamation project under the Federal Reclamation Act of 1902. (Ariz. Opening Br., p. 142.) But this 1904 statute dealt with the application of the 1902 Act, which has in fact never been applied; it has no reference to the reserved rights which have been developed on the Reservation. Nor is it apparent how Arizona gains any comfort from the Appropriations Act of April 4, 1910, 36 Stat. 273, and the later appropriations acts referred to in its brief (Ariz. Opening Br., pp. 144–148) which show Congress' purpose through the years to develop an irrigation project on the Colorado River Indian Reservation of the magnitude of 150,000 acres. The appropriations supplement, rather than negate, the existing authority. The significant fact is that a substantial project was built—it is in being and constitutes the best evidence of congressional and executive intent to reserve adequate

water from the mainstream of the Colorado River for use on the project.

(2) *Other mainstream Indian reservations.*

The considerations reviewed above support the Special Master's conclusion that under the *Winters* doctrine, water rights were also reserved for the other mainstream Indian reservations. The aridity of their climate is substantially identical to that of the Colorado River Indian Reservation. The need for water for irrigated agriculture to provide even a minimum subsistence for those living on the reservations is the same. Without water, the reservation lands are "a barren waste" (*Winters* v. *United States, supra,* 207 U.S. at 577). Arizona's objections are based more on denial of the power of the Executive to establish the reservations than on doubt as to whether there was an implied reservation of water rights. See Arizona's comments on Fort Mohave Reservation (Arizona Opening Br., pp. 148–150). And, as is pointed out above, the specific provisions for water from other sources, referred to by Arizona, may be taken to supplement rather than supersede the reserved rights.

(3) *The Gila National Forest.*

Arizona disagrees with, but does not argue, the Master's conclusion (Rept. 335) that the United States has reserved rights to use the waters of the Gila and San Francisco Rivers on the Gila National Forest.[25] Arizona states that it is not necessary that this

[25] Since no specific challenge has been directed at the Special Master's similar conclusions respecting the Lake Mead National Recreation Area (Rept. 291) and the Havasu and Imperial National Wildlife Refuges (Rept. 296), we rely simply on the general principles above discussed to support those conclusions.

question be resolved, since, according to the contention, the Master erred in his finding of an intent to reserve water for national forest purposes. (Arizona Opening Br., p. 193.)

Arizona bases its contention on the Acts of March 3, 1891 (26 Stat. 1101), and June 4, 1897 (30 Stat. 36), and certain statements and declarations by congressional committees and the Forest Service and Department of Agriculture, which Arizona apparently presents as administrative construction of the mentioned acts. Arizona concludes this argument with the statement of an Assistant Secretary of Agriculture in 1956 that:

> For example, it has been the firmly established policy of this Department for nearly half a century to acquire, in strict accordance with State laws and procedures, the water rights needed for the administration of the national forests. [Arizona Opening Br., p. 198.]

This statement is taken from hearings before the Subcommittee on Irrigation and Reclamation of the Senate Committee on Interior and Insular Affairs.

Arizona's argument ignores the fact that Section 1 of the Act of June 4, 1897, 30 Stat. 36 (16 U.S.C. 481) expressly provides [26] that water on the national forests may be used in accordance with state or *federal* law. Surely, there is nothing in this language to sup-

---

[26] "All waters on such reservations may be used for domestic, mining, milling, or irrigation purposes, under the laws of the State wherein such forest reservations are situated, or under the laws of the United States and the rules and regulations established thereunder."

port the contention that the United States may not exercise, by reservation or otherwise, its rights to use the unappropriated waters which pertain to the national forest lands. As the Special Master stated: "The power of the United States to make such a reservation with respect to the Forest cannot be logically differentiated from the power of the United States with respect to Indian Reservations and Recreation Areas." (Rept. 335.)

Moreover, we deny that there has been any consistent administrative interpretation that rights of the United States to use water on national forests must be obtained in accordance with State law. Explanatory of the policy of the Department of Agriculture and the Forest Service in proceeding under State law, is a recent statement of the Secretary of Agriculture made to the Senate Committee on Interior and Insular Affairs.

> It has long been the policy of this Department to make filings with appropriate State agencies and in accordance with the procedures established by State law on waters needed in connection with the development and administration of the National Forests. In this way, we have endeavored to indicate those rights which are needed in connection with the administration of the National Forests so that both the State officials and those seeking to use the waters from the National Forests would have information as to the needs of the Federal Government. The project of making these filings is not complete but is proceeding as rapidly as funds and

manpower permit. The Department plans to continue this policy.[27]

Thus it appears that the filings are for the purpose of giving information, not of establishing legal rights.

(d) *The water rights reserved include at least sufficient water to accomplish the purposes of the reservations.*

Generally speaking, the quantity of water necessary to accomplish the purpose of a reservation is the minimum measure of the rights to use water reserved by the reservation of public lands for federal purposes. In the case of an Indian reservation, the measure is the quantity required to satisfy the ultimate needs of the Indians of the reservation.

The Special Master concluded "that the United States effectuated the intention to provide for the future needs of the Indians by reserving sufficient water to irrigate all of the practicably irrigable land in a Reservation and to supply related stock and do-

---

[27] Letter of June 14, 1961 from Orville L. Freeman, Secretary of Agriculture to Senator Clinton P. Anderson, Chairman, Senate Committee on Interior and Insular Affairs (Hearings before the Committee on Interior and Insular Affairs, United States Senate, 87th Cong., 1st Sess., on problems arising from relationships between the States and the Federal Government with respect to the development and control of Water Resources, June 15 and 16, 1961.)

The fact that in the Lower Colorado Basin the project for making filings under State law, referred to in the Secretary's letter, had been completed as of the close of the evidence before the Special Master with respect to only 537 places of use within the national forests in the basin out of a total of 5204 places of present use demonstrates the error of the Arizona argument. U.S. Exs. 2702–2722.

mestic uses." (Rept. 262.)[28] This conclusion is amply supported by decisions of this Court and the Court of Appeals for the Ninth Circuit recognizing that the reserved right extends to the ultimate needs of the Indians. *United States* v. *Powers,* 305 U.S. 527; *United States* v. *Ahtanum Irrigation District,* 236 F. 2d 321 (C.A. 9), certiorari denied, 352 U.S. 988; *Conrad Investment Co.* v. *United States,* 161 Fed. 829 (C.A. 9).

Arizona's argument that irrigable acreage is not a correct measure of the reserved water right was made to the Special Master who responded as follows:

> * * * Arizona seems to envisage that the United States intended to create water rights in gross which would fluctuate in magnitude as the Indian population and needs fluctuated, the water right being measured by the amount of water needed at any particular time by the Indians actually inhabiting a particular Reservation. As pointed out above, the more sensible conclusion is that the United States in-

[28] Whether the reservation of water rights is limited to the needs of the Indians for irrigation and related stock and domestic uses is a question which need not be considered insofar as the reservations for which the Master recommends that rights be decreed are concerned. In *Conrad Investment Co.* v. *United States,* 161 Fed. 829, 831, the Court of Appeals for the Ninth Circuit recognized that the accomplishment of "other useful purposes" is included within the intent of the reservation. Cf. Rept. 265. In an appropriate case, we would assert that the needs of the Indians to be satisfied by the reserved water right include additional uses of the reserved lands which serve the economic necessities of the Indians entitled to reside there.

tended to reserve enough water to irrigate all of the practicably irrigable lands on a Reservation and that the water rights thereby created would run to defined lands, as is generally true of water rights.

But even if Arizona were correct in her contention, the most feasible way to give full effect to the water rights created by the United States, as Arizona defines them, would be to decree to each Reservation enough water to irrigate all of the practicably irrigable acreage. It is clear that the water rights of the five Reservations in question cannot be fixed at present uses for this would defeat the basic purpose of reserving water to meet future requirements. Even if, as Arizona argues, the reservation of water was in gross for Indians and not Reservation lands, the Indians' needs may well increase in the future and these increased needs would have to be provided for. * * * [Rept. 263.]

The necessity for making provision for the expanding needs of the Indians of the Lower Colorado River Basin as the Special Master recommends (Rept. 262, *et seq.*) is amply demonstrated by the record in this case. The population of the Indians of the Lower Basin is increasing and a total population of over 130,000 can reasonably be expected by the year 1970. Tr. 15,237. They presently number in the neighborhood of 120,000. Calif. Ex. 2600–1 through 2600–26. The mainstream Indian reservations include 136,636 acres of irrigable land. Certainly it cannot be said that water rights for 136,636 acres as the Special

Master recommends is in excess of the future needs of the Indians of the reservations.[29]

The Colorado River Reservation was established "for the Indians of said river and its tributaries." Act of March 3, 1865, *supra,* p. 69.[30] Arizona says "the Indians of said river and its tributaries" means only those tribes which were found in the area of the Lower Basin near the mainstream in 1865. Congress has indicated a contrary view. By the Act of April 19, 1950, 64 Stat. 44, Congress authorized the appropriation of $88,570,000 to promote the rehabilitation of the Navajo and Hopi tribes in better utilization of the Navajo and Hopi Indian Reservations and for other purposes, including the relocation and resettlement of Navajo and Hopi Indians on the Colorado River Indian Reservation. Speculation as to considerations which might deter the settlement there of additional Indians, as argued by Arizona, is not a proper basis for limiting the quantum of the water rights reserved for a reservation established "for the Indians of the [Colorado] river and its tributaries."

Arizona singles out for separate treatment the quantity of water allocated to the Fort Mohave Indian

---

[29] Even were the matter of need to be measured by the present population of the organized tribes entitled to reside on the several reservations, it is to be noted that the irrigable lands per Indian, calculable from the table at page 157 of Arizona's brief, would in no case be as much as the irrigable acreage allowed under Federal Reclamation law for support of a family, and in most instances it would be very greatly less.

[30] The Fort Mohave Reservation was established "for the use and occupation of the Fort Mojave and such other Indians as the Secretary of the Interior may see fit to settle thereon." U.S. Exs. 1304, 1305.

Reservation, apparently because of its undeveloped nature, and claims that the United States has "abandoned" irrigation on this Reservation (Arizona Opening Br., p. 166). But the Indians themselves are without means to develop an irrigation project. The fact that the United States has not gone forward with development does not support the argument that the rights reserved for the benefit of these Indians should now be foreclosed. As the Court of Appeals for the Ninth Circuit recently said in *United States* v. *Ahtanum Irrigation District,* 236 F. 2d 321, 328, certiorari denied, 352 U.S. 988, "We deal here with the conduct of the Government as trustee for the Indians. It is not for us to say to the legislative branch of the Government that Congress did not move with sufficient speed to appropriate the funds necessary to complete this irrigation system by 1908 rather than by 1915, or that the Government had thus lost or forfeited the rights reserved for the Indians."[31]

---

[31] The record discloses a population of several hundred members of the Fort Mohave Tribe entitled to reside on the Fort Mohave Reservation. The record also discloses that a considerable number of these Indians live in a nearby colony in Needles, California, which was established with Tribal funds received from sale of some of the Reservation lands. Tr. 13,764–5, 14,220–2. This colony is close to their place of employment by the Santa Fe Railroad. Although great emphasis is placed by Arizona on the fact that what little irrigation there was in times past on this Reservation has been discontinued, the evidence demonstrates that efforts to develop the valley lands of the Reservation were frustrated by the flood hazard prior to the closure of Hoover and Davis Dams. With the completion of the dams referred to and channelization of the river through the lands of the Reservation, this hazard is now eliminated and development of the lands of the Reservation for irrigation can now go forward. Tr. 14,076–8.

4. *The attempted distinction between navigable and non-navigable waters lacks merit; therefore, the United States' right to use appurtenant navigable waters on its public and reserved lands was not surrendered upon the admission of Arizona, California, or Nevada to statehood.*

Since the federal ownership of the usufruct of non-navigable waters on the public domain is well established, except where the right has been transferred to others under the Desert Land Act or other Congressional authorization, Arizona attempts to draw a distinction between navigable and non-navigable waters. Arizona argues upon this basis that ownership of navigable waters passed to the States upon their admission to the Union along with title to the bed of the stream. We submit that there is no merit to the distinction. None of the differences between the law governing navigable streams and the rules applicable to non-navigable waters supports the anomalous conclusion that although the United States retained ownership of the right to use non-navigable waters in the public lands States, it surrendered ownership of its similar rights in streams which are equally essential to the development of the federal domain and intimately related to the control of navigation and river development.

The decisions of this Court which Arizona cites to establish the point that, upon admission of a State

---

As held in the *Ahtanum* case, *supra*, delay by the United States in developing the lands of this Reservation to provide for the needs of the Indians entitled to reside thereon is no basis for a determination that rights of the United States to use water thereon have been lost.

into the Union, title to the "water * * * of navigable streams" passes to and vests in the State do not support the argument.[32] With one exception, each involved the question of ownership of the shores of, or lands beneath, navigable waters;[33] none involved the

---

[32] The Arizona argument respecting the United States' ability to reserve, prior to the admission of a State, rights to use the waters of a navigable stream boils down to one respecting intent and is answered, *supra*, pp. 72 to 79.

[33] The property right in question in each case was as follows: *Borax Consolidated, Ltd.*, v. *Los Angeles*, 296 U.S. 10—title to land in Los Angeles Harbor claimed to be tideland; *United States* v. *Utah*, 283 U.S. 64—title to the bed of the Colorado River in Utah; *Massachusetts* v. *New York*, 271 U.S. 65—title to land under the navigable waters of Lake Ontario; *United States* v. *Holt State Bank*, 270 U.S. 49—title to the bed of Mud Lake in Minnesota; *Port of Seattle* v. *Oregon & W.R.R.*, 255 U.S. 56—the right of the owner of upland along navigable water to build a pier in the soil covered by the navigable water in order to reach the navigation channel wherein the State of Oregon claimed ownership of the soil under the navigable water; *United States* v. *Mission Rock Co.*, 189 U.S. 391—title to submerged lands in San Francisco Bay; *Knight* v. *United States Land Ass'n*, 142 U.S. 161—title to property in the City of San Francisco claimed to have been below the line of ordinary high-water upon the acquisition of California from Mexico and thus property of California after its admission to the Union; *Goodtitle* v. *Kibbe*, 50 U.S. 471—title to property in the City of Mobile claimed to be part of the shore of a navigable tide-water river and lying below high-water mark when Alabama was admitted to the Union and thus property of the State; *Pollard* v. *Hagan*, 44 U.S. 212—title to property in the City of Mobile claimed to be in the same area as that in *Goodtitle* v. *Kibbe*, *supra*; *Martin* v. *Waddell's Lessee*, 16 Pet. 367—title to land under the navigable waters of the Raritan river and bay in the State of New Jersey.

United States v. *Rio Grande Irrigation Co.*, 174 U.S. 690, is the one exception noted in the text. That case does not help Arizona's argument either. There no question of ownership of navigable waters by the State was involved. The question was whether the State could authorize construction of a dam and the

question of ownership of the water itself and, even more significantly, none involved the question of the United States' rights to use the waters upon its public and reserved lands.

Furthermore, any claim of ownership of the water or of the right to use the water of the Colorado River which Arizona may assert on the basis of title to the bed of the stream is refuted by the Court's holding in *United States* v. *Chandler-Dunbar Co.*, 229 U.S. 53. At p. 69 the Court said:

> But whether this private right to the use of the flow of the water and flow of the stream be based upon the qualified title which the company had to the bed of the river over which it flows or the ownership of land bordering upon the river is of no prime importance. In neither event can there be said to arise any ownership of the river.* * *

Of the dictum in Mr. Justice Brandeis' opinion in *Port of Seattle* v. *Oregon & W.R.R. Co.*, 255 U.S. 56, 63, quoted at p. 123 of Arizona's Opening Brief, the Court said in *United States* v. *Appalachian Power Co.*, 311 U.S. 377, 425: "[That case] centered around the issue of title to land under navigable water. Nothing further was involved as to the use of the water than its navigability."

Arizona's argument is likewise refuted by the decision in *Moore* v. *Smaw*, 17 Cal. 199 (1861) by Mr. Justice Field while he was Chief Justice of the Su-

---

diversion of water in the non-navigable upper reaches of the Rio Grande River, against the United States' contention that the dam and proposed diversions would be an obstruction to navigation in the lower reaches of the river.

preme Court of California. The case involved the ownership of minerals in land in California patented by the United States in confirmation of a grant made by the Mexican Government before the territory was ceded to the United States. The Court concluded, first, that "[a]t the date of the cession of California to the United States" the minerals in question were "the property of the Mexican nation, and by the cession passed, with all other property of Mexico within the limits of California, to the United States." 17 Cal. 216–217. The defendants did not deny this but claimed that the United States held the minerals "in trust for the future State, and that upon the admission of California the ownership of them vested in her * * *." 17 Cal. 217.[34] At pages 218–219 the Court noted the distinction between sovereign and proprietary rights.

> It is undoubtedly true that the United States held certain rights of sovereignty over the territory which is now embraced within the limits of California, only in trust for the future State, and that such rights at once vested in the new State upon her admission into the Union. But the ownership of the precious metals found in public or private lands was not one of those rights. Such ownership stands in no different relation to the sovereignty of a State than that of any other property, which is the subject of barter and sale. Sovereignty is a term used to express the supreme political authority of an

[34] This is the same contention which Arizona is making here except that here the resource is water while there it was gold and silver.

> independent State, or nation. Whatever rights are essential to the existence of this authority are rights of sovereignty. Thus the right to declare war, to make treaties of peace, to levy taxes, to take private property for public uses, termed the right of eminent domain, are all rights of sovereignty, for they are rights essential to the existence of supreme political authority. In this country this authority is vested in the people, and is exercised through the joint action of their Federal and State Governments. * * * To the existence of this political authority of the State—this qualified sovereignty, or to any part of it—the ownership of the minerals of gold and silver found within her limits is in no way essential. The minerals do not differ from the great mass of property, the ownership of which may be in the United States, or in individuals, without affecting in any respect the political jurisdiction of the State. They may be acquired by the State, as any other property may be, but when thus acquired she will hold them in the same manner that individual proprietors hold their property, and by the same right; by the right of ownership, and not by any right of sovereignty.

It then rejected the defendant's claim saying at p. 222:

> It follows * * * that * * * the gold and silver which passed by the cession from Mexico were not held by the United States in trust for the future State; that the ownership of them is not an incident of any right of sovereignty; that the minerals were held by the United States in the same manner as they held any other public property which they acquired from Mexico; and

that their ownership over them was not lost, or in any respect impaired by the admission of California as a State.

This analysis is particularly applicable to the usufruct of all the waters, navigable as well as non-navigable, upon the public and reserved lands in the arid portion of the United States. Title to those lands has *not* passed to the States except for those specifically granted. "To the existence of the political authority of [Arizona] * * * the ownership of the [navigable waters of the Colorado River] is in no way essential." But the continued ownership of the right to use such waters "so far at least as may be necessary for the beneficial uses of the government property" bordering on the stream (*United States* v. *Rio Grande Irrigation Co.*, 174 U.S. 690, 703) is essential to the United States administration and disposition of those lands, except as Congress may specifically have determined otherwise. The considerations which have resulted in the Court's determinations with respect to the transfer of ownership of lands underlying navigable waters upon admission of a State into the Union are not applicable with respect to the waters themselves or the right to use them.

5. *The reserved rights appurtenant to federal reservations are "present perfected rights" for the satisfaction of which water must be released under Section 6 of the Project Act.*

Those reserved rights of the United States, to use mainstream waters upon its Indian and other federal reservations adjacent to the mainstream, which antedate the Project Act are accorded preferred status in

the statutory plan for distribution of the project water supply. The direction of Section 6 of the Project Act is that Hoover Dam shall be used, *inter alia,* for the satisfaction of "present perfected rights." As we have pointed out above, the right to use water, a basic necessity for any use of these arid lands, is effectively preserved when the land is reserved for federal uses. The reserved right constitutes a "perfected right" recognized by the Act, with priority as of the date of establishment of the reservation. This was the conclusion of the Special Master in his report at pp. 310–311:

> To hold that Congress did not include reserved water within the protection of Section 6 would require a holding that Congress, without saying so expressly, and without ever considering the matter, [fn. omitted] intended to nullify, in times of shortage, the very purpose of the reservation. The cases cited at pp. 258–259, *supra,* demonstrate that reservation of water was made by the United States to assure an adequate supply of water for the future needs of the federal establishments, in order that they could fulfill their purposes. It would frustrate this intent to deny the United States the use of this reserved water in times of shortage.
>
> I do not believe that Congress, when directing that the dam be operated in "satisfaction of present perfected rights," intended these consequences, and accordingly, I conclude that water rights reserved before June 25, 1929, for federal establishments are "perfected rights" within the meaning of Section 6.

6. The principles of equitable apportionment are inapplicable to adjudication of rights reserved by the United States for use in Arizona vis-à-vis other users in Arizona.

Arizona argues that the rights of the United States to use water on its Indian reservations should be determined, as against potential uses in Arizona, by application of principles of equitable apportionment. In this connection, Arizona would confer a quasi-sovereign status on the Indian tribes of the several reservations and, on this basis, argues what counsel appear to consider the equities of non-Indian citizens of that State *vis-à-vis* its Indian citizens.

The novelty of Arizona's suggestion is emphasized by the argument in Part I of its brief (pp. 40, *et seq.*) against application of the principles of equitable apportionment to the controversy among the states. In effect, Arizona is saying that the doctrine of equitable apportionment should not be applied to resolve the interstate controversy, the area of historical application of the doctrine,[35] but that it is properly usable to resolve rights intrastate.

We shall not reargue here the proposition that, under the Project Act, it is not equitable apportionment but the authorized distribution by the Secretary of the Interior which governs the use of the Boulder Canyon Project and the waters controlled thereby. (*Supra,* pp. 22 to 26.) That proposition is as true with respect to the rights of the United States

---

[35] *Nebraska* v. *Wyoming*, 325 U.S. 589; *Colorado* v. *Kansas*, 320 U.S. 383; *New Jersey* v. *New York*, 283 U.S. 336; *Connecticut* v. *Massachusetts*, 282 U.S. 660.

to use water on its Indian reservations as it is with respect to the interstate allocation. (*Supra,* pp. 58–60, 89–90.)

We do note, however, that even in an interstate allocation which is not controlled by statute, as the Project Act controls here, the reserved rights of the United States are not subject to reduction by apportionment between the states. This court's decision in *Hinderlider* v. *La Plata Co.,* 304 U.S. 92, makes clear that rights acquired under state law are subject to ultimate determination of the state's equitable share of the waters of an interstate stream. This principle, however, is not applicable to rights of the United States established by reservation out of its original ownership of the public domain. Rights so established are reserved out of the entire water supply which affects them and which they affect. The rights reserved transcend state boundaries and extend against all conflicting claims of use upstream and downstream. Since they do not depend for their validity upon the law of any state, they are not, unlike rights established under state law, subject to limitation by determination of the equitable share in the river of the state in which the federal reservation may happen to be situated.

But even if the doctrine of equitable apportionment were applicable as Arizona suggests, it does not justify reducing the quantity of water reserved for use on the Indian reservations. It is true that this Court held in *Nebraska* v. *Wyoming,* 325 U.S. 589, that factors other than priority of appropriation may have to

be considered in order to secure an equitable apportionment. But the Court did not say, or even suggest, that priority is to play no part in that apportionment. It went no further in this respect than to hold that an established economy based on *present use* under junior rights should not be destroyed by future expanded uses under senior rights. There is nothing in any of the equitable apportionment decisions of this Court to support Arizona's suggestion that use of water on the reservations should be subject to defeasance because of a claim that the water could be better used elsewhere within the State. If Arizona were right, no federal water development within a State would be secure against a later State determination that other areas need the water more. Cf. *Oklahoma* v. *Atkinson Co.*, 313 U.S. 508, 534–535. The priorities of the rights for the mainstream Indian reservations have been established; the quantities of those rights as recommended by the Special Master are realistic and fair in the light of the future needs of the reservations. Nothing in the doctrine of equitable apportionment weighs against adoption of the Recommended Decree.

C. THE RIGHTS OF THE UNITED STATES TO WATER FOR FEDERAL ESTABLISHMENTS MUST BE SAFEGUARDED, WHATEVER APPORTIONMENT MAY BE DECREED AMONG THE STATES

The preceding argument shows that the United States has certain rights to the use of water in the Lower Colorado River Basin arising from its ownership of land and the reservation of certain of those lands for

specified purposes. These rights to use water carry with them priorities according to the dates of creation of, and addition to, the various Reservations. These rights extend to the ultimate needs of the Reservations.

The Special Master has given full recognition to the rights of the United States and has integrated such rights into his allocation among the States. However, the Court's ultimate decree in this case should sustain these rights regardless of its action upon the Special Master's allocation. These rights of the United States exist independently, against all other uses, without regard to state boundaries or shares. They are rights of the United States, not capable of limitation by the apportionment among the States. Accordingly, these rights must be safeguarded, whatever the basis or the nature of the allocation among the States.

III

MISCELLANEOUS MATTERS

A. BOUNDARIES OF THE COLORADO RIVER INDIAN RESERVATION AND THE FORT MOHAVE INDIAN RESERVATION

In the process of determining the irrigable acreage of the Colorado River Indian Reservation and the Fort Mohave Indian Reservation and the consequent quantity of the water rights to be decreed for these Reservations, the Special Master had to resolve disputes between the United States and California concerning the proper location of the western boundary of each of these Reservations. The opinions of the

Special Master are found on pp. 274–278 and 283–287, respectively, of the Report.

With particular reference to the boundary determinations respecting the Colorado River Indian Reservation, California continues to argue (California Opening Br., pp. 279–283) that the Decree should disclaim any intention to pass on land titles of occupants of the disputed areas. Responsive to such California request, the Special Master stated:

> Of necessity, a determination of the amount of irrigable acreage within the Reservation and the consequent award of a quantity of water based on this determination requires adjudication of the boundaries of the Reservation. The findings herein made are therefore binding on the parties. Nevertheless, in the hearings and in this Report, I did not inquire into or determine the right of any occupant, whoever he might be, to the possession of lands within the questioned areas. [Rept. 278.]

We agree that this is the extent of the assurance that can be accorded California in this matter. The determination of the boundary of each Reservation is an essential prerequisite to the determination of the quantum of the water rights for that Reservation. There is no question of the Court's jurisdiction to resolve boundary questions nor of the authority of California to act as *parens patriae* for its citizens in such matters. *Rhode Island* v. *Massachusetts,* 37 U.S. 657. We oppose the disclaimer proposed by California because of its possible derogative effect upon the water rights herein decreed to the United States.

B. RESPONSE TO NEVADA'S PROPOSAL FOR AMENDMENT OF THE DECREE

Nevada continues to argue, in its opening brief (pp. 52–55), that the general requirement of the Recommended Decree that all users of mainstream waters have contracts with the Secretary of the Interior should be made inapplicable to users in Nevada. Our opposition to the Nevada argument is set forth in Point IV, pp. 48–51, of the Brief in Support of Exceptions of the United States to the Special Master's Report and Recommended Decree.

CONCLUSION

For the foregoing reasons it is respectfully submitted that with respect to the interstate allocations and the recognition of the right to use waters on the federal reservations, the Report of the Special Master and the proposed decree should be approved except as otherwise pointed out in the brief of the United States in support of its exceptions to the Report.

MOTION ON BEHALF OF NAVAJO TRIBE OF INDIANS OF THE NAVAJO RESERVATION, ARIZONA, NEW MEXICO AND UTAH, FOR LEAVE TO INTERVENE

COMES NOW the Navajo Tribe of Indians of the Navajo Reservation, Arizona, New Mexico and Utah, and respectfully moves this Court for leave to intervene in the above-entitled cause and for leave to file a petition of intervention therein, and as reason therefor states the following:

I.

That the Navajo Indian Reservation is located within the northeast corner of Arizona, the northwest corner of

New Mexico and the southeast corner of Utah. The Reservation is in part located within the drainage basin of the Colorado River and of the Little Colorado River, a tributary of the Colorado River.

The Little Colorado River flows into the Colorado River at a point between Lake Mead and Lee Ferry. It is, therefore, a Lower Basin tributary which feeds into the Colorado River above Lake Mead.

II.

That the Navajo Indians, as a consequence of their aboriginal rights and of the establishment of their Reservation as above described, are entitled to substantial rights in and to the water of the Colorado River and the Little Colorado River, which rights are in perpetuity and are vital to the present and future well-being of the Navajo Indians.

III.

That this action was first begun in 1952 upon motion of the State of Arizona. Since that time, pleadings have been filed by the several parties and Statements of Position made. The Special Master, to whom the case was referred, has made his report. During the development of the case, there has been much dispute concerning the breadth of the controversy. The Special Master has, in his report, declined to make any apportionment of waters in the Lower Basin above Lake Mead. The Special Master states, however, at page 322 of his Report, that "The States of Nevada, New Mexico and Utah have asked for a decree confirming present uses and reserving water for

future requirements on various interstate tributaries of the Colorado River flowing within their borders . . . New Mexico asserts rights in the Little Colorado and Gila System; . . . .' In addition, California objects to the consideration solely of waters in and below Lake Mead, and would have the other waters of the Lower Basin taken into account in applying principles of equitable apportionment. The United States, for its part, argues that the uses above Lake Mead ought to be deductible in making allocations of waters from Lake Mead. In light of these various contentions concerning Colorado River and tributary waters above Lake Mead, it is altogether possible that there will be in this action an adjudication of the rights of the respective parties to water in the Colorado River above Lake Mead and in the Little Colorado River and that the interests of the Navajo Indian Tribe will thereby be affected. The Navajo Indian Tribe is now represented by the United States, inadequately however as hereinafter set forth, and will be bound by any decree that apportions the said waters, if such a decree is entered.

IV.

That it has become apparent that the representation of the Navajo Indian Tribe in this controversy by the United States has been inadequate fully to assert and protect the interests of the Navajo Indians which may be adjudicated herein.

The United States has failed vigorously to assert these interests in at least five areas of major importance:

First, the United States has failed, in its exceptions to the Report of the Special Master and in its brief in

support of its exceptions, to assert the justiciability of issues pertaining to the tributary waters above Lake Mead. In essence, it has abandoned the case so far as the adjudication of the rights of the Navajo Indians is concerned. At page 27 of its original Petition of Intervention the United States spoke of a "protracted conflict" among the parties possessing claims to water in the Lower Basin. It stated that this "protracted conflict" was to the "detriment of all parties" and asked for a decree "quieting the title of all parties to their respective rights". But later, after the Special Master in effect has sought to exclude the adjudication of the rights of the Navajo Indians and of other claimants above Lake Mead from this lawsuit, the United States has made no exceptions to such a ruling, and seems content to allow the "protracted conflict" to continue as to the rights of the Navajo Indians.

Second, the United States has adhered in this lawsuit to a doctrine inimical to the interests of the Navajo Indians, as well as of all other indians represented by it, in taking the position, as stated on page 254 of the Special Master's Report, that indian water rights are "subject. . . to the priority of appropriative rights established before (the) Reservation was created . . . ." In admitting the priority of such other rights, the United States has failed to understand and to present to this Court the aboriginal nature of indian water rights, which existed long before the present-day reservations were established. When the indians by treaty or otherwise entered into their existing reservations, they did not obtain water rights where previously they had none. Rather, they retained rights of an ancient character, which — being aboriginal in their source — cannot rightly be made subject to the priorities of much later appropriators, even if such appropriators

used water prior to the formal establishment of a reservation. In its failure to assert and defend these aboriginal indian rights, the United States has failed adequately to represent the Navajo Indians in this cause.

Third, by a combination of (1) accepting the Special Master's findings that the Boulder Canyon Project Act and associated water delivery contracts constitute an apportionment of water in and below Lake Mead and (2) having divided the said water by its water delivery contracts among states only, without separate apportionment to indian users, the United States has consented, in effect, to the thesis that there may be an apportionment to the States only, and that the indians must in turn look to the states for their share of water. The states, however, have no trustee relationship as to indians within their respective borders. Rather, their interests are adverse to those of reservation indians. History has shown that this has caused the states to be hostile to indian interests. The error of requiring the indians to look to the states for water has been reflected in this lawsuit by the United States as to Navajo Indian rights, and is manifested in the failure of the United States to insist upon an apportionment of Lower Basin water to the Navajo Indians separate and apart from apportionments made to Arizona, New Mexico, and the other parties litigant. In so failing to insist upon a separate apportionment to the Navajo Indians, the United States has inadequately represented their interests in this cause.

Fourth, as a vital corollary to the third area of inadequate representation just stated, the United States, by the position it has taken permitting the apportionment of water to states alone, would put the Navajo Indian Tribe in perpetual political conflict with the State of

Arizona, in particular, and with the States of New Mexico and Utah. It is clear that a precipitating cause of this litigation has been the proposed Central Arizona Project and the desire of Arizona for water to sustain it. One or more of the possible points of diversion of water for this Project are above Lake Mead. If the rights allocated to the Navajo Indian Tribe are to be subtracted from the apportionment ultimately made to Arizona, the consequence will be a conflict of interests which necessarily will produce many years of unnecessary, injurious and altogether avoidable political hostility between the Navajo Indians and the State of Arizona, where previously the Navajo Tribe has made substantial progress in recent years toward amicable relations with Arizona and her citizens.

Fifth, the United States apparently acquiesces in the theory of the Special Master, expressed at page 262 of his Report, that the extent of indian water rights is to be measured as being "sufficient water to irrigate all of the practicably irrigable lands in a reservation and to supply related stock and domestic uses." The United States has made no exception to this view. Nor has the United States affirmatively pressed in this litigation for a determination that the Navajo Indian Tribe is in fact entitled to legal recognition of a water right, of an open and flexible nature, which in terms of amount is co-extensive with the future needs of the Navajo Indian Tribe for all of its beneficial uses, whether for hunting, grazing, agriculture, or for other arts of civilization. In failing fully to assert the entire extent of the water right to which the Navajo Indian Tribe is entitled, the United States has certainly not adequately represented the Navajo Indians in this litigation.

V.

That this inadequacy of representation is the product of the dual and conflicting role played by the Attorney General in this litigation. At one and the same time, in the same lawsuit, he is charged with asserting and protecting, on the one hand, the proprietary rights and contract commitments of the United States and, on the other hand, the rights of the Navajo Indian Tribe and other indian tribes in conflict therewith. It is relevant to note also that, in other connections, it is his obligation to defend the United States before the Indian Claims Commission and the Court of Claims in suits brought by indian tribes seeking compensation for loss of water rights. Therefore, the position of the Attorney General both within and without this lawsuit is such that it is difficult for him vigorously to protect and assert the full rights of the Navajo Indians. This difficulty has, in practice, spond to a request of the General Counsel of the Navajo been evidenced by the Attorney General's failure to re- Indian Tribe, contained in a letter of February 2, 1961, that he diligently assert and maintain the rights of the Navajo Indians in the waters of the Colorado River and its tributaries.

VI.

That Paragraph 2 of Rule 9 of this Court, pertaining to Original Jurisdiction, provides that the Federal Rules of Civil Procedure may, where appropriate, "be taken as a guide to procedure in original actions". Rule 24(a) of the Federal Rules of Civil Procedure provides for intervention as a matter of right when "the representation of the applicant's interest by existing parties is or may be

inadequate and the applicant is or may be bound by a judgment in the action." Since it is apparent that the United States, an existing party, is not adequately representing the Navajo Indian Tribe, which tribe may be bound by a judgment in this action, and since it is likewise apparent that this motion for leave to intervene is timely made, in light of the fact that the full extent of the inadequacy of the representation could not have been determined until the United States filed its exceptions and brief in response to the Report of the Special Master, the Navajo Indian Tribe seeks the leave of this Court to intervene in this cause. In thus asking leave, the Navajo Indian Tribe would seek respectfully to exercise its power to intervene "as of right" under the terms of Rule 24(a), cited above.

VII.

That the intervention of the Navajo Indian Tribe will not itself make necessary the referral of the cause back to the Special Master for the taking of additional evidence. It has been noted previously here that California, Nevada, New Mexico, the United States and Utah all have raised important contentions in respect to Lower Basin waters above Lake Mead. If it should prove necessary to refer the matter back to the Special Master, it is probable that such further reference will have been required so as satisfactorily to resolve the conflicting claims of those parties, rather than merely to provide the foundation for the legal recognition of the rights of the Navajo Indians. If, however, the cause is once again referred to the Special Master, in order to adjudicate the many claims heretofore made by the said parties, it is apparent that in such an eventuality it will be necessary to take con-

siderable additional evidence as to all rights in the Lower Basin above Lake Mead. In such a case, the presence in the lawsuit of the Navajo Indian Tribe will be of considerable usefulness, since the taking of further evidence as to the needs and condition of the Navajo Reservation will then be required.

WHEREFORE, the Navajo Indian Tribe, applicant for intervention herein, respectfully moves the Court for leave to intervene in the action and to file therein its petition of intervention, exceptions to the report of the Special Master, and briefs in support thereof, which are annexed to this Motion.

BRIEF OF THE NAVAJO INDIAN TRIBE IN SUPPORT OF MOTION TO INTERVENE

I. SOURCE OF RIGHT TO INTERVENE

This is an action within the original jurisdiction of the Court under the Constitution. The procedure in such actions is not specified by the Constitution. However, Rule 9 of the Revised Rules of the Supreme Court of the United States pertains to actions within the Court's original jurisdiction. We are particularly guided, as to matters of intervention, by Paragraph 2 of that Rule, which refers to the Federal Rules of Civil Procedure, 28 U.S. C.A., and specifies that "where their application is ap-

propriate", these rules "may be taken as a guide to procedure in original actions in this court."

There would seem to be nothing in this action which would render inappropriate the application of the Federal Rules of Civil Procedure in determining the right of the Navajo Indian Tribe to intervene. The provisions of Rule 24(a) of the Federal Rules are explicit on the question of the right of a person to intervene in certain instances, and the instances described may as readily arise in actions within the original jurisdiction of the court as in other actions.

Rule 24(a) is entitled "Intervention of Right". It states that "*Upon timely application* anyone *shall* be permitted to intervene in an action . . . (2) when the representation of the applicant's interest by existing parties is or may be inadequate and the applicant is or may be bound by a judgment in the action; . . . ." (Emphasis added). It is to be noted that the provision is mandatory in its language, giving a right to intervene, provided the three stated requisites are present. These requisites are:

1. Timely application
2. Inadequate representation
3. Binding effect of judgment

In this Brief, these requisites will be discussed in this order. If they are found to be present, the right of the Navajo Indian Tribe to intervene will have been established.

II. REQUISITES FOR RIGHT TO INTERVENE

A. Timeliness of Motion.

1. *The Law and Rationale of "Timeliness"*

The question of the timeliness of the Navajo Indian Tribe's motion to intervene is not a simple one. There are many things to be considered in connection with it. It is true, as it is likely to be suggested by those who do not favor the intervention, that the litigation has been long pending and has reached a certain stage of maturity. But it is also true that the lack of intervention heretofore is not the fault of the Navajo Indians. They have been represented in this action by the United States. Until the litigation reached such a point in its fruition that the inadequacy of that representation became clearly apparent, it could not have been incumbent upon the Navajo Indian Tribe to seek to break the ties of that representation through an intervention in its own behalf. Those who would say that the intervention is not timely necessarily press upon the Court an impossible hypothesis. It is that the Navajo Indians could have intervened earlier in the suit before the inadequacy of the representation given them by the United States became fully apparent and before appreciable damage was done to their interests thereby, but that the Navajo Indians may not now intervene at a point at which the failure vigorously to press their interests has become clearly manifested and at a point where serious injury to their rights may only be averted by intervention.

It seems more cogent to think of intervention as a practical sort of remedy. Surely it cannot be said that it

is to be asserted when the need for it is not apparent and that it is to be denied on the ground of "untimeliness" when the need for it is greatest. Timeliness is, instead, to be judged with common sense in light of the circumstances of the parties and of the litigation itself.

It has often been held by the federal courts and by the courts of the respective states that the question of timeliness is to be judged according to the facts and circumstances of each case. In speaking of a motion to intervene as of right under Rule 24(a), the Ninth Circuit Court of Appeals has stated that "In determining the timeliness of such a motion a court should consider not only the period of time that has passed, but also the circumstances contributing to the delay." *Pellegrino v. Nesbit,* 203 Fed. 2d 463, 465 (1953). It is interesting to note that in the Pellegrino case, which involved an intervention by a corporate stockholder after the corporation's Board of Directors decided not to appeal from the judgments of the District Court, the Circuit Court of Appeals went on to say that "Intervention should be allowed even after a final judgment where it is necessary to preserve some right which cannot otherwise be protected."

The law as stated in the *Pellegrino* case receives substantial support from the other authorities. The following cases state the rule as to the need to look to the circumstances of the case in determining timeliness: *Clark v. Sandusky,* 205 F. 2d 915 (7th Cir. 1953); *Pyle-National Co. v. Amos,* 172 F. 2d 425 (7th Cir. 1949); *American Brake Shoe and Foundry Co. v. Interborough Rapid Transit Co.,* 112 F. 2d 669 (2nd Cir. 1940); *In re Rumsey Manufacturing Corporation,* 9 FRD 93 (D.C.N.Y. 1949); *Woburn Decreasing Co. of New Jersey v. Spencer Kellogg & Sons, Inc.,* 3 FRD 7 (D.C.N.Y. 1943). The

rule that intervention should be allowed even after a final judgment where it is necessary to preserve some right which cannot otherwise be protected is stated in *Wolpe v. Poretsky,* 144 F. 2d 505 (1944), certiorari denied 323 U.S. 777, 65 Sup. Ct. 190; *United States Casualty Co. v. Taylor,* 64 F. 2d 521 (4th Cir. 1933), certiorari denied 290 U.S. 639, 54 Sup. Ct. 56.

In keeping with the view that the facts and circumstances of each case are to be considered, the courts have often said that the determination of the question of timeliness lies within the discretion of the court. Referring to the aspect of timeliness in relation to intervention, this Court stated in *Smith v. Gale,* 144 U.S. 509, 12 Sup. Ct. 674, 677 (1892) that "A limitation upon the right to intervene . . . presupposes a certain amount of discretion in the court." This view has been reiterated by the Second Circuit Court of Appeals in *Defense Plant Corporation v. United States Barge Lines,* 145 F. 2d 766, 767 (2nd Cir. 1944), where it is said:

> The mere fact that a final decree had been entered would not necessarily be a bar to intervention on the ground of tardiness. The admiralty court has wide discretion as to the time of intervention.

The discretion of the court has been recognized in such other cases as *Simms v. Andrews,* 118 F. 2d 803 (10th Cir. 1941); *Braatelien v. Burns,* 74 N. D. 29, 19 N. W. 2d 827 (1945); *Hartwig v. Harvey,* 250 Wis. 478, 27 N. W. 2d 363 (1947).

One of the more important circumstances to be considered in exercising the discretion of the court is whether the intervention, if permitted, would be an intervention

"as of right" or merely a "permissive intervention". Where the person seeking to intervene may be bound by the decree and is not adequately represented in the cause, the courts are far more reluctant to deny the intervention on the ground of untimeliness than they are where there is no urgent need for the intervention, as in a permissive intervention. Such a reluctance to deny the intervention is a commonsense attitude based on a proper weighing of the conflicting interests involved. The rationale behind this judicial attitude has been well expressed in *Moore's Federal Practice*, Vol. 2, 1938, at page 2369:

> Intervention may . . . . be permitted at a late stage in the proceedings, depending upon the amount of administrative inconvenience this would cause, and also whether the right to intervene is unconditional or conditional. *Here the character of the right is particularly important.* Since the basis for the permissive right to intervene is largely one of trial convenience a court might properly deny a motion to intervene unless made at a very early stage, since it is required by subdivision (b) to 'consider whether the intervention will unduly delay or prejudice the adjudication of the rights of the original parties.' On the other hand the basis for intervention as of right is chiefly the fact that the court's processes are apt to injure or prejudice the applicant unless he is permitted to intervene. Rule 24(a) does not, of course, give an absolute right to intervene unless the application is timely, but *since something more than trial convenience is here involved an application to intervene under Rule 24(a) may well be granted at a time in the suit when it would be wise to deny permissive intervention. The problem of the late intervener shades off into the problem of his status.* (Emphasis added)

The importance of looking to the character of the intervention sought was likewise emphasized in *Cameron v. President and Fellows of Harvard College*, 157 F. 2d 993 (1st Cir. 1946). In an opinion which cited favorably the above statement by Moore, the court said:

> This question of timeliness cannot be split off and considered in vacuo — as one separate and apart from the question of the paragraph of Rule 24 under which intervention is sought. The reason for this is that an assertion of a legal right to intervene might well be considered timely even when made at a relatively late stage of the main action whereas a request for leave to intervene in discretion made at the same stage in the main action might well be considered otherwise.

The motion of the Navajo Indian Tribe to intervene in the present case is a motion to intervene "as of right". It is based upon the vital interest which the Navajo Indians have in the subject matter of this suit. To the Navajo Indians, their right to water from the Colorado River and from the Little Colorado River is the *sine qua non* of their present and future prosperity, happiness and development. And, yet, although they may be bound by the decree which is ultimately handed down, the representation given them by the Attorney General of the United States has proved to be woefully inadequate, as will appear more fully in later portions of this brief. These are circumstances which must necessarily weigh heavily in favor of an exercise of the Court's discretion in granting the motion to intervene.

In this litigation the situation of the Navajo Indians has been analogous to that of a member of a class whose interests are represented by the plaintiff in a class action. It is certainly not incumbent upon the members of a class

individually to intervene at an early stage in the proceeding in order to assure the adequacy of their representation at a later stage. To hold otherwise would be to render chaotic all class litigation. Intervention is only called for when the need for it becomes apparent, and this may occur either late or early in the proceeding. The late Mr. Justice Brandeis of this Court expressed the law in this regard in *Southern Pacific Co. v. Bogert,* 250 U.S. 483, 39 Sup. Ct. 533, 536 (1919) when he said: "Where the cause of action is of such a nature that a suit to enforce it would be brought on behalf, not only of the plaintiff, but of all persons similarly situated, it is not essential that each such person should intervene in the suit brought in order that he be deemed thereafter free from the laches which bars those who sleep on their rights." The same rule is found in *Moore's Federal Practice,* Vol. 2, 1938, at page 2333:

> Where a petitioner is represented in a proceeding, he will be bound by a decree of the court, whether he can show an interest in the property or not. It, therefore, becomes even more important that the right to intervene be absolute if the representation is shown to be inadequate.

2. *Past Efforts of Navajo Tribe to Secure Adequate Representation*

There has been no delay in the efforts of the Navajo Tribe to secure effective representation of its interests in this case. It was alerted to the inadequacy of representation being given to it by the Attorney General and government counsel purporting to represent the interests of all the Indian tribes in Arizona, when in the pre-trial conference before the Special Master on April 10-13, 1956, two and one-half years after the Government's petition for intervention was filed, the United States declared that

it was not ready to define its position on indian claims either from the standpoint of law or facts (TR. April 10, 1956, pp. 18, 23-26, 34-35). The Government's attitude was clearly that of a passive bystander wishing an inactive role and not the role of advocate defending the interests of its wards. The Assistant Attorney General in charge urged:

> The United States would like to be last, and we will ask the questions we feel the States have not covered, if that will be permitted. (TR. p. 39)

This statement of a policy of general inarticulateness was followed by the failure to cross examine witnesses for the State of Arizona in respect to indian water rights and established uses of water by indians in Arizona. The Navajo Tribe promptly caused the following steps to be taken:

1. Upon examining the pleadings in the office of the clerk of the court, counsel for the Tribe discovered that when the petition of the United States to intervene was filed in this case on December 31, 1952, protection of the interests of the indians was urged as a major ground for intervention of the United States (Para. XII, Motion for Leave to Intervene; p. 32, U.S. Brief in Support of Motion). On November 2, 1953, when the Government filed its petition of intervention pursuant to the Court's order, the petition asserted clearly and unequivocally the "prior and superior" rights of indians, as follows (Para. XXVII, p. 23):

   > The United States of America asserts that the rights to the use of water claimed on behalf of the Indians and Indian Tribes as set

> forth in this Petition are prior and superior to the rights to the use of water claimed by the parties to this cause in the Colorado River and its tributaries in the Lower Basin of that stream.

Political pressure from the then Governor of the State of Arizona was brought to bear upon the Attorney General's office, with the result that the Attorney General wrongfully and in violation of the rules of this Court, which provide that "original or file copies of pleadings and papers, or briefs, may not be withdrawn by the litigant" (Rule 1, Sub. Para. 2), withdrew its petition for intervention. This was done four days after the filing of the Government's original petition and apparently before distribution of copies to members of this Court. On December 8, 1953, a revised petition for intervention was filed by the Government in which the above allegation respecting the prior and superior rights of indians was deleted — all without application by the United States to this Court for leave to amend its original petition. (TR. pp. 2448-2449, 2480-2482).

2. Counsel for the Tribe discovered that the attorney in the Department of Justice who had long been in charge of the Government's preparations in this case, and was well informed as to indian water rights and skilled in the practice of asserting such rights, had been removed from the case and new counsel had been substituted within a relatively short time before hearings were commenced in San Francisco before the Special Master (TR. p. 2450). The said new counsel did not, and in so short a time for preparation probably could not even if he

had so desired, properly question witnesses in the proceedings before the Special Master in respect to indian uses of water.

3. The General Counsel for the Tribe joined with representatives of other indian tribes in Arizona in urging Assistant Attorney General J. Lee Rankin, then in charge of this litigation in the Department of Justice, to recognize the conflict of interests which existed between the other parties or interests which the Government sought to represent and the prior and superior rights of indians which Government counsel also purported to represent. In a final conference on July 5, 1956, with the Assistant Attorney General, representatives of most of the indian tribes in Arizona requested that special counsel be appointed within the Department of Justice to represent the interests of the indians. The Assistant Attorney General refused the request, contending that representation by Government counsel was adequate (TR. pp. 2432-2435).

4. The General Counsel of the Navajo Tribe joined with other counsel of indian tribes in Arizona to present to the Special Master a motion for leave to file a representation of interests, requesting the Special Master to recommend to this Court that special counsel be appointed to represent the interests of the indians. The General Counsel of the Navajo Tribe on behalf of the Tribe and on behalf of all other indian tribes in Arizona, presented the matter to Mr. Justice Douglas (then in California during the adjournment of this Court), who referred the motion to the Special Master for appropriate action. The Motion was argued on July 6, 1956, in

San Francisco before the Special Master (TR. Vol. 15, pp. 2419-2498). The foregoing and other facts respecting the inadequacy of the Government's representation of the indian interests were set forth. Counsel for the State of California, in the course of his reply to the General Counsel of the Navajo Tribe, confirmed what the latter had said respecting deletion from the Government's original petition for intervention of the allegation asserting the prior and superior rights of indians, that deletion having been made — as the California counsel stated — under political pressure from the Governor of the State of Arizona (TR. pp. 2480-2481).

5. On July 18, 1956, the Special Master held that the trusteeship of the United States in behalf of the indians is a creation of a plenary legislative power and that it "is beyond the power of the Courts to disqualify this Trustee" . . . and that "The legal power of the Attorney General to represent the petitioners and to manage the litigation in their behalf cannot be curtailed by judicial action." The Special Master assumed "accomodation" by the Attorney General in respect to presentation of any evidence which the indian tribes might wish to have offered, and recommended that a brief amicus curiae be filed in the Supreme Court on behalf of the indians (TR. Vol. 16, pp. 2638-2641).

With deference to the outstanding ability of the Special Master, it was evident in the proceedings that the subject of indian water rights was new to him. The assistance which he was entitled to receive from counsel for the Government, and which a conscientious advocate would have offered, was not forthcoming. This inadequacy of

representation of the Navajo Indian Tribe and the other tribes similarly situated in Arizona bore fruit and became more apparent after the report of the Special Master was filed. His proposed findings are in several respects highly prejudicial to the rights and interests of the Navajos and other indians, as will appear more fully in later portions of this brief.

The General Counsel of the Navajo Tribe made a last effort to secure appropriate action by the Attorney General by requesting in a letter of February 2, 1961, that the Attorney General take exception to the Special Master's report in numerous vital respects, stating, inter alia:

> "The Special Master has made a number of proposed findings which are gravely prejudicial to the position of the Navajo Indian Tribe. This is to request that exceptions be taken to the report of the Special Master and that any other action be taken that may be necessary to protect and preserve the position of the Navajo Indian Tribe which is represented in this cause by the Department of Justice."

The Special Master had set February 27, 1961, as the date for filing exceptions to his report. However, Government counsel did not reply and the United States took no action pursuant to the letter of the General Counsel of the Navajo Indian Tribe. Indeed, the objections filed by the United States do not even bear upon the question of indian rights. The exceptions filed by the United States, and the brief in support thereof, are themselves mute testimony to the extent of the neglect of indian interests. The Navajo Tribe could not have known in advance that there would be no action taken pursuant to its letter to the Attorney General and that the exceptions filed by the

United States would utterly fail to maintain and assert the Tribe's full legal position. It was only at this point, after the Special Master's Report was filed and the exceptions of the respective parties were made, that the inadequacy of the representation was at last so conclusively established that this petition for intervention by the Navajo Tribe became a necessity.

The Navajo Tribe, through its General Counsel, took immediate steps after the filing of the exceptions of the United States to retain counsel especially experienced in water law to seek intervention in this Court. Time was required for such employment, not only for consideration by the Navajo Tribal Council, but also to secure approval by the Secretary of the Interior pursuant to Title 25 U. S. C., Sec. 82. And thereafter counsel had to analyze the position of the Tribe and prepare these documents in intervention.

It is clear, therefore, that the Navajo Tribe has not slept upon its rights. Having first sought with other tribes to secure adequate representation through the office of the Attorney General of the United States, and having failed to secure that conscientious assertion of indian rights which normally could be expected from any experienced advocate, the Navajo Tribe now respectfully seeks to fill this patent void before it is too late to protect its interests. Clearly, the question of timeliness of this motion merges into the question of inadequacy of representation thusfar given to the interests of the Navajo Tribe. The two issues, although logically separate questions, cannot possibly be considered independently in this instance and must be considered together in regard to the timeliness of this motion to intervene.

B. Inadequacy of Representation.

In its Motion for Leave to Intervene, the Navajo Indian Tribe has set forth in some detail five areas of major importance in which the United States has failed vigorously to assert the interests of the Navajo Indians. The nature of these interests, and the extent of the failure of the United States to give expression to them, has been stated in some detail in the motion itself. The following discussion here will attempt to supplement, but not repeat, what was said in the motion.[1]

1. *The Justiciability Issue*

In his Report the Special Master has excluded the determination of water rights in the Lower Basin and tributaries between Lee Ferry and Lake Mead. Such a finding would in effect exclude the interests of the Navajo Indians from this law suit. Despite the fact that at page 27 of its original Petition of Intervention it has recognized a "protracted conflict" among the parties possessing claims to water in the Lower Basin, the United States has raised no objection to the finding of the Special Master in this regard. In making its exceptions, the United States has touched upon this question only obliquely. Its first two exceptions are to the effect that in making allocations of waters from Lake Mead among Lower Colorado River Basin states, the Secretary of the Interior is authorized to make deductions to compensate for upstream consumptive use in Arizona and Nevada of water which would otherwise flow into Lake Mead. This is not, strictly speaking, an argument in favor of the justiciability of the con-

[1]Some repetition will be unavoidable in the interest of continuity.

troversy as to waters above Lake Mead. Instead of meeting the issue straight on in a diligent effort to protect the Navajo Indians in the "protracted conflict" which it has recognized, the United States has preferred to discuss the issue only peripherally as it affects the Secretary of the Interior in his technical operation of the federal water projects under the Boulder Canyon Project Act.

It ought to be apparent, however, that the justiciability of the controversy encompasses the Lower Basin as a whole. The Lower Basin waters above Lake Mead are as much involved in the controversy as those in and below it. To say, as the Special Master has said, that the controversy will be treated as involving a part of the waters of the Colorado River in the Lower Basin, is to "truncate" not merely the Colorado River, but is also to truncate the controversy itself. The controversy is, in essence, one as to the availability of water for present and proposed uses. It is great in its magnitude and importance, and is imminent in its threatened interference with those uses. The Lower Basin is entitled to a given amount of water under the Colorado River Compact and the critical problem before the Court concerns the legal availability of this water for Lower Basin uses. This is the nature of the controversy in its entire scope. When a controversy exists, courts will determine the entire controversy. They will not artificially split a part of the over-all problem off in order to say, in effect, that by considering just a part of it a solution may be worked out which will settle the more imminent problems, leaving the less imminent parts of the controversy unjusticiable. This would make justiciability depend not on the extent and imminent nature of the controversy itself, but on the particular twist or turn taken by the proposed solution. But justiciability rests on a

much sturdier foundation than such a view would have us suppose. Once a controversy is found to exist encompassing an entire subject-matter, the courts continue to treat it as a whole, do not truncate it, and seek to settle the issues involved without making necessary a multiplicity of suits. What can be settled in one justiciable lawsuit will not be so treated as to force several independent actions.

There can be little doubt but that this controversy, as framed by the contentions of the various parties themselves, has encompassed the entire Lower Basin and concerns the legal availability of water therein. In Paragraph XIX of its Bill of Complaint, Arizona recites that she "desparately needs additional water from the main stream of the Colorado River. Without such additional water . . . agricultural production will be reduced to a dangerous extent, population will decline, and the economy of the state will be destroyed in large measure. The only source of water to prevent such a catastrophe is the main stream of the Colorado River." There is to be seen in this no limitations whereby Arizona states that it "desperately needs additional water from the main stream of the Colorado River *in and below Lake Mead.*" Rather, the needs and claims giving rise to this litigation are more urgent and all-encompassing. They pertain to the available water in the Lower Basin. This breadth is also reflected in Paragraph XX of the Bill of Complaint, where Arizona complains that the Central Arizona Project has been interfered with and postponed because of the alleged "wrongful assertion by the defendants of unwarranted and unlawful claims to the use of water of the Colorado River system." The same pervasive scope of this litigation, in terms of the claims of the respective parties, is

reflected in the recital on page 322 of the Special Master's Report that "the States of Nevada, New Mexico and Utah have asked for a decree confirming present uses and reserving water for future requirements on various interstate tributaries of the Colorado River flowing within their borders . . . New Mexico asserts rights in the Little Colorado . . . ." In addition, as appears more fully from the section beginning at page 124 of the opening brief of the California defendants in support of their exceptions to the report of the Special Master, the California defendants object to the "truncation of the Colorado River at Lake Mead" and would have the other waters of the Lower Basin taken into account in applying principles of equitable apportionment. The United States, for its part, argues that the uses above Lake Mead ought to be deductible in making allocations of waters from Lake Mead. In light of these conflicting contentions, the Colorado River and its tributaries below Lee Ferry but above Lake Mead can hardly be said to be superfluous to this controversy when it is considered as a whole.

This controversy, taken as a whole and considered in its entirety, constitutes a justiciable controversy under the law as heretofore stated by this Court and other courts in the United States. The test for justiciability was set down by this Court in *New York v. Illinois,* 274 U.S. 488, 47 Sup. Ct. 661 (1927), where reference was made to the need for "an actual or presently threatened interference with the rights of another", and in *Colorado v. Kansas,* 320 U.S. 383, 64 Sup. Ct. 176, 181 (1944), where the court posed the need to determine "whether one state is using, or threatening to use, more than its equitable share of the benefits of a stream." In *Aetna Life Insurance Co. v. Haworth,* 300 U.S. 227, 57 Sup. Ct. 461, 464 (1937) this Court

recognized that the "controversy must be definite and concrete, touching the legal relations of parties having adverse legal interests." The Court went on to say that "it must be a real and substantial controversy admitting of specific relief . . ." Another court has said, in *Mayor, Etc. of Savannah v. Bay Realty Co.*, 90 Ga. App. 261, 82 S.E. 2d 710, 711 (1954) that "a controversy is 'justiciable' when there are interested parties asserting adverse claims upon an accrued state of facts." Certainly all of these criteria, as stated in the cases referred to, are met by the Colorado River controversy as it appears in this litigation.

Once an entire controversy is before a court, the court will decide it without a truncation of its various aspects. "It is the policy of the court to determine the whole controversy." *Hoskins v. Hotel Randolph Co.*, 203 Iowa 1152, 211 N.W. 423, 429 (1926). It has been said that "the . . . court, having first acquired jurisdiction, may exercise it to dispose of the whole subject-matter of the litigation and adjust all of the equities between the parties, and is entitled to do so." *Cleveland v. Ward,* 116 Texas 1, 285 S.W. 1063, 1070 (1926). "The courts, having jurisdiction . . ., have the right and authority to hear and determine all questions that occur in the case and are essential to a decision of the merits of the issues." *Taylor v. Hulett,* 15 Ida. 265, 97 Pac. 37, 39 (1908). To like effect are *Pittsburgh, C., C. & St. L. Ry. Co. v. Peck,* 44 Ind. App. 62, 88 N.E. 627 (1909); *Lenderink v. Sawyer,* 92 Neb. 587, 138 N.W. 744 (1912); *Heidenheimer v. Johnston,* 76 Texas 200, 13 S.W. 46 (1890).

In addition to the policy of deciding entire controversies, it has long been the policy of the law to avoid, where

possible, a multiplicity of litigation. "One of the functions and duties of this court is to exercise its powers so as to avoid future litigation." *Mallonee v. Fahey,* 117 F. Supp. 259, 275 (1953). "It is one of the favorite objects of a court of equity to do full and complete justice between the parties by avoiding the delays and hardships incident to a multiplicity of suits." *Weininger v. Metropolitan Fire Insurance Co.,* 359 Ill. 584, 195 N.E. 420 (1935).

Taken together, these principles require that the rights in and to waters in the Lower Basin above Lake Mead be adjudicated as a part of the over-all controversy, which is itself justiciable.

In its failure to press for a complete determination of the matters involved in the controversy, the United States has, for its part, abandoned any attempt to have the rights of the Navajo Indian Tribe adjudicated in this cause. This means that it has acquiesced in a continuation of the "protracted conflict" so far as their rights are concerned. If — as we have seen — their rights may be determined in this litigation, and if the United States is willing itself to acquiesce in a failure to determine them, leaving them a subject of future controversy, it is manifest that the United States is inadequately representing the Navajo Indian Tribe, and is preoccupied by its other interests in this litigation.

2. *The Extent of Indian Priority.*

The brief of the United States in support of its exceptions to the Special Master's Report makes no mention of the relative priority of indian water rights as against other claimants.

Its Answer Brief, however, emerges from the former silence sufficiently to remark, without apparent objection, that "Rights reserved for reservations established subsequent to the Project Act are recognized as having priorities, intrastate, as of the respective dates of establishment of the reservations." (United States Answer Brief, p. 56).

It would seem incredible that the United States, who in this litigation has stood in the relation of trustee to the Navajo and other indian tribes of the Lower Basin, could with such ease and facility ignore well-established law as to the nature of Indian rights. The law ignored is law which the United States itself has asserted previously in this Court. It is law which this Court has forcefully expressed on two important occasions and which has been reiterated as recently as 1956 by the Ninth Circuit Court of Appeals in a case instituted by the United States.

The water rights of indian tribes, we submit, are not subordinate to the claims of appropriators who were using water before the present reservations were established. The indian rights are ancient and aboriginal in their character. As such, they are prior to all appropriative rights of a later origin, whether those later appropriations occurred before or after existing reservations were created.

In order fully to appreciate this fact, and the basis for its assertion, it is necessary to be fully cognizant of the fact that the creation of an indian reservation has historically and legally involved a *grant by the indians* as to their larger claims and a *reservation by them* of certain important rights which pre-existed the making of the treaty or agreement and which continued to exist thereafter. It is a mistake to consider that when an indian reservation is created water is "reserved for its benefit"

in the different sense that a previously non-existent right is called into being and is now present as a "reserved right". Rather, the reservation of the right to water is made by the indians themselves and is the reservation of a much older, pre-existing right.

This stands out starkly in the great landmark cases heretofore decided by this Court. These are the cases of *United States v. Winans,* 198 U.S. 371, 25 Sup. Ct. 662 (1905) and *Winters v. United States,* 207 U.S. 564, 28 Sup. Ct. 207 (1908). The recent case reiterating their principles is *United States v. Ahtanum Irrigation District,* 236 F. 2d 321 (9th Cir. 1956).

United States v. Winans was a suit brought by the United States to enjoin certain respondents from obstructing Indians of the Yakima Nation, in the State of Washington, in their exercise of fishing rights and privileges on the Columbia River. While the subject under discussion was fishing rights, rather than water rights, the law expressed by the Court is altogether relevant to the question of priority of water rights. The Court gave explicit recognition to the fact that "the right to resort to the fishing places in controversy was a part of larger rights possessed by the Indians." It is stated that these rights "were not much less necessary to the existence of the Indians than the atmosphere they breathed." Referring to the treaty made between the United States and the Indians in 1859, the court made the following significant observation: "*The treaty was not a grant of rights to the Indians, but a grant of right from them, — a reservation of those not granted.*" (Emphasis added). It is to be seen, then, that in the view of the Court the fishing rights which the United States sought to protect in the lawsuit were not the product of the treaty, but were rather pre-

existing rights which survived the treaty. Although it is true that the case dealt with fishing rights rather than water rights, so far as the law is concerned that is a mere distinction without a difference. There is nothing in logic which can distinguish the applicability of the central concept involved so far as the two separate types of rights are concerned. If the concept that the rights pre-existed the treaty is applicable to the fishing rights, there would seem to be no cogent reason why it would not with equal force apply to water rights.

Three years later, in 1908, this Court did in fact express the same rationale in a case involving water rights. This is the famous case of *Winters v. United States, supra,* which gave rise to the so-called Winters Doctrine.

Winters v. United States involved a suit by the United States to enjoin the building of certain dams which would prevent water from flowing to the Ft. Belknap Indian Reservation. The Court pointed out that the reservation created by the agreement of May, 1888, "was a part of a much larger tract which the indians had the right to occupy and use." The rationale of the *Winans* case is readily apparent in the following statement made by the Court: "The Indians had command of the lands and the waters, — command of all their beneficial use, whether kept for hunting, 'and grazing roving herds of stock,' or turned to agriculture and the arts of civilization. Did they give up all this? Did they reduce the area of their occupation and give up the waters which made it valuable or adequate?" The questions raised in this quoted language were rhetorical. The Court considered that they answered themselves. The indians, the Court held, did not "give up" their water rights when they entered into the Reser-

vation. But if they did not "give them up", then it must be concluded that they retained their rights. And if they retained them, the retention was from an earlier period, a period which preceded the establishment of the Reservation. In other words, they retained their ancient and aboriginal rights, not "giving them up" when they entered into the reservation.

How, then, can it conceivably be said that relative latecomers arriving on the scene and using water within a few short years before the establishment of a formal indian reservation can have a legally cognizable right prior to that of the rights adhering in the indians themselves? To grant such persons priority is to deny the pre-existing character of the indian rights and is to fly in the face of both the Winans and the Winters decisions.

It cannot be said, in contradiction to this, that the *Winans* and *Winters* cases are no longer virile as modern statements of the law. The doctrine which they so soundly proclaimed has found renewed expression, as recently as 1956, in *United States v. Ahtanum Irrigation District, supra.*

The *Ahtanum* case involved a suit by the United States to quiet title to the right of indians to use water from Ahtanum Creek. The Ninth Circuit Court of Appeals, following in the footsteps of the *Winans* and *Winters* cases, stated:

> "As in the *Winters* case, we must answer in the negative the question there posed: 'Did they give up all this? Did they reduce the area of their occupation and give up the waters which made it valuable or adequate?' As was said in the *Winters* case: 'The res-

> ervation was a part of a very much larger tract which the indians had the right to occupy and use, and which was adequate for the habits and wants of a nomadic and uncivilized people.' When the indians agreed to change their nomadic habits and to become a pastoral and civilized people, using the smaller reservation area, it must be borne in mind, as the Supreme Court said of this very treaty, that 'The treaty was not a grant of right to the indians, but a grant of right from them — a reservation of those not granted.' *Before the treaty the indians had the right to the use of not only Ahtanum Creek but of all other streams in a vast area. The indians did not surrender any part of their right* to the use of Ahtanum Creek . . . ." 236 F. 2d at 336. (Emphasis added).[2]

Thus, what we might call the "aboriginal rights" doctrine expressed by the *Winans* and *Winters* cases (although they did not use the term) has not been buried by the passage of time. And there are important reasons, so far as the legitimate interests of the Navajo Indian Tribe are concerned, why it should be vigorously reasserted in the present litigation. As the trustee for the indians, it has been the duty of the United States to see to it that such established law favorable to indian rights not

---

[2]Indian reservations have been established in the past by several methods: treaty, executive order, Interior Department action, or agreement. The law as to the indians' water rights is the same in each case, not being affected by the manner of establishment of the reservation. See **Winters v. United States,** 207 U.S. 564 (1908) (reservation established by agreement); **United States v. Ahtanum Irrigation District,** 236 F. 2d 321 (9th Cir. 1956) (reservation established by treaty); **United States v. Walker River Irrigation District,** 104 F. 2d 334 (9th Cir. 1939) (reservation established by Interior Department Action); **Conrad Inv. Co. v. United States,** 161 Fed. 829 (9th Cir. 1908) (reservation established by agreement).

become obfuscated and supplanted. The United States has thusfar failed in this duty. In light of this failure, it would seem that the only manner by which the law as heretofore developed may be fully presented to this Court is through intervention by the indians in their own behalf.

3. *The Right of the Navajo Indians to an Apportionment of Water Separate from the Apportionments Made to the States*

The United States has not pressed in this action for a separate apportionment of water to the Navajo Indian Tribe, or to the other indian tribes located within the Lower Basin. Its policy seems to be one of contentment with seeing water apportioned to states, from which indian tribes must then draw their share. This view has been manifested in this litigation by the failure by the United States to assert affirmatively the need for a separate apportionment to the Navajo Indian Tribe, or other indian tribes, and in its acceptance of the Special Master's findings that the water delivery contracts entered upon under the Boulder Canyon Project Act, which would provide for delivery of water to non-indian users only, constitute an apportionment of water in and below Lake Mead.

There is, however, nothing more inappropriate, both practically and legally, than for the waters of the Lower Basin to be so apportioned that the Navajo Indian Tribe and other indians must look to the States of Arizona, New Mexico and Utah for their water.

It is to be remembered that — as a matter of law — the indians are under the trusteeship of the United States, not of individual states. Arizona, New Mexico and Utah, separately or in combination, are not now, nor have

they ever been, trustees charged with an affirmative duty of looking after the interests of the indians.

The relationship of the indian tribes to the United States and to the several states has been made clear in a number of cases. In *United States v. Ahtanum Irrigation District, supra,* the court referred to the role of the federal "government as trustee for the Indians." The position of the indians was made particularly clear in *United States v. Kagama,* 118 U.S. 375, 6 S. Ct. 1109, 1114 (1886), where it was said that "These Indian tribes are the wards of the nation. They are communities *dependent* on the United States — dependent largely for their daily food; dependent for their political rights." (Emphasis by Court). In addition to recognizing explicitly the fact of federal trusteeship, the Court went further and explained the lack of trusteeship on the part of the states in which the indian reservations are located. The Court said: "They (the indians) owe no allegiance to the states, and receive from them no protection." Not only is there a lack of trustee-ward relation, the Court said, but also "because of the local ill feeling, the people of the states where they are found are often their deadliest enemies."

A rather complete discussion of "The Scope of State Power over Indian Affairs," in which it is made abundantly clear that the primary relation of indian tribes is with the United States, and not with the states individually, is to be found in Felix S. Cohen, Handbook of Federal Indian Law 116-122 (1941) and in United States Department of the Interior, Federal Indian Law 501-514 (1958).

While this observation by the Court was made in 1886, so that there are sure to have been certain changes

in attitude between then and now, it is well known that such attitudes often change only slowly. During recent years, for example, there has been a gradual amelioration of relations between the Navajo Indian Tribe and the states in which the Reservation is located. But this amelioration has not so changed the basic circumstance that it would now be practical or wise to create an important new dependency by the indians upon the states. Nor is there any basis in law — as we have seen — for charging the states with a duty to look after the interests of the indians. This function has historically and legally been that of the United States.

On page 56 of its Answering Brief the United States has stated that it now acquiesces in the Special Master's making of apportionments to the states alone. The acquiescence stated there finds further expression in the failure of the United States to except to the Special Master's Report and recommended decree as to such combined apportionment. This has not always been the view taken by the United States, however. It formerly held, as it points out in its Answering Brief, to the sound contention that there should be a separate apportionment. Strangely enough, the United States is now willing not to "press the point here" in favor of a separate apportionment and is willing to acquiesce in the Special Master's view, even though the United States admits that "the logic" of the matter does in fact demand separate allocations. In other words, the United States is willing to acquiesce in the making of apportionments to the states alone even though it has held, and still holds today, the view that there ought really to be a separate allocation. We would submit, of course, that the United States is right in its logic, but wrong in its acquiescence.

The reason the United States has surrendered the point is that it has concluded that "the recommended decree appears sufficient for all practical purposes to protect the federal establishments." But does the recommended decree in fact contain such practical assurances? The answer can only be that it does not. One of the grounds for the United States' satisfaction is that "Rights reserved for reservations established subsequent to the Project Act are recognized as having priorities, intrastate, as of the respective dates of establishment of the reservations." (United States Answering Brief, page 56) In essence, then, the United States is willing to abandon the "logic" of the matter because it has accepted the equally fallacious premise, which we have already examined here, that indian priority dates, intrastate, are based upon the dates the indian reservations were created. But surely one fallacy cannot justify another. The fact is that the "practical" means by which the recommended decree "appears to protect the federal establishments" is not well founded. Moreover, the muddled position in which the Navajo Indian Tribe would find itself if an apportionment of water were made only to the states is further testified to by the United States' Answer Brief itself on page 91 where it is pointed out that "Arizona argues that the rights of the United States to use water on its Indian reservations should be determined, as against potential uses in Arizona, by application of principles of equitable apportionment." Referring to "the novelty of Arizona's suggestion", the United States proceeds in its Answering Brief to point out its unsoundness.

In light of this, it would have been far better for the United States to have adhered to the much sounder position that there should be a separate apportionment of

water to the indian tribes, or to the United States for purposes of satisfying the indian rights, and that this apportionment should be independent of that given to any state. Such a conclusion is based upon both practicality and logic. It is based upon a recognition that (1) the United States, and not the states, is the Trustee in relation to the indians; (2) the indian rights are not derived from state law, but rather find their source elsewhere, being of an aboriginal nature and having been reserved by the indians at the time of the establishment of formal reservations; and (3) a separate apportionment will, as a practical matter, lend itself far less to continued rivalry and hostility during the years to come.

In failing to "press the point here" the United States has inadequately represented the Navajo Indian Tribe in this litigation.

4. *Dependence of the Navajo Indian Tribe upon the States for Water Would Lead to Continuing Political Conflict Detrimental to Navajo Interests.*

It is a vital corollary to the third area of inadequate representation just stated that the United States, by the position it has taken permitting the apportionment of water to states alone, would thus place the Navajo Indian Tribe in continuing political conflict with the State of Arizona, in particular, and with the States of New Mexico and Utah. With the indian right included within the state apportionment, the indian and the white populations are placed in inevitable competition for the water to which the state is entitled and, expressly here, the indians must compete with the Central Arizona Project, the desire for

which by the white population spawned this litigation. Even if, in depending on the states for its water, the Navajo Indian Tribe were to prove altogether successful over the years in having its rights fully upheld, both as to extent and priority, the effect of the dependency would be injurious to the mutual relations of the parties. The Navajo Indian Tribe and the states in which its reservation is located must necessarily deal together in many connections. It is to be appreciated that each will benefit if their relations can grow increasingly amicable with the passage of time. But such progress will be impeded in these other aspects if a significant area of dispute is left open to fester between them. So far as the political and general human relations involved are concerned, there is much to be gained by giving "unto Caesar that which is Caesar's" in the sense that each is apportioned its own lawful share.

The legal foundation for a separate apportionment has been more fully discussed above. Reference is made at this point to the over-all non-legal consequences of a combined allocation because they must enter strongly into any true understanding of the extent of the prejudice which will befall Navajo interests if the inadequate representation thusfar afforded them in this cause is permitted to continue.

5. *The Extent, in Terms of Quantity, of the Navajo Indian Water Right*

The failure of the United States adequately to represent the Navajo Indian Tribe is nowhere more apparent than in connection with the question of the extent of indian water rights as to their quantities.

For its part, the United States is willing vaguely to assert, as it does on page 79 of its Answer Brief, that "In

the case of an Indian reservation, the measure is the quantity required to satisfy the ultimate needs of the Indians of the reservations." Although such a statement is certainly broad enough to include the full extent of indian rights, it is in no way specific. And it is in the specific application of such a concept that the really important issues arise. It is important, so far as the effective assertion of full indian rights is concerned, to make it clear that these indian needs include not merely the "ultimate needs" of a people living an existence of marginal subsistence, but also sufficient water to permit the indians to take their rightful place in the advance of civilization, as through industrial use.

The danger in a failure specifically to point this out lies in the fact that the Special Master and the Court may, as a result of the lack of proper advocacy in behalf of indian claims, overlook the full extent and ramifications of the existing rights.

Unfortunately, this danger is by no means spurious or academic. It has already been realized, and — so far as the Special Master's Report and even the position of the United States in respect thereto is concerned — the danger may be pointed to not as potential in character, but as an accomplished fact. The Special Master and the United States have indeed fallen into the very error of omission and oversight to which we have just referred. At page 262 of his Report, the Special Master concluded "that the United States effectuated the intention to provide for the future needs of the Indians by reserving sufficient water to irrigate all of the practicably irrigable land in a Reservation and to supply related stock and domestic uses." The United States has shown its willing-

ness, at page 80 of its Answer Brief, to accept this conclusion. After quoting from the Special Master, the United States says "This conclusion is amply supported by decisions of this Court . . . ." It is only in a footnote at the bottom of page 80 that the United States suggests that the indian rights may in fact be far more extensive. It states that "Whether the reservation of water rights is limited to the needs of the Indians for irrigation and related stock and domestic uses is a question which need not be considered insofar as the reservations for which the Master recommends that rights be decreed are concerned." One is led to ask the question why the United States, which is charged with a positive duty to assert fully the rights of the indians, is willing to acquiesce in a patent understatement of the extent of indian water rights. Even if it is conceded, for the purposes of argument, that such an understatement is sufficient for the limited purposes which the Special Master has in mind, there can be no doubt but that the eventual incorporation of this understatement into the opinion of this Court, if such were to occur, could do irreparable injury to the legal position of the indians in any later attempt to assert the full extent of their rights as heretofore recognized. The failure of the United States to press for a proper statement of the law in this litigation could easily lead to an inadventent restriction of indian rights in all future cases because of language emanting from the Court at this time.

It is not merely in future litigation that the present shortcomings may have their effect. It is by no means certain that the rights of the Navajo Indians will not be litigated in this controversy. In this brief it has already been stated at some length why those rights should, as a matter of law, be litigated here. And if the Navajo In-

dian Tribe's rights are in fact to be determined, the full extent of their right ought to be decreed, and ought not to be left in doubt for future statement of a more precise nature.

As examination of past cases indicates that it has not been the intention of this Court, or of other courts, to limit the water right of the indian tribe merely to uses for irrigation. The reservation of the rights by the indians was more extensive, including water for other useful purposes, as those purposes might arise in the development of the indian tribe. This is apparent from the language of the Court in *Winters v. United States, supra,* 28 S. Ct. at 211, where the Court said that "The indians had command of the lands and the waters, — command of all their beneficial use, whether kept for hunting, 'and grazing the roving herds of stock,' or turned to agriculture *and the arts of civilization.*" (Emphasis added) The Court then asked rhetorically: "Did they give up all this? Did they reduce the area of their occupation and give up the waters which made it valuable or adequate?" It is important to note that the court specifically made reference to uses other than agricultural uses when it referred to "the arts of civilization". Not only the language, but also the rationale, of the Court in the *Winters* case sustains the view that the indians retained more than merely what is sufficient for purposes of irrigation. There can be no doubt but that they retained, when they entered into their Reservation, enough water to progress normally toward an advanced civilization.

Two cases from the Ninth Circuit Court of Appeals, one decided in 1908 and the other decided in 1956, have augmented the view expressed in the *Winters* case. The most recent of these cases is *United States v. Ahtanum*

Irrigation District, 236 F.2d 321 (1956). The court there observed that "As we have said, the implied reservation of the waters of this stream extended to so much thereof as was required to provide for the reasonable needs of the indians . . . ." By what stretch of the imagination can "reasonable needs" be limited merely to agricultural and domestic needs in an age where industrial uses are becoming more and more important to the economy and welfare of a people? The language of the court contained no such restriction.

The earlier of these cases is *Conrad Investment Co. v. United States,* 161 Fed. 829 (1908). The court proclaimed "the paramount right of the indians of the Black Feet Indian Reservation to the use of the waters of Birch Creek to the extent reasonably necessary for the purposes of irrigation and stock raising, and domestic *and other useful purposes.*" (Emphasis added) Again, the language of the court reflects an intention not to delimit the right of the indians to the mere accomodation of a type of economy based solely on agriculture. The court has clearly left open the door for future changes in the indian economy which will call into existence the need for water to satisfy "other useful purposes".

In the letter written by the General Counsel of the Navajo Indian Tribe to the Attorney General of the United States on February 2, 1961, to which a reply has never been received by the Navajo Indians, request was made to the Attorney General to make absolutely clear in this litigation the extent of the indian water rights as expressed by these cases. The importance of these cases, and the doctrine expressed in them, is underscored by the following remarks contained in that letter:

"I respectfully request that you take exception to this interpretation on the grounds that the so-called Winters doctrine is not so limited. It is true that water was reserved for Indian tribes for agricultural, stock, and domestic uses, but it was also reserved for any other use that Indian tribes might make for the reservations set aside for them by the United States Government. For example, on the Navajo Reservation there has been industrial development and we contemplate greatly expanded industrial development in the near future. This development will require water in substantial quantities and no recognition of such use is given in the Special Master's Report. While the tribes allocated water by the Master may not have contemplated industrial development on their reservations, this construction of the Winters doctrine could be fatal to many tribes who depend on industrial development."

For the reasons stated in the letter, it is imperative that the full extent of indian water rights not be obfuscated in this litigation. They must be expressed forthrightly on behalf of the respective indian tribes, including the Navajo Indian Tribe, and properly determined to their full lawful extent. The United States has not done this, and its failure to do so can hardly be characterized less forcefully than "as inadequate representation."

C. Binding Effect of Judgment

One of the pre-conditions for intervention "as of right" under Rule 24(a) of the Federal Rules of Civil Procedure is, as we have stated above, that "the applicant is or may be bound by a judgment in the action".

The Special Master would himself cut the controversy into two fragments and has proposed a solution which he contends renders one of the fragments unjusticiable. This latter fragment pertains to claims to water in the Lower Basin above Lake Mead. Earlier in this brief we have shown the invalidity of this proposed fragmentation.

In light of the controversy which has raged among the parties for many years as to this water and especially in light of the specific contentions of California, Nevada, New Mexico, Utah and the United States in respect thereto, it is likely that this Court will not acquiesce in the proposed truncation of this controversy. In such an eventuality, the Navajo Indian Tribe, whose claims pertain to the waters of the Colorado River and the Little Colorado River above Lake Mead, will be bound by the terms of any decree that may be forthcoming in this action. Certainly there is no assurance at this stage in the litigation that the Navajo Indian Tribe will not be bound. Nor is such an assurance requested, in light of the need for a complete adjudication of the controversy.

Few legal authorities need be cited in support of the elementary proposition that the Special Master's Report and his findings are not determinative of the issues of this cause, including the issue having to do with its breadth and with the scope of the decree ultimately to be rendered. The Special Master's report can do no more than to present the case to the Court for the Court's own determination. This is clearly set forth in the order entered June 1, 1954, by the Court appointing the Special Master. The order states that "the findings, conclusions, and recommended decree of the master shall be subject to consideration, revision, or approval by the court." This

order is in keeping with the traditional practice of the Court. See *North Carolina R. Co. v. Swasey,* 23 Wall. 405, 23 L.Ed. 136.

No other conclusion can intelligently be reached but that the Navajo Indian Tribe "may be bound by a judgment in the action". As in all other respects, the terms of Rule 24(a) are fully satisfied.

III. CONCLUSION

The Navajo Indian Tribe is making timely application to intervene "as of right" in a matter of the greatest importance to it. The intervention is based upon the inadequacy of the representation given to the Navajo Indian Tribe by the United States, which is itself already a party to this action. The decree ultimately handed down may be one which will bind the Navajo Indian Tribe itself. It is imperative that, in all of the connections discussed above, the lawful rights of the Navajo Indian Tribe be fully protected and asserted, so that they may not become atrophied through neglect and inattention.

PETITION OF INTERVENTION ON BEHALF OF NAVAJO TRIBE OF INDIANS OF THE NAVAJO RESERVATION, ARIZONA, NEW MEXICO AND UTAH

COMES NOW the Navajo Tribe of Indians of the Navajo Reservation, Arizona, New Mexico and Utah, and by leave of Court first had and obtained, files this Petition of Intervention in the above-entitled cause, and alleges and states as follows:

I.

The Navajo Indian Tribe has, for many generations and long prior to the acquisition of the territory by the

United States under the Treaty of Guadalupe Hidalgo in July, 1848, lived in, used and occupied the area directly to the east of the Grand Canyon. Part of the area occupied by the Tribe during the said period now constitutes the Navajo Reservation which is located within the northeast corner of Arizona, the northwest corner of New Mexico and the southeast corner of Utah.

During these centuries of occupancy, the Tribe has made beneficial use of the waters of the Lower Basin of the Colorado River, and in particular of the waters of the Colorado River and the Little Colorado River. The present Reservation is bordered on the west by the Colorado River and is in part within the drainage basin of the Little Colorado River, a Lower Basin tributary of the Colorado River which flows through the Reservation and into the Colorado River at a point between Lake Mead and Lee Ferry.

II.

The Navajo Indian Tribe claims as a matter of ancient and aboriginal right extensive water rights in and to the Colorado River and the Little Colorado River, which rights existed long prior to the establishment of the Navajo Reservation, but which rights are now appurtenant to the land contained within the Reservation.

III.

The Navajo Indian Tribe asserts the priority of these water rights over those of all other claimants, whether such claimants appropriated water before the establishment of the Navajo Reservation or not, insofar as such other claimants do not themselves possess a still more

ancient and aboriginal claim upon the waters of the Colorado River and the Little Colorado River.

IV.

Upon the establishment of the Navajo Indian Reservation by the United States, the United States reserved unto the Navajo Indian Tribe its previously existing water rights, which rights remained in the said Tribe and were not given up by it. The reservation of existing rights was coextensive with the future needs of the Navajo Indian Tribe for all of its beneficial uses, whether for hunting, grazing, agriculture, or for other arts of civilization. Such rights cannot, by their nature, be permanently fixed and limited at a given amount. Rather, they are rights of an open and flexible nature, and depend as to their amount upon the needs of the Tribe as aforesaid.

V.

Said rights in and to water of the Colorado River and of the Little Colorado River existing in the Navajo Indian Tribe are rights existing separate and apart from any hierarchy of rights established according to the law of any given state. The rights of the Navajo Indian Tribe do not depend upon state law for their priority, duration or extent. Therefore, it is most appropriate that in this cause the Court give separate recognition to the right of the Navajo Indian Tribe to the use of water in the Lower Basin, such recognition to be apart from the apportionment made to any given state.

VI.

For many years, there has been a protracted conflict among the several users of water in the Lower Basin of the Colorado River as to their respective and conflicting claims in and to the water of the said Basin. This conflict has cast a cloud upon all rights and uses within the Lower Basin. This controversy is justiciable in its nature, and involves claimants as to waters in the Lower Basin above Lake Mead, whose claims, not being severable from the controversy as it exists as to all Lower Basin waters, are themselves justiciable as among themselves and as against claimants to waters in and below Lake Mead.

VII.

The Navajo Indian Tribe denies all the allegations, arguments, conclusions or averments in the respective pleadings of the parties which are at variance with the facts and allegations of this petition of intervention or in contravention of the rights of the Navajo Indian Tribe as hereinabove set forth.

WHEREFORE, the Navajo Indian Tribe respectfully prays:

1. That the rights of the Navajo Indian Tribe in and to the waters of the Lower Basin of the Colorado River, and in particular in and to the waters of the Colorado River and of the Little Colorado River, be adjudicated in this action.

2. That these rights be declared to be of an ancient and aboriginal nature, and prior to all other rights,

whether such other rights were established before the creation of the Navajo Reservation or not, insofar as such other claimants do not themselves possess a still more ancient and aboriginal claim.

3. That these rights be determined by this Court as to their present amount, but that this Court recognize their open and flexible nature, subject to such future changes in amount as may result from changes in the future needs of the Navajo Indian Tribe for hunting, grazing, agriculture or for other arts of civilization.

4. That the apportionment of water to the Navajo Indians be to the Navajo Indian Tribe itself, and not to one or more of the states.

5. That the Navajo Indian Tribe have such other and further relief as the Court may deem proper.

CLOSING BRIEF OF IMPERIAL IRRIGATION DISTRICT

The Imperial Irrigation District as a defendant, owning and operating the largest California project involved herein and one of the very earliest developments, feels impelled in justice to its interests and in fairness to this Court to respond to matters contained, and also omitted, in the Brief of parties other than California defendants. Hence this Closing Brief on behalf of the Imperial Irrigation District.

Preliminary Statement

The matters before this Court on the Exceptions of the parties as briefed to now have gone far afield from the cause as plead and as tried. The result is that the inseparable influence and relevancy of the Compact on the decisions that must be made herein has been beclouded and is being lost sight of.

The Master's concept is that the only water rights or uses involved in this case are those from Lake Mead and the main stream below.[1]

---

[1]The Master holds that rights to and uses of water in any or all Lower Basin tributaries are irrelevant and not chargeable *pro tanto* to the using state. (R. Pgs. 242, 226—except unexplainedly the Bill Williams R. Pg. 184.) This is held to apply, also, to the Gila River uses. (R. Pgs. 179 and Note 38; 184 Note 46; 231-232;) and to make the 265 miles of the main stream from Lee Ferry to Lake Mead a tributary and uses therefrom not accountable. (R. Pgs. 151 Note 18 and Pg. 183.) The Master even invalidates provisions of the Nevada Contract (Article 5(a), Pg. 420 R.) and the Arizona Contract (Art. 7(d) Pg. 401R.) charging those states pro tanto for uses above Lake Mead (R. Pgs. 207; 237 et seq.) This last holding Nevada and Arizona approve (Nev. Op. Br. Pgs. 19, 48, Nev. Rp. Bf. Pg. 49:— Ariz. Op. Br. Pgs. 100, 101.) In fact Arizona contends that provisions in her contract providing for Nevada, New Mexico and Utah to share in water uses as specified in Article 7(f), (g)(M.R. Pg. 402) are invalid (Ariz. Op. Br. Pgs. 29, 99, Rp.

Arizona goes so far as to contend that the Compact deals only with the main stream[2] on the basis that *supply* from the Upper Basin at Lee Ferry (Article III (d)) equals and is the same as the quantitative amount of *uses* (Article III(a)) at Lake Mead and below[3], undiminished by pro tanto charges for uses above Lake Mead.[4]

United States claims that the main stream from Lee Ferry down is involved[5] and with uses above Lake Mead, including tributaries, to be charged pro tanto to the states of use.[6]

Except for the claim of the United States for pro tanto charge for tributary uses above Lake Mead, the United States, Arizona and Nevada join in the contention that tributary rights and uses in any part of the Lower Basin are irrelevant and of no concern in this case.

The Master holds the Compact and the law of appropriation and equitable apportionment irrelevant to his "main stream"—i.e., waters of Lake Mead and main stream below[7]—though applicable to the Colorado River *System* in the Lower Basin, including the tributaries.[8]

Br. Pg. 88;) United States contends tributary and other uses above Lake Mead must necessarily be chargeable pro tanto to the state of use. U.S. Op. Br. Pgs. 15 et seq.; U.S. Rp. Br. Pg. 17.)

[2]Ariz. Op. Br. Pgs. 67, 72. Ariz. Rp. Br. Pg. 58 Note 73.

[3]Ariz. Op. Br. Pgs. 78 et seq.

[4]Ariz Op. Br. Pg. 101; Ariz. Rp. Br. Pg. 88.

[5]U.S. Op. Br. Pg. 9; U.S. Rp. Br. Pgs. 33-34.

[6]U.S. Op. Br. Pg. 15 et seq.; U.S. Rp. Br. Pg. 17.

[7]M.R. Pg. 138.

[8]M.R. Pgs. 142 re tributaries in *System*. M.R. bottom Pg. 140 re application law of appropriation.

The irrelevancy noted is upon the basis that the Project Act and Secretarial contracts are controlling.[9]

The issues herein are clearly drawn. Nevada and Arizona, naturally, support the Report and Recommended Deeree because it gives each the uncontrolled and additional use of tributary waters without accounting or charge pro tanto as against their respective state's rights in the Colorado River System. The qualified[10] support of the United States is upon the basis of purported validation of the contracts of the United States plus desired Federal controls.

We will attempt here to establish that no decision herein, whether as an intermediate or piecemeal adjudication of Lower Basin rights, can be made other than on a *System* as distinguished from so-called "main stream" basis. That the Compact and not merely the Project Act is inescapably and basically controlling in the administration of Lower Basin water rights and uses.

We shall try to be as objective as possible. We shall try to document why the Compact is *not* irrelevant and why the Compact is basically controlling on the water rights of the Lower Basin parties hereto. We shall try to document why water use rights in the Lower Basin *have* to be determined on a *System* (including all tributaries) basis and *cannot* be determined on a so-called "main stream" basis. We shall try to document why the Arizona Contract as construed by the Master is in

[9]M.R. Pg. 138.

[10]U.S. excepts to invalidating pro tanto charges for tributary and other uses above Lake Mead. (U.S. Op. Br. Pg. 1, Item 1) Also to application of state law as to when, where and in what quantity or priority water may be used in a state. (U.S. Op. Br. Pgs. 1-2, Items 2 and 3. Also Pgs. 21-23).

violation of not only the Compact, but in violation of, and contrary to, the Project Act. We shall try to document and demonstrate why priority of appropriation was and still is the applicable rule, subject to equitable apportionment considerations.

The foregoing may appear to be repetitious. May we assure this Court that we will limit any repetition to matters necessary to enable us to document our position and to set forth background matters necessary to point up our additional bases for our position herein.

Pre Compact Situation

Much has been written concerning the pre 1922 situation in the Colorado River Basin. The only reference we wish to make here to that subject is to a factual and physical or geographic error of the Master as to the Gila River. Also as to why the Gila River water uses, in particular, and all Lower Basin tributary uses, in general, were in 1922, we believe, considered as Lower Basin rights and uses in the Compact.

The Gila River Error:

The Master recognizes the right of a main stream appropriator to enjoin junior upstream tributary appropriators. He states, however, that California had no such claims against the Gila because "their points of diversion all being upstream from the confluence of the Gila with the main stream".[1] In a footnote the Master reiterates his concept that while the Gila River flows into the Colorado River, the confluence is below points

[1]Next to last paragraph Pg. 229 M.R.

of use in the United States and therefore of no consideration as a part of the System.[2]

The errors in this concept are these. Imperial's predecessors appropriated the waters of the Colorado River for diversion at what is called Hanlon Heading, a point several miles *below* the confluence of the Gila.[3] The appropriations were made principally before, but some after the 1900's.[4] Various physical structures were built as diversion works at Hanlon but all served the diversion purpose at that point until the All-American Canal went into operation[5] in 1940.[6] Also, deliveries of Colorado River water to Mexico under a Treaty were definitely contemplated in 1922.[7]

Following many previous United States investigations and reports concerning uses of Colorado River System water in the Lower Basin, Congress in 1920 directed a further examination and report concerning irrigation development of Imperial Valley and vicinity.[8] With respect to the Gila River it was reported that the drainage area was some 57,000 square miles.[9] That the average annual discharge of the Gila River to the Colorado River was 1,070,000 acre feet per annum and 6% of the total tributary contributions in the Colorado River Basin.[10] A possible site for a 2,200,000 acre

feet additional reservoir on the Gila was also referred to.[11] The run-off of the Gila into the Colorado from 1903-1920 is given on a monthly as well as a yearly basis.[12] Also see Arizona Exhibit 98 showing the Gila run-off from 1903-1950.[13] These run-off records report amounts, after existing Arizona uses, as high as four million acre feet in one year and some over two million acre feet and some over one million acre feet—per annum (1916, 1904, 1906, 1915, and 1909, 1917 and 1920 respectively).[13] In conjunction with this there is to be kept in mind that a dam and reservoir building program was being put into effect in Arizona on the Gila System. Roosevelt Dam on the Salt River in 1909[14] and Coolidge Dam on the Gila[15] were followed by a series totalling some eleven in number. As reported by the Master, their construction dates disclose the apparent reason for the complete impounding in Arizona of the run-off of the Gila System after 1941.[13] These matters, as of 1922, were reported by the Fall Davis Report to Congress in February 1922.[16] As it covers in detail the claims and uses in the Lower Basin as well as data on the Upper Basin, we submit it is reasonable to assume it was given study and consideration by the Compact Commissioners in their deliberations prior to November 1922.

The foregoing explains, in our opinion, why the claim of Arizona is unsound that the tributaries in the Lower

[16]Ariz. Ex. 45, Pg. ix.

Basin, and particularly the Gila, were of no interest to the Upper Basin.[17] Also why, when Project Act opponents were seeking to eliminate tributaries from consideration and accounting as uses of System water while the Compact was up for ratification and the Project Act was being considered, proponents were so adamant on the inclusion of the Gila River. Also why the Compact was so understood and intentionally so. Rather than reprint the documentation of this we refer to the explanation of Herbert Hoover, as United States Commissioner, on the Compact, made known to Congress.[18] Also to the statement of Governor Emerson of Wyoming to the Senate Committee stating that the Gila is as much of a tributary as the Green in Wyoming.[19] Arizona may argue that with Imperial's diversions to be above the confluence of the Gila under the Project Act the Gila would no longer be of interest to the Upper Basin or to California. This point was raised during the debates and by Arizona. The reply given by Mr. Carpenter, one of the Compact Commissioners and an Upper Basin representative, we think answers this fully, showing why the System, including *all* tributaries, had to be accounted for not only as to the Upper Basin and to Imperial Valley, but because of obligations to Mexico.[20]

Early Appropriations of Water:

In the Fall Davis Report of February 1922 not only were the tributary waters of the Gila reported upon but the same report called attention to the matter of appropriations of water under state law.[21] Sufficiency of rights to irrigate Palo Verde Valley was expressed.[22] Appropriations for the Yuma Project are listed.[23] The area of public and private lands to be irrigated and referred to as Imperial Valley is given at 1,134,700 acres.[24] The Fall Davis Report refers to previous reports, including the All-American Canal Board Report[25] of 1919 which in turn had reported on notices of 1895-1899 to appropriate 10,000 second feet at Hanlon.[26] In fact, studies and reports to Congress of various departments of the United States concerning the navigability of the Colorado River and diversions therefrom for agricultural purposes were made beginning in 1890[27] and 1895.[28] Also there could be detailed a joint report of the United States Departments of State; Justice; and Corps of Engineers; Army and others in

1901-1902;[29] several other later reports[30] and permits from the War Department,[31] as well as reports to Congress by Presidents of the United States concerning protecting agricultural development.[32]

These matters, i.e., tributaries as a part of the Colorado River System and claims of appropriative rights for agricultural use—are mentioned to emphasize the notoriety of the topics and claims as the Compact was being drafted in 1922.

Another important event took place just before the meetings of the Compact Commissioners. It was the 1922 decision of this Court in Wyoming vs. Colorado[33] which after arguments for several days in 1916, 1917, 1918, 1921 and again in 1922 and decided June 1922,[34] finally settles the application of the law of appropriation of water interstate as well as intrastate in the Western states adhering to the law of priority of appropriation.[35] It was a landmark decision available to the Compact Commissioners as a guide. Mr. Delph Carpenter was not only one of the leading Compact Commissioners but counsel in the Wyoming-Colorado case. It would seem not to need argument to support the proposition that the principle of interstate applications of the law of prior appropriation was an estab-

lished matter when the Compact was signed in November 1922.

With the foregoing pre Compact matters in mind, we feel justified in attaching to the language of the Compact drafted and signed in 1922 and ratified by Congress in 1929, the significance that *System* beyond question included all tributaries, including the Gila River. Also, that "rights as may now exist" related to and meant appropriative rights with their normal Western water law priorities. It is with the purpose of relating this concept to the language used in the Compact and trying to establish the inescapable relevancy and applicability of the Compact to all rights to use of any System water that we wish now to direct attention.

The Compact

The Master holds the Compact irrelevant[1] and only interbasin.[2] Nevada contends that the Compact, Project Act, Limitation Act and Reclamation Laws are a single body of laws.[3] Arizona contends that the Compact is purely a main stream matter[4] and only interbasin,[5] although Arizona contends the Compact and Project Act must be construed together and that the Master erred in that regard.[6] Arizona also contends the Project Act modified the Compact to limit the Compact to the main stream.[7] The United States contends that the Compact divided the System between Basins and

---

[6]Ariz. Op. Br. Pg. 67.
[7]Ariz. Op. Br. Pg. 27, third paragraph from top of page.

the Project Act modified the Compact but that uses above Lake Mead should be accounted for pro tanto.[8] The United States is indefinite on the Compact application except to approve conditionally the Master's Report and reserve its position.[9] The position now seems to be that the language and meaning of the Compact as signed in 1922 is immaterial[10] and only Congressional intent in 1929 is material.[10]

That the Compact accomplished a division of the *beneficial consumptive uses* of the Colorado River *System* as between the Basins is generally agreed. On the basis that all the Compact dealt with is the main stream (Arizona's position) and that the Project Act is controlling and makes the Compact irrelevant (the Master's position partially concurred in by the United States but questioned in part by Arizona and the United States) little, if any, analysis of or attention to the application of the Compact has been made.

The Tributaries:

Inasmuch as the Master holds rights and uses on the tributaries to be immaterial and not subject to pro tanto charge to the states of use (including uses on the main stream above Lake Mead)[11] and invalidates pro tanto deductions in the Arizona and Nevada Contracts[12] (on the basis of the Project Act and contracts being controlling), may we analyze the Compact on this subject.[13]

---

[8]U.S. Op. Br. Pgs. 10 et seq., U.S. Rp. Br. Pg. 8.
[9]U.S. Op. Br. Pg. 6 "Argument."
[10]U.S. Rp. Br. Pg. 33.
[11]M.R. Pgs. 183, 226, 242, 316, 325.
[12]M.R. Pgs. 207, 237.
[13]The effect of the Project Act is discussed later under that topic heading.

Use and Supply:

We believe that to interpret properly the Compact and its effect on the Project Act and Secretarial contracts there must be first kept in mind the distinction between *supply* on the one hand and the division of *beneficial consumptive uses* dealt with by the Compact on the other hand.

The obligations of the Upper Basin to furnish *supply* to the Lower Basin are contained in the following provisions of the Compact.

Article III(d) provides that the Upper Division will not cause the flow of the River at Lee Ferry to be depleted below an aggregate of 75,000,000 acre feet for any period of ten consecutive years reckoned in continuing progressive series.[14]

Article III(e) provides that the Upper Division shall not withhold water and the states of the Lower Division shall not require the delivery of water which cannot reasonably be applied to domestic and agricultural uses.[15]

Article III(c) provides that in the event of a treaty with Mexico giving rights to System water, such shall be supplied *first* from surplus *above* 16,000,000[16] acre feet of *uses* (7,500,000 in Upper Basin and 8,500,000 in Lower Basin) and then if there shall not be such surplus, one-half of the deficiency shall be supplied by each Basin, the Upper Basin's share to be delivered at Lee Ferry.[17]

---

[14]M.R. Pg. 373.

[15]M.R. Pgs. 373-374.

[16]Articles III(a) and III(b).

[17]M.R. Pg. 373.

Turning now to the division made by the Compact between Basins, we find in Article III(a) that what is apportioned there is *not supply* but exclusive beneficial consumptive *use* in perpetuity. In other words, the exclusive *right* to beneficial consumptive *use* in *perpetuity* of 7,500,000 acre feet per annum in the Lower Basin.[18]

This vast distinction quantitatively between supply at Lee Ferry and uses at sites and places of *use* scattered throughout the Lower Basin is recognized by the Master. Claims that in the Compact supply and use are correlative (III(d) and III(a)) or that Article III(a) uses are confined to the main stream are rejected.[19] The Master points out that said *supply* is considerably smaller than uses given by Article III(a).[20]

Tributary Uses:

We, however, submit that there can be no room for argument, as made by Arizona, that the perpetual beneficial consumptive *uses* permitted to the Lower Basin do not include *all* Lower Basin tributary uses, including the Gila River beneficial consumptive uses. Article III(a) specifically says that the III(a) uses are "from the Colorado River System".[18] To further fortify this contention attention is called to Article II(a) of the Compact which expressly defines *System* as meaning Colorado River and its *tributaries* within the United

---

[18]M.R. Pg. 373; Article III(a): "There is hereby apportioned from the Colorado River System in perpetuity to the Upper Basin and to the Lower Basin, respectively, the exclusive beneficial consumptive use of 7,500,000 acre-feet of water per annum, which shall include all water necessary for the supply of any rights which may now exist."

[19]M.R. Pgs. 142-143.

[20]M.R. Pg. 144, first paragraph.

States.[21] That the Project Act made no change in this situation is treated hereinafter under Project Act.

Appropriative Rights:

The foregoing is not all that Article III(a) of the Compact does. Having in mind the then current decision in Wyoming vs. Colorado holding the law of appropriation to be applicable to interstate streams and rights[22] and the Fall, Davis and other Reports calling attention to the Lower Basin claims to appropriative rights,[23] we submit that there is significant language in the Compact recognizing these claims. Article III(a) of the Compact provides that the 7,500,000 acre feet per annum of *System* beneficial consumptive uses apportioned to the Lower Basin shall "include *all* water necessary for the supply of any *rights which may now exist*".[18] We submit that in the atmosphere of 1922 this would be peculiar language and mere surplusage unless it had some purpose and definite meaning.

To us it had and still has a very plain and necessary meaning. To us it meant and means this. That the Lower Basin States agreed with the Upper Basin States that the total or aggregate of all Lower Basin *then existing rights* would be included within and *sat-*

[21]M.R. Pg. 372.

[22]259 U.S. 419 at 465, 468, 470; 66 L.Ed. 999 at 1013, 1015-1016 (1922).

[23]See Pg. 8 supra.

[18]M.R. Pg. 373; Article III(a): "There is hereby apportioned from the Colorado River System in perpetuity to the Upper Basin and to the Lower Basin, respectively, the exclusive beneficial consumptive use of 7,500,000 acre-feet of water per annum, which shall include all water necessary for the supply of any rights which may now exist."

isfied from the *System* uses[24] in the Lower Basin. That quantitatively this relates to and means the permanent right to use[24] of the first 7,500,000 acre feet per annum.

To us this meant and means that this *perpetual* aggregate annual right to 7,500,000 acre feet of beneficial consumptive uses from the *System* in the Lower Basin was and is, as between the Lower Basin States, a competitive and adverse right in each Lower Basin State against the other, to a part of that total. To us it also meant and means that as to each Lower Basin State not only was there given protection of its existing *System* rights but each such state was and is correlatively chargeable, accounting-wise, with all its *System uses.*[24]

Compact Accounting:

This brings into focus the matter of the need of Compact accounting. May we digress from existing rights for a moment to try to demonstrate why we think Compact accounting is inevitable. Also, why this case cannot be disposed of here without Compact accounting.

Basin vs. Basin:

Taking this matter first from the standpoint of Compact accounting Basin vs. Basin, we again turn to Article III(c) of the Compact.[25] Under Articles III(a) and (b) the Lower Basin has the right to put to beneficial consumptive use 8,500,000 acre feet per annum from the *System,*[26] not simply the main stream. By

---

[24]Meaning beneficial consumptive uses.
[25]M.R. Pg. 373.
[26]M.R. Pg. 373.

Article III(c) the Lower Basin is protected against the Upper Basin to the extent of the 8,500,000 annual acre feet use of *System*—not *main stream*—uses, as against the impact of the Mexican Treaty obligation.[27] The Upper Basin is likewise protected as to its 7,500,000 a.f. per a. of such uses. Then if there is a deficiency below 16,000,000 a.f. per a., Article III(c) requires each Basin to contribute in equal shares to the deficiency for Mexico.[28] It seems to us too clear for argument that before the Lower Basin may call on the Upper Basin for any part of the deficiency for Mexico the Lower Basin must first show that beneficial consumptive uses in the Lower Basin from all *System*—not simply main stream sources—have been exhausted to the extent of 8,500,000 a.f. per a. This calls for accounting.

State vs. State:

If Basin vs. Basin, all Lower Basin uses from System, as distinguished from uses of the main stream or some part thereof, are accountable before the Lower Basin can call upon the Upper Basin for water for Mexico, then what of the relation of the Lower Basin states one against the other as to such a System accounting? Before any Lower Basin state can be called upon to supply any part of a deficiency for Mexico is not that state as against other Lower Basin states entitled to participate in the System accounting of Lower Basin uses? It is to be remembered that under the Compact the uses the Lower Basin is given is of *Sys-*

---

[27]Since fixed by Treaty as 1,500,000 a.f. per a. from all System sources net delivery into limitroph section of River at boundary. See Ariz. Ex. 4, Tr. 220 at Pgs. 1288 et seq. of Ex.

[28]M.R. Pg. 373.

tem, not merely "main stream" character—and includes tributaries by definition.[29] And is not each Lower Basin state against the other entitled under Article III(a) of the Compact to have its existing rights to III(a) *System* water uses protected against the inroads of uses not chargeable to or protected by the existing use provisions of Article III(a) or III(c)? Put in another way—may uses out of the main stream by any or all Lower Basin states total the amount of uses available to the Lower Basin by the Compact and any one or more Lower Basin states also make tributary uses in addition thereto? Is each Lower Basin state at liberty to make all the uses of non "main stream" waters at will and without limit or pro tanto charge and only be charged with its "main stream" uses as its total use of System uses permitted to the Lower Basin by the Compact? We submit this just can't be against the Upper Basin. We also submit that it is impossible between states of the Lower Basin. The aggregate of the Lower Basin states' uses, we submit, is controlled between states on the same bases as Basin vs. Basin, i.e., System—not "main stream" wise. We submit no state—one against the other—can be compelled to give up its III(a) uses as to a state using water in addition to its III(a) rights. If Arizona's uses on the Gila are III(a) uses, then we submit she can't have her full share of III(a) uses again from the main stream.

It is to be remembered that the Upper Basin as against the Lower Basin is entitled, before furnishing deficiency water for Mexico, to an accounting of all System Lower Basin uses up to 8,500,000 a.f. per a. This

---

[29]Articles II(a), III(a) and (b), Pgs. 372-373, M.R.

same accounting, we submit, is available to and a right of each Lower Basin state against the other before the Lower Basin is to be required to give up *any part* of its *8,500,000* a.f. per a. of uses.

Compact Controlling:

The question may be asked as to why we stress the Compact so much when the Master agrees that the Compact includes all tributaries.[30] The reason is that the Master holds the Compact irrelevant[31] and the Project Act controlling.[32] To this we call attention to the fact that the Master fails to consider or apply the language of the Project Act making the Compact controlling. When Congress provided in the Project Act for ratification of the Compact, Congress also in the same Section of the Act provided (1) that the rights of the United States and those claiming under the United States should be subject to and controlled by the Compact as to the waters of the Colorado River and its *tributaries;*[33] and (2) that all contracts or other privileges from the United States or under its authority necessary or convenient for the use of the waters of the Colorado River or its *tributaries* shall likewise be subject to and controlled by the Compact.[34] But Congress did not stop there. It also provided that the *United States* as well as its contractees and users and *appropriators* of water from the reservoirs and *works provided for in the Project Act* should be *subject* to and *controlled* by the *Compact—notwithstanding anything in*

[34]Pro. Act, Section 13(b), Pg. 393 M.R.

the Project Act to the contrary and that all contracts should so provide.[35] We submit these provisions, ignored by the Master and our opponents, are unanswerable and make the Compact not only relevant but controlling, and the matter before the Court a System and not a segmented "main stream" one.

The contracts of the parties do specifically provide that the Compact is controlling.[36] It is to be noted that these contract provisions,—as does Project Act Section 13(a),—include tributaries as being subject to the Compact.[37]

The Master reasons that there is no basis in law for regulation of the tributaries by the United States. As stated—"United States cannot by its operation and control of Hoover Dam regulate the flow of water in the tributaries—".[38] Also, the Master indicates that charging pro tanto uses on tributaries is contrary to Section 18 of the Project Act.[39] Section 18 leaves to the states the appropriation, use and control of water within their borders, except as modified by the Compact.[40] The Master overlooks the proposition that by *ratification* of the Compact the *states* have consented and *agreed* to an *accounting* of their beneficial consumptive uses on all parts of the *System,* including all tributaries. This does, however, raise the question of administration. We submit this does not mean that

the United States may go into a state and control the place, quantity and priority of use intrastate at the will of the United States, as the United States contends with respect to its position in Nevada[41] and elsewhere. Congress has decided to the contrary as to the United States powers by providing that the United States is bound by the Compact notwithstanding anything contained in the Project Act[42] and providing for state regulation of appropriation and use of water within a state.[43]

Administration of the Compact in Harmony With Project Act:

The administration sounds complicated. In fact, we submit it is not as complicated as would be the Master's formula which sounds simple but, we urge, is not. His formula is predicated on a combination of "present perfected rights"[44] and pro ration[45]. To complicate the matter he decrees that the first 7,500,000 acre feet per annum in the segmented "main stream" under the Project Act[46] is subject to disposition under the Project Act and Secretarial contracts in the full Compact quantity from the "main stream" only. It is submitted this is in direct conflict with the controlling effect of the Compact provided in the Project Act, and contrary to the express requirements of the Compact that the first 7,500,000 a.f. per a. is *System* and shall satisfy

[46]First and second paragraph of Section 4(a) of Project Act which the Master says gives of the *Article III(a) Compact water* 4.4 to Cal., .3 to Nev. and 2.8 to Arizona.

existing rights. Also because the Master's formula, after allocating 7,500,000 a.f. per a. from the "main stream" in effect allocates without pro tanto charge the tributary uses and uses on the main stream above Lake Mead. How any administration could be had under this conflicting set of factors we submit is beyond determination. Yet the Compact, we submit, cannot be and was not intended to be ignored even in the passage of the Project Act. If so, what is the meaning of the several above provisions of the Project Act making the Compact controlling?

It is submitted that the only feasible way to administer the matters involved in this case is to start with the Compact. Then apply the Project Act subject to the Compact. Such an accounting is inevitable in the end. Any piecemeal disposition of the matter in this case only evades the ultimate. You just can't, we claim, dispose of a part of the main stream and leave all other uses out and ever conform interbasin or interstate to the Compact. The Master does it by ruling the Compact irrelevant and this without reference to the provisions of the Project Act making the Compact controlling.[47]

Project Act

The Master holds the Project Act to be controlling over the Compact but only as to the "main stream" from Lake Mead and below.[1] The Compact which he holds applies to the System and includes the tribu-

---

[47]See infra Pgs. 39-48, 52 for an outline and formula for the Decree in this case, which formula, we submit, harmonizes the Compact and Project Act and defines the rights of all Lower Basin states.

[1]M.R. Pg. 151.

taries,[2] is held to be irrelevant.[3] This is done upon the basis that the Compact deals only interbasin.[4]

A significant holding is that the Compact is only applicable to the extent made applicable by Statute (presumably Project Act) and contracts.[5] Then it is held that the Project Act is the source of authority—not for allocation of System uses in the Lower Basin—but only from the segment of the main stream water from Lake Mead and below.[6] On this theory the Master holds that pro tanto charges for uses above Lake Mead are void.[7] By implication and omission in the Arizona Contract the uses on the Gila River are excluded from pro tanto charge of Compact uses.[8] It is then held that the Project Act by Section 4(a) second paragraph furnishes authority for Arizona to have the Gila uses without pro tanto charge therefor, and in addition thereto its alleged full quota from main stream sources.[9]

Here we clash with the Report. The Master holds Section 4(a) second paragraph[10] and Section 5[11] to be the guiding source of authority for the contracts, and the Arizona contract in particular.[12] The Arizona contract is held valid, except for pro tanto charges for Arizona uses above Lake Mead.[13] Arizona contends

that other provisions of her contract recognizing the right of Nevada, Utah and New Mexico to specified uses of water are also invalid.[14]

Arizona Contract Invalid as Interpreted:

We contend that the Arizona Contract as interpreted is invalid for the reasons that it is contrary to and in conflict and violation of the Compact and also in violation of the Project Act. That the Project Act requires contracts under the Project Act to be subject to and controlled by the Compact notwithstanding anything to the contrary in the Project Act.[1] This relates specifically to the Project Act works.[1] All contracts are required to be conditioned on their being subject to and controlled by the Compact.[1] Arizona's contract is so conditioned.[2]

As the Project Act, and in particular the second paragraph of Section 4(a) thereof, are claimed by Arizona to be the mandatory basis of its contract[3] and the Master holds it to be at least a guide,[4] may we turn to the Arizona Contract for some of its terms. Section 7 thereof deals with the quantities of beneficial consumptive uses of water Arizona is to have.[5] It is to be noted that the use Section 7(a) of Arizona's Contract purports to allocate to the extent of 2,800,000 acre feet of use per annum is not by the contract identified except to specify "from storage in Lake Mead—" thus main stream as segmented. Now may we turn to

the language of the second paragraph of Section 4(a) of the Project, said to be the source of giving Arizona 2,800,000 a.f. per a. out of the main stream as segmented *plus* non pro tanto charge of uses above Lake Mead or from tributaries, i.e., System uses. There we find that the language of the Act is not to give Arizona 2,800,000 a.f. per a. of a segment of main stream uses, or just any uses, but on the contrary 2,800,000 a.f. per a. of that 7,500,000 a.f. per a. of System uses of water apportioned by Article III(a) of the Compact.[6] The III(a) uses are *System*—not simply or confined to a segment of the main stream—and are clearly and unequivocally defined as such in Articles II(a) and III(a) of the Compact.[7]

Not only is the Arizona Contract in violation of the Article III(a) aspects as expressed in the second paragraph of Section 4(a) of the Act as well as Article II(a) of the Compact, but it is in conflict with and violates another provision of the Compact incorporated into the Act by reference. The beneficial consumptive uses allocated in perpetuity to the Lower Basin of the first 7,500,000 a.f. per a. are to include all water necessary to supply any rights "which may now exist" in the Lower Basin. As III(a) is System and not main stream or a segment thereof, we submit there is no basis for allocating all of that 7,500,000 a.f. per a. out of the main stream.[7a] That any beneficial con-

---

[6]M.R. bottom Pg. 382 and top Pg. 383.

[7]M.R. Pgs. 372-373.

[7a]The Master's formula is 4.4 to Cal., .3 to Nev. and 2.8 to Arizona out of III(a)—all from Lake Mead only. While the contract language does not identify these items as III(a) the authority for the allocation of this 7.5 is of III(a). See both paragraphs of Section 4(a) of Act, Pgs. 382-383, M.R.

sumptive uses of water in the Lower Basin by Arizona from any part of the *System* must be charged pro tanto as a part of any 2,800,000 a.f. per a. to Arizona of III(a) uses.

Turning now to paragraph 7(b) of the Arizona Contract,[8] this provides for Arizona to have one-half of the excess or surplus unapportioned by the Compact—less such thereof as may be of right in Nevada, New Mexico and Utah. Here again the source is Lake Mead storage. Arizona says the Secretary had no right to recognize any rights of Nevada, Utah or New Mexico to any part of said excess or surplus.[9]

Going back to the said second paragraph in the Project Act, the authority there is—(if we are to consider something that never came into being)—for Arizona to have one-half of the excess or surplus unapportioned by the Compact.[10] In the language of this subparagraph of Section 4(a), it is obvious, we think, that the excess and surplus referred to includes use available to the Lower Basin above the III(a) uses. We can find no other waters referred to there as to these first two items other than III(a) and surplus and excess. Here again we refer back to the Compact and the other or additional 1,000,000 a.f. per a. of uses of which the Lower Basin may make use by Article III(b) of the Compact.[11] The uses there referred to are of *such* waters, referring back to System uses specified in Article III(a). The Master holds this to be

[8]M.R. Pg. 401.
[9]Ariz. Op. Br. Pg. 29, Ariz. Rp. Br. Pg. 88.
[10]M.R. top Pg. 383.
[11]M.R. Pg. 373.

so.[12] Thus to the extent of 1,000,000 a.f. per a. of excess or surplus in the second item of Arizona's Contract,[13] any part thereof confined and limited to the segment of the main stream—i.e, Lake Mead—is under the language of the Arizona Contract, void as contra to the Project Act and contrary to the Compact. The contract, as to surplus or excess, allocates such to Arizona—not from the System, where it is under the Compact and the Project Act (by its reference to the Compact)—but from Lake Mead.

To make matters worse, the Master by his allocation scheme, said to be authorized by the Project Act and implemented by the Secretarial contracts,[14] allocates all 7,500,000 a.f. per a. of III(a) uses plus both halves of all surplus or excess however defined—*out of Lake Mead*. This by his own definition includes the III(b) uses. Therefore, the Master's formula disposes of the total of at least 8,500,000 a.f. per a. of Compact uses —the total available to the Lower Basin from the *System* by Articles III(a) and (b) of the Compact but *not* from the *System*—but from *Lake Mead*. In addition, the Master's formula allows all tributary uses,[15] including the Gila, without pro tanto charge against the 8,500,000 of uses. This completely defeats the Compact by allocating 100% of the Compact III(a) and (b) from the main stream and treating other uses from tributaries as available over and above and free from accounting to the Upper Basin and this not *accountable* as to Mexican Treaty waters.

[12]M.R. Pgs. 172, 194.

[13]Section 7(b) Pg. 401 M.R.

[14]M.R. Pgs. 138, 151, 153.

[15]Except for unexplained reasons—the Bill Williams. M.R. Pg. 184.

This, we submit, demonstrates the utter impossibility of any administration except by administration of the Colorado River System. It nullifies the Compact and its administration. We submit you just can't have any such accountings now or later because the necessary factors cannot be harmonized at all.

Here we again refer to the above material in reference to the Compact being controlling.[16] If the rights under the Project Act do not have to be harmonized with and be subject to and controlled by the Compact —then what—we ask, is the meaning of the several provisions of the Project Act and of the contracts so providing?[17] Also, it is to be noted that if the Tri-State Compact,—preratified by Congress as provided in the second paragraph of Section 4(a) of the Project Act—had been agreed upon by the three states, it would have had to have been upon the condition that such a Tri-State Compact had to be "in all particulars" subject to the provision of the Colorado River Compact and Arizona would have had to ratify the Colorado River Compact.[18] This coupled with the fact that the second paragraph of said Section 4(a) as to items (1) and (2) (2.8 plus excess) refer to Compact uses, i.e., System uses, we submit demonstrates that the Arizona Contract and the Master's main stream formula are unsound and unsupported and the Arizona Contract is void as interpreted by the Master.

This is not to say that Arizona might not be entitled to 2,800,000 a.f. per a. of III(a) uses and one-

---

[16]See Pg. 18 supra.

[17]See Sections 8(a), 13(b),(c) and (d) of the Project Act.

[18]See items 6 and 7 of said second paragraph of Sec. 4(a) at Pg. 383 M.R.

half the excess or surplus, and Nevada 300,000 a.f. per a. subject to the rights of Utah and New Mexico from *System* uses available to the Lower Basin but *not* from the *main stream alone* with tributary uses added.

If the concept behind the formula of the Master be; that by allocating 100% of the III(a) water from Lake Mead and allocating 100% of surplus and excess from Lake Mead and allowing all tributary and other uses as plus 100%, it can be done by depending upon there being physically available in the main stream below Lee Ferry unused portions of Article III(a) uses apportioned to the Upper Basin in perpetuity—then we submit there are unsurmountable legal obstacles.

First is the matter of the Master's designation of the main stream from Lee Ferry to Lake Mead—265 miles—as a tributary and uses therefrom not to be deductible pro tanto from the allocated Lake Mead amounts.[19] A holding herein that would become res adjudicata would wreck the whole concept of the Compact as well as the Project Act.

To decide that the Arizona Contract for water from Lake Mead may be *permanently* attached to unused water apportioned in perpetuity to the Upper Basin to satisfy Lower Basin III(a) or (b) uses encounters several legal obstacles.

One is that Section 5 of the Project Act provides that the Secretarial contracts shall be *for permanent service.*[20] How can a supply that has been allocated "in perpetuity" to the Upper Basin be made the subject of permanent service to a Lower Basin state?

---

[19]M.R. Pg. 226.

[20]See Pgs. 384-385 M.R. last sentence beginning on Pg. 384.

Secondly, to assume the inability of Upper Basin states to develop projects including transmountain diversions sufficient to put to use the full perpetual allocation of the Upper Basin is unsound as a practical matter and no basis for the legal assumption of availability to the Lower Basin on a permanent basis.

Thirdly, if there are quantities of the Upper Basin allocation of 7,500,000 a.f. per a. physically present at Lee Ferry because unused in the Upper Basin, its very presence would preclude calling on the Upper Basin for water for Mexico and the Upper Basin could, and undoubtedly would, require its application to Mexico. In so doing there seems to be no answer to the proposition that in such an accounting all Lower Basin System uses would have to be accounted for. In this accounting we submit California is not required to sit by and have only main stream uses by other states accounted for before the California uses are to be burdened. We submit California would be entitled to have Arizona charged for all her tributary uses as well as her main stream uses as a part of the 8,500,000 a.f. per a. that are available and chargeable to the Lower Basin before demand can be made on the Upper Basin. Being in the Lower Basin as surplus already, we submit the Upper Basin could require this surplus contribution to Lake Mead to be used for Treaty purposes. Thus, we claim, it would not be available in the Lower Basin for permanent service to Arizona. Therefore, at least interbasin—and we submit between states in the Lower Basin—this 2,800,000 a.f. per a. allocated by the Master to Arizona from the "main stream" would be subject to the Mexican Treaty obligation at least to the extent of Arizona's uses on the Gila. Arizona's rights

to main stream uses would also be subject to such diminution—because of her Gila uses—to the extent of other Lower Basin states' rights to main stream water. Therefore, we say that there could be nothing legally firm or permanent or justified in awarding Arizona her alleged full share of System water out of the main stream, whether or not dependent upon conjectured and unfirm use of Upper Basin water. Also because, we submit, you just cannot give Arizona 100% of her alleged share of System water out of the main stream and also give her unaccounted for uses out of the Gila and much less above Lake Mead, or in defiance of the use rights of other Lower Basin states.

The Gila Under the Project Act:

We submit that under the Compact there is no room for argument against the Compact including all the tributaries, including the Gila, as System. That the 8,500,000 a.f. per a. of uses avialable to the Lower Basin is of System water. The Master so holds.[1]

Arizona insists that the Project Act, second paragraph of Section 4(a), gives to Arizona the exclusive use of the Gila. Also, gives protection against Arizona being required to release any of the waters of the Gila System for use in Mexico.[2] Arizona also interprets this language as giving the Gila System uses to Arizona free from any quantitative accounting or pro tanto charge against her share of System water uses available under the Compact.[3] There is no question but that Arizona sought by every device from 1922 through 1929

---

[1]M.R. Pgs. 142-143.

[2]Items (3) and (4) Section 4(a), second paragraph M.R. Pg. 383.

[3]Ariz. Rp. Br. Pg. 78.

to get the Gila uses exclusively for Arizona, and out from under the Compact. Arizona's briefs and citations show diligent efforts and skillful maneuvering to this end. On the other hand, the opponents to this were equally as adamant that the Gila River be included along with all other tributaries as a part of the System and its uses accountable as a part of the System. Wishing to avoid repetition, we here refer to the material at Pages 91-96, 99-100 of California's Reply Brief. To us the many arguments pro and con before ratification of the Compact and before passage of the Project Act demonstrate that the issue was strenuously debated. To us it also demonstrates that if there had been any intent to amend the Compact to exclude the Gila System, or any tributaries, from the Colorado River System, the matter was so prominently before Congress that it could and would have been expressed by amendment of the Compact. Two express amendments were made to the Compact.[4] We therefore submit that as the Project Act specifically makes the Compact controlling[5] and it was not specifically amended in respect to System, then that is decisive.

But Arizona says the Project Act amended or modified the Compact in this regard.[6] Much legislative history is quoted by all parties hereto. The United States makes a timely observation. "In debates of such duration, participated in by many individuals, representing competing interests, it is inevitable that many argu-

---

[6]Ariz. Op. Br. Pg. 27.

ments were advanced and statements of intention made which confuse the picture."[7] We therefore merely cite the record to show that if there had been any intention to eliminate the Gila from System or System accounting it could have been expressly done. We submit it was not done either as to the Compact or Project Act.

As to the effect of the second paragraph of Section 4(a) of the Project Act and with particular reference to the Gila River, we submit the following. The United States expresses the matter aptly. The above mentioned paragraph of Section 4(a) was a way out of a possible impasse. It merely offered to Arizona, Nevada and California an opportunity to make a Compact. The Compact was never made. No such agreement was ever made. We do not believe it necessary to resolve any precise meaning to items (3) and (4) of said second paragraph of Section 4(a).[8] By her series of reservoirs of eleven or more on the Gila System[9] Arizona has successfully and completely cut off any flow of the Gila into the Colorado and is putting it fully to use in Arizona. The Arizona and New Mexico Gila System uses are now far upstream on the Gila and remote from the Colorado, and it is physically very unlikely that any interest would advocate or be able to release from Arizona reservoirs water so as to make it available to Mexico near Yuma. Therefore, Arizona has really accomplished what we believe to be the suggestion in 4(a) aforesaid.

However, we submit that it was never the intention of the Upper Basin states, much less the Lower Basin

---

[7]U.S. Rp. Br. Pg. 38.
[8]M.R. Pg. 383.
[9]M.R. Pgs. 39-43.

states, to give Arizona the use of the Gila as being unaccounted for. Even if so, it was never done by Compact or agreement. To carve the Gila System out of the Colorado River System, accounting-wise, and give it to her in addition to a full allotment of all her claims to her alleged share of System water is too big a jump, we contend.

The Master holds and Arizona, naturally, agrees that the Secretarial contract affects this non-accounting for Gila uses because there is no reference to accounting or pro tanto reduction of Arizona's Gila uses.[10] This, we submit, fails of its own weight. The Master says the Project Act does not cover the Gila[11] and only the Project Act and contracts are held to be controlling.[12] It is hard, then, to see how the Project Act could eliminate Compact accounting on the Gila if the Project Act did not deal with the Gila and the failure in the Contract to exclude the Gila, amounting to exclusion from Compact accounting, is negatived by the provisions of Sections 7(c) and 13 of the Arizona Contract unequivocally making the Compact controlling.[13]

Under the Pleadings and Evidence:

It is submitted that it is very significant that following 1929 ratification of the Compact and passage of the Project Act, Arizona did continue to try to eliminate being charged for Gila uses. If the Compact or Project Act notoriously settled the issue as now

---

[10]See Section 7(d) of Arizona Contract, M.R. Pg. 401. Master's holding Pg. 232 of Report.

[11]M.R. Pg. 232.

[12]M.R. Pg. 138.

[13]M.R. Pgs. 401 and 406.

claimed by Arizona, there would have been no need for Arizona's subsequent conduct.

Having tried unsuccessfully to eliminate the Gila from accounting by Tri-State Compact, Arizona next resorted to the claim that at least one million a.f. per a. of Compact uses (i.e., III(b)) were subject only to Arizona Gila use under the Compact and Project Act and contracts made by the Secretary were infringing upon this right.[14] This Court held there was no merit to Arizona's claim that III(b) water related only to the Gila or was exclusively for Arizona.[15]

And may we now call attention to the pleadings herein and the trial record herein. We submit this is important. The contentions of Arizona, now made, that the Gila had been eliminated from accounting in 1929 and was so understood is completely refuted by Arizona's own pleadings herein. Further, we submit that the pleadings herein and the years and volume of trial record herein were devoted, not to the issue argued by Arizona or contained in the Report, but to a complete disposition of the Compact as well as the Project Act, Limitation Act and contract issues herein. The pleadings and trial were devoted to the issues of the rights and uses of Nevada and Utah on their respective tributaries, as well as Nevada's main stream claims. The pleadings and trial also covered in detail the New Mexico tributaries rights and uses. They also covered in detail the rights and uses of Arizona on the Gila and the main stream. It also covered the California claims to

---

[14]Arizona vs. California, 292 U.S. 341 at 349, 350-351; 78 L.Ed. 1298 at 1301, 1302 (1933).

[15]Arizona vs. California, 292 U.S. 341 at 358; 78 L.Ed. 1298 at 1306.

rights and uses on the main stream. As we are here discussing primarily the Gila, we will document the issues in the pleadings and the evidence under a separate heading.[16]

The next effort of Arizona to eliminate the Gila from System accounting was in this case. It was based on the concept of gaining, without accounting therefor, about one million a.f. per a. on the Gila by this process. Regardless of the amount actually put to beneficial consumptive use on the Gila, Arizona urged that she should only be charged or have to account for the diminution to the flow of the main stream by the action of man on the Gila. Even though Arizona at various times claimed her Gila uses to be about 3,000,000 a.f. pe a.,[17] she claimed the "reconstructed virgin flow into the Colorado from the Gila to be only about one million a.f. per a."[18] This claim she has now receded from and admits accounting for use should be based on beneficial consumptive use at places of use.[19]

As a part of Arizona's claims in her Complaint she stated her Gila uses but claimed she should only have to account therefor to the extent of her uses in excess of one million a.f. per a. This million measure was based on her main stream depletion theory.[20] She also alleged that her Gila uses were chargeable to III (b) uses and to III(a) uses only to the extent that III(a) uses exceeded the one million of III(b) uses.[21] Strange pleadings in 1952, it would seem, if it was so

well known to Congress in 1929 and to Arizona at all times since then that the Gila was excluded from Compact or any accounting, or if the Project Act in 1929 accomplished giving the Gila to Arizona free from accounting. Nevada plead that the Gila uses were accountable as III(a) uses.[22] The United States refers to the Arizona Contract for its terms and alleges the United States is "in grave doubt" about whether the Arizona Contract covers tributaries and applies to the Gila and requests this Court to resolve the matter.[23] Weeks were spent in trying Arizona's rights and uses on the Gila and primarily on the issue of the extent of and how to measure them quantitatively.[24] New Mexico plead her rights and uses on the Gila River and its tributaries in New Mexico—many, many miles and the width of Arizona away from the main Colorado[25] and claimed she was entitled to and was of right using III(a) and III(b) uses.[26] Her whole case on the trial was devoted to her detailed uses in New Mexico from the Gila System.

Again, we say these are strange pleadings and trial proceedings if the Gila had been eliminated. Also, may we ask this question. If only the main stream of the Colorado from Lake Mead and below are involved in this case and tributaries, including the Gila, are not involved in this case, and the Project Act is controlling and the

Compact is irrelevant—then why any decision on the Gila either in Arizona or New Mexico, and where does jurisdiction therefor come from? We submit that the Gila and all tributaries are involved in this case and that the case was plead and tried on that basis and should be so decided.

The Compact, Project Act, Limitation Act and Contracts Harmonized

We herewith submit our contentions that the Compact, Project Act and Limitation Act can be and must be harmonized to enable any administration of the Colorado River System in the Lower Basin and in both Basins. We also submit that the contracts can all be sustained under the interpretations we offer. We further submit that the following was and is contemplated in the drafting and ratification of the Compact, the passage of the Project Act, the enactment of the Limitation Act and in the drafting of the contracts.

Application of the Compact:

We contend that the Compact contemplated and provided in Article III(a) for two things. One was that the beneficial consumptive uses to be perpetually available to the Lower Basin to the extent of the use of the first 7,500,000 a.f. per a. were to be of System—not merely a part thereof. That by providing that that amount of beneficial consumptive use should "include all water necessary for the supply of any rights which may now exist," each Lower Basin state was and is entitled to have its then existing uses served from said amount of uses. The Master has held, and we agree, that the operative date is June 25, 1929[1] when the

[1]See M.R. Pg. 152 and footnote 20.

Compact became effective by ratification by the United States and Proclamation of the President. This right to use of the first 7,500,000 a.f. per a. of such uses we claim had as reciprocal thereto the obligation to account anywhere on the System for existing uses in the Lower Basin.

To demonstrate this concept, we beg the indulgence of this Court for an analysis of the issues in the pleadings, the evidence and record in support of the proposition that this case as plead and tried was a System—not main stream matter. We wish to demonstrate that as a practical as well as legal matter the case can and in fact must be disposed of on a System and not main stream basis. Also, that Compact accounting, practically and legally, is not only possible but required. We beg indulgence to show in some detail that the rights of all Lower Basin states are not only before this Court but what their rights are and how administration can best be had by Decree herein.

Reference to the pleadings and record as to each Lower Basin states rights of use as established in the case follows. We will make it as concise as possible. We feel it important to the overall determinations to be made herein.

We do not contend that the following details are all the evidence, but we do contend that the following is substantially the picture and furnishes a basis and pattern for disposition of this case.

As to Utah:

We submit Utah was entitled to protection for her then existing rights as of 1929 on her tributaries in the Lower Basin. She plead her claims of right on

her tributaries, *i.e.*, on the Virgin River and adjacent areas and on Kanab and Johnson Creeks. She claimed existing rights to 65,625 plus 15,173 a.f. per a. for 22,857 plus 5,338 acres; also asked for 70,852 a.f. per a. for new future uses.[2] Utah proved that her existing uses were initiated and established in the early Mormon days in 1847[3] and 1870.[4] A map of the irrigated areas was introduced.[5] A 1902 detailed study of these uses showing ditches used and areas served was received.[6] A series of Decrees adjudicating priorities prior to 1929 are in evidence.[7] Evidence as to acreages, names of appropriators and descriptions of properties served were introduced.[8] Thus Utah plead and proved very old uses, *i.e.*, III(a) uses, and asked for recognition for future needs from surplus.[9] The established Utah appropriations and existing uses are as follows: From Virgin River, 48,750 a.f. per a.; Johnson and Kanab Creeks, 6,850 a.f. per a. (Vol. II, Cal. Findings, pgs. XVII-1-10). Summarized to rounded figures of 56,000 a.f. per a. (Vol. I, Cal. Findings, pg. IV-55), recapped pg. VII-14.[9a] See Master's Report, pg. 97.

[9]See Utah Complt., Pgs. 3, 6.

[9a]These references to proposed California Findings are cited also for their references to the supporting material in the transcript and trial exhibits as cited.

As to Nevada:

Nevada alleged a right to 539,100 a.f. per a. of III(a) uses.[10] She alleged in detail her existing rights and future claims on her tributaries on the Virgin and Muddy Rivers and Meadow Valley Wash. Her total tributary "existing" uses were plead as 48,340 a.f. per a.[11] and she prayed that her use rights be decreed to be of III(a) and to have a right in the future to share in surplus.[12] The tributary uses were established to be very early ones, some dating back to Mormon colonization dates in 1865.[13] Evidence of early appropriation was introduced on the Virgin River showing pre-1905 rights and priorities.[14] The Meadow Valley Wash rights stemming from 1864[17] were evidenced by priority tables, legal descriptions, permits for a total acreage of 1,790 acres.[18] The established Nevada appropriations and existing uses are as follows: Virgin River System, including Muddy River and Meadow Valley Wash, 51,000 a.f. per a. (Vol. II, Cal. Findings, pgs. XV-1-16; Vol. I, Cal. Findings, pg. IV-55, Finding 4F-102, recapped at pg. VII-14). Nevada's main stream uses are all post-1929 See Master's Report, pg. 71 concerning Nevada uses.

As to New Mexico:

New Mexico plead uses for 20,900 acres i.e. 9,500 on the Little Colorado and 11,400 acres on the Gila—

all in New Mexico—as existing uses and rights,[21] as III(a) and (b) uses,[22] and claims to surplus.[23] The evidence presented was extensive and included some 3,000 pages of deposition[24] a stipulation concerning documents[25] and a series of maps.[26] The New Mexico contest was really one between New Mexico on the one hand and Arizona's conflicting claims and the claims of the United States for Indian and Federal uses.[27] The established appropriations and existing uses are as follows: On the Gila System, including San Francisco and San Simon Creeks, 34,650 a.f. per a. (Vol. II, Cal. Findings, pgs. XVI-3-9-16A-101.) This is rounded to 35,000 a.f. per a. in the California recap on tributaries (Vol. I, Cal. Findings, pg. VII-14, Item 71-201). Of this, the Master has allowed New Mexico not to exceed 28,227 a.f. per a. as herein indicated. This deduction of 6,423 a.f. per a. from New Mexico's uses are then to be added to Arizona's uses. A compromise as to the Gila uses in New Mexico was arrived at and is adopted by the Master in upholding New Mexico's claims.[28] Article IV Page 354 and VII Page 359 of the Master's proposed Decree set forth the uses New Mexico may make and may not make. They are: From San Simon for 2,900 acres, not to exceed 8,220 a.f. per a.; from San Francisco Creek for 2,269 acres, not to exceed 4,112 a.f.

[27]M. R. Pg. 325.
[28]See Master's holding R. Pg. 324—Also M.R. Pgs. 329, 330.

per a.; and from the Gila proper not to exceed, for 7,057 acres, 15,895 a.f. per a.[29] New Mexico is annually to report the acreages irrigated in accordance with Article IV of the proposed Decree.[30] Neither New Mexico, the United States nor Arizona has excepted from this. See Page 76 for Master's Report on New Mexico uses.

The New Mexico uses on the Little Colorado are established as 10,500 a.f. per a. (Vol. II, Cal. Findings, pg. XVI-6-8, Item 16B-201, summarized in Vol. I, Cal. Findings, pg. IV-55, Item 4F-102, recapped in Vol. I, pg. VII-14, Item 7I-201, Cal. Findings).

This makes a total of tributary uses for New Mexico of 45,500 a.f. per a. (Vol. I, Cal. Findings, pg. VII-14, Item 7I-201). Adjusted to the Master's limitation for New Mexico on the Gila System to 28,227 a.f. per a., this reduces New Mexico's tributary rights and uses by 6,423 a.f. per a. as against New Mexico's proof. Adjusted to the round figures of the Cal. Findings (35,000 a.f. per a. for the proof of 34,650 a.f. per a.), New Mexico's tributary rights and charges are fixed at 45,500 a.f. per a. minus 6,423 a.f. per a. or a total of 39,079 a.f. per a. See Master's Report, pg. 76.

As to Arizona:

Despite lengthy pleadings and a protracted trial over the rights of Arizona on the Gila from the standpoint of the uses being very early ones, and particularly on the measure of Arizona's uses, the matter has become comparatively simple. Arizona now concedes the correctness of the Master's ruling that uses are to be

---

[29]M. R. Pgs. 354-355.
[30]M. R. VII, Pg. 359.

based on beneficial consumptive use at the places of use.[31] The problem of accounting for the measure of Arizona's beneficial consumptive uses on the Gila System has been made simple by studies and evidence as to the safe annual yield there. These studies show that the safe annual yield of the Gila Basin is approximately 1,844,000 af. per a.,[32] as against Arizona's actual uses in excess thereof.[33] California has suggested that in accounting for Gila uses by Arizona this figure for safety be 1,750,000 a.f. per a. of continuous beneficial consumptive uses.[34]

Arizona's tributary uses on the Gila, Little Colorado, Kanab Creek, Virgin River, Bill Williams and miscellaneous tributaries are set forth in detail in Vol, II, Cal. Findings, pgs. XIV-57-103, Items 14G-101-14L-201. These, exclusive of the Gila River System, total 82,500 a.f. per a. (Vol. I, Cal. Findings, pgs. 14-54-55, Items 4F 101-102). The Gila River System uses and rights are given in detail. (Vol. II, Cal. Findings, pgs. XIV-57-75, Items 14G-101-204). The safe annual yield of the Gila System is there calculated at 1,715,000 a.f. per a. (Vol. I, Cal. Findings, pg. IV-54). Recapped, the total Arizona tributary claims and uses, including the Gila River Systems, is 1,797,500 a.f. per a. on a safe yield basis (on the Gila). (Vol. I, pg. VII-14, Item 7I-201, Cal. Findings.) To this figure of 1,797,500 a.f. per a. must now be added 6,423 a.f. per a. taken from New Mexico, thus enlarg-

[33]Cal. Ex. 1514A, Column 5.

[34]See Page V-35, Vol. I, Cal. Findings and Conclusions for details.

ing Arizona's Gila uses. This makes Arizona's total tributary uses 1,803,923 a.f. per a.

As to the United States:

The Master holds that rights to use and uses of main stream water by the United States are to be charged to the share of the state in which it is used.[35] As there is no other source there appears to be no argument. The United States presented all of its claims of rights and uses in extreme detail. The Master sets out each claim in detail, commencing at Page 80 of his Report. These claims are largely, sofar as number is concerned, off the main stream but include all main stream claims.[36] These claims are made the subject of holdings by the Master[37] as well as Findings as to acreages and quantities of water.[38] It is to be noted that quantitatively the Master fixes the uses as per this example, *i.e.*, 51,616 acre feet of annual diversions or a quantity—necessary to supply the consumptive use required for irrigation of 7,743 acres—*whichever is less.*[39]

As to Main Stream:

By the provisions of the first paragraph of Section 4(a) of the Project Act[40] and the provisions of the California Limitation Act[41] California is limited to beneficial consumptive use at points in California of 4,400,000 a.f. per a. of the first 7,500,000 a.f. per a. of such uses available to the Lower Basin plus one-half

---

[35]M.R. Pg. 247.

[37]M.R. Pgs. 254-266.
[38]M.R. Pgs. 267-304.
[39]M.R. Pg. 269.
[40]M.R. Pg. 382.
[41]M.R. Pgs. 397-398.

of any excess or surplus unapportioned by the Compact. The two provisions specifically define the 4,400,000 a.f. per a. as III(a) uses.[42]

The second paragraph of Section 4(a) of the Project Act, for whatever influence it may have, authorized a Tri-State Compact that would have given Nevada and Arizona, respectively, *from* the 7,500,000 of III(a) uses, i.e., *System*, 300,000 to Nevada and 2,800,000 to Arizona, and Arizona the other half of any excess or surplus not apportioned by the Compact. As above discussed, we claim it did not purport to give these quantities to Nevada or Arizona solely from the main stream but from the System.[43]

All of the immediate foregoing is to bring into focus the case as plead and tried; also to give the data for a formula for a Decree we propose in place of the Master's proposed Decree.

We submit that the Compact in making the first 7,500,000 a.f. per a. of beneficial consumptive uses available to the Lower Basin from the System—to include "all water necessary for the supply of any rights which now exist"[44] meant this.

That, as of the effective date of the Compact, the following states were entitled to that part of the System water to which they had existing rights up to an aggregate of 7,500,000 a.f. per a.:

Utah's rights and uses from the Virgin River and Kanab and Johnson Creek, as above shown, are 56,000 a.f. per a.

---

[42]See M.R. Pgs. 382, 397-398.

[43]See Pgs. 23-27 supra.

[44]Article III(a) Compact, M.R. Pg. 373.

Nevada's tributary rights and uses, as above indicated, are 51,000 a.f. per a.

New Mexico's rights and uses on the Gila System, allowed by the Master, are 28,227 a.f. per a., and her rights and uses on the Little Colorado are determined as 10,500 a.f. per a., making a total of Nevada's tributary uses of 38,727 a.f. per a.

Arizona's tributary uses on the Gila and Little Colorado Rivers, Kanab Creek, Virgin River and the Bill Williams and miscellaneous tributaries, increased by the deduction from New Mexico, makes Arizona's total tributary uses 1,803,923 a.f. per a.

California had whatever her existing rights were within this first 7,500,000 a.f. per a. of III(a) uses.

The foregoing demonstrates that of the first 7,500,000 a.f. per a. of System uses, consisting of existing right uses, 1,949,650 a.f. per a. were from that part of the System made up of tributaries, leaving 5,556,773 a.f. per a. for main stream existing use rights, if they totaled that much. By this process the provisions of Article III(a) of the Compact as to System and as to existing rights would be satisfied. There will, of course, be such additional quantities in the main stream as are there as a result of excess or surplus.

Application of the Project Act:

The Master holds the Compact irrelevant and the Project Act and contracts controlling.[47] We contend that the Project Act by its language harmonizes with the Compact instead of making the Compact irrelevant. We have already pointed out the provisions of

[47]M.R. Pg. 138.

the Project Act that make the Compact controlling, notwithstanding anything in the Project Act to the contrary.[48]

On both the questions of recognition of System as against main stream and on appropriative rights as "existing rights" may we turn to Sections 4(a) and 5 of the Project Act. These two Sections are said to make the Compact inapplicable and furnish the basis for its irrelevancy and authorize a main stream decision and nullify the law of appropriation or equitable apportionment. May we analyze this.

Section 5 says the contracts shall conform to Paragraph (a) of Section 4 of the Project Act. Turning to Section 4(a)—first paragraph—we find that after all the debates and contentions of Federal regimentation and the now contention that the Compact provisions as to System and existing rights are displaced by the Project Act that Congress perpetuated System and existing rights instead of displacing them. In this subsection we find that Congress provided and California agreed—"that the aggregate annual consumptive use (diversions less returns to the river) of water of and from the Colorado River for use in the State of California, including all uses under contracts made under the provisions of this Act and *all water necessary for the supply of any rights which may now exist* shall not exceed four million four hundred thousand acre feet of the waters *apportioned* to the Lower Basin states by paragraph (a) of Article III of the Colorado River *Compact,* plus not more than one-half of any excess or surplus waters unapportioned by said *Compact,* such

[48]Sections 8(a) and 13(b) and (c) Pro. Act. Also Pg. 18 supra.

uses *always to be subject to the terms of said Compact.*"[49]

It is submitted that the above emphasized language clearly indicates that the requirements of Section 5 that the Secretarial contracts conform to Section 4(a) plainly mean this. That the uses to be available to California under contract should *include*, among other things, *all water necessary for the supply of any rights which may now exist in* California—not to exceed, however, 4,400,000 plus half of the excess or surplus unapportioned by the Compact. Also, that with respect to the uses not to exceed 4.4, they are specifically earmarked and designated as III(a) uses, i.e., Compact uses—not main stream only. The fact that California could and can get water only out of the main steam does not militate against the obvious reference to System and existing rights in Compact and Project Act provisions. Also to be noted is that here again we have that constant and repeated Project Act reference back to the Compact as controlling—"such uses always to be subject to the terms of said Compact."[50] How, we asked, under this language could you divorce from Compact accounting interbasin or interstate the uses allowed to California?

Now, with reference to the second paragraph of Section 4(a), considered from the standpoint of conflict or harmony with the Compact, we have hereinbefore analyzed items (1) and (2), being the 2.8 and half of the surplus reference to Arizona, and .3 to Ne-

---

[49]M.R. Pg. 382. Corresponding provisions of Limitation Act, M.R. Pg. 398.

[50]M.R. Pg. 382, end of paragraph on that page.

vada.[51] We again submit that it is too clear for words that the 2.8 to Arizona and .3 to Nevada are by specific language III(a) uses. Also, that surplus relates to III(b)—also Compact uses. Again there is to be noted that "all the provisions of said Tri-State Agreement shall be subject in all particulars to the provisions of the Colorado River Compact."[52] Again we say this recognized Compact System accounting and by the controlling effect of the Compact—existing rights as the basis of contract. Interbasin or interstate the System accounting is necessary and contemplated in our view.

Application of the Contracts:

If we consider the Compact as recognizing and perpetuating *"existing rights"* from III(a) System uses and the Project Act as following that pattern, we then have to consider the series of contracts to see if they are also in harmony with the administration of a Compact accounting interbasin and interstate.

California Contracts:

The California contracts, prior in time to the Nevada and Arizona Contracts, have a common provision in each. This provision, typified in the Palo Verde Contract[53] in items designated as "Sections" 1 through 12,[54] permits uses up to a total of 5,362,000 a.f. per a. at points in California. The contracts are silent on the question of III(a) or other Compact designations of the uses except to provide repeatedly that the Compact

---

[51]See Pg. 27 supra.
[52]Item (6) M.R. Pg. 383.
[53]Ariz. Ex. 33, Tr. 249.
[54]M.R. Pgs. 425-429.

is controlling.[55] The preservation of present perfected rights is also recited.[56] However, as these contracts are made under the first paragraph of Section 4(a) of the Project Act and under Limitation Act the 5,362,000 a.f. per a. would have to be 4,400,000 from III(a) System existing right uses and the balance from half of the designated surplus, the first million of such uses being also System III(b) uses—interbasin and interstate.

So far as California is concerned, as of June 1929 it had long been recognized in the debates in Congress and elsewhere that the uses to be served in California under the Compact and Project Act included not only Palo Verde and Imperial Valleys, but Coachella Valley and the Metropolitan areas on the California Coast—this last to the extent of at least 1,000,000 a.f. per a. of uses.[57] Pre-1929 appropriations for the coastal area had been made and Metropolitan District bought and paid for the pre 1929 works and we submit succeeded to the pre 1929-rights.[58]

---

[55]Palo Verde Contract, M.R. at Pg. 428 and Section 14 of Contract, M.R. Pg. 431.

[56]Palo Verde Contract, M.R. Pg. 428.

[57]See H.R. Rep. No. 918, 70th Cong., 1st Sess., pt. 1, at 20-21 (1928); also S. Rep. 592, 70th Cong., 1st Sess., pt. 1, at 24-25 (1928); also, Hayden in Cong. Rec. 70th Cong., 1st Sess. 464 (Dec. 12, 1928).

[58]The City of Los Angeles as early as 1924, and San Diego as early as 1926, filed applications to appropriate water for their coastal areas. See Cal. Ex. 419, Tr. 9395 and Ex. 436, Tr. 9395. Commencing in 1923 extensive work was done to implement these appropriations, Tr. 9451, and the work continued over nearly 10 years, Tr. 9467. Infiltration galleries for diversions were excavated, Tr. 9457-9459. Nearly two million dollars was so spent and when Metropolitan was organized to carry out this project, it acquired these benefits and efforts from Los Angeles, for which Metropolitan paid over two million dollars to Los Angeles, Tr. 9471. Thereafter Metropolitan financed and completed the present works as elsewhere detailed.

The Secretary called upon the California agencies to agree upon their appropriative priorities in time and quantity. This was done in the "Seven Party Agreement."[59] The Secretarial contracts with the California defendant agencies conformed in precise langauge. Of necessity the contracts, whether expressly saying so or not, had to recognize existing rights as required by the first paragraph of said Section 4(a). Recognizing the fact that all uses had to be accounted for, all California contracts had in the delivery obligation of the United States the pro tanto deduction provision "including all other waters diverted for use."[60]

Nevada Contracts:

As hereinbefore indicated, after the pre 1929 existing rights on tributaries in Utah, Nevada, New Mexico and Arizona had been protected as to existing rights to System uses, approximately 5,556,773 a.f. per a. of III(a) uses were available from the main stream,[61] first to satisfy existing rights and then any residue for other uses. The United States made contracts with Nevada for 300,000 a.f. per a.[62] Attention is called to the pattern that the contracts do not specify how much is III(a) or surplus. Article 5(a) of the contract conforms to the Compact accounting concept (we say recognized in the Project Act) by providing for pro tanto deduction from this 300,000 a.f. per a. for uses diverted by Nevada from the Colo-

[59]Ariz. Ex. 27, Tr. 242.

[60]Palo Verde Contract Section 6, M.R. Pg. 424.

rado River System from tributaries above Lake Mead.[63] This we submit was and is in harmony with the Compact, the Project Act and interbasin and interstate accounting. In 1929 Nevada had no main stream uses.

The Arizona Contract:

The Arizona Contract does not designate the 2.8 a.f. per a. mentioned in Section 7(a) or the half of surplus mentioned in Section 7(b) of Arizona's Contract as being III(a) or III(b).[64] The second paragraph of said Section 4(a) of the Act does identify the uses as III(a) as to the first 7.5 of uses to the Lower Basin. We submit the contract must be so interpreted. Section 7(c) of the Arizona Contract recognizes the preference to "present perfected rights" and also incorporates the Compact by making the contract subject to and controlled by the Compact.[65] Section 7(d) of the contract follows the recognized System accounting pattern by imposing the pro tanto charge for existing or future Arizona uses above Lake Mead.[66] The Compact accounting requirements are further recognized in said contract—in that Arizona recognizes and agrees that New Mexico and Utah are entitled to share in the uses apportioned and unapportioned by the Compact.[67] Arizona also by her contract agrees to the right of the United States to contract with California agencies for uses, provided the contracts do not exceed 4.4 of III(a) uses and uses of one-half of the

[65]M.R. Pg. 401.

[66]M.R. Pg. 401.

[67]Section 7(g), M.R. Pg. 402.

"surplus".[68] The Contract also again agrees that the Compact is controlling.[69]

Now as to the interpretation of the Arizona Contract. The contract agrees to pro tanto charges for uses above Lake Mead;[70] also agrees to recognize Nevada's contracts which also provide for pro tanto charge for uses above Lake Mead;[71] also agrees to recognize the rights of Utah and New Mexico to share in III(a). System uses and surplus available under the Compact.[72] If her contract is interpreted to mean that her 2.8 of III(a) uses is from the uses available from the first 7.5 of uses available to Arizona from the Lower Basin in accordance with the terms of the second paragraph of Section 4(a) of the Project Act and the control of the Compact, it would be in harmony with the Compact, Project Act, Limitation Act and her own contract. Her contract does not negative her 2.8 as being of III(a) uses. The report merely interprets it as solely from Lake Mead and therefore divorced from Article III(a). We submit this does violence to the controlling Compact, the provisions of Sections 4(a) and 5, and especially Sections 8(a), 13(b) and (c) of the Project Act and the provisions of her own contract making the Compact controlling. If Arizona's contract is interpreted as entitling her out of the main stream to so much of 2.8 of III(a) uses as are not already exhausted by prior existing rights

---

[68]Section 7(h), M.R. Pg. 402.

[69]Section 13, M.R. Pg. 406.

[70]Section 7(d), M.R. Pg. 401.

[71]Section 7(f), Ariz. Contract, M.R. Pg. 402. Note Nevada Contract with its Article 5(a) pro tanto provision was made Jan. 19, 1944, M.R. Pg. 419. The Arizona Contract, Feb. 9, 1944.

[72]Ariz. Contract, Section 7(g), M.R. Pg. 402.

and contracts therefor and charging Arizona with her tributary existing right uses as a part of her III(a) rights, the Compact, Project Act, Limitation Act and contracts can all be reconciled. What Arizona may be short of as III(a) uses from the main stream she will gain as her part of excess or surplus therein. In any event, what is more important all Lower Basin states will be protected and share in III(a) uses as contemplated, and a uniform accounting as to all states will be available.

To further demonstrate, Utah and New Mexico are the only Lower Basin states that are not involved directly in main stream uses. The New Mexico uses on the Gila System have been settled. If there are post 1929 or future Utah or New Mexico uses from tributaries above Lake Mead that are to be settled herein—and they should be—it is very probable they could be settled quantitatively by stipulation. In Nevada and Arizona the question of each state allowing further tributary development would be cared for by the pro tanto deduction principle of the using state's rights. The problem between main stream and such tributary uses as to priority is a state problem under their own law.[73] Arizona's contract recognizes Nevada's contract for 300,000 a.f. per a. of III(a) and 1/25th of any surplus.[74] Arizona's contract recognizes the California contracts for 4,400,000 a.f. per a. of III(a) plus one-half of the surplus.[75] Arizona's contract recognizes the right of New Mexico and Utah to share

---

[73]See Section 18 Pro. Act, M.R. Pg. 395.

[74]See Section 7(f) Ariz. Contract, M.R. Pg. 402.

[75]See Section 7(h) Ariz. Contract, M.R. Pg. 402.

in III(a) and surplus.[76] Arizona's contract recognizes the pro tanto charges for any present or future uses above Lake Mead.[77] Arizona's contract provides that the quantities involved in her contract from Lake Mead are, "Subject to the availability thereof for use in Arizona under the provisions of the Colorado River Compact and the Boulder Canyon Project Act—".[78] Therefore, if the Arizona contract is interpreted according to its own terms and the Compact and Project Act, we submit she gets her quantities of III(a) uses from the *System* and her surplus from the main stream. As stated before—what she loses as III(a) from the main stream she gains as surplus from her contract designated share. That is the deal she made by her own contract. That, we submit, harmonizes all contracts and complies with the Compact, Project Act and Limitation Act, and enables an orderly administration of the System in the Lower Basin.

Administration

This brings up the matter of the necessities as to administration of the uses available to the Lower Basin and of a Decree herein. There are several departments of the United States that are competitive with each other as to control. The Department of Interior has conflicting interests within the Department. The State Department concerning the Mexican Treaty, the Army Engineers with respect to navigation and flood control are interested. All of these interests are competitive

---

[76]See Section 7(g) Arizona Contract, M.R. Pg. 402.
[77]See Section 7(d) Arizona Contract, M.R. Pg. 401.
[78]Beginning of Section 7(a) Arizona Contract, M.R. Pg. 400.

not only internally but as to each Lower Basin state. The states are competitive with each other.

The matter of a Compact accounting interbasin, as well as the unavoidable Compact accounting between Lower Basin states, is made necessary but the agency for administration is not set up.

Accounting for existing right III(a) uses and other uses involved in the accounting is provided for in the Compact by the consent of the Compact states to the inclusion of tributaries as a part of the System.

It is submitted that it is desirable as well as necessary in the settling of Federal questions as well as state questions that the Court appoint a Commissioner or Commission to administer the entire matter in the Lower Basin under the direction of this Court.

The Master has arrived at an appropriate way of administering tributary uses once established. It is to require the using state annually to list and account for all such uses to the end of an accounting so as not to exceed the limit locally on such uses. A Commissioner or Commission could best supervise this under the authority of the Court in administration of the Decree.

The Master has also furnished a possible pattern in the furnishing of any details needed by a Commissioner or Commission to administer the System in the Lower Basin. The Master provides for a two year period within which the states shall furnish to this Court and to the Secretary (and we now suggest to the Commission instead) a list of present perfected rights claims as of June 1929 with claims of priorities, etc.[79] We sub-

[79]Art. VI, Proposed Decree, M.R. Pg. 359.

mit that if this Court adopts the interpretation of the Arizona contract herein believed to be proper—then, where there is anything left beyond the details of the trial as to existing right uses or post 1929 uses or claims on surplus, those claims could be filed with the Commission and if there is disagreement, the areas of such be referred to another Master for limited hearings. By this process, formula, or yardstick, the quantitative and priority claims of all states can easily be settled to the end that as between Basins and as between states there can be an orderly administration of the whole subject.

It is to be remembered that water rights and rights of use to water are not administered on the basis of annual crop rotation, or market conditions but on a right of use basis. Therefore, the formula only needs to define the limit of existing rights in each state for areas or projects and the administration would be able to see to it that those limits were not exceeded. Water within specified rights and not used would either go from tributaries to the main stream or on the main stream remain in reservoirs.

Miscellaneous

There are diversionary matters in Briefs in opposition to California which Imperial wishes to clear up.

Source of Imperial Water:

The implication is made by Arizona[1] that the source of the water supply to Imperial Valley was not from appropriations or diversions in California, but from Mexico. The Imperial Valley supply was diverted in California North of the Mexican Border and carried by

[1]Ariz. Op. Br. last paragraph Pg. 12.

canal into and through Lower California, Mexico back into then San Diego, now Imperial County, and there distributed by canals of the California Development Company, the California appropriators, and later by Imperial Irrigation District, to local mutual water companies for local area distribution.[2] In 1916 Imperial District acquired the properties of the California Development Company and in 1922 the mutual water companies.[3] That the diversion works in California, the transmission works through Mexico and into the United States and the canal system in California were considered and held by the Supreme Court of California to be all one System and one project is clearly shown in the case of *Title Insurance and Trust Company vs. California Development Co., 171 Cal. 173 at 179 et seq. (1915)*. An interesting review of the history of the project is there detailed.

Alleged Waste in Imperial Valley:

Arizona claims that of the water diverted from the Colorado River for Imperial Valley, Imperial District is wasting into the Salton Sea approximately one million acre feet of water per year.[1] As there is not enough water available to all the agricultural agencies in California for California agricultural and domestic uses, i.e.,

---

[2]The appropriations were from California points. See Cal. Exs. 70-90, Tr. 6903, 7175; also see engineering report Cal. Ex. 69, Tr. 6894, 7182. The original diversion gate, Chafey, was in California, Tr. 7037-7042; this was in the vicinity of Hanlon Heading the area for the permanent works from which the supply was diverted in California. See Cal. Ex. 50 and Tr. 6914, 6988, 7038. The capacity was 10,000 second feet, Tr. 7200.

3,850,000 a.f. per a. plus 300,000[2] to supply all the lands and need within those agencies, we submit that anything but unavoidable losses—termed here waste—will not occur.

However as so much is made by Arizona as an item of prejudice, we take leave to reply.

The Salton Sea is at the bottom of a large drainage area of approximately 7,500 square miles of which about 1,000 square miles is in Lower California, Mexico.[3] The extreme depth is 273 feet below sea level.[4] It is the site of an ancient inland lake.[5] The drainage area is shown generally on a map showing Imperial, Coachella and Mexicali Valleys and the surrounding mountain and desert areas included.[6]

The Sea was recreated in the 1905-07 flood when the entire flow of the Colorado River ran into and through Imperial Valley.[7]

The constant irrigation of ever-increasing acres in Imperial Valley resulted in irrigation water penetrating beneath the surface until prevented from going to depths because of the nature of the soil. As a result, a large underground body of highly saline water collected throughout the Valley. This underground water, because of its saline quality and water logging of land for lack of drainage, caused some lands to go out of production.[8] This brought about drainage stud-

[8]Tr. Pg. 7906.

ies in 1922[9] resulting in bond issues to finance a drainage program.[9] The result was the ultimate construction of a network of open drainage canals throughout the Valley to try to drain off this accumulation[10] These drains directed the drainage water to Salton Sea.[11] Some 1400 miles of these drains were constructed.[12]

But open drains alone did not drain off this huge accumulation of saline underground water.[13] In 1929 a program of underground tile leach lines to drain the water off to the drainage ditches was started.[14] This has been beneficial and resulted in some 5,000 miles of tile drains covering about 200,000 acres. Most of the lands will have to be tiled eventually.[15] Thus there is being leached out from the soil the highly saline stored up waters. The tile drainage water will carry out about 5½ tons of salt per acre foot of water leached out.[16] By this process Imperial Valley has been putting into the Salton Sea much larger quantities of salt than have been coming into the Valley in irrigation water from the Colorado River.[17] This is one source of water to the Salton Sea from Imperial Valley.

Another source of drainage water to the Sea is from what is called "salt balance" requirements. As each

---

[15]Tr. 7914, L. 8. For general description of tiling see Tr. 7911 et seq., also Tr. 7917.

[16]Tr. 8202 et seq.

[17]See Cal. Exs. 242, 243, Tr. 7986-7991.

acre foot of water is brought into Imperial Valley it carries with it quantities of salt that is spread on the land by irrigation. As this salt does not evaporate and little is taken up by the plants, there would gradually accumulate tremendous tonnages of salt in the top soil if not forced down and out into tile or natural drainage means by the application of enough water to drive the accumulation down and out. By this process the salt content in the soil will become the same as the content of irrigation water being used.[18] The question of the quantity of water that needs to be applied to the surface over and above the amount the plants consume, and evaporation from the surface was the subject of extensive study and testimony. On the basis of there being over the extended future a salt content of 1.25 tons of salt per acre foot of water coming into Imperial Valley, the studies showed the need for the water to be applied in addition to said plant consumption and surface evaporation was and will be about 22%.[19]

It is, however, not our purpose here to argue the exactness of the requirement. We merely here point out that to maintain "salt balance" as above discussed a certain quantity of water must be applied to the surface and forced down and out into tile and drainage lines to get rid of the excess salt in the root zone and to keep the soil from becoming too salty for production. This process is going on. Therefore, this class of drainage water also has to go to the Sea. In a project of the size of the Imperial Irrigation District—the lar-

---

[18]Tr. 7981, 7996.

[19]See the testimony of Dr. Fireman, an expert on the subject. Tr. 20515 et seq., 21357 et seq., and 21988 et seq. Also see Cal. Exs. 5201, 6101-6103-A, particularly Ex. 6104, Tr. 21391 et seq., also testimony of Dowd, Tr. 8199-8204, Cal. Ex. 283.

gest such in the United States—there is inevitably such drainage. Also other operational losses. The Salton Sea also receives the drainage water of mountain rains and drainage from Mexicali Valley and Coachella Valley.

Arizona also recognizes and uses water for "salt balance" and has recognized quantities of regulatory loss—called by Arizona as to Imperial—waste.[20]

In any event the project efficiency of Imperial was established as almost the best of any irrigation project in the Lower Basin.[21]

The quantity of drainage called waste may furnish a diversion, but, we submit, not a matter of substance on the merits.

Measure of Present Perfected Rights:

The Master defines the measure of present perfected rights as the quantity applied to use[1] as of June 25, 1929, and not the capacity of existing works.[2] The Master misunderstood Imperial's contention.

Imperial does not contend that the capacity of the works is the sole measure or that there can be a perfected right to more than the quantity needed for the project, merely because a larger quantity is claimed in notices of appropriation or because of the large capacity of the works.

Imperial does claim that the proper definition is for that quantity necessary for the completed project as

[1]M.R. Pg. 308, next to last paragraph.

[2]M.R. Pg. 308, last paragraph.

originally contemplated, if within the quantities claimed, and if works therefor to the needed capacity have been constructed or are being constructed—all provided—due diligence has been exercised from the time of claim of appropriation and that this diligence has been exercised—both as to construction of the final project work and the application of water to use.

Imperial does claim that, especially with respect to large projects, the whole protection to appropriative rights by priority would be defeated if the rights of a project could be defeated, though 99% complete merely because water had not yet been run through a long and expensive system of works or only delivered to a portion of the area to be served.

That this is the recognized rule of appropriation under Western water law as defined by the Courts of last resort of the Western states and as well as by this Court is briefed in Volume III (Agencies) of the April 1, 1959 Findings and Conclusions and Briefs of California. It is in said volume under Imperial Section, Pages I.I.D.-B10-B52. See especially on necessity of recognizing rights in projects to which full supply of water has not yet been delivered, I.I.D.-B28-B52. For the sake of brevity we do not repeat here but ask reference thereto:

Federal Constitutional Claims—Moot:

The United States claims several United States constitutional powers as supreme and giving freedom of control to the United States through the Secretary of Interior. These powers are claimed to be free from the necessity of recognition of any application of the West-

ern water law of appropriation or any recognition of states' rights or controls.

We submit that we do not need herein to argue or decide those powers or their extent. We contend that the Congress of the United States by ratification of the Compact determined this in part.[1] We also contend that Congress in the passage of the Project Act decided these questions and bound the exercise of any powers of the United States to the framework of the Compact.[2] Congress also provided that nothing should be construed as interfering with such rights as the states now have, with respect to the appropriation, use or control of waters within their borders[3] and made the Project Act a supplement to the Reclamation laws.[4]

We shall not here review the many Acts of Congress in the Reclamation laws or in other Acts giving recognition to the law of appropriation and directing the Departments and Agencies of the United States to observe those state laws.[5]

We wish here to point out that the waters herein being dealt with are *not un*appropriated waters except possibly to a limited amount.

We submit these questions of constitutional powers of the United States are moot herein.

---

[1]Article III of the Compact provided for the basis of agricultural and domestic uses and use rights, i.e., beneficial consumptive use of System for existing rights. Also for recognition of present perfected rights in Article VIII, M.R. Pgs. 373 and 376.

[2]Section 8(a) Pro. Act provides that the *United States,* its contractees and appropriators of water *shall observe* and be *subject to* and *controlled* by the Colorado River *Compact.* See also Sections 8(b) and 13(b), M.R. Pgs. 389, 393.

[4]Section 14, Pro. Act, M.R. Pg. 394.

[5]See compilation in Cal. Reply Brief before Master at Pgs. B-1 through B-21.

There is one contention that we submit this Court might well put to rest. It is the claim of the United States that it owns all the waters in the areas acquired by conquest or purchase from foreign countries. It is urged periodically and if ever sustained, such a decision, we believe, would work endless havoc in many sections of the United States and in many regards. We do not argue the matter of Federal control over navigable water for commerce or flood control, nor will we burden the Court with the vast number of cases holding title to the bed and banks of navigable streams to be in the states and not the Federal Government.[6] This Court has held that any title acquired by the Federal Government from foreign countries is held in trust for the states, including future states.[7]

The more important point is that Congress has directed the exercise or non-exercise of those Federal powers in relation to navigable and non-navigable streams. Contrary to the contention of the United States that Congress dealt only with non-navigable waters, attention is called to the Act of July 26, 1866 that recognized the law of appropriation in the Western states and provided therein for the use of public lands for canals, etc. This Act was not limited to non-

[6]Starting with Martin vs. Waddell, 16 Peters 367 at 411; 10 L.Ed. 997 at 1013 (1842); Pollard vs. Hagan, 3 Howard 212 at 230; 11 L.Ed. 565 at 574 (1845); Mumford vs. Wardell, 6 Wallace 423 at 436; 18 L.Ed. 756 at 761 (1867); U.S. v. Utah, 283 U.S. 64 at 71 and 75; 75 L.Ed. 844 at 849 at note 1 (1930). The rule si also recognized as to inland navigable waters in U.S. vs. Cal., 332 U.S. 19 at 36; 91 L.Ed. 1889 at 1898 (1946).

[7]Pollard vs. Hagan, 3 Howard 212 at 229; 11 L.Ed. 565 at 573 (1845); Weber vs. Board of Harbor Commissioners, 18 Wall. 57 at 65-66, 85 L.Ed. 798 at 802 (1873); U.S. vs. Utah, 283 U.S. 64 at 71-72, 83; 75 L.Ed. 844 at 853 (1930).

navigable waters.[8] This Court held that Act and other Federal recognition of the law of appropriation not to create the right but to recognize it as existing law on the subject.[9] The supervision of diversions from navigable streams was placed in the hands of the Secretary of War and Army Engineers, who issued permits therefor.[10] Many other Acts were passed in this regard and they are reviewed at length in the California Reply Brief before the Master, Pages B-1 through B-21, to which we refer for the citations and copies.

We submit Congress has acted covering the subject and again we say constitutional powers of the United States are a moot matter herein.

Project Act Benefits to California:

Our opponents point for some purpose to the benefits California has gained from the Project Act works. We are proud of them. Some of these defendant agencies and other California agencies by contracts underwrote the costs, not only of the All-American Canal works, but Hoover Dam and Lake Mead facilities as required by the Act.[12] Arizona did not.

We submit that it is not in harmony with the Compact, Project Act, Limitation Act or the contracts or previous decisions of this Court or equity to deprive

INTRODUCTION 1

Part I

The Controversy Among Arizona, California and Nevada with Respect to Main Stream Water

ARGUMENT:

I. California continues to misread the legislative history of the Project Act. 5

A. As to the Statutory Allocation Issue..... 5

B. As to the Main Stream Versus System Allocation Issue 18

II. The fact that a delivery of 7,500,000 acre-feet of water at Lee Ferry cannot be precisely equated with a consumptive use of 7,500,000 acre-feet of water down stream does not warrant the conclusion that §4(a) of the Project Act deals with system water. 23

III. California's assertion of an "automatic shortage" is unfounded. 26

IV. The California contention that Hoover Dam and Lake Mead can and must be operated in satisfaction of prior appropriative rights is unsound. 29

V. California's criticism of the Master's invalidation of Article 7(d) of the Arizona contract is predicated upon the erroneous claim that the United States concurs in California's position that the doctrine of prior appropriation survived the Project Act. 31

VI. California's criticism of Arizona's proposed amendment to Article II(B)(8) of the Special Master's Recommended Decree is unwarranted. 34

PAGE

Part II

The Claims of the United States to Water

ARGUMENT:

VII. The Master's recommendations regarding the right of the United States to use water of the Colorado River for federal establishments cannot be sustained on the basis of the authority given the Secretary by the Project Act. 37

VIII. The Master's recommendations regarding the right of the United States to use water of the Colorado River for federal establishments cannot be sustained on the basis of the so-called "reservation" theory. 44

A. Basic Fallacies Underlie the Position of the United States. 44

B. Proprietary Rights to the Use of Navigable Water in Arizona Were Not Acquired by the United States Through Treaties With Mexico. 46

C. Arizona's Rights In Navigable Water Are Not Dependent Upon a Transfer Thereof from the United States. 48

D. The Mere Creation of a Federal Establishment Does Not Operate to Reserve Navigable Water for Its Use. 54

E. In the Absence of Congressional Authority the Executive is Without Power to Reserve the Use of Navigable Water for Federal Establishments. 55

F. There Must Be a Clear Manifestation of Intent to Reserve Navigable Water. 57

PAGE

G. Indian Need, Rather Than Irrigable Acreage, is the Correct Measure of Any Reserved Water Right. 60

H. Principles of Equitable Apportionment May Be Applied to Measure Indian Water Rights. 67

IX. The United States has not reserved water from the Gila and San Francisco Rivers for the purposes of the Gila National Forest. 69

REPLY BRIEF FOR ARIZONA

This reply brief, like Arizona's Opening Brief, is divided into two parts. Part I considers matters pertaining to the controversy among Arizona, California and Nevada with respect to Colorado River water. Part II deals with the controversy between Arizona and the United States with respect to the rights of federal establishments to water in

the main stream of the Colorado River and water from the Gila River System for the Gila National Forest.

The basic questions involved in the controversy among the states are:

> First. Does the Project Act make a statutory allocation, or authorize the Secretary of the Interior to make a contractual allocation, of water among the three Lower Basin states?
>
> Second. If an interstate allocation is effectuated or authorized by the Project Act, is it an allocation of main stream water only?

The Special Master finds the evidence to be clear that Congress in enacting the Project Act intended to provide for an apportionment of main stream water exclusively and authorized the Secretary of the Interior to enter into water delivery contracts which, in the absence of an interstate compact, control the allocation of main stream water among Arizona, California and Nevada (Rep. 99-100, 152-54, 173-85, 201).

If the Master's conclusions are sound—and all the parties save California agree that they are—California's case necessarily collapses. A statutory allocation of main stream water, whether achieved directly by the statute itself or by secretarial contracts pursuant to the statute, renders untenable the fundamental positions upon which California's case is based, namely:

> First. That principles of equitable apportionment and prior appropriation are applicable to and decisive of the issues in this litigation.[1]

[1] Briefed by

Arizona	Ariz. Op. Br. 40-46; Ariz. Ans. Br. 4-57.
California	Cal. Op. Br. 25, 39, 46-47, 52, 68, 138-94; Cal. Ans. Br. 29-31, 36-75, 106-29, 136-40.
Nevada	Nev. Ans. Br. 29-43.
United States..	U. S. Ans. Br. 21, 24-25.

Second. That the water to the use of which California is limited by the Project and Limitation Acts consists of both main stream water and water of Lower Basin tributaries.[2]

Third. That the future water supply in the Lower Basin can and must be determined in order to sustain the Court's jurisdiction and to decide the legal issues involved.[3]

Arizona has exhaustively briefed her position in support of the Master's conclusion that the Project Act authorizes an allocation among Arizona, California and Nevada of water of the main stream of the Colorado River only (Ariz. Op. Br. 57-108; Ariz. Ans. Br. 4-97).

In Part I of this brief we shall continue to correct California's persistent misreading and miswriting of the legislative history. We shall not repeat arguments which we have previously made, except when necessary to meet variations contained in California's Answering Brief of contentions she has previously urged.

Since the Opening Brief of the United States did not deal with the claims for federal establishments, we deferred their further consideration until this reply brief. In Part II of this brief we respond to the contentions made in the Answering Brief of the United States with respect to these claims.

ARGUMENT

I

California continues to misread the legislative history of the Project Act.

The Special Master found that the pertinent legislative history was so clear and conclusive as to necessitate his fundamental findings and recommendations as to the meaning of the Project Act and the significance of the water delivery contracts (Rep. 154). However, California seems bent upon injecting ambiguity and confusion into the legislative history in the hope that the Court may find it of doubtful utility in the decision of the basic issues, the resolution of which rests in the last analysis upon the intent of Congress in enacting the Project Act. This strategy is pursued in California's Answering Brief with respect to the two basic issues: (1) the statutory allocation question and (2) the main stream versus system allocation question.

A. As to the Statutory Allocation Issue

California persists in asserting that the legislative history of the Project Act shows that Congress did not intend to delegate authority to the Secretary of the Interior to make an allocation of the water of the Colorado River (Cal. Ans. Br. 50-56). She criticizes the use by the United States, in support of its contention that Congress did so intend, of statements of opponents of the bill denouncing it as an unwarranted assertion of federal power, upon the ground that "views expressed by opponents of an act are not persuasive legislative history" (Cal. Ans. Br. 51).

However, California neglects to state that the authors of the Project Act—Senator Johnson and Congressman Swing—well understood that the statute did authorize

an allocation of water of the Colorado River and nevertheless supported the measure as a proper exercise of federal power. The majority of the Senate and House Committees which favorably reported the fourth Swing-Johnson bill (which became the Project Act) similarly appreciated the effect of the bill, as did witnesses who testified before those Committees in favor of the measure (Ariz. Ans. Br. 30-47).

California not only ignores these views of the authors and supporters of the Project Act, but she erroneously claims that the proponents of the statute "refuted" the charge of its opponents that §5 gave to the Secretary of the Interior authority to make an interstate allocation of water (Cal. Ans. Br. 51). For example, she says (Cal. Ans. Br. 53) that Mr. Swing "responded" to the charge of Mr. Douglas of Arizona that the Swing-Johnson bill "vests in the Secretary of the Interior complete and absolute control over the waters of the Colorado below Boulder Dam".[4] California comments: "It is unlikely that any member of the House took seriously Mr. Douglas' diatribe" (Cal. Ans. Br. 54). Yet, at the very outset of his response to Mr. Douglas, Mr. Swing stated:

> "Mr. Chairman and gentlemen of the House, I want to congratulate my colleague [Mr. Douglas of Arizona], who has just preceded me, on presenting as forcefully, as effectively as it is humanly possible to present it, the side of the case against the Boulder Dam project."[5]

Mr. Swing proceeded to discuss the Boulder Dam Project—its engineering feasibility, its necessity as a means of flood control and its economic soundness.[6] Not until the

---

[4] 69 Cong. Rec. 9623 (1928).
[5] 69 Cong. Rec. 9635 (1928).
[6] 69 Cong. Rec. 9635-45 (1928).

very close of his argument did he discuss what he termed "the so-called question of constitutional rights".[7]

Mr. Swing then argued in favor of the bill's constitutionality and cited, among other legal authorities, what he characterized as a "very able brief" prepared by an Arizona law firm in which the conclusion was reached that

> ". . . the rights of the Federal Government to withdraw the river, for the purposes of development, from State sovereignty is undoubted."[8]

While thus arguing for his bill as a constitutional exercise of federal power, not once in the course of his protracted speech did Mr. Swing "respond" to the Douglas charge that the bill "vests in the Secretary of the Interior complete and absolute control over the waters of the Colorado below Boulder Dam".

Mr. Swing's statement that the contentions made by Mr. Douglas "have been answered in the investigations made of the project and in the hearings held on this bill"[9] did not and could not have referred to the question whether the bill was intended to make an interstate allocation of water. As the record of the congressional committee hearings establishes, there was a clear understanding that the Project Act made, or empowered the Secretary of the Interior to make, an allocation of water among the lower Basin states. The primary area of dispute between proponents and opponents of the bills was not over the effect of the proposed legislation but whether Congress had the constitutional power so to allocate water among the states (Ariz. Ans. Br. 30-44).

---

[7] 69 Cong. Rec. 9645 (1928).

[8] 69 Cong. Rec. 9645 (1928).

[9] 69 Cong. Rec. 9635 (1928).

California also claims that proponents of the Project Act "refuted" the assertion of Congressman Colton of Utah that §5 gave the Secretary of the Interior "control of all the water stored in the reservoir and its delivery to any part of the river below". This so-called refutation is said to have been made by Congressmen Bankhead of Alabama and White of Colorado (Cal. Ans. Br. 51-53). The Colton-Bankhead exchange is quoted only in part by California (Cal. Ans. Br. 52-53 note 1). It is set forth in full in the margin.[10]

---

[10] "Mr. Colton. . . . Our [Utah's] whole industrial life has been built up upon the theory that the State owns the waters, and a man in my State to-day can not acquire the ownership of any water for any purpose. He can acquire the right to use any water, and as long as he puts that water to a beneficial use he can assert control over it; but when he ceases to put it to beneficial use it reverts to the State and is again subject to appropriation by any other citizen within the State. So that when you say that the Government of the United States owns and controls waters within that State, cannot you see that you strike at the very basis of our industrial life? You are saying that you are going to take it away from the States and place it in the Federal Government, and section 5 of this bill asserts that very principle. It provides that the Secretary of the Interior shall have control of all of the water stored in the reservoir and its delivery to any part of the river below. We deny that in principle and say it is against the very contract that this country has entered into with our Western States and contrary to the decisions of the United States Supreme Court.

"Mr. Bankhead. As I understand, the whole theory of this bill is predicated on the recognition of the right that the gentleman is now asserting, for the reason that nothing can be done by Congress under this bill until the States acting through this compact shall determine what their respective rights are in reference to this matter.

"Mr. Colton. I will answer in this way: *If the gentleman from Alabama were stating the proposition correctly, there would not be the slightest objection to this bill other than from the engineering and economic standpoint. I feel sure that it is not fully understood. We do not get full protection under this bill, for there is no seven-State compact. Arizona is not a party at all to this compact.*

"She and her citizens may appropriate water at any time.

"Mr. Douglas of Arizona. Arizona is a party to it, but Arizona has not ratified it.

"Mr. Colton. Yes. The gentleman's statement is more accurate. *Arizona can grant applications for water if my theory is*

The Colton-Bankhead colloquy was not concerned with the effect of the provisions of §5 of the Project Act but rather with the question whether, in the absence of seven-state ratification of the Colorado River Compact, the State of Utah would be protected against claims of right to the use of Colorado River water by appropriations in or by Arizona. Mr. Bankhead had erroneously assumed that the bill provided for seven-state ratification of the Compact. When Mr. Colton pointed out that six-state ratification was required, Mr. Bankhead had nothing further to say.

Shortly after this there occurred the Colton-White discussion, which is quoted only in part by California to support her claim that "Mr. Colton's charges . . . [that §5 gave the Secretary of the Interior authority to make an interstate allocation of water] were refuted by Mr. White . . . (and, in effect, by Mr. Colton himself)" (Cal. Ans. Br. 51-52). California misreads the record. Actually Mr. Colton, in quoting §5, refuted the assertion of Mr. White that the pending legislation made no attempt "to nullify, abrogate, or change the doctrine of priority in the use of water". When Mr. Colton cited the provisions of §5, Mr. White made no further comment. Indeed, no one arose to dispute Mr. Colton's construction of the meaning and effect of §5 of the Project Act or to deny his assertion that it gave the Secretary of the Interior control of the water to be impounded by the dam and stored in the reservoir

---

correct, and her citizens can acquire rights by prior usage to every bit of water belonging to the upper States. There is absolutely no protection against her and her citizens. The gentleman from Alabama [Mr. Bankhead] has stated the principle for which Utah is contending. We have been pioneers in the development of the Colorado River. We are anxious to see California prosper. This development, however, must not be made at the injury and expense of other States." 69 Cong. Rec. 9648 (1928). (Unless otherwise indicated, italics appearing in quotations in this brief have been added for emphasis).

authorized by the Act. The complete text of the Colton-White colloquy is set forth in the margin.[11]

---

[11] "Mr. Colton. Congress can not allocate water. I want to say to the gentleman that I have here figures showing that in two counties of my State they have now 277,839 acres under cultivation, and there is enough land susceptible of practical irrigation and reclamation to make a total of 689,762 acres in those two counties, so that there are 300,000 acres in two counties alone of my State that are now susceptible of reclamation and irrigation, and the projects for reclamation are perfectly feasible. We say we are not opposing this dam, provided it will not be under terms that are injurious to Utah. But we must have future development protected. There are seven or eight other counties in my State which have lands capable of reclamation.

"Mr. Leatherwood. Will the gentleman yield?

"Mr. Colton. Yes.

"Mr. Leatherwood. I just want to call the gentleman's attention to the fact that the gentlemen who are raising the question about our refusal to go ahead without a full seven-State compact in every case have insisted that in their State they be absolutely protected without any question.

"Mr. Colton. I think the gentleman is right in that.

"Mr. White of Colorado. Will the gentleman yield?

"Mr. Colton. Yes.

"Mr. White of Colorado. A while ago the gentleman stated that he doubted whether or not Congress had the power at this late date to nullify, abrogate, or change the doctrine of priority in the use of the water.

"Mr. Colton. I think they have not that power.

"Mr. White of Colorado. There is no attempt to do anything of that kind by this bill. On the contrary, the bill expressly provides for a compact among six States, and the only State that has shown the slightest tendency to stay out of the compact is Arizona. Now, how can that affect a State that is not a member of the compact?

"Mr. Colton. It can not. Moreover, I admit we are somewhat protected so far as California is concerned, although even that is a question in my mind. As the gentleman from Arizona has stated, you have an interstate compact made by seven States, and I do not believe six States may make it binding on the other. I would like to hear the opinion of the gentleman from Virginia [Mr. Montague] on that. He is a good lawyer. That raises a serious question at least. Let me point out to the gentleman just what this bill provides. In section 5 it is provided:

> That the Secretary of the Interior is hereby authorized, under such general regulations as he may prescribe—

"To do what?

> to contract for the storage of water in said reservoir and for the delivery thereof at such points on the river and on

California next refers to a colloquy between Senators Hayden and King and to what she describes as a discussion between Senators Hayden and Borah. These are cited to support California's assertion that the "charge that the bill gave control of water rights to the Secretary of the Interior was repeatedly answered by proponents of the measure" (Cal. Ans. Br. 55). California classifies Senator King and Senator Borah as "proponents" of the measure solely because they ultimately voted for its enactment.[12]

---

said canal as may be agreed upon, for irrigation and domestic uses.

"The Chairman. The gentleman has used 30 minutes.

"Mr. Colton. I thank the Chair. If that does not give him absolute control of this water, or if it does not seek to give the Secretary of the Interior absolute control of this water, I can not understand the English language; and, gentlemen, that is exactly what we are objecting to. We are saying the Federal Government is trespassing upon territory that does not belong to it whenever it attempts to regulate or control the waters of a river when it is not for the express purpose of navigation and commerce. That is the only power the Congress of the United States has over the water in the streams of this country, and the basic principle upon which Utah has rested its opposition to this bill is that the States control the water for all other purposes." 69 Cong. Rec. 9648-49 (1928).

[12] 70 Cong. Rec. 603 (1928). Although Senator King ultimately voted for the Project Act, he can hardly be classified as a "sponsor" or "proponent" of the measure. The Project Act evolved from the fourth Swing-Johnson bill as altered through a series of amendments. In voting upon these amendments Senator King is to be found in most instances aligned with Senators Ashurst and Hayden of Arizona and opposed to Senators Johnson and Shortridge of California.

Early in the debate he stated frankly that his sympathies were with Arizona regarding the division of water between Arizona and California. 70 Cong. Rec. 164 (1928).

On the Hayden amendment to the Phipps amendment, which would have reduced the California limitation from 4,600,000 to 4,200,000 acre-feet per annum, Senator King voted for the amendment (with Senators Ashurst and Hayden and against Senators Johnson and Shortridge). 70 Cong. Rec. 382-84 (1928).

On the Bratton amendment to the Phipps amendment, which reduced the California limitation from 4,600,000 to 4,400,000 acre-feet per annum, Senator King voted for the amendment, with

The King-Hayden colloquy was unrelated to the powers conferred on the Secretary by the Act. It concerned Senator King's contention that there ought to be a judicial determination of water rights before any money was appropriated for the Boulder Canyon project (Ariz. Ans. Br. 46).[13]

The Hayden-Borah colloquy was really a Hayden-Borah-King discussion. California makes no reference whatever to Senator King's participation in it. Perhaps this conspicuous omission may be explained by the fact that Senator King pointed out to Senator Borah that the pending legislation *did* clothe the Secretary of the Interior with authority to allocate water and to generate and allocate power pursuant to contracts which the bill authorized him to make, and that these provisions jeopardized what Senator King described as Arizona's "future consumptive use of her just share of the waters of the Colorado River".

Senators Ashurst and Hayden and against Senators Johnson and Shortridge, who voted against it. 70 Cong. Rec. 384-87 (1928).

On the Hayden amendment to the Phipps amendment, which would have stricken from §4(a) the provision for six-state rather than seven-state ratification of the Colorado River Compact, Senator King did not vote, but was paired with Senator Shipstead of Minnesota, who was absent. However, Senator King stated that, if present, Senator Shipstead would have voted "Nay" and, therefore, if permitted to vote, Senator King would have voted "Yea". Senators Ashurst and Hayden voted for the amendment, while Senators Johnson and Shortridge voted against it. 70 Cong. Rec. 394 (1928).

On the Hayden amendment to authorize the Secretary of the Interior to investigate the feasibility of the Parker Project and to appropriate $250,000 therefor from the Colorado River Dam fund, Senator King did not vote. Senators Ashurst and Hayden voted for the amendment and Senators Johnson and Shortridge opposed. The amendment carried. 70 Cong. Rec. 574-75 (1928).

At one time Senator King thought that Imperial Valley should be assessed for the cost not only of the All-American Canal but of the dam as well and intended to introduce an amendment so providing. He later changed his mind. 70 Cong. Rec. 474, 528 (1928).

[13] 70 Cong. Rec. 169 (1928).

So that there may be no possible doubt about the matter we set forth in the margin the full text of Senator King's statement in the context of the Borah-Hayden discussion.[14]

---

[14] "Mr. Borah. I can see how Arizona might lose her rights, not by reason of this legislation, but by reason of acts of appropriation going on in carrying out the terms of this bill in case Arizona did not assert her rights in court. If she stood by and water were appropriated to beneficial use in other States, she might lose her rights. She would not lose them, however, by reason of this legislation, but by reason of the acts of appropriation.

"Mr. Hayden. That is exactly what we fear—that if, subsequent to the passage of this legislation, a great dam is erected in the Colorado River without the consent of the State of Arizona, the water impounded behind that dam will be claimed and controlled by the Federal Government, and the State of Arizona will have no jurisdiction over it. *The Secretary of the Interior may then enter into contracts to permit the use in California of a much larger quantity of water out of that dam than is fair to the State of Arizona.* The State of Arizona will be helpless unless it does proceed, as the Senator suggests, by filing a suit in the Supreme Court of the United States to determine its rights.

"Mr. King. Mr. President—

"Mr. Hayden. I yield to the Senator from Utah.

"Mr. King. I desire to suggest to my friend from Idaho this situation:

"By this bill the Federal Government is asked to appropriate more than $100,000,000 to construct a dam in the States of Arizona and Nevada particularly for the purpose of generating power. *The bill requires that the Secretary of the Interior shall make contracts for the sale of power and stored water.* It is obvious that Arizona, not being ready to utilize all of the water of the river to which she believes herself entitled, may lose her right largely because of the acts of the Federal Government. The construction of the dam and the use of a portion of the water for the generation of power places the Government in the position of aiding California in appropriating water which Arizona claims.

"By this bill the Government is aiding California, by taking money out of the Treasury of the United States, to appropriate a part of the river flow for power, irrigation, and domestic purposes. This appropriation may be, and probably is, a part of the stream to which in all justice Arizona is entitled. *Under the terms of the bill we are requiring contracts to be entered into by the Secretary of the Interior to raise sufficient sums to annually meet the expenditures made by the Government.* These contracts will require that power be developed by utilizing a portion of the water claimed by Arizona. *Contracts are to be made requiring that a portion of the waters of the river be diverted therefrom and*

In attempting to answer Arizona's position that §§4(a) and 5 of the Project Act constitute a formula for the allo-

---

taken to Los Angeles and other coastal cities for domestic and other purposes; so that the United States is asked to become a party to a policy which may deny to Arizona the future consumptive use of her just share of the waters of the Colorado River.

"Arizona is vitally interested in this proposed legislation, and in securing an agreement with California as to a division of the water; doubtless she feels that before she can vote to ratify the compact there should be an agreement dividing the water of the river. She may feel that if no agreement is entered into and she is not in a position to utilize her share of the water for some time, California, with the aid of the Government, will use for power and other purposes water which is justly hers. In this situation, when Arizona is in a position to require the water, and it is claimed by California, a demand might be made upon the upper States for a portion of the quantity allocated to them.

"It will be observed that there are serious problems involved in the proposed legislation which we are considering.

"Mr. Borah. Mr. President, of course it would have been extremely satisfactory to all members of the Senate if the seven States could have agreed. They have been unable to agree, however; and we must, therefore, make our choice of whether we will do nothing, or whether we will pass such legislation as is now proposed.

"Then, again, here is a river some 1,700 miles long, I think, national and international in its scope, affecting immediately seven States, and indirectly as many more. There is no one except the Government of the United States who can deal with that river so far as flood control and such matters are concerned. No one else is able to do it; no one else could do it; no one else really has the authority to do it; and, fundamentally, the flood-control proposition is what most immediately concerns me.

"Undoubtedly, if Arizona stands idly by and does not protect her rights, either by appropriation or by such action in the courts as will protect them, she will lose her rights ultimately. That is one of the penalties of living under the doctrine of prior appropriation. If an individual has a farm or ranch, and the water is running by it, if he does not use it, his neighbor below him or above him can appropriate it and take it away from him, ultimately. So here, I presume, if Arizona should not act, she perhaps would be prejudiced by this legislation in the sense that the acts carrying it out would result in appropriations by others. It would not be the act of Congress which took away her rights, however, but the acts of appropriation following as a result of it.

"Mr. Hayden. Mr. President, that is why we oppose the passage of a bill which authorizes large appropriations of money to construct a dam and other works which will inevitably lead to appropriations

cation of water among the Lower Basin main stream states, California argues:

> "The 'conform to' provision in section 5 was offered before the language of the second paragraph of section 4(a) was offered; the genesis of each was unrelated to the other." (Cal. Ans. Br. 127) (footnote omitted)

The footnote references in support of this statement create the erroneous impression that when Senator Phipps first offered the amendment to §5, requiring secretarial contracts to conform to §4(a), the second paragraph of §4(a) was not even before the Senate. A brief review of the evolution of these provisions establishes that the California contention is erroneous.

Senator Phipps did not offer his amendment in May, 1928, he merely had it printed.[15] The same is true of an amendment, printed by Senator Pittman, which later became the Hayden amendment.[16] Neither of these two suggestions was offered and therefore neither had any status as an amendment during the First Session of the 70th Congress.

On December 6, 1928, the second day of the Second Session of the 70th Congress, Senator Hayden offered his proposed amendment to §4(a), providing for a limitation of 4,200,000 acre-feet on California and containing the first

---

of water which are adverse to the State of Arizona, unless and until there is an agreement between Arizona and California apportioning these waters. We desire an agreement so that if Arizona is not in position to use her share of the water immediately, it will be reserved for her. In other words, Arizona's position in this matter is exactly and identically on all fours with the position of the States of the upper basin. We ask no more and no less in the way of protection from immediate development in California than do the States of the upper basin." 70 Cong. Rec. 391-92 (1928).

[15] 69 Cong. Rec. 9144 (1928), Ariz. Legis. Hist. 20-21.

[16] 69 Cong. Rec. 10,259-60 (1928), Ariz. Legis. Hist. 21-26.

proposal for a tri-state compact and an interstate allocation of water.[17] Four days later, Senator Phipps stated his understanding that the pending amendment was the one offered by Senator Hayden and then proposed his amendment, which was substantially the same as the first paragraph of the Hayden amendment except that it fixed the California limitation at 4,600,000 acre-feet, provided for six-state ratification of the Compact and added the provision to §5 that the Secretary's contracts "shall conform to paragraph (a) of section 4 of this Act".[18] Thus, at the time Senator Phipps proposed this amendment to §5 both paragraphs of §4(a) were the subject of debate by the Senate.

On December 11th Senator Hayden pointed out that since the Phipps amendment to his amendment was in the second degree the Phipps amendment was not subject to amendment. He then asked for a ruling whether under parliamentary procedure he might withdraw his amendment in order that there might be a separate vote on three questions: (1) the division of water; (2) six or seven-state ratification of the Compact; and (3) a limitation on the authority of the Federal Power Commission to issue licenses. After a ruling that his suggested procedure was in order, he withdrew his amendment without prejudice and requested Senator Phipps to re-offer his amendment so that "we can proceed to debate it, to amend it, and to vote upon it". Senator Phipps then re-offered his amendment to §§4(a) and 5 with the obvious understanding that Senator Hayden's proposal for a tri-state compact and an interstate allocation of water would be reoffered subsequently.[19]

---

[17] 70 Cong. Rec. 161-62 (1928), Ariz. Legis. Hist. 27-29.

[18] 70 Cong. Rec. 324 (1928), Ariz. Legis. Hist. 72.

[19] 70 Cong. Rec. 382 (1928), Ariz. Legis. Hist. 84-86.

After the California limitation was fixed at not to exceed 4,400,000 acre-feet per annum and six-state ratification of the Compact was accepted, Senator Hayden again offered his amendment which added the second paragraph to §4(a).[20]

Before the vote on the Hayden amendment, Senator Phipps stated:

> "Mr. President, as I understand, this amendment is to the one offered by myself and which is now the pending amendment. I desire to say that I am willing to accept the amendment."[21]

The Hayden amendment was then agreed to.[22] The Phipps amendment, as amended by the Hayden amendment, was then approved by the Senate.[23]

At that time, the second paragraph of §4(a) had been added and the provision in §5 requiring secretarial contracts to conform to §4(a) was approved simultaneously, so that at the time §5 was thus amended the complete water allocation to which the Secretary was required to conform was approved by the Senate.

All of these provisions were in the bill when it was approved as a whole by the Senate[24] and when the House approved the bill without further change.[25]

California's claim that the legislative history negates any congressional intent to make an interstate allocation of water is simply untenable. As the Special Master concluded:

> "The congressional debates are almost unintelligible except on the premise that the legislators considered that they were providing, in the Project Act itself, the authority for the allocation of impounded water among the states." (Rep. 154)

B. As to the Main Stream Versus System Allocation Issue

We repeat what was demonstrated in Arizona's Opening Brief—that the historical background and legislative history of §4(a) show that Congress intended by the enactment of that section to deal with main stream water only (Ariz. Op. Br. 61-67; see also Ariz. Ans. Br. 61-67). In reviewing this legislative history we referred to the proposal made by the Governors of the states of the Upper Division at the 1927 Governors' Conference that, "of the average annual delivery of water to be provided by the States of the upper division at Lees Ferry, under the terms of the Colorado River Compact", there be apportioned to Nevada 300,000 acre-feet, to Arizona 3,000,000 acre-feet and to California 4,200,000 acre-feet. We then demonstrated that this recommendation of the Governors was the starting point for the compromise effectuated in §4(a) of the Project Act whereby California was limited to 4,400,000 acre-feet and Arizona was allotted 2,800,000 acre-feet of water from the main stream of the Colorado River (Ariz. Op. Br. 62-63).

California attacks as unsound (Cal. Ans. Br. 97-99) Arizona's contention that the legislative history of the Project Act supports the view that the Act authorized the apportionment among the Lower Basin main stream states of only main stream water because (1) a portion of the legislative history relied upon by Arizona is the recommendation of the Governors' Conference for the division

among the Lower Basin main stream states of the water delivered by the states of the Upper Division at Lee Ferry and (2) the Master construes the Project Act as authorizing the allocation of water among the Lower Basin main stream states in terms of diversions less returns measured at the points of diversion in the Lower Basin. California reasons that since a flow of 7,500,000 acre-feet at Lee Ferry cannot, because of natural losses, supply 7,500,000 acre-feet of water for consumptive use below Lake Mead, Arizona's legislative history of the Project Act is irrelevant to the construction of that Act. She relies upon the Special Master's statements regarding the part which the Governors' recommendation played in the deliberations of Congress in the enactment of the Project Act in support of her contention, notwithstanding the fact that the Special Master expressly found that the intent of Congress to authorize the allocation of main stream water only is clearly stated in the legislative history of the Project Act (Rep. 174).

A short answer to this California argument is that even if Arizona were mistaken in her belief that the Governors' recommendation throws light on the proper construction of the Project Act, that would not vitiate all the other phases of the legislative history which, as the Master holds, unmistakably evidence the intent of Congress to authorize the apportionment of only main stream water among the Lower Basin main stream states.

However, the Governors' recommendation is of assistance in determining the congressional intent. It is immaterial whether Congress appreciated that the Governors' proposal referred to Article III(d) water rather than III(a) water, as the Master finds, or whether Congress viewed that proposal as recognizing the correlation between Article

III(a) and III(d) of the Compact, as we believe. In either event, the subject matter of this proposal of the Governors was main stream water, and the deliberations of Congress concerning the limitation on California and the tri-state division of water approved by Congress started with and continued to deal with that same subject matter.

Moreover, the Master's discussion of the Governors' Conference relates only to his rejection of the contention, at one time urged by the United States, that uses should be measured at Lee Ferry (Rep. 187-94); it does not relate to the question of what water, *i.e.*, main stream or main stream and tributary, is dealt with in the Project Act. This latter question the Master had previously answered thus:

> "I have concluded that the limitation on California's consumption of water from the Colorado River contained in Section 4(a) of the Project Act and the correlative apportionment of this water among Arizona, California and Nevada effectuated by the water delivery contracts . . . apply only to water diverted from Lake Mead and from the mainstream of the Colorado River below Lake Mead. Hereafter, reference to the 'mainstream', except where otherwise specifically indicated, means Lake Mead and the Colorado River downstream from Lake Mead within the United States." (Rep. 185)

Thus, while Congress may not have understood that the Governors' proposal referred to Article III(d) water rather than to Article III(a) water (Rep. 189), Congress certainly understood that the Governors' recommendation referred to water of the main stream of the Colorado River to the exclusion of Lower Basin tributaries, since water to be delivered at Lee Ferry could mean nothing other than main stream water.

The fact that "the recommendation of the upper division governors did not exempt any lower basin tributaries from the Mexican Treaty burden" (Cal. Ans. Br. 89) is of no relevance to any issue presented by this case. The important point is that the Governors distinguished between water to be delivered at Lee Ferry—necessarily main stream water—and waters of the tributaries of the Colorado River "flowing in Arizona" or "emptying into the river below Lees Ferry" (Ariz. Op. Br. 63 and note 28).

The Master has not found nor even intimated that this distinction between main stream and tributary water, unmistakably made by the Governors, was not clearly understood by Congress in its use of the Governors' recommendations in the senatorial compromise effectuated by §4(a) of the Project Act (Rep. 188-93).

That the recommendations of the Governors' Conference were the basis of the discussion resulting in the compromise was recognized by both Senators Hayden and Johnson, the principal protagonists for Arizona and California, respectively:

> "Mr. Hayden. Is the Senator, then, to make it more specific, willing to use the recommendations of the governors of the States of Wyoming, Colorado, New Mexico, and Utah, as a basis for discussion.
>
> "Mr. Johnson. We can use them as a basis for discussion, but in the bill was inserted a reference to a certain amount of water, at the instance, I think, of the Senator from Wyoming, as the amount that should not be exceeded to the State of California, holding it to 4,600,000 acre-feet, I believe. That is in the bill.
>
> "Mr. Hayden. That is the amount of water which the State of California demanded at Denver and from which she would not recede.
>
> "Mr. Johnson. That is correct, is it?

> "Mr. Hayden. It is. The four governors awarded to the State of California, in their offer of mediation, 4,200,000 acre-feet of water. The State of California submitted a demand for 4,600,000 acre-feet, and has never receded by as much as one acre-foot from that demand."[26]

The Court's attention is invited to the fact that in the portion of Governor Dern's testimony excised by California (Cal. Ans. Br. 99-100), he stated in reference to the Governors' Conference:

> ". . . The State of Arizona made very material concessions toward accepting the proposals submitted by the governors. Arizona, for instance, accepted the amount of water the governors allocated to her *out of the main stream,* which was the most important item."[27]

Mr. Wilson, testifying at the same hearings, stated in the portion of his testimony immediately before that quoted by California:

> "But we took the position that, as regards the 75,000,000 acre-feet which the upper-basin States are obligated under the compact *to let go down by Lees Ferry* in any continuous period of 10 years, we could make a suggestion as to the division of those waters, which, after all, must necessarily be the bone of contention between California and Arizona, *because California had already at previous conferences between the two States conceded that the tributaries of Arizona should belong to that State.* So when we made the suggestion to them we said that all of the suggestions made should be subject and subservient

---

[26] 70 Cong. Rec. 77 (1928).

[27] *Hearings on H. R. 5773 Before the House Committee on Irrigation and Reclamation,* 70th Cong., 1st Sess. 264 (1928).

> to the provisions of the Santa Fe compact. Then we said: Of the average annual delivery of water to be provided by the States of the upper basin at Lees Ferry under the terms of the Colorado River compact, to the State of Nevada, 300,000 acre-feet; to the State of Arizona, 3,000,000 acre-feet; to the State of California, 4,200,000 acre-feet.''[28]

In any event, entirely independently of the Governors' conference and without any reference to it whatever, the Special Master found:

> "Certainly Congress intended that the water, to a portion of which California was limited by Section 4(a), would be mainstream water only. . . . This intention is clearly stated in the legislative history." (Rep. 174)

II

The fact that a delivery of 7,500,000 acre-feet of water at Lee Ferry cannot be precisely equated with a consumptive use of 7,500,000 acre-feet of water down stream does not warrant the conclusion that §4(a) of the Project Act deals with system water.

California argues that since a delivery of 7,500,000 acre-feet of water at Lee Ferry cannot supply consumptive uses in that amount (measured by diversions less returns) at the diversion points in the Lower Basin states, neither Article III(a) of the Compact nor §4(a) of the Project Act could have intended a division of main stream water at Lee Ferry (Cal. Ans. Br. 84-87).

Arizona has fully developed her reasons for concluding that Article III(a) of the Compact apportions main stream water at Lee Ferry (Ariz. Op. Br. 72-81). But even if Arizona's interpretation of Article III(a) is not accepted,

---

[28] *Id.* at 291-92.

it is the congressional intent in employing Compact terminology which governs the construction of §4(a) of the Project Act, as the Master has held (Rep. 173-85).

California first assumes, for the purpose of her attack upon Arizona's position, an actual delivery of 7,500,000 acre-feet of water each year at Lee Ferry. She next assumes it to be Arizona's contention that Congress must have envisaged that this identical water was to be delivered at the points of diversion in the three Lower Basin states.

This is not the case. We agree with the Special Master that the 7,500,000 acre-feet divided among the Lower Basin main stream states is the first 7,500,000 acre-feet of water available each year for consumptive use from Lake Mead and below (Rep. 173-85, 232-33, 305). Quite obviously, this quantity of water is not made up solely of water delivered at Lee Ferry pursuant to the delivery obligation of Article III(d) of the Compact since a release of 7,500,000 acre-feet at Lee Ferry would not result in the identical water so released reaching Lake Mead. Moreover, the Article III(d) delivery obligation does not require the delivery of 7,500,000 acre-feet each year, but only an average of 7,500,000 acre-feet per year in any period of ten consecutive years. Congress was well aware of these facts.

Congress did not intend that the annual delivery at Lee Ferry was to be piloted through the reservoir and down the river for diversion by the states. Congress knew that in a reservoir of the magnitude of Lake Mead water delivered at its upper end would remain in storage for a substantial period of time before reaching Hoover Dam and did not equate the actual annual delivery at Lee Ferry with the water to be supplied to the states each year.

When members of Congress spoke in debate of dividing the 7,500,000 acre-feet let down at Lee Ferry, it is not to be supposed that they intended the impossible. Rather, the

true significance to be attributed to these statements is that in the matter of division of water Congress had its attention focused upon, was concerned with, and intended to deal only with main stream water, and that water of Lower Basin tributaries was not considered as a part of the water to be divided.

Congress was faced with the responsibility of providing authority for the allocation and use of water which would be stored in the exercise of its dominant servitude over navigable water. In discharging that responsibility Congress undoubtedly was influenced by the fact that the water supply flowing in the main stream from the Upper Basin would average not less than 7,500,000 acre-feet per annum. But this fact does not compel the conclusion that Congress, in providing for an allocation of water to be made available by the vast storage facilities contemplated by the Project Act, intended to provide for the allocation among the Lower Basin main stream states of only that portion of the water delivered at Lee Ferry pursuant to Article III(d) of the Compact as should actually reach the diversion points below Lake Mead.

In any event, the fact that 7,500,000 acre-feet of water delivered at Lee Ferry cannot be equated with 7,500,000 acre-feet delivered at Lake Mead or with 7,500,000 acre-feet of consumptive use within the Lower Basin states does not establish the California thesis that Congress in §4(a) of the Project Act was dealing with system water rather than with water of the main stream only. The legislative history of the Act simply precludes any such conclusion. Even apart from the legislative history, the provisions and general operative scheme of the statute lead inevitably to the conclusion, as the Master found, that both §4(a) of the Project Act and the Limitation Act refer only to main stream water—to water in Lake Mead and flowing in the main stream below Hoover Dam (Rep. 138, 151-52, 173-85).

III

California's assertion of an "automatic shortage" is unfounded.

California's claim of "automatic shortage" (Cal. Ans. Br. 1-29) is epitomized in the following statement:

> "The proposed decision [the Master's Report and Recommended Decree] would permit California to receive only *3.8 million acre-feet* even if the lower basin water supply were sufficient to sustain all of the Compact allocations in full, plus all Mexican Treaty requirements and all losses of every description." (Cal. Ans. Br. 8) (California's italics)

California's fundamental error lies in her assertion that the meaning of Article III of the Compact, as she construes it, controls the intent and purpose of Congress in enacting the Project Act and that the water dealt with in §§4(a) and 5 of the Project Act includes Lower Basin tributary water as well as water of the main stream.

The Master was right in rejecting the California contention that the California limitation covered tributary as well as main stream water and in holding:

> "For the reasons stated above, Section 4(a) of the Project Act cannot be given a literal interpretation. Such an interpretation would fly in the face of what must have been the congressional intention; it would make no practical sense whatsoever. This being the case, I have construed Section 4(a) so as to comport with the purposes of Congress in enacting it and to effectuate a result which makes sense when the section is applied to the factual situation existing in the Colorado River Basin.
>
> • • • • • •
>
> "Thus I hold that Section 4(a) of the Project Act and the California Limitation Act refer only to the

water stored in Lake Mead and flowing in the mainstream below Hoover Dam, despite the fact that Article III(a) of the Compact deals with the Colorado River *System,* which is defined in Article II(a) as including the entire mainstream and the tributaries.

"It is clear that Congress intended Section 4(a) of the Project Act to apply only to the mainstream, where the works authorized by the Act were to be constructed. The United States cannot by its operation and control of Hoover Dam regulate the flow of water in the tributaries, nor can it deliver water on any of these streams" (Rep. 172-74) (footnote omitted; Master's italics).[29]

Subsidiary to California's fundamental error in reading her construction of the Compact into the provisions of the Project Act is the California concept that Article III(a) and (b) of the Compact impose an "embargo" or "ceiling" on the amount of water which the Lower Basin may legally put to beneficial consumptive use, regardless of the amount of water which is physically available for such use (Cal. Ans. Br. 19).

California says:

"Manifestly, if the Compact requires accounting for uses on the tributaries against the lower basin's III(a) ceiling of 7.5 million acre-feet, the lower basin states cannot claim against the upper basin (which is their major source of supply) the whole 7.5 million acre-feet out of the main stream as within that ceiling. Thus, if the limitation on California and the secretarial contracts effectuate an allocation of 7.5 million acre-feet from Lake Mead and below, this allocation exceeds the Compact 'ceiling' or 'embargo' (Rep. 140, 196). Since the Secretary is required by statute to operate Lake Mead (and each of the dams

[29] See Ariz. Op. Br. 32-46, 57-81; Ariz. Ans. Br. 58-72.

> above Lake Mead) in conformity with the Compact, shortage in the allocations made by the Master's 'contractual allocation scheme' is automatic and certain whenever the Secretary restricts either the inflow to, or releases from, Lake Mead to enforce the Compact 'ceiling.' " (Cal. Ans. Br. 19-20) (footnotes omitted)

And further:

> "If the Compact is enforced, the Master's formula produces a built-in shortage." (Cal. Ans. Br. 20) (footnote omitted)

This argument is frivolous. The Master held directly to the contrary:

> "... it is clear that the Lower Basin may utilize and consume more than the 8,500,000 acre-feet of water per annum apportioned to it by subdivisions (a) and (b) of Article III of the Compact, if the water is actually available, but against the Upper Basin it can acquire appropriative rights to no greater quantity than is sufficient to satisfy a consumptive use of that magnitude." (Rep. 140)

The language of the Compact not only fails to support California's assumptions, but points clearly to a contrary conclusion. Article III(e) of the Compact provides:

> "The States of the Upper Division shall not withhold water, and the States of the Lower Division shall not require the delivery of water, which cannot reasonably be applied to domestic and agricultural uses."

California ignores realities and deals in computations using assumed figures which have no factual basis in the record. Her "legal drouth" is as mythical as her previously asserted "disaster" (Cal. Op. Br. 50). By her unrealistic computations and assumptions California produces her "built-in shortage" (Cal. Ans. Br. 20), despite the fact that, according to authoritative estimates, uses in

the Upper Basin will not exceed 4,800,000 acre-feet of its apportioned 7,500,000 acre-feet per annum in the foreseeable future (Ariz. Ans. Br. 128).

IV

The California contention that Hoover Dam and Lake Mead can and must be operated in satisfaction of prior appropriative rights is unsound.

We adhere to our position that the recognition and satisfaction of appropriative rights in point of quantity and priority date would be incompatible with the management of Hoover Dam and Lake Mead for the improvement of navigation and flood control pursuant to the mandate of the Project Act (Ariz. Op. Br. 41-42). This position is not inconsistent, as California asserts (Cal. Ans. Br. 111), with that which we have taken with respect to §18 of the Project Act.

The subject under consideration at page 99 of Arizona's Opening Brief, to which California refers for support of her statement that "Arizona agrees with the Master that section 18 of the Project Act requires 'that state law shall govern intrastate water rights and priorities'" (Cal. Ans. Br. 111), was Article 7(d) of the Arizona water delivery contract, which concerns tributary uses in Arizona above Lake Mead. It was and is our position that these provisions of the Arizona contract are invalid for the reason, among others, that they violate the direction of §18 of the Project Act that state law shall govern intrastate water rights and priorities. We contended that the provisions of §18 of the Project Act apply to the tributaries within the State of Arizona, but we did not contend that the provisions of §18

are applicable to water stored in Lake Mead. To the contrary, we stated in our Answering Brief:

> "In no event can §18 be construed as applying to the *interstate* allocation of water stored pursuant to the Project Act. Once that water is impounded by the United States, it ceases to be water subject to the sovereign dominion of any state. Otherwise, its release and delivery from Lake Mead would be controlled by state law and policy instead of by contracts which the Secretary of the Interior is authorized by §5 of the Project Act to make and without which 'no person shall have or be entitled to have the use for any purpose of the water stored as aforesaid. . . .'" (Ariz. Ans. Br. 9) (italics in original)

The purpose of §18 was to insure that nothing in the Act or any water delivery contract should override the then existing rights of the states in the tributary streams within their borders or should prevent the states from controlling the use of such water in accordance with whatever policies they might deem appropriate (Ariz. Ans. Br. 159-60).

California attempts to identify the provisions of §6 of the Project Act with those of §2 of the Rivers and Harbors Act of 1937.[30] She then quotes from this Court's decision in *United States* v. *Gerlach Live Stock Co.*, 339 U. S. 725, 734 (1950), thereby creating the erroneous impression that it was there held that a dam of the Central Valley Project in California had to be operated so as to satisfy existing rights under state law (Cal. Ans. Br. 112-14).

The *Gerlach* case did not so hold or even intimate. It held that in undertaking the project Congress recognized that state-created water rights would necessarily be taken from their owners but did not intend that the taking should be without compensation. 339 U. S. at 739. The situation in the case at bar is far different.

---

[30] 50 Stat. 850.

Finally, California's assertion that "there is no evidence that Hoover Dam and Lake Mead have been operated without regard to appropriative rights, nor may any such inference be drawn from the evidence" (Cal. Ans. Br. 115) is flatly contradicted by the record.[31]

V

California's criticism of the Master's invalidation of Article 7(d) of the Arizona contract is predicated upon the erroneous claim that the United States concurs in California's position that the doctrine of prior appropriation survived the Project Act.

Answering the Opening Brief of the United States, California once again argues her thesis that principles of priority of appropriation and equitable apportionment are relevant and controlling in the determination of the rights of the Lower Basin main stream states in the water of the Colorado River. California attempts to distort the argument made by the United States in support of the validity of Article 7(d) of the Arizona water delivery contract and Article 5(a) of the Nevada contract into an asserted reliance on the doctrine of prior appropriation and the principles of equitable apportionment (Cal. Ans. Br. 36-46).

We do not understand the United States to rely on the doctrine of prior appropriation to support the validity of these provisions of the Arizona and Nevada contracts nor do we believe that the Government's argument is fairly susceptible of that interpretation. We cannot find any justification for the California assertion that the United States, by "implication, inference, and other interpretive techniques [attempts] to mold water delivery contracts

[31] Tr. 21,212-14; and see Tr. 828-29, 857-67, 876-78, 893-95.

into instruments having the effect of recreating equitable apportionment" (Cal. Ans. Br. 37). To the contrary, the briefs of the United States repeatedly assert its position that principles of priority of appropriation and equitable apportionment are not material to a determination of the entitlements of the Lower Basin main stream states to the use of Colorado River water. For example, the Answering Brief of the United States asserts:

> "The principles of priority of appropriation and equitable apportionment are irrelevant, therefore, once it is shown that Congress has made or authorized a federal allocation. Recognition of this proposition removes the underpinning from California's attack upon the decree recommended by the Special Master, for the essence of California's claim is that the principles of prior appropriation and equitable apportionment, when applied to the waters of the Colorado River, give her a right to a water supply adequate to permit full utilization of the capacities of her present projects, which should not be at the hazard of sharing shortages in the total main stream supply with future projects in Arizona and Nevada.
>
> "There is no merit in California's claim that her citizens could acquire 'prior rights' (Calif. Opening Br., p. 37) in the navigable waters of the Colorado River before the United States exercised its powers over the stream. Any claimed rights recognized under the State law were subject to, and could be displaced by, the exercise of the superior federal authority" (U. S. Ans. Br. 24-25).

Contrary to the California claim, the authority to charge tributary uses against contract entitlements in main stream water, for which the United States argues, is not predicated on the enforcement of claimed prior rights downstream, but is based upon the Government's interpretation of the Project Act (U. S. Op. Br. 4, 8-21). In fact the contention of the United States is that these contractual provisions

are necessary to avoid frustration of the purposes of the Act (U. S. Op. Br. 10-11).

Even if the United States were correct, the charge against the entitlements of the states to stored water resulting from the enforcement of these provisions of the Arizona and Nevada contracts would not be in recognition of claimed senior priorities below Lake Mead. The result would be to increase the supply available for apportionment under the authority of the Project Act without reference to claimed appropriative rights below Lake Mead. Since this is true, the "unworkable system of water rights" resulting from the example hypothesized in the California Answering Brief (Cal. Ans. Br. 44-45) would not and could not arise. The basic fallacy which underlies the California contention and her supposed example is that rights to the use of Colorado River water originate in and are predicated upon appropriative rights. This concept cannot be squared with an administration of the river predicated upon the premise that such rights are derived from the United States and are fixed by the allocation authorized by the Project Act. Any attempt to read principles of priority of appropriation into the Project Act or to reconcile the incompatible concept of appropriative rights with that of a statutory allocation is bound to produce "an unworkable system of water rights".

When it is appreciated that Congress elected to exercise its dominant servitude only over the water in the main stream of the Colorado River and to authorize an allocation among the Lower Basin main stream states of the main stream water stored by the United States in carrying out its powers under the Commerce Clause, the problems posed by California disappear. All rights to the use of water below Lake Mead are limited to the supply created under the authority of the Project Act and do not extend to the water of tributary streams, over which Congress did not attempt

to exercise any control and which Congress did not intend should constitute a part of the water included in the Project Act allocation (Ariz. Ans. Br. 156-57).

VI

California's criticism of Arizona's proposed amendment to Article II(B)(8) of the Special Master's Recommended Decree is unwarranted.

California takes exception to Arizona's suggested amendment (Ariz. Op. Br. 106-08) of Article II(B)(8) of the Special Master's Recommended Decree[32] and argues

---

[32] California's assertion (Cal. Ans. Br. 129) that Arizona's proposal was "rejected by the Special Master" is incorrect. The proposed amendment set forth in Arizona's Opening Brief (108) was not presented to the Master. The proposal submitted to and rejected by him was substantially different and read as follows:

"ARIZONA'S SUGGESTED CHANGES TO SUBDIVISION (B)(6) OF ARTICLE II OF THE RECOMMENDED DECREE (DRAFT REPORT, pp. 306-309)

"(Deletions struck, additions underlined)

"II(B)(6) 'If, in any one year, water apportioned for consumptive use in a state will not be consumed in that state, whether for the reason that users therein do not have delivery contracts for the full amount of the state's apportionment, or that they cannot apply all of such water to beneficial uses, or for any ~~another~~ other reason, ~~nothing in this decree shall be construed as prohibiting the the Secretary of the Interior from releasing such apportioned but unused water during such year for consumptive use in the other states. No rights to the recurrent use of such water shall accrue by reason of the use thereof.~~ the Secretary of the Interior may, in his discretion and to the extent such storage will not be inconsistent with the objects and purposes of the Project Act, permit such state to accumulate and store such unused waters. Any losses occasioned by reason of such storage shall be a charge against the water so stored.' "

For the discussion of this suggestion before the Special Master see Reporter's Transcript, Conferences on Recommended Decree, New York, N. Y., August 19, 1960, pp. 85-122.

that should flood control require the release of water from Lake Mead the proposed amendment requires the Secretary "to compel the waste of that water to the ocean rather than to permit its use by a state thereby exceeding its allocation" (Cal. Ans. Br. 129).

California misunderstands the provisions of the Recommended Decree and the modification of Article II(B)(8) proposed by Arizona. The Recommended Decree enjoins the release of water for irrigation and domestic use in Arizona, California and Nevada, except in the quantities specified in Article II for consumptive use in the three states. Article II(B)(8) merely authorizes the release to one state of water which is apportioned to but will not be consumed in another. This exception has nothing to do with water released for flood control or other non-consumptive uses but is expressly limited to "water apportioned for consumptive use in a state".

Subdivisions (C) and (D) of Article III of the Recommended Decree enjoin each of the Lower Basin main stream states from diverting water from the main stream, the diversion of which has not been authorized by the United States for use in that state and from consuming water in excess of the quantities specified in Article II of the Recommended Decree.

Thus, even without the modification of Article II(B)(8) suggested by Arizona, the States of Arizona, California and Nevada are enjoined by the Recommended Decree as it now stands from diverting or consuming any main stream water in excess of that which is apportioned to them by the United States pursuant to Article II, or which has been apportioned to but will not be consumed by another state.

All that is intended by the proposed modification advocated by Arizona and all that may be properly attributed

to it is that the ceiling placed on consumptive uses in the Lower Basin main stream states by the Project Act, the Limitation Act and the water delivery contracts shall be observed and that this ceiling shall not be exceeded because of uses in one state of water apportioned to but unused in another.

Evasion of the ceiling placed on uses of Colorado River water by the Project and Limitation Acts and the water delivery contracts should not be sanctioned under the guise of prevention of waste. Glen Canyon Dam, together with existing and anticipated regulatory structures on the Colorado River, make it most likely that it will be possible to store and regulate the flow of the Colorado River so that the use requirements of the Lower Basin main stream states and the Mexican Treaty delivery obligations can be synchronized with releases required for flood control without the wasteful results predicted by California. The fact that the water available for use in the Lower Basin is not abundant leads all to deplore waste and to endorse any reasonable and lawful measure for its elimination. At the same time, we are mindful of California's relentless opposition to every Arizona effort to put to use Arizona's share of Colorado River water. Even though California attempts to disguise her true purpose by draping the "prevention of waste" cloak about it, we must oppose the incorporation into the Decree of provisions which would nullify the protection afforded by the limitations set by the Project and Limitation Acts and thereby supply California with the incentive to continue her opposition to Arizona's utilization of Colorado River water even after Arizona's legal entitlements in that stream are set at rest.

PART II

The Claims of the United States to Water

PART II

The United States attempts to support the Special Master's recommendations relating to its right to the use of main stream water for Indian Reservations and other federal establishments on either of two alternative theories:

First. That under the Project Act the Secretary of the Interior is empowered "to use, or to reserve the use of," a portion of "the waters of the mainstream of the Colorado River" for the lands of the United States (U. S. Ans. Br. 55).

Second. That the United States has "property rights" or "a proprietorship" in the use of the water of the Colorado River, which it exercised when the federal establishments were created by reserving such waters for use thereon in quantities sufficient to satisfy their ultimate needs (U. S. Ans. Br. 55-56).

The Master's recommendations cannot be sustained on either of these theories.

ARGUMENT

VII

The Master's recommendations regarding the right of the United States to use water of the Colorado River for federal establishments cannot be sustained on the basis of the authority given the Secretary by the Project Act.

The Special Master did not rely upon the Project Act as creating the rights which the United States claims to main stream water for use on federal establishments. He upheld these claims on the ground that the federal government has the inherent power to reserve water of both navi-

gable and non-navigable streams for the benefit of federal establishments and that the very creation of such establishments impliedly reserves in perpetuity sufficient water to satisfy their ultimate needs (Rep. 254-66).

Under the Master's theory, this reservation of water for the use of federal establishments was not effectuated by any act of the Secretary of the Interior in the exercise of the authority granted him by the Project Act, but rather by Congress or the President in creating the federal establishments, thereby automatically reserving water for their use.

Clearly, the priorities which the Master accorded these federal water rights do not and could not possibly originate in the Project Act, which did not become effective until June 25, 1929 (Rep. 152 note 20), since the priorities of all but three of the establishments are recognized by the Master as antedating the Project Act.[33]

The Master construed §6 of the Project Act as preserving whatever rights to main stream water were perfected when the Project Act became effective on June 25, 1929 (Rep. 152 note 20), and he held specifically that a reservation of water by the United States before June 25, 1929 is to be accorded the protection given by §6 to "present perfected rights", even though, as of that date, the rights were not perfected under state law and but a small fraction of

---

[33] The priority dates found by the Master for the various establishments are as follows: Chemehuevi Indian Reservation, February 2, 1907 (Rep. 267); Cocopah Indian Reservation, September 27, 1917 (Rep. 268); Yuma Indian Reservation, January 9, 1884 (Rep. 269); Colorado River Indian Reservation, March 3, 1865, November 22, 1873, November 16, 1874, May 15, 1876, and November 22, 1915 (Rep. 274); Fort Mohave Indian Reservation, September 18, 1890, and February 2, 1911 (Rep. 283); Lake Mead National Recreation Area, May 3, 1929, and April 25, 1930 (Rep. 295); Havasu Lake National Wildlife Refuge, January 22, 1941, and February 11, 1949 (Rep. 299); Imperial National Wildlife Refuge, February 14, 1941 (Rep. 300).

the water purportedly reserved had been put to beneficial use (Rep. 309-10). The Master's conclusion was based on the premise that

> "The water rights created by such a federal reservation do not depend upon state law or upon the actual diversion and beneficial use of a specific quantity of water." (Rep. 309)

This conclusion serves to emphasize the fact that the water rights of federal establishments were grounded by the Master not upon the Project Act but upon principles of decisional law,[34] which, he found, gave to those rights an existence, a special character and a priority wholly independent of the Project Act and which that Act only recognized and preserved.

Nor did the Special Master derive from the Project Act the quantities of water which he found had been reserved for federal establishments, *viz.*, quantities sufficient to irrigate all the irrigable acreage within the Indian Reservations (Rep. 254-66) or quantities reasonably necessary to fulfill the purposes and to meet the requirements of other federal establishments (Rep. 295, 299, 300).

It is thus too clear for dispute that the Project Act is not the basis of the Master's recommendations sustaining the claims of the United States to main stream water for the use of federal establishments. Rather, the entirely different, separate and independent "reservation" theory is the sole and exclusive foundation for those recommendations.

Indeed, the Master specifically held that the Project Act is not the origin of the rights claimed by the United States to main stream water for federal establishments. With

---

[34] The Master relied on *Winters* v. *United States*, 207 U. S. 564 (1908).

respect to such a claim for the Coachella Indian Reservations, the Master stated:

> "The Boulder Canyon Project Act does not specifically invest the Coachella Reservations, or indeed any Indian Reservation, with rights to water from the Colorado River. Nor can any such rights be reasonably inferred from the Act's authorization of the Secretary of the Interior to deliver water to the Coachella Valley." (Rep. 289)

This holding, to which the United States did not except, is particularly significant in view of the facts found by the Master with respect to the claim.

The Indian Reservations referred to are located outside the drainage basin of the Colorado River—a fact which, as the Master found, "leaves no room for a presumption, absent a specific showing, that the United States intended to reserve water from the Colorado River for use on these Reservations" (Rep. 289). Perhaps this fact explains why the United States did not rely upon the "reservation" theory in claiming water for these Reservations, but rather based its claim on the Project Act, various federal statutes and several contracts between the Coachella Valley County Water District and the United States (Rep. 289). The Master found that none of these instruments created any rights in the United States to Colorado River water for the use of the Reservations concerned.

The 1934 contract between the Water District and the United States provided for the construction of Imperial Dam and the All-American Canal for the benefit, *inter alia*, of lands within the Coachella Valley. The 1947 contract provided for the construction of distribution and drainage works for the benefit of lands within the Coachella service area. As to these agreements the Master held:

> "Neither of these contracts purports in any manner to deal with water rights of the Coachella Indian Reservations and they cannot form the basis for assertion of such rights." (Rep. 290)

The Act of August 25, 1950[35] directed the Secretary of the Interior to designate the lands of the Coachella Reservations which could be irrigated by the facilities of the District and authorized him to enter into a contract with the District for the benefit of the designated Indian lands. As to this statute the Master held:

> "The Act does not create rights to water in favor of the Indians; it merely serves as a preliminary step towards possible acquisition of rights. It is apparent, therefore, that up to and including 1950 the Coachella Reservations had no enforceable right to water from the Colorado River." (Rep. 290)

Finally, in 1957 the District entered into an agreement with the Secretary of the Interior whereby he undertook to construct irrigation distribution works connected to the District's system to serve Indian lands designated by the Secretary. The contract provided, among other things, that after any major part of the irrigation system and drainage works were turned over to the District for care, operation and maintenance, the District should deliver water to specified lands within Improvement District No. 1 (including the Indian Reservation lands in question), which could be irrigated through such part of the system "under the same conditions, rules, and regulations, to the same extent, without discrimination, and for the same charges, . . . as water is delivered by the District to other lands similarly located within the District" (Rep. 290). This agreement was to become effective when Congress author-

[35] 64 Stat. 470.

ized the Secretary to fulfill the obligations undertaken by him and this authorization was given by the Act of August 28, 1958.[36] On the basis of these facts the Master concluded:

> "From the foregoing it is clear that rights of the Coachella Reservations to water from the Colorado River can be derived only from the 1957 contract between the Secretary and the District. But there has been no showing that the Indian distribution system has been constructed. Nor has it been established that 'any major part of such irrigation distribution system . . . has been turned over to the District. . . .' The obligation of the District to deliver water to the Coachella Reservations under the contract with the Secretary, therefore, cannot be said to have matured. Thus, there is no occasion on the facts and circumstances presented for a determination of what rights may accrue to the Coachella Reservations should the District become obligated to deliver water to them in the future." (Rep. 291)

The foregoing holdings of the Special Master regarding the claims of the United States on behalf of the Coachella Indian Reservations clearly indicate that, had the question been presented to him, the Special Master would have rejected as unsound the contention now made for the first time by the United States that, independent of the so-called "reservation" theory, rights to water of the Colorado River for use on federal establishments within Arizona may be derived from the Project Act or inferred from the Act's authorization to the Secretary of the Interior to deliver water for reclamation of "public lands" and other beneficial purposes (U. S. Ans. Br. 59-60).[37]

---

[36] 72 Stat. 968.

[37] Elsewhere in its Answering Brief the United States correctly asserts that "reservations are not 'public lands' ", citing *FPC* v. *Oregon*, 349 U. S. 435, 448 (1955), and other cases (U. S. Ans. Br. 66).

The United States assertion that "since the Secretary of the Interior has the power to contract for the delivery of stored water 'for irrigation and domestic uses,' . . . he derives power from the same sources to use mainstream water for similar purposes on federal lands" (U. S. Ans. Br. 59) was in effect rejected as unsound by the Master's holding directly to the contrary in respect of the Coachella Indian Reservations (Rep. 289).

The Master's conclusions, reviewed immediately above, also indicate the unsoundness of the further contention of the United States that its claims on behalf of federal establishments may be sustained under Article 7(*l*) of the Arizona 1944 water delivery contract with the Secretary of the Interior (U. S. Ans. Br. 60). That portion of the contract provides in material part:

> "Deliveries of water hereunder shall be made for use within Arizona to such individuals, irrigation districts, corporations or political subdivisions therein of Arizona as may contract therefor with the Secretary, and as may qualify under the Reclamation Law or other federal statutes *or to lands of the United States within Arizona.*"

The United States relies on the italicized phrase of the quoted provisions to sustain its position. But this is surely a weak straw to grasp in view of the Master's holding that rights to water in favor of the Indians were not created by the far more specific provisions of the 1934 and 1947 contracts between the United States and the Coachella Valley County Water District "for the benefit of lands within the Coachella Valley" (Rep. 289) and the 1957 contract between the District and the Secretary of the Interior which contained explicit references to "Indian lands designated by the Secretary". If those agreements were

ineffective to create rights for the benefit of the Coachella Indian Reservations, certainly the general language culled by the United States out of the Arizona water delivery contract is insufficient to create any existing and definite rights to water for use on federal establishments within Arizona.

VIII

The Master's recommendations regarding the right of the United States to use water of the Colorado River for federal establishments cannot be sustained on the basis of the so-called "reservation" theory.

A. Basic Fallacies Underlie the Position of the United States.

The alternative theory by which the United States attempts to support the Master's recommendations relating to its claims to main stream water for Indian Reservations and other federal establishments is that the United States had "property rights" or a "proprietorship" in the use of water of the Colorado River and that when the federal establishments were created it reserved for use thereon the quantities of water sufficient to satisfy the ultimate needs of the establishments (U. S. Ans. Br. 55-56).

The United States fails to recognize the essential difference between the principles applicable to navigable and those applicable to non-navigable streams. This fundamental error vitiates the entire position of the United States with respect to the alleged reservation of the use of main stream water for federal establishments. Although it concedes that water rights which are not "owned" by the federal government cannot be reserved by it (U. S. Ans. Br. 64), the Government will not accept the teaching of the

long and unbroken line of decisions of this Court that the federal government does not "own" any rights in navigable waters, has no "property rights" in them and exercises no "proprietorship" over them (Ariz. Op. Br. 121-29).

As Mr. Justice Douglas stated in *United States* v. *Twin City Power Co.*, 350 U. S. 222, 224 (1956):

> "The interest of the United States in the flow of a navigable stream *originates* in the Commerce Clause. *That Clause speaks in terms of power, not of property.*"

The United States fails to give effect to fundamental principles of law repeatedly stated and applied by this Court:

1. Prior to statehood the rights of the United States in the navigable water of a territory, unlike its title to territorial land, are not absolute but are held for the benefit of the people and in trust for the future state (Ariz. Op. Br. 125-29).

2. Upon the admission of a territory to statehood sovereign rights in the water and beds of navigable streams become vested in the newly created state, which acquires absolute and complete sovereignty over them, subject only to the power of the United States over navigation under the Commerce Clause (Ariz. Op. Br. 121-29).

The United States also fails to recognize the corollary propositions which flow from these basic principles:

1. After statehood the United States has no power to reserve water of navigable streams within a state for federal establishments within the state (Ariz. Op. Br. 121-24).

2. Before statehood the power of the United States to reserve navigable water for use on federal establishments resides exclusively in Congress and no authority exists in

the Executive to dispose of navigable waters for federal purposes in the absence of an authorization from Congress (Ariz. Op. Br. 129-35).

3. The settled policy of the United States to hold navigable streams within federal territories in trust for future states raises a presumption against a disposal of those waters by the United States, which must be overcome in each case by a clear manifestation of an intention on the part of the United States to dispose of the waters (Ariz. Op. Br. 135-39).

Failure to recognize and apply the foregoing fundamentals and their corollaries has led the United States into a number of errors which permeate its Answering Brief. These will be considered in the discussion which follows.

B. Proprietary Rights to the Use of Navigable Water in Arizona Were Not Acquired by the United States Through Treaties With Mexico.

The United States argues that when it acquired the territory, part of which is now within the State of Arizona, by cession from Mexico, "it became the owner not only of the land itself, but of all rights pertaining thereto as well," and that the "right to use the appurtenant waters was one of the whole bundle of rights so acquired" (U. S. Ans. Br. 61) (footnote omitted). The Government thus fails to distinguish between the nature of its title to territorial *land,* which is absolute, and its rights in the navigable waters of a territory, which are held by the United States for the benefit of the people and in trust for future states. As this Court said in *Port of Seattle* v. *Oregon & W. R. R.,* 255 U. S. 56, 63 (1921):

> "The right of the United States in the navigable waters within the several states is limited to control

thereof for purposes of navigation. Subject to that right Washington became, upon its organization as a state, the owner of the navigable water within its boundaries and of the land under same. . . . The character of the state's ownership in the land and in the water is the full proprietary right."

Similarly, in *Kean* v. *Calumet Canal & Improvement Co.*, 190 U. S. 452, 481 (1903), the Court said:

". . . by a consideration of the doctrine of public and private waters known to the common law, it was early decided, and has been repeatedly reiterated, that the navigable waters and the land under them belong to the states—as well the new as the old—in virtue of their sovereignty, to be held in trust for the people subject to the power of Congress to regulate commerce. And, in harmony with the principle just stated, it has been decided that such navigable waters and the land under them in the public domain of the United States within the territories, while subject to be disposed of by Congress, under the trust for public use, were yet held by the United States to be transmitted to the new states to be formed, and which should, when endowed with statehood, possess them with the same rights and powers as the original states" (citing many cases).[38]

---

[38] *Borax Consolidated, Ltd.* v. *Los Angeles*, 296 U. S. 10 (1935), and *Knight* v. *United Land Ass'n*, 142 U. S. 161 (1891), cited by the United States (U. S. Ans. Br. 61), are not to the contrary. In both cases the Court held that title to the acquired territory vested in the United States, but also recognized that title to the tidelands were held "only in trust for the future states that might be erected out of that territory". 296 U. S. at 15.

United States v. *Grand River Dam Authority*, 363 U. S. 229 (1960), cited at U. S. Ans. Br. 62, is not in point because it involved the construction of a water power project on a non-navigable tributary of a navigable river.

The "see also" decisions of this Court, cited at U. S. Ans. Br. 62-63, are likewise inappropriate. All of them involved the dominant servitude of the United States over navigable waters in

C. Arizona's Rights In Navigable Water Are Not Dependent Upon a Transfer Thereof from the United States.

The United States makes reference to "the Desert Land Act of 1877, and its precursor Acts of 1866 and 1870" (U. S. Ans. Br. 63-66, 73-84). The Government's argument based upon this legislation runs as follows: In the Desert Land Act,[39] Congress provided for the acquisition from the United States of rights to use the surplus *non-navigable* waters on public lands by appropriation in accordance with local laws and customs. The Act did not authorize the appropriation of rights to use navigable waters on public lands. Therefore the "proprietary right" to use *navigable* water has never been "surrendered" by the United States. For this reason, the United States claims, it is still the "owner" of the right to use "the waters of the Colorado River appurtenant to its reservations" and this ownership

---

exercise of its power to regulate navigation under the Commerce Clause, not the title of the states to the waters of navigable streams.

Winters v. *United States*, 207 U. S. 564 (1908), cited at U. S. Ans. Br. 64 is of course not relevant since it involved non-navigable water. *United States* v. *California*, 332 U. S. 19 (1947); *Utah Power & Light Co.* v. *United States*, 243 U. S. 389 (1917), and *Van Brocklin* v. *Tennessee*, 117 U. S. 151 (1886) (U. S. Ans. Br. 64), are simply authority for the proposition that the United States owns property rights to *land* in its public domain.

The quotation from 1 KINNEY, THE LAW OF IRRIGATION AND WATER RIGHTS, 692-93 (2d Ed. 1912), (U. S. Ans. Br. 62) is misleading, since the author was there referring to *non-navigable* waters. Speaking of navigable waters, the same author states:

> "[N]avigable waters and the land under them in the public domain of the United States within the Territories, while subject to be disposed of by Congress, under trust for the public use, were yet held by the United States to be transmitted to the new States to be formed, and which should, when endowed with statehood, possess them with the same rights and powers as the original States." *Id.* at 539.

[39] 19 Stat. 377 (1877), as amended, 43 U. S. C. §§321-29 (1958).

did not pass to Arizona upon her admission into the Union (U. S. Ans. Br. 64-65, 84).

This entire line of reasoning is specious, because it is based on the false premise that the United States at one time owned absolutely the right to use both navigable and non-navigable streams on public lands. This premise, as we have seen, is contrary to the many decisions of this Court holding that rights in navigable streams within territories of the United States are held by the federal government in trust for future states and that title to those waters becomes vested in the newly created state on admission to the Union.

In view of this settled law, it is not difficult to understand why the Desert Land Act "does not authorize the appropriation of rights to use *navigable* waters anywhere" (U. S. Ans. Br. 65). Since the Government never acquired any "proprietary rights" to navigable waters, it could not give away what it did not have. Indeed, in view of *Martin* v. *Waddell's Lessee,* 41 U. S. (16 Pet.) 367 (1842), *Pollard* v. *Hagan,* 44 U. S. (3 How.) 212 (1845), and numerous other decisions concerning proprietary rights in navigable waters, with which Congress was undoubtedly familiar, it is clear that Congress limited the Desert Land Act to non-navigable waters because it knew that the United States had no title to, and hence no right to dispose of, any proprietary interest in navigable waters.

On the same false premises the United States, although confronted with overwhelming legal authority to the contrary, denies "that ownership of navigable waters passed to the States upon their admission to the Union along with title to the bed of the stream" (U. S. Ans. Br. 84). This proposition is denied because, the Government says, it is based upon a "distinction between navigable and non-

navigable waters" and "there is no merit to the distinction" (U. S. Ans. Br. 84). It is much too late, we submit, to argue the "merit" of a legal distinction which has been consistently and invariably recognized since the formation of the United States as a nation and indeed long before.

Confronted with this impressive body of authority, the United States attempts to distinguish the cases by stating that, of those cited by Arizona in her Opening Brief (Ariz. Op. Br. 124-29), "with one exception, each involved the question of ownership of the shores of, or lands beneath, navigable waters; none involved the question of ownership of the water itself" (U. S. Ans. Br. 85-86) (footnote omitted).

But this attempted distinction is without validity and unsupported by authority. The Court has never drawn a distinction between proprietary rights in navigable waters and those in the lands underlying them and, historically, none has existed. Thus, the cases speak without distinction of the states' "absolute right to all their navigable waters and the soils under them", *Martin* v. *Waddell's Lessee,* 41 U. S. (16 Pet.) 367, 410 (1842); of the state's ownership "of the navigable waters within its boundaries and of the land under same", of "the state's ownership in the land and in the waters"; and of the state as "the absolute owner of the tidelands and of the waters over them", *Port of Seattle* v. *Oregon & W. R. R.,* 255 U. S. 56, 63 (1921). In the last cited case it was said:

> "The character of the State's ownership in the land and the water is the full proprietary right" 255 U. S. at 63.

In *United States* v. *Oregon,* 295 U. S. 1, 14 (1935) it was said:

> "Dominion over navigable waters and property in the soil under them are so identified with the

> sovereign power of government that a presumption against their separation from sovereignty must be indulged, in construing either grants by the sovereign of the lands to be held in private ownership or transfer of sovereignty itself. See *Massachusetts* v. *New York*, 271 U. S. 65, 89. For that reason, upon the admission of a State to the Union, the title of the United States to lands underlying navigable waters within the State passes to it, as incident to the transfer to the State of local sovereignty, and is subject only to the paramount power of the United States to control such waters for the purposes of navigation in interstate and foreign commerce. But if the waters are not navigable in fact, the title of the United States to land underlying them remains unaffected by the creation of the new State."

It is therefore obvious that the states acquire sovereignty over and title to lands under navigable water only because they acquire sovereignty over and title to the navigable water itself.

The extent to which the United States misconceives the essential nature of rights in navigable streams is sharply illustrated by its great reliance on the opinion of Mr. Justice Field in *Moore* v. *Smaw*, 17 Cal. 199 (1861), decided when he was Chief Justice of the Supreme Court of California. The holding of that case that ownership of minerals in land passed by the cession of the territory from Mexico to the United States is completely beside the point. The United States, having become absolute owner of the *land*, became absolute owner of the minerals in the land and did not, as was there claimed by the defendants, hold them in trust for the future State of California. Entirely different principles apply to rights in navigable streams. The attempt of the United States to substitute "navigable waters of the Colorado River" in place of minerals in lands within the scope of *Moore* v. *Smaw* (U. S. Ans. Br. 86-89)

manifests an unwillingness to recognize the true nature of rights in navigable streams.

The United States overlooks the fact that Mr. Justice Field had become a member of this Court when it handed down its unanimous decision in the leading case of *Shively* v. *Bowlby,* 152 U. S. 1 (1894), which traced the historical development and defined the nature of the respective rights of the federal and state governments in navigable waters. In fact, Justice Field wrote the opinion of the Court in *Weber* v. *State Harbor Comm'rs,* 85 U. S. (18 Wall.) 57 (1873), quoted in Arizona's Opening Brief (Ariz. Op. Br. 122-23). He also wrote the prevailing opinion in *Illinois Central R. R.* v. *Illinois,* 146 U. S. 387, 435 (1892), in which he said:

> "It is the settled law of this country that the ownership of and dominion and sovereignty over lands covered by tide waters, within the limits of the several States, belong to the respective States within which they are found with the consequent right to use or dispose of any portion thereof, when that can be done without substantial impairment of the interest of the public in the waters, and subject always to the paramount right of Congress to control their navigation so far as may be necessary for the regulation of commerce with foreign nations and among the States. This doctrine has been often announced by this court, and is not questioned by counsel of any of the parties. *Pollard* v. *Hagan,* 3 How. 212; *Weber* v. *Harbor Commissioners,* 18 Wall. 57."

Clearly, then, the states have sovereignty over and title to not only the beds of navigable streams but the water thereof as well. The rights of the states are, of course, subject to the "dominant servitude" or dominant "power" of the United States under the Commerce Clause. *United States* v. *Twin City Power Co.,* 350 U. S. 222, 224 (1956).

United States v. *Chandler-Dunbar Water Power Co.*, 229 U. S. 53 (1913), cited by the Government (U. S. Ans. Br. 86), is an example of the exercise of this dominant servitude. The Court there held that Congress has the power to decide conclusively, as a purely legislative question, whether the entire flow of a navigable stream should be conserved for navigation. Moreover, in that case the interest which conflicted with the dominant servitude of the United States was the claim of a private company—not that of a sovereign state—to the use of the flow of a navigable stream. State sovereignty over and title to the waters or to the land under them was not involved. Similarly, it was held in *United States* v. *Appalachian Electric Power Co.*, 311 U. S. 377, 425 (1940), cited by the Government (U. S. Ans. Br. 86), that since "the flow of a navigable stream is in no sense private property", the United States, in the exercise of its powers over navigation, could take over without compensation a power project on a navigable river privately operated under state license.

State ownership of navigable waters and federal dominion over them under the Commerce Clause are not inconsistent or incompatible. Actually, it is because the United States does not own the water of a navigable stream that the Commerce Clause "speaks in terms of power, not of property". *United States* v. *Twin City Power Co.*, 350 U. S. at 224. The failure of the United States to recognize this distinction between the rights of the states and the dominant servitude of the federal government under the Commerce Clause leads it to confuse the two and to find "inconsistency" where it does not exist, *i.e.*, between the position of Arizona with respect to the power of Congress under the Commerce Clause to impound the water of the Colorado River and to apportion the stored water among the states and the power of the United States to reserve the

water of the Colorado River, whether impounded or not, for federal establishments (U. S. Ans. Br. 57-58). The two powers are entirely distinct and governed by wholly different principles and considerations. Significantly, the Master does not resort to the Commerce Clause to sustain the reservation of navigable water for federal establishments.

D. The Mere Creation of a Federal Establishment Does Not Operate to Reserve Navigable Water for Its Use.

Completely disregarding the considerations peculiar to navigable waters, the United States relies on *Winters* v. *United States*, 207 U. S. 564 (1908), to sustain its thesis that the very establishment of an Indian Reservation implies an intention to reserve the use "of all appurtenant waters" necessary for the fulfillment of the purposes for which the lands were reserved (U. S. Ans. Br. 65). The United States ignores the fact that the case involved water of a non-navigable stream reserved for use on an Indian Reservation created by treaty in the Territory of Montana. The Government again makes reference to the Desert Land Act and argues:

> "The only real difference in this respect between navigable and non-navigable waters may be that *as to the former there is no need for reservation to preserve* the rights against appropriation by others because there is no statute which provides for their transfer or appropriation." (U. S. Ans. Br. 66)

Thus, from its refusal to recognize rights of the states in navigable streams, the Government reaches the strange conclusion that in the case of navigable water there need

be no reservation for federal use. The argument proves too much. If sound, there is no necessity for the reservation of navigable water for use on any federal establishment.

E. In the Absence of Congressional Authority the Executive is Without Power to Reserve the Use of Navigable Water for Federal Establishments.

The United States asserts that the argument of Arizona questioning the authority of the President to reserve navigable water (Ariz. Op. Br. 129-35), "is really directed toward the authority of the President to establish federal reservations" (U. S. Ans. Br. 69). The Government misconceives our position. The misconception is caused by the false notion that "the reservation of the use of waters appurtenant to federal areas results from the reservation of the land" (U. S. Ans. Br. 69). Once again, the failure to distinguish between the title of the federal government in publicly owned *land* and its rights in *navigable water* on that land, leads the United States into error.

We do not question the power of the President to establish federal reservations. The constitutional doubts which beclouded his power were finally dispelled by *United States* v. *Midwest Oil Co.*, 236 U. S. 459 (1915). However, we do contend that the power to reserve by executive order federally owned lands, title to which is in the United States as absolute owner, is one thing, and the power to reserve navigable territorial water, which is held by the United States in trust for future states, is quite another. As we said in Arizona's Opening Brief:

> "We have found no statute which authorizes the President to reserve navigable water for the benefit of federal establishments nor, so far as we have been able to determine, are there any cases which have

> passed upon the existence of such executive power in the absence of statute." (Ariz. Op. Br. 130-31) (footnote omitted)

The United States has not come forward with any authority supporting either the express or implied power of the Executive to reserve navigable water (U. S. Ans. Br. 69-72).[40] Actually, even the inferred presidential authority to establish Indian Reservations out of public lands, recognized in *United States* v. *Midwest Oil Co., supra,* was expressly terminated by Congress with regard to New Mexico and Arizona in 1918 (U. S. Ans. Br. 70).[41] The United States says that "these statutes constituted a clear change in the congressional policy with regard to the establishment of Indian Reservations by executive order" (U. S. Ans. Br. 70). We agree. But we see in this legislation a determination by Congress to severely restrict, indeed to abolish, as far as Arizona and New Mexico are concerned, the power of the President to reserve land for Indian Reservations which this Court in 1915 had recognized in the *Midwest Oil* case. Certainly this legislation cannot be construed as recognizing by inference any presidential power to reserve navigable streams for federal purposes. To the contrary, Congress would undoubtedly be opposed to presidential assumption of that power in view of the duties of trusteeship over navigable water with which Congress is charged.

Nor does Arizona contest the power of the President to establish by executive order, as he did, the Lake Mead

---

[40] The General Indian Allotment Act, 24 Stat. 388 (1887), recognized and confirmed only "the power of the President to reserve public *lands* for the Indians" (U. S. Ans. Br. 69). By the Act of June 25, 1910, 36 Stat. 847, 43 U. S. C. §141 (1958), the President was "authorized to reserve public *lands*" for specified purposes (U. S. Ans. Br. 70).

[41] Act of May 25, 1918, 40 Stat. 570, 25 U. S. C. §211 (1958).

National Recreation Area, the Havasu Lake National Wildlife Refuge and the Imperial National Wildlife Refuge. As the United States asserts, these federal establishments were created under the "powers of the President to deal with public *lands*" (U. S. Ans. Br. 71). We do, however, contest the power of the President to reserve navigable water for any Indian Reservation or other federal establishment in the absence of a delegation by Congress of the authority to do so. The United States has presented no authority to the contrary.

In discussing the federal establishments created by executive order, the United States makes no distinction between those established before and after Arizona became a state. The Cocopah Indian Reservation, the Lake Mead National Recreation Area and the Havasu Lake and Imperial Wildlife Refuges were all created after Arizona was admitted to statehood. Hence, regardless of whether the President has or has not the power to reserve navigable territorial waters, the federal government was without power to make any reservation of water of the Colorado River for the use of these establishments (Ariz. Op. Br. 121-24).

F. There Must Be a Clear Manifestation of Intent to Reserve Navigable Water.

The United States, still ignoring the distinction between rights in navigable and non-navigable water, can find "no logical reason . . . for requiring an express intent to reserve rights with respect to navigable waters when implied intent is sufficient for all others" (U. S. Ans. Br. 72-73). Again, Arizona's position is misconstrued. We do not urge that a stated "intent to reserve" is indispensable in the case of navigable water. We do assert, upon the authority of this Court's decision in *United States* v. *Holt*

State Bank, 270 U. S. 49, 55 (1926), that "disposals by the United States during the territorial period are not lightly to be inferred, and should not be regarded as intended unless the intention was definitely declared or otherwise made very plain".

We shall not review our analysis of the events surrounding the establishment, enlargement and maintenance of the Indian Reservations here involved which demonstrates that there is no justification for a finding or conclusion that the United States in establishing those Reservations intended to reserve water of the Colorado River for their use (Ariz. Op. Br. 139-53).

The United States refers to the various congressional appropriation Acts passed after 1910, which were designed to supply funds for the construction of irrigation works on the Colorado River Indian Reservation "for the purpose of securing an appropriation of water" (Ariz. Op. Br. 144-48). The plain language of these appropriation statutes is irreconcilable with the view that by the very creation of the Reservation water had been reserved for use upon it (Ariz. Op. Br. 144). Quite the contrary, the language discloses Congress' clear understanding that no water rights had been reserved by the mere creation of the Reservation.

The Government attempts to answer by asserting that this legislation shows "Congress' purpose through the years to develop an irrigation project on the Colorado River Indian Reservation of the magnitude of 150,000 acres" (U. S. Ans. Br. 75). But this legislation is significant, not as showing Congress' intention to develop an irrigation project for the Colorado River Indian Reservation, but as clearly demonstrating Congress' understanding of the manner in which water rights could be acquired for this project. Even accepting, arguendo, the Government's

contention that this legislation shows an intent on the part of Congress to establish an irrigation project of 150,000 acres exclusively for the Indians of the Colorado River Indian Reservation, the fact remains that Congress considered it necessary to acquire water for the project under the local law of prior appropriation. Congress would hardly have recognized such a necessity, if, as the Government urges, the mere creation of the Reservation had the effect of reserving the right to use whatever quantity of water should be required to meet the ultimate needs of the Reservation.

The suggestion made by the United States (U. S. Ans. Br. 75) that Congress intended that appropriative rights to the use of water should be for the purpose of supplementing the reserved right is frivolous. If, as the United States contends, the reserved right includes whatever quantity may be required to meet the ultimate needs of the Indians, there could be no occasion to "supplement" the reserved right with water available under the state law of prior appropriation.

Moreover, this series of enactments does not disclose a congressional purpose "to develop an irrigation project . . . of the magnitude of 150,000 acres" for exclusive use of the Indians, as the United States contends. The Act of April 21, 1904 provided for an allotment of five acres of irrigable land for each of the Indians on the Colorado River Indian Reservation, an allotment which was increased to ten acres by the Act of March 3, 1911.[42] In these statutes it was provided that the "remainder of the lands irrigable in said Reservation shall be disposed of to settlers under the provisions of the Reclamation Act"; and each of the appropriation Acts from 1910 through 1942 which are referred to by the Government provided that the funds

---

[42] 33 Stat. 224; 36 Stat. 1063.

expended should be reimbursable from the sale of these surplus lands of the Reservation (Arizona Opening Brief 175-76).

G. Indian Need, Rather Than Irrigable Acreage, is the Correct Measure of Any Reserved Water Right.[43]

Assuming that there has been an effective reservation of main stream water for federal establishments, the Government asserts that in the case of an *Indian Reservation* "the measure [of the amount reserved] is the quantity required to satisfy the ultimate needs of the Indians of the reservation". It then attempts to support the Master's conclusion that this quantity consists of " 'sufficient water to irrigate all of the practicably irrigable land in a Reservation and to supply related stock and domestic uses' (Rep. 262)" (U. S. Ans. Br. 79-80) (footnote omitted).

As pointed out in Arizona's Opening Brief, the total irrigable acreage standard has no relationship to actual Indian needs. Under that formula it is immaterial whether the water reserved will ever be used by the Indians resident on the Reservation or whether any Indians occupy or will ever occupy the Reservation or make use of the water reserved (Ariz. Op. Br. 157).

We agree with the Special Master that "the water rights of the five Reservations in question cannot be fixed at present uses" and that the Indians' future needs should be taken into account (Rep. 263). We disagree, however, with his conclusion that the future needs of Reservation Indians cannot be ascertained with reasonable accuracy (Rep. 264).

---

[43] In connection with this subject see an excellent article, Sondheim & Alexander, *Federal Indian Water Rights: A Retrogression to Quasi-Riparianism?*, 34 So. Cal. L. Rev. 1 (1960).

The regrettable fact is that the Government made no attempt to prove even the present needs of the Indians. All it did was to introduce evidence of "the present population of organized tribes entitled to reside on the several reservations" (U. S. Ans. Br. 82-83 notes 29, 31). Included in this tribal population are some who do not reside on any Reservation and some who do not even live in Arizona.

In addition, as we demonstrated in Arizona's Opening Brief, a number of Indians have in effect been counted twice, *once for the* Colorado River Indian Reservation and once again for other Reservations (Ariz. Op. Br. 170-79).

The unreasonableness of the Government's claims is demonstrated by its unrealistic estimate of "the expanding needs of the Indians of the Lower Colorado River Basin" (U. S. Ans. Br. 81). The total tribal population (not the unproved resident population of the Reservations) of the tribes presently entitled to occupy the five Reservations in question aggregates only 3,340 Indians (Ariz. Op. Br. 157). Yet, in measuring "expanding" Indian needs, the Government includes "in the neighborhood of 120,000" Indians in the Lower Basin which, it says, can be expected to increase to a total population of 130,000 by 1970 (U. S. Ans. Br. 81). The Government then apparently assumes that the five main stream Reservations are to be burdened with the water requirements of all these Lower Basin Indians regardless of where they presently reside or what their tribes may be, for it says:

> "The mainstream Indian reservations include 136,636 acres of irrigable land.[44] Certainly it cannot be said that water rights for 136,636 acres as the Special Master recommends is in excess of the future needs of the Indians of the reservations." (U. S. Ans. Br. 81-82) (footnote ours)

---

[44] The source of this figure apparently is the Recommended Decree, Article II(C)(2)(a) through II(C)(2)(e) (Rep. 350-52).

Thus the United States contends that the "matter of need" is not to be measured even "by the present population of the organized tribes entitled to reside on the several reservations" (U. S. Ans. Br. 82 note 29), but by the total of all the Indians in the Lower Basin, regardless of whether they reside on or off the Reservations and regardless also of whether they reside in Arizona, California or Nevada, or elsewhere in the United States, or even abroad.

The unfairness of this approach will be appreciated even more when it is remembered that the Government also asserted before the Master claims on behalf of Lower Basin Reservations, other than main stream Reservations, to water of Lower Basin tributaries sufficient to irrigate a total of 127,532 acres.[45]

TOTAL	127,532	

The United States takes issue with Arizona's position that when the Colorado River Indian Reservation was initially created in 1865 the statutory phrase, "the Indians of said river and its tributaries", meant only those tribes which were found in the area of the Lower Basin near the main stream (Ariz. Op. Br. 170-74).

The administrative construction of the statute creating the Colorado River Indian Reservation accords with Arizona's view. Under date of September 15, 1936, the Solicitor of the Department of the Interior sent to the Commissioner of Indian Affairs a memorandum[46] in which he stated:

> ". . . The designation in the act of the Indians of the Colorado River and its tributaries is so general and vague as to be almost meaningless without reference to administrative action taken thereunder. It would be absurd today to say that this reservation belongs to all the Indians of the Colorado River and its tributaries, since that would embrace most of the Indians of the Southwest. The only practical solution of the situation is to refer to the administrative action which has been taken and completed many years ago in settling on this reservation the wandering Indians along the Colorado River, and to take the position that this action finally determined to which Indians the reservation belonged. This position is substantiated by the fact that the Indians of this reservation have long been officially known as the Colorado River Indian Tribes and have funds in the Treasury under that name."

In a subsequent memorandum dated November 24, 1936, the Solicitor stated:

> "The Colorado River Reservation was created by the act of March 3, 1865 (13 Stat. 559), and its bound-

[46] C 4571, Tr. 20,674.

aries were subsequently fixed and determined by various Executive orders. The act of 1865 declared that the reservation should be set apart 'for the Indians of said river (Colorado) and its tributaries.' The Annual Reports of the Commissioner of Indian Affairs for the years 1864 and 1866, at pages 21 and 27 respectively, show that the reservation was created with the object in view of placing thereon 'the Yumas, Mojaves, Yavapais, Hualapais, and Chemihuevis', numbering some 10,000 persons. This object failed of accomplishment, however. The principal reason for the failure, aside from the aridity of the soil of the Colorado River Reservation lands and hostilities among the Indians themselves (see Commissioner's Annual Report 1870, page 8) was the reluctance of some of the tribes to locate on the reservation.

* * * * * *

"The language of the act of 1865 and the Executive orders issued pursuant thereto to the effect that the reservation was set aside for Indians of the Colorado River and its tributaries obviously was not intended to vest all Indians coming within that descriptive phraseology with immediate rights in the reservation lands. The language used merely defines the class of Indians eligible for collection and colonization on the reservation and removal to and continued residence on the reservation necessarily were conditions essential to the acquisition of rights on the reservation. Clearly there was no intent to create or vest rights in Indians such as the Yumas, the Hualapais and the Navajos who refused to locate on the Colorado River Reservation, obtained reservations elsewhere and received allotments or other benefits there. Now to permit such Indians to receive tribal benefits on the Colorado River Reservation would be in direct contravention of the rule long recognized by this Department and recently

approved by the Tenth Circuit Court of Appeals in *Mandler* v. *United States,* 52 Fed. (2d) 713, that no Indian is entitled to receive dual tribal benefits.''[47]

Despite the fact that it is necessary in the instant litigation to determine for the indefinite future the rights of the parties litigant to the use of main stream water, the United States has failed to produce evidence which would enable the Court to ascertain the reasonable future water needs of the Government's Indian wards. The net result is an anomalous one indeed, for in effect the United States has been awarded the largest conceivable quantity of main stream water for future use on Reservations because it made no effort to produce any proof as to what those future needs will actually be.

The position of the Government regarding the Fort Mohave Indian Reservation typifies its indifferent attitude with respect to establishing the actual requirements of the Indians and its surprising willingness to waste an invaluable natural resource. That Reservation contains 18,974 irrigable acres for the irrigation of which there has been reserved, in accordance with the Government's contention, either 122,648 acre-feet per annum of diversions from the ''mainstream'', or the quantity of ''mainstream'' water necessary to supply the consumptive use required for irrigation of 18,974 acres and for the satisfaction of related needs, whichever of these two alternative quantities is less (Rep. 351). Yet, no Indians reside in the Arizona and California portions of this Reservation, and only one Indian family lives in the Nevada section. No land whatever is being irrigated on the Reservation and the maximum which has ever been irrigated is 23 acres. No major irrigation project has ever been developed for

[47] C 4574, Tr. 20,678.

the Reservation and it has long been recognized that any such project is impracticable (Ariz. Op. Br. 166-67).

Confronted with this history of inaction, the United States responds:

> "The fact that the United States has not gone forward with development does not support the argument that the rights reserved for the benefit of these Indians should now be foreclosed." (U. S. Ans. Br. 83)[48]

Certainly "these Indians" are not Indians resident on the Reservation, for there are almost none. The 450 members of the Fort Mohave tribe entitled to reside on the Fort Mojave Indian Reservation have shown no disposition to reside there. We submit that the United States should not be permitted, by a failure to perform its trust duties toward its Indian wards, to achieve for them a reservation of thousands of acre-feet of water to the prejudice of the needs of all citizens, Indian and non-Indian alike.

---

[48] The Government seeks to explain its failure to develop irrigation on this Reservation by asserting:

> ". . . efforts to develop the valley lands of the Reservation were frustrated by the flood hazard prior to the closure of Hoover and Davis dams. With the completion of the dams referred to and channelization of the river through the lands of the Reservation, this hazard is *now* eliminated and development of the lands of the Reservation for irrigation can *now* go forward." (U. S. Ans. Br. 83 note 31)

Hoover Dam, which controls Colorado River floods, first impounded water on February 1, 1935. Davis Dam serves merely to reregulate releases from Hoover Dam (Rep. 32-33). The Government evidently regards the past 25 years as "now".

H. Principles of Equitable Apportionment May Be Applied to Measure Indian Water Rights.

In Arizona's Opening Brief we argued that should the Court find there has been no reservation of water on Indian Reservations, or should the Court find such a reservation of water but reject Indian needs as the test of the quantity reserved, the amount of water to which the Reservations are entitled should be determined in accordance with principles of equitable apportionment (Ariz. Op. Br. 181-92).

The Government sees inconsistency between this proposition and Arizona's contention that the Project Act renders principles of equitable apportionment inapplicable (U. S. Ans. Br. 91-92). No inconsistency exists. It is true that as to the *interstate* allocation of water Arizona took the position, with which the Master agreed, that the Project Act governs and renders principles of equitable apportionment inapplicable (Ariz. Op. Br. 32-41). The Project Act allocated or authorized the allocation for use annually in Arizona of a portion of the water impounded in Lake Mead. Nothing in the Act or its legislative history indicates any intention on the part of Congress to undertake the division of this fund of water allocated for use in Arizona as between non-Indian and Indian users.

There is therefore no inconsistency between Arizona's position that, as to water allocated under the Project Act between the three Lower Basin states of Nevada, California and Arizona, principles of equitable apportionment are inapplicable, and that as to the fund of water allocated to Arizona, but undivided by the Project Act, principles of equitable apportionment are applicable. When there is a conflict between sovereigns as to water rights, principles of equitable apportionment have been traditionally applied.

The United States argues further that even in an interstate allocation uncontrolled by statute its "reserved rights . . . are not subject to . . . apportionment between the states" (U. S. Ans. Br. 92). But no precedents are cited or reasons given supporting this position and we know of none. There appears to be no sound reason for a distinction between a case where both sovereigns appear as *parens patriae* for their citizens and a case in which one sovereign appears in that capacity and the other appears as guardian for its Indian wards.

Finally, the Government argues that even under principles of equitable apportionment it is entitled to all that the Master has awarded—sufficient water to irrigate every irrigable acre in each Reservation. This result is neither "realistic" nor "fair" (U. S. Ans. Br. 93). We do not suggest, as the United States asserts, "that use of water . . . should be subject to defeasance because of a claim that the water could be better used elsewhere within the State" (U. S. Ans. Br. 93). We do contend, however, that to reserve in perpetuity large quantities of water for Indian Reservations which have never used or demonstrated a need for any quantity approaching the amount reserved is unrealistic and inequitable. It is only in the effort to reach a just result that we have advanced the proposal that principles of equitable apportionment be applied.

IX

The United States has not reserved water from the Gila and San Francisco Rivers for the purposes of the Gila National Forest.

The United States predicates its asserted rights to the use of non-navigable water for the Gila National Forest upon its claim of a federal proprietorship of the usufruct of non-navigable water on the public domain.

It is argued that when the territory comprising the Lower Colorado River Basin was ceded by Mexico to the United States it became the owner not only of the land but also of "all rights pertaining thereto" and that the right to use "the appurtenant waters was one of the whole bundle of rights so acquired" (U. S. Ans. Br. 61) (footnote omitted).

This claim poses a perplexing and difficult problem as yet unresolved by this Court. The Government does not explain why the United States necessarily acquired the ownership of the use of the water within this territory. Mere ownership of land does not inevitably carry with it the ownership of the right to use the water to which the land is riparian. Whether the right to use water is a right pertaining to and accompanying the ownership of land depends upon the applicable law of property in that regard. Where the rule of prior appropriation is followed, the ownership of land, in and of itself, carries with it no rights to the use of water. The United States, while describing its claimed right to non-navigable water as a right pertaining to the public land, seems to envisage a water right in gross, which is not appurtenant to any particular lands within the public domain. The United States, however, asserts it has the right to attach a portion of this gross water right to

specific lands which are withdrawn from the public domain for designated federal purposes and establishments. In fact, it appears to be the position of the Government that neither the riparian nor the appropriative rights doctrine was applicable to this water when the United States became the owner of the lands in the territory (U. S. Ans. Br. 61-62 note 19).[49] Thus the water rights, as conceived and claimed by the United States, exist independently of any rule of property law. They apparently are based upon the notion that ownership of the right to the use of all water must rest somewhere and that, since there were no other "owners" in whom this proprietorship could vest, it necessarily vested in the United States when it became the proprietor of the lands.

An attempt to resolve the long-existing conflict between the United States and the public land states with respect to rights in non-navigable water by determining who "owns" that water serves only to complicate further an already difficult problem. The power of either the national or the

---

[49] The riparian doctrine has never applied in the territory acquired from Mexico by the Treaty of Guadalupe Hidalgo and the Gadsden Purchase. The law of prior appropriation and not the riparian rights doctrine was in force in that area, from which Arizona and a part of New Mexico were later formed, when it was a part of Mexico. *Boquillas Land & Cattle Co.* v. *Curtis*, 213 U. S. 339 (1909). Congress enacted no legislation making the common law riparian doctrine applicable to this territory. One of the first acts of the United States after acquisition of the territory was to declare that "the laws heretofore in force concerning water courses . . . shall continue in force." H. R. Doc. No. 19, 29th Cong., 2d Sess. 72 (1846). The territorial legislatures of both New Mexico and Arizona, agents of Congress, kept in force the doctrine of prior appropriation which had maintained before the acquisition of the territory by the United States. *Boquillas Land & Cattle Co.* v. *Curtis, supra; Clough* v. *Wing*, 2 Ariz. 371, 17 Pac. 453 (1888). The laws and constitutions of both the States of Arizona and New Mexico continued the law of prior appropriation in force. ARIZ. CONST. art. XVII, §1; Ariz. Rev. Stat. §45-101 (1956); N. M. CONST. art. XVI, §2; N. M. Stat. §75-1-1 (1953).

local government to prescribe rules of property in the use of water and to establish principles governing the acquisition of specific rights in water is so essentially an exercise of sovereign power that it cannot be predicated on the basis of proprietorship of the rights to the use of water.

But, as we have stated in Arizona's Opening Brief, it is not necessary that this important and serious question be decided in this litigation in order to dispose of the claims of the United States to the use of water of the Gila and San Francisco Rivers on the Gila National Forest (Ariz. Op. Br. 194).

Even if it be assumed that the United States became the absolute proprietor of the right to use all non-navigable water on or appurtenant to the public lands within the territory acquired from Mexico, it does not necessarily follow from that assumption that by the creation of a national forest water was reserved for use on the forest reserve. Mere existence of power does not establish its exercise. In our Opening Brief we referred to the Acts of Congress, legislative history and administrative construction which negative the existence of any intent on the part of Congress that the mere creation of a national forest should operate to reserve water for the needs of the forest (Ariz. Op. Br. 192-98).

The United States disputes our conclusions. It claims that the Arizona argument based upon the Act of June 4, 1897[50] ignores the fact that the Act "expressly provides that water on the national forests may be used in accordance with state or *federal* law" (U. S. Ans. Br. 77) (footnote omitted; United States italics). But the United States contends that the very establishment of a national forest accomplishes a reservation of water for forest purposes (U. S. Ans. Br. 65). If this contention were correct, the

[50] 30 Stat. 36.

United States would have no possible reason for resorting to "federal law" to acquire by "reservation or otherwise" rights to use "unappropriated waters which pertain to the national forest lands" (U. S. Ans. Br. 78). Nor could any purpose be served by the provisions of the Act of June 4, 1897, that all water on forest reservations may be used "under the laws of the state wherein such forest reservations are situated".

The United States denies that there has been any consistent administrative interpretation that its rights to use water on the national forests must be obtained in accordance with state law. It is claimed that the rules and regulations quoted from the Forest Service Manual (Ariz. Op. Br. 197-98), which state the policy followed by the Department for more than fifty years, are robbed of all value and meaning by the statement of the Secretary of Agriculture made on June 21, 1961, and quoted at pages 78 and 79 of the Government's Answering Brief. Whatever may be the correct meaning of these very recent remarks of the Secretary of Agriculture, they do not warrant the Government's conclusion that the uniform and long-adhered to policy of the Department, specifically anchored in the Act of June 4, 1897, of making water filings with appropriate state agencies pursuant to state law is merely for the purpose of giving information and not of establishing legal rights to the use of water under state law.

The assertion of the Government that this uniform course of conduct over a fifty year period was for informational purposes only wholly lacks merit. Mere letters would have served this purpose. In fact, this course of conduct, if not intended to evidence a recognition that state laws control the acquisition of such rights, would have the effect of misleading state officials and those "seeking to

use the waters from the National Forest" rather than informing them.

The Government contention cannot be reconciled with the policy stated in the formal rules and regulations of the Department that *rights* to the use of water for national forest purposes *will be obtained* in accordance with state law and that the authority of the Department to *secure water rights* under state law is based on the Act of June 4, 1897, and confirmed by the Department of Agriculture Organic Act[51] (Ariz. Op. Br. 197-98).

The United States makes no effort to explain why, if Congress intended that the creation of national forests should result in a reservation of all water required to serve the purposes of the forests, it found it necessary repeatedly to appropriate funds for the purchase and establishment by the Forest Service of water rights for use on the national forests or why Congress was concerned that filings on water rights for national forests be made by the Government before filings were made "by adverse claimants" (Ariz. Op. Br. 195-96).

The United States at one point appears to argue that, entirely independent of any intent to reserve non-navigable water for any particular federal establishment, the mere withdrawal of public lands accomplishes an automatic withdrawal of the "sources of water supply" upon the land reserved. The reasoning in support of this claim is that since the United States owns all the unappropriated non-navigable water upon the public domain, rights to the use of such water cannot be acquired without the consent of the United States; that only by the Desert Land Act of 1877 and its precursor Acts of 1866 and 1870 has the United States granted such consent and that such consent

---

[51] 58 Stat. 734 (1944).

is "restricted to sources of water supply upon the public lands". It is argued that since reserved lands cease to be public lands the sources of water supply upon the reserved lands cease to be available for "purposes of private acquisition" (U. S. Ans. Br. 64-66).

The argument of the United States, if pursued to its logical end, compels the conclusion that the only reservation of water accomplished by the withdrawal of public lands is the water originating on the land withdrawn. Yet the Government's claim of reserved water rights for use on federal establishments is limited only by the ultimate needs of the particular federal establishment and is not confined to the quantity of water available from sources of water supply actually existent on withdrawn lands. This leaves completely unexplained how such a withdrawal of the source of water supply on withdrawn lands operates to reserve the right to use waters having their source on other public lands not withdrawn.

The utter confusion and insurmountable obstacles which would result from the acceptance and application of the Government's theory are apparent. Rights to the use of water, both for federal establishments and by private appropriators, would depend on the ability to identify and segregate water as to its source, so that water which has its source on the public lands may be distinguished from that which has its source on reserved lands, as well as from that having its source on private lands and state-owned lands.

It is evident that Congress never contemplated or intended that the mere withdrawal of lands from the public domain should have these absurd consequences.

CONCLUSION

The Report and Recommended Decree of the Special Master should be adopted by the Court, with the modifications requested by Arizona.

Respectfully submitted,

REPLY BRIEF FOR THE UNITED STATES

INTRODUCTION

In our preceding briefs we have explained our limited exceptions to the Report of the Special Master and our arguments in support of the Report, subject to those exceptions. Accordingly, there is no need now to reply in detail to all the arguments made in the answering briefs of the other parties wherein views different from those advanced in our previous briefs are expressed. A brief reply on the most fundamental points, however, may be of assistance to the Court.

ARGUMENT

I

UPHOLDING THE VALIDITY OF THE PROVISIONS IN THE ARIZONA AND NEVADA CONTRACTS DIMINISHING THE OBLIGATION TO DELIVER STORED WATER TO THE EXTENT OF ANY DEPLETIONS OF THE RESERVOIR SUPPLY THROUGH UPSTREAM USES IS NOT INCONSISTENT WITH INTERPRETING SECTION 4(a) OF THE PROJECT ACT AS APPLICABLE ONLY TO MAINSTREAM WATERS

Arizona, Nevada and California, all disagree with our argument in support of our first and second exceptions to the Report. Arizona's and Nevada's disagreement arises from the benefit to each of those States from the Master's holding that each may receive its full allocation of the stored waters without regard to any depletion of the project water supply by uses in that State from the mainstream and the tributaries above Lake Mead. Each of those States argues, as does the Special Master, that it is only those waters which physically arrive in the reservoir which the Secretary of the Interior has authority to take into account in contracting for the disposition of and administering the project water supply. California, which would receive substantial benefit from modification of the Recommended Decree in accordance with our first and second exceptions, takes issue with the exceptions and our argument in support on the ground that our position "is irreconcilable with the Master's conclusions."

The Master's exclusion of the mainstream and tributary uses above Lake Mead is not a necessary consequence of the language of the Project Act or its legislative history. Nor does it necessarily follow

from the fact that water taken from above the reservoir does not pass into the physical control of the United States as a result of the construction and operation of Hoover Dam and related project facilities. We think it equally plain that a ruling that the Secretary of the Interior has full authority in his administration of the Boulder Canyon Project water supply to protect that supply by conditioning the amounts to be delivered for use in Arizona and Nevada upon the quantities of reservoir depletion as a result of upstream diversions in those States would not be inconsistent with the Master's determination that in the enactment of Section 4(a) of the Project Act Congress contemplated an allocation of the first 7,500,000 acre feet of mainstream water available in the Lower Basin and of the surplus mainstream water over that amount.

The Master's conclusion that Section 4(a) of the Project Act applies only to uses of mainstream water is fundamentally derived from the legislative history, which shows clearly that it was water passing through the mainstream that was the subject of Congressional consideration when that language was adopted. The issue concerning deductions for uses above Lake Mead rests upon different considerations. As noted in our opening brief, page 11, the predicate for the Master's conclusion that mainstream and tributary uses above Lake Mead are to be excluded from the Project Act accounting is the fact that "Hoover Dam gives the United States physical control of the water stored in Lake Mead and over the use of substantially all of the water in the mainstream below, but it does not enable

the United States physically to control the use of water from above Lake Mead." Consequently, to reject the view that the Secretary, in making allocations, can take into account only the water that actually passes into his physical control does not affect the foundation of the Master's interpretation of Section 4(a).

In our view the Master put too much weight upon the fact of actual physical control in considering the risk of upstream diversions which, unlike the use of tributaries below Lake Mead, would diminish the water available for storage and subsequent distribution. We submit that when Congress authorized the construction of Hoover Dam and related project facilities and the various facilities were constructed in accordance with such authorization, the United States, subject to the compact apportionment for use in the Upper Basin, preempted the waters of the Colorado River capable of being stored and regulated by those facilities for administration in accordance with the authorizing legislation and any other applicable acts of Congress. Obviously, the location of Hoover Dam, the principal project facility, means that waters which would pass through the mainstream and be regulated by Hoover Dam do not come under the *physical control* of the United States if they are diverted and used, either from the tributaries or the mainstream, above the reservoir. But this does not mean that Congress intended the successful operation of this great reservoir project and the successful administration of a statutory plan for distribution of the stored waters

under contract made with the Secretary of the Interior to be at the hazard of depletion of the mainstream supply by diversions above the reservoir. Cf. *United States* v. *Rio Grande Irrigation Co.*, 174 U.S. 690; *United States* v. *Appalachian Power Co.*, 311 U.S. 377.

The reservoir, which Congress authorized for construction, was of sufficient size to impound and regulate the entire flow of the river undiminished by upstream tributary and mainstream depletions. Congress specified the purposes for which the stored waters might be used and placed the Secretary of the Interior in charge of distribution of the water supply so created. Surely, under the broad authority given to him by the Project Act, the Secretary is authorized in contracting for distribution of the project supply to assure that the purposes of the Project Act and of the facilities constructed thereunder will not be frustrated by diversions of the waters away from the project before they arrive in the reservoir. We submit that he would be remiss in the performance of his duties if he failed to take such action.

The situation here, although technically dissimilar, is substantially analogous to the appropriation of waters for federal reclamation projects. Frequently, when a reservoir for the storage of water is constructed under the reclamation law of the United States, the Secretary of the Interior does file the papers with State authority which are prescribed by State law for making an appropriation of the waters which the reservoir will impound and control. (See

Nebraska v. *Wyoming,* 325 U.S. 589.) When such procedure is followed, a State-recognized appropriation of the waters results which protects the project water supply against depletion as a result of later appropriations by others.

In the case of Hoover Dam and the related facilities of the Boulder Canyon Project, the United States has not chosen to follow this procedure. Some of the reasons are obvious. The Colorado River is a navigable stream, and the first and primary purpose of the project was, and is, flood control, improvement of navigation, and river regulation. The dam and reservoir, which were intended to impound water for use in the States of California, Arizona, and Nevada, is located in Nevada and Arizona, and no single state could purport to authorize an appropriation for the reservoir project. It is plain that, had such an application been made to the State of Arizona, it would have been refused. (See *Arizona* v. *California,* 283 U.S. 423.)

But the fact that the United States did not choose to go through the formalities of State-prescribed procedures for making an appropriation for the project does not mean that hundreds of millions of dollars of federal funds have been expended for the construction of great works, the usefulness of which might be impaired as a result of upstream diversions. By authorization and construction of the project for the purposes which Congress has specified, the United States has effectively "appropriated" for those purposes the waters which the project was built to control. Subsequent State-authorized appropriations above the

reservoir should not defeat accomplishment of those purposes just as they could not when an appropriation has been made in accordance with State procedure.

It was to prevent the defeat of this "appropriation" of mainstream waters that the Secretary stipulated that his obligation to deliver stored waters for use in Arizona and Nevada should be diminished to the extent that uses in those States from above the reservoir would deplete the reservoir supply. His action was in accordance with his responsibilities and fully consistent with Congress' plan for the allocation of the reservoir supply.

II

CALIFORNIA'S CONTENTION THAT THE SPECIAL MASTER'S INTERPRETATION OF SECTION 4(a) OF THE PROJECT ACT PRODUCES AN "INCREDIBLE RESULT" NEGLECTS FUNDAMENTAL INTER-BASIN ISSUES RESPECTING MEASUREMENT OF USE AND ACCOUNTABILITY FOR EVAPORATION LOSSES

In its answering brief, California attacks the Special Master's interpretation of Section 4(a) of the Project Act because it reaches what is described as "this incredible result: Even if the lower basin enjoys the use of the full quantities aggregating 8.5 million acre-feet under Article III(a) and III(b) of the Compact, and Mexico is satisfied from surplus without invasion of that quantity, California would receive only 3.8 million acre-feet—not even the 4.4 million acre-feet to which the first part of the limitation on California refers." (California Answering Brief, p.

614086—61——2

1.) The "incredible result" is neither so clear nor so simple as the argument suggests.

In the first place, California assumes that in determining the compact apportionment all tributary uses are to be measured by diversions less return flow at the various sites of use. This assumption as to measurement is subject to the most serious question even if it be assumed, contrary to Arizona's argument, that the compact apportionment includes Lower Basin tributary uses. Most of the tributaries of the Lower Basin, and particularly the Gila River, are wasting streams. Much of the water in their upper reaches would never arrive in the mainstream of the Colorado even if there were no upstream diversions from the tributaries for beneficial consumptive use.

By agreement between themselves the States of the Upper Basin have provided for allocation of that Basin's apportionment under the Colorado River Compact in terms of "man-made depletions of the virgin flow at Lee Ferry." Upper Colorado River Compact, Article VI, 63 Stat. 31. If Lower Basin tributary uses are to be included and measured for compact accounting purposes in terms of depletion of the virgin flow at one or more significant mainstream points, the California argument as to "incredibility" loses any force. The evidence before the Special Master indicates that the Lower Basin tributary uses measured by diversions less return flows at the respective sites of use are materially larger than if measured by depletion of the mainstream at significant downstream points. If, in the California hypothesis, the tributary uses are calculated by the latter method,

the quantity of mainstream water "adequate for all components of the Compact in the lower basin, after satisfaction of the treaty requirements" (California Answering Brief, p. 11), is not 6.5 million acre-feet but a substantially larger amount. California would not be compelled, under the Master's interpretation, to accept only 3.8 million acre-feet of the available mainstream water upon its assumption of full satisfaction of the Lower Basin's apportionment under Article III(a) and III(b) of the Compact.

On the other hand, if, as California contends, the Master erroneously referred to the legislative history to determine what Congress meant when it used the words "apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact," then he is equally in error in having referred to the legislative history to determine what Congress meant when it used the words "plus not more than one-half of any excess or surplus waters unapportioned by said compact." And in that event the Article III(b) component of the mainstream water would not be available for use in California.

The foregoing demonstrates one fallacy in California's charge that the Master's interpretation of the Project Act produces an "incredible result." Further brief analysis of the hypothesis is sufficient to demonstrate its inadmissibility, and the utter futility of attempting in this case to make an interstate allocation upon an hypothesis supposed to be consistent with the interbasin apportionment effected by the Colorado River Compact is demonstrated by the questions which it raises but leaves unanswered. In the compact by

which the states of the Upper Basin agreed respecting allocation between themselves of the Upper Basin apportionment, reservoir losses of water in storage for use in the Upper Basin are accepted as charges against the interbasin apportionment and as charges against the respective State allocations. See Upper Colorado River Compact, Article V. The logic of this treatment of reservoir losses is plain enough. It seems equally plain that in any interbasin accounting the losses of water in storage for use in the Lower Basin are chargeable against the Lower Basin apportionment. But California's hypothesis assumes that under the Colorado River Compact the Lower Basin may have 8.5 million acre-feet in satisfaction of the Article III(a) and III(b) apportionments, "plus all evaporation and other losses, whatever those losses may be" (California Answering Brief, pp. 8–9). She makes no suggestions as to how the interbasin charge for such losses can be disregarded in her hypothesis of "full service" of the Lower Basin allocation of 8.5 million acre-feet. Neither does her argument suggest how such charge is to be allocated among the Lower Basin States,[1] nor is there any indication of the disposition to be made of the excess water in the assumed

[1] California's postulate in footnote 6, page 9, of her Answering Brief that these losses are "diminutions of supply" is acceptable under the solution which the Special Master's Recommended Decree proposes. It could not be accepted if the effort in this case were to assure that the interstate allocations here to be approved can be squared at every corner with the apportionment to the Lower Basin effected by Article III of the Colorado River Compact.

8.5 million acre-feet which would result from the charge so to be made against the Basin apportionment. The Special Master's interpretation of the Project Act eliminates such questions from the case. If the California hypothesis were to be otherwise accepted, they would have to be answered. Any effort to ascertain Congress' intention in enacting Section 4(a) of the Project Act by attempting to assure that the interstate allocation therein provided accords in all respects with the highly uncertain requirements for interbasin accounting under the Colorado River Compact leaves the issues in this case as obscure as they were at the outset of the litigation, and insoluble in the absence of the Upper Basin States.

Second, even if California's hypothesis were valid, the argument does not demonstrate that the Master erred in concluding that, when Congress adopted the critical language of Section 4(a) of the Project Act, it was thinking in terms of the first 7.5 million acre-feet of mainstream water available for use in the Lower Basin in the States of California, Arizona and Nevada and the available mainstream waters in excess of the first 7.5 million acre-feet. The evidence that such was Congress' intention is reviewed at pages 27–46 of our answering brief. The fact that Congress may not have fully foreseen the consequences of what it did intend does not mean that its intention was different from what the language of the Act and the legislative history indicates. There is no evidence whatever that Congress intended, as California seems

to argue, the limitation of California's future use to 4.4 million acre-feet plus one-half of the surplus or excess as a guarantee of any quantity of water for use in that State. The limitation is a limitation and nothing more. The only guarantee of the Project Act is that to be found in the Section 6 requirement for satisfaction of "present perfected rights." Under the Master's interpretation of that provision, the Act does guarantee the satisfaction of California's claimed rights which were perfected as of the effective date of the Project Act in the order of their priority with relationship to all other "present perfected rights." But beyond this the Act makes no guarantee and in the extremely unlikely event of water insufficient to satisfy all "present perfected rights" California's claims of such rights would have to yield to others in accordance with their respective priority dates.

III

THE PROJECT ACT DOES NOT PROVIDE FOR PRIORITIES INTERSTATE EXCEPT IN ITS REQUIREMENT FOR SATISFACTION OF "PRESENT PERFECTED RIGHTS"; PRIORITIES INTRASTATE ARE GOVERNED BY APPLICABLE FEDERAL LAW AND CONTRACTS MADE UNDER THE PROJECT ACT

California's answering brief in arguing for a system of interstate priorities appears to misconceive the government's arguments in its opening brief in support of its exceptions; to misapply Section 8 of the Reclamation Act; and to misread some of the decisions of this Court on which reliance is placed. In order that there may be no misunderstanding of our position with respect to priority of right under the

Boulder Canyon Project Act in distribution of the water supply which that Act directs the Secretary of the Interior to administer, we summarize it here.

We support the Master's determination that principles of priority of appropriation in accordance with the laws of the several States having access to the mainstream of the Colorado River and principles of equitable apportionment as enunciated in prior decisions of this Court are inapplicable with respect to the controversy relating to the mainstream of the Colorado River. We agree with the Special Master that such principles are inapplicable here because Congress, in exercise of its exclusive power to control the waters of the Colorado River, has provided its own procedure for effecting an interstate allocation.

Congress has authorized the construction of a dam capable of impounding and controlling substantially the entire flow of the River in the Lower Basin. The dam and related facilities through which much of the impounded water may be put to use have been constructed. Under authority of the Project Act, and in accordance with its command that "[n]o person shall have or be entitled to have the use for any purpose of the water stored as aforesaid except by contract made as herein stated," contracts have been made for delivery of much of the waters which the reservoir was constructed to impound and regulate and, by contract with the States of Arizona and Nevada, commitments have been made for the future delivery of additional quantities for use in those States.

Under the statutory and contractual plan for allocation intrastate as well as interstate, there is no provision for priority except as it may be found in the Section 6 requirement for satisfaction of "present perfected rights" and as it may be incorporated into the contracts which have been and may be made under the Project Act and other applicable laws. Insofar as claims of appropriative rights recognized under State law prior to the effective date of the Project Act are concerned, Congress indicated, in Section 6, its intention to recognize only those which were perfected at that date by the actual application of water to specific areas. Since the reserved rights of the United States were perfect without the application of water to specific areas, they are entitled to recognition under Section 6 without regard to when water may be or may have been applied to accomplishment of the purposes of the reservations. To the extent that California's claimed prior rights meet the test for "present perfected rights," the recommended decree recognizes the priorities which that State so strenuously asserts. To the extent, however, that California's uses do not meet that test, its rights must depend upon contracts made by its agencies with the Secretary. California's attempt to distinguish between claims of right to "natural flow" and uses of stored water is invalid. The Project Act recognizes no "natural flow rights" except those which qualified as "present perfected rights."

1. It is plain that the Project Act does not contemplate the recognition of interstate priorities in the contracts made under the Project Act. Otherwise,

Congress' obvious intention that the first seven and a half million acre-feet of mainstream water available be allocated in specified proportions would not be accomplished. For reasons stated at pages 21 to 47 of our Brief in Support of Exceptions to the Special Master's Report, we think it is also plain that Congress did not delegate to State authorities, acting under State law, the extremely important problem of determining, intrastate, either the amounts of stored water to be delivered to the various users within a State or the relative priorities between them. These are determinations which must be made by the Secretary of the Interior in his administration of the project water supply, in accordance with the provisions of applicable laws of the United States and the many factual considerations which must be taken into account in the administration of that supply.

The problem of quantities and relative priorities within the California allocation has been resolved by incorporation into each of the contracts with the California agencies of the priority schedule established by the California Seven Party Agreement. So far as we know, there is no challenge to the authority of the Secretary so to establish priorities as between uses within the California allocation. Accordingly, it is assumed that deliveries for use in California will, if shortage occurs, be made in accordance with the priority schedule adopted by the several California contracts, subject only to the requirements of the decree respecting the reserved rights of the United States and the further requirements for satisfaction of "present perfected rights."

With respect to the making of contracts for the delivery of stored water for use in Arizona and Nevada, the necessity for consideration of relative priorities as between various contract users has arisen only in connection with the Secretary's relatively recent contract with the city of Yuma. See footnote 11, page 31, Brief in Support of the Exceptions of the United States to the Special Master's Report. This is because the contracts which have thus far been made for the delivery of water for use in those States, together with the reserved rights of the United States, have not even approached the minimum limits of the aggregate quantities of stored water regularly available for use in those States. In the case of the contract with the City of Yuma, the Secretary deemed it advisable to condition the contract on the City's agreement that its right to receive the quantity specified in the contract shall be subordinate to the satisfaction of commitments previously made for uses within the Arizona allocation.[2] It may be assumed that future contracts

[2] Contrary to the implication of California's comment at pages 60–61 of its answering brief, the subordination provision in this agreement imposes no hardship or injustice on the City of Yuma. What California refers to as "an appropriation senior to those agricultural districts under which she had been continuously using 'mainstream' water for more than half a century" was for a much lesser quantity of water than that for which the contract provides. To the extent that Yuma's claim under that "appropriation" qualifies as a "present perfected right" the City will, under a decree as recommended by the Special Master, be entitled to continue to receive water in priority with other holders of "present perfected rights." However, to receive the additional water for which the contract provides, the City must properly abide by its agreement, just as the several California agencies must abide by their agreements

for the delivery of water for use in Arizona, as well as future contracts for use in Nevada when the need arises, will contain the same condition unless Congress directs otherwise.

The inclusion of this condition is consistent with the practices which the Secretary of the Interior has followed in other areas. For example, the waters controlled by Friant Dam for the Friant unit of the Central Valley Project in California have been divided into class I and class II. The aggregate quantity of class I water is the quantity which it is anticipated will be available on a firm basis annually. The class II water comprises that supply which becomes available in addition to class I water and is recognized to be undependable in character. The contracts in this area generally include commitments for both class I and class II water. The class I supply is limited contractually in the aggregate to 800,000 acre feet annually. All class I commitments have a priority over class II commitments, but in the event that less water is available in either class than that for which there are commitments, the water avail-

---

respecting priority within the California allocation. Nor do we share California's concern about the Valley Division of the Yuma Project in Arizona, as expressed in footnote 5 on page 62 of the California answering brief. The use of water on that Project had been largely "perfected" in 1929. With respect to expanded uses there since that date, it is our position that the authority vested in the Secretary of the Interior includes the authority to provide in future contracts for subordination just as he has done in the contract with the City of Yuma. For this reason, we do not consider that either the Valley Division of the Yuma Project or the other projects in the Yuma area are in a "perilous situation."

able in each class is apportioned ratably to the amount committed to each contractor.

The fact that the Secretary has made some contracts under which the users will share ratably in times of shortages, while he has made others which prescribe priorities between users in the same State, does not aid California's argument for a system of interstate priorities under the Project Act over and beyond the Section 6 requirement for the satisfaction of "present perfected rights." As noted above, the principle of parity as between interstate allocations appears clearly to follow from Congress' obvious intention that the aggregate project water supply be allocated for use in the several States in specified proportions. The limit on California's use to 4.4 million acre-feet cannot be divorced from the plain intention to make another 3.1 acre-feet available for use in Arizona and Nevada. Likewise, limiting California to use of one-half of the surplus or excess waters plainly contemplates the existence of another one-half, to round out the whole. The universe with which Congress dealt was 7.5 million acre-feet plus the available mainstream waters over and above that amount. There is nothing to indicate that Congress intended, if the universe should prove to be less than 7.5 million acre-feet, to divide it in proportions different from those applied to the size assumed except for the satisfaction of "present perfected rights."

2. California suggests that our reasoning at pages 15–21 of our Brief in Support of Exceptions to the Special Master's Report supports its argument for

a broader system of interstate priorities, but the suggestion misconceives the reasoning. Our argument was addressed to the Special Master's determination that Article 7(d) of the Arizona contract and Article 5(a) of the Nevada contract violate the Project Act insofar as they condition the quantities of mainstream water to be delivered upon the extent to which uses in those States upstream from Lake Mead deplete the reservoir supply. We simply assumed, *arguendo,* as did the Special Master, that in a contest between an appropriator on an upstream tributary and a contract user of stored water, the appropriator's claim would be junior under State law if it post-dated the contract claim. This *arguendo* assumption does not bear on the question of relative priorities between contract users under the Project Act.

3. California's arguments respecting Section 8 of the Reclamation Act and Section 18 of the Project Act likewise misinterpret those provisions and appear to misconceive the nature of the Boulder Canyon Project.

Section 8 of the Reclamation Act provides that nothing in the Act be construed as affecting State laws relating to the control, appropriation, use, or distribution of water used in irrigation, or any vested right acquired thereunder, and it directs the Secretary of the Interior, in carrying out the provisions of the Act, to proceed in conformity with such laws. (43 U.S.C. 383.) Section 8 also provides that nothing in the Act shall affect the rights of any State, the Federal Government, or any landowner, in any inter-

state stream or the waters thereof. It further specifies that the right to the use of water acquired under the provisions of the reclamation law shall be appurtenant to the land irrigated, and that beneficial use shall be the basis, measure, and the limit of the right (43 U.S.C. 372). It does not specify that waters brought under the control of the United States by the construction of a reclamation project shall be distributed by the Secretary in accordance with the determination of State authorities made under State law. Neither does it specify that such waters shall be distributed within the project in accordance with principles of priority of appropriation. Section 8 has never been construed by the Secretary of the Interior as prescribing any rules as to priority between users of the water supply created by construction of a storage project. All questions of priority as between users within a project, and as between separate divisions of a project receiving water from the same project supply, have been determined by contract between the Secretary and the project landowners or water-distributing organizations made under authority of the various provisions of reclamation law. In the absence of specific statutory or contractual provisions to the contrary, ratability in the event of shortage in the project supply has been the rule.

It is not pertinent to this controversy to argue the question of relative priorities between completely separate federal reclamation projects on the same stream system, either in the light of, or regardless of, the provisions of Section 8 of the Reclamation Act. That is not the question which is before the Court in this

case. The Boulder Canyon Project is a single project. Hoover Dam creates a reservoir having an original unsilted storage capacity of over 32,000,000 acre-feet. The great quantity of water thus brought under control is distributed for use in an extensive area through a considerable number of related sub-projects, some of which have been constructed under federal law and some of which have been privately financed. But notwithstanding the extensive and varied facilities which are required for utilization of all the waters which Hoover Dam impounds, there is no room for any argument that principles applicable to the resolution of conflicts between separate projects claiming rights under separate appropriations under State law on the same stream system are applicable to distribution of the water supply created by the great storage project with which we are here concerned.[3]

There is nothing in any of the decisions of this Court which California cites in support of her contentions respecting Section 8 which supports that argument. On the contrary, each of those cases shows the fallacy of the argument.

In *Ivanhoe Irrigation District* v. *McCracken,* 357 U.S. 275, 291–292, the Court said with unmistakable clarity:

> As we read § 8, it merely requires the United States to comply with state law when, in the construction and operation of a reclamation

[3] We have dealt quite extensively with Section 18 of the Project Act in Point III of our Brief in Support of Exceptions to the Special Master's Report. We see nothing in California's arguments respecting that section requiring amplification of the analysis previously made.

> project, it becomes necessary for it to acquire water rights or vested interests therein. But the acquisition of water rights must not be confused with the operation of federal projects. As the Court said in *Nebraska* v. *Wyoming, supra,* at 615: "We do not suggest that where Congress has provided a system of regulation for federal projects it must give way before an inconsistent state system." * * * We read nothing in § 8 that compels the United States to deliver water on conditions imposed by the State.

The fact that in *Nebraska* v. *Wyoming,* 325 U.S. 589, the Court held that on the record in that case title to the appropriative natural flow rights was in the project landowners rather than in the United States has nothing to do with the questions here presented. We emphasize that it was from the opinion in *Nebraska* v. *Wyoming* that the Court in *Ivanhoe* quoted, in support of its statement that the acquisition of water rights must not be confused with the operation of federal projects, the sentence: "We do not suggest that where Congress has provided a system of regulation for federal projects, it must give way before an inconsistent state system."

Likewise, as noted in footnote 19, at page 43, of our Brief in Support of Exceptions to the Special Master's Report, there is nothing in the Court's opinion in *Ickes* v. *Fox,* 300 U.S. 82, which supports California's argument that under the Boulder Canyon Project Act priorities are to be observed interstate over and beyond the Act's specific requirement for satisfaction of "present perfected rights." In that

case the Court simply held that under the undenied allegations of the petition, the Secretary of the Interior exceeded his authority when he sought to require from landowners within a reclamation project, who held fully paid water right application contracts, additional payments to reimburse the cost of an addition to the project from which they would receive no benefit. The Court expressly predicated its decision on "the terms of the ~~new~~ law [i.e., the Reclamation Act] and of the contract already referred to * * *."

We respectfully submit that, as determined by the Special Master, Congress has specifically provided for the recognition of interstate priorities to the extent of the satisfaction of "present perfected rights." There is nothing in the general language of Section 8 of the Reclamation Act or in Section 18 of the Project Act or in any other provision of applicable law to justify extending this express but limited provision so that principles of priority of appropriation would apply as a matter of law, interstate or intrastate, with respect to uses under contract which had not been perfected when the Project Act became effective.

Respectfully submitted.

ARCHIBALD COX,
Solicitor General.

REPLY BRIEF OF THE CALIFORNIA DEFENDANTS TO THE ANSWERING BRIEFS OF THE UNITED STATES, ARIZONA, AND NEVADA

October 2, 1961

TABLE OF CONTENTS

	PAGE
THE BASIC CONTROVERSY	1
SUMMARY OF THE ARGUMENT	
I. California's Claims	4
II. The Severance Issue	5
III. The Priority Issue	6
IV. The Jurisdictional Issues	8
ARGUMENT	
I. California Seeks Only To Preserve Rights of California Users to 4.4 Million Acre-Feet Per Annum Plus One Half of "Excess or Surplus Waters"	10
A. The Decision Proposed by the Special Master Would Restrict California to No More Than 3.8 Million Acre-Feet Annually of the Lower Basin's Compact Waters	10
1. The "severance issue"	11
2. The "priority issue"	13
B. The Decision Proposed by the Special Master Should Be Modified To Preserve California's Firm Right to 4.4 Million Acre-Feet	14
C. The Adoption of California's Contentions Would Not Halt Further Development in Arizona and Nevada	17
1. As to presently authorized projects	18
2. As to proposed new projects, such as the Central Arizona Project	18

II. The Legislative History of the Project Act Does Not Support Severance of the "Colorado River Compact" From the California Limitation 19

A. The Legislative History of the California Limitation on Which Our Opponents Rely Cannot Be Read Literally 19

B. No Legislative History Supports the Master's Construction of the Limitation 24

C. The Legislative History, Like the Language of the Statute, Must Be Read in the Light of the Plain Purpose of Section 4(a) 29

D. California Is Not Excluded From Participation in Article III(b) Waters Under Any Construction of the Limitation 31

III. The Priorities of California's Established Projects up to 4.4 Million Acre-Feet Annually Should Be Protected From Impairment by New Projects in Arizona and Nevada 34

Statement of the Issue 34

A. In Any Competition of Principles, 100 Years of Experience Has Proved That Parity Must Yield to Priority 38

B. The Colorado River Compact Confirms Priority as the Characteristic of Rights to "Article III(a) Water" 44

1. The terms of the Compact explicitly recognize and preserve appropriative priorities as the basis of water rights within each basin 44

2. The Compact provides no "background" principle of parity 46

C. The Project Act Did Not Substitute Proration for Priority in Interstate Rights to "Article III(a) Waters" nor Did It Authorize the Secretary of the Interior To Do So 48

1. Section 5 provides no basis for a pro rata interstate "contractual allocation scheme"..... 49

a. The "contracts" asserted to create the "contractual allocation scheme" are not contracts authorized by section 5..... 51

b. No term in section 5 curtails priorities at state lines..... 52

c. The contracts authorized by section 5 are limited to "water stored" in Lake Mead..... 54

2. Provisions of the Project Act other than section 5 negative proration in any "contractual allocation scheme"..... 65

a. Sections 18, 14, and 8(a) of the Project Act are irreconcilable with a pro rata "contractual allocation scheme"..... 65

b. No inference from sections 8(b) and 6 supports any "contractual allocation scheme".... 67

3. The legislative history of the Project Act confirms the nonexistence of the "contractual allocation scheme"..... 70

a. No federal allocation was authorized..... 70

b. Priorities were not abrogated..... 77

D. The Secretary Has Not Purported To Abrogate Interstate Priority in Article III(a) Water..... 80

E. No Congressional or Secretarial Silence Supports Any Inference That Priorities in "Article III(a) Water" Have Been Supplanted by Proration..... 81

1. Arizona's contention that section 4(a) supports the Master's proration formula is unsound..... 82

2. The United States contention that administrative practice supports the Master's proration formula is unsound..... 84

3. Nevada's contention that equitable apportionment principles, administrative practice, and custom and usage support the Master's proration formula is unsound 89

F. The Master's Proration Formula Would Provide an Illogical and Impractical Hybrid System of Water Rights in the Lower Basin 94

G. The Relevant Interstate Priorities for Existing Main Stream Projects Can Readily Be Determined and Incorporated in Any Decree 96

IV. If the Conclusions Reached by the Special Master and Urged by the Other Parties Are Correct, This Controversy Is Not Justiciable 98

Statement of the Issue 98

A. The Proposed Decree Does Not Apply to a Proposed Central Arizona Project Diverting Above Lake Mead 100

B. On the Master's Water Supply Premises, the Proposed Decree Resolves No Real Case or Controversy Even If a Proposed Project Diverts From the "Mainstream"—Lake Mead and Below 101

1. Physical availability: water supply 101

2. Legal availability. the Compact 103

C. Tested by the Realities of Water Supply, the Proposed Decree Destroys California's Existing Projects 105

1. The assertion that the upper basin will not use its apportionment 107

2. The assertion that upper basin use is remote 109

3. The assertion that technology will solve water problems 119

4. The assertion that California is wasting water 119

D. In the Absence of Any Attempt To Determine the Consequences of the Decision Before It Is Made the Court Should Not Exercise Jurisdiction..... 122

CONCLUSION..... 128

TEXT OF STATUTES..... 131

(Legislative history appendixes are in separate accompanying volume.)

TREATISES AND MISCELLANEOUS

U.S. BUREAU OF RECLAMATION, REGION 4, DEP'T OF THE INTERIOR, FINANCIAL AND POWER RATE ANALYSIS, COLORADO RIVER STORAGE PROJECT AND PARTICIPATING PROJECTS (September 1960)..... 110

REPLY BRIEF

This consolidated reply brief of all eight California defendants, together with accompanying appendixes in a separate volume, is filed in reply to the answering briefs of the United States, Arizona, and Nevada pursuant to the notice accompanying the Court's order of January 16, 1961.[1]

THE BASIC CONTROVERSY

The United States says that "so long as California gets its 4,400,000 acre-feet, plus one-half of the surplus over 7,500,000 acre-feet, it cannot complain that its rights are not being fully met" (U.S. Ans. Br. 51). But the decree which our opponents endorse does not do this. Under the Special Master's decree, California would receive no more than 3,800,000 acre-feet whenever the Colorado River Compact's "ceiling on appropriations" is enforced against the lower basin. It is fatuous to assume that it will not be enforced.

If the Compact is not enforced against the lower basin, there is no justiciable controversy now, because all of the claims for the future here presented by Arizona, California, and Nevada can be readily satisfied if past recorded flow at Lee Ferry continues without further depletion. It is only because the Compact permits the upper basin to further diminish that flow, and to correspondingly restrict satisfaction of lower basin

[1]364 U.S. 940. Abbreviations used in citations are the same as in our previous brief filed August 14, 1961. See Calif. Ans. Br. 1 n.1.

appropriations of it, that the claims exceed the dependable supply which is the subject matter of the controversy. Only on this basis is the case justiciable. On the premises of the Master's Report it is not.

The United States, endorsing the Master's recommended decree, invites every state and Congress to proceed on a collision course, with expansion in both basins relying on a supply already largely committed to constructed or authorized projects.

We challenge, basically, two elements of the decree: (1) the severance of the Compact from the California limitation agreement, and (2) the proration of the resulting shortage in disregard of the priorities of California's long-established projects.

The United States says that California seeks a decree protecting her future at the expense of Arizona's present (U.S. Ans. Br. 54). This is not so. The decree we seek would not deny water to any existing project in any state, nor indeed to the proposed Central Arizona Project, if the gamble on the water supply is taken by the new project. The priorities of California's existing projects up to our agreed limitation of 4.4 million acre-feet must be respected, just as we respect our agreement that beyond 4.4 million acre-feet our rights are limited to one half of any "excess or surplus" waters. This is the agreement between Congress and California that our opponents would break.

The United States apparently concedes that California's existing projects will be impaired if the decree takes effect, perhaps by 1990. This is less than 30 years from now, a span of time shorter than that since enact-

ment of the Project Act. (The Reclamation Bureau has published plans which would result in reducing California's present uses within 14 years.)

But, the United States argues: Shortages which will occur in 30 years are too remote to be given any consideration now; it is "undesirable to abandon needed development in Arizona and Nevada" (U.S. Ans. Br. 19) and in the upper basin merely because the water supply will not sustain all the projects that are built; California's projects and, indeed, projects in every other Colorado River basin state should depend for their security upon scientific advances not yet discovered which will save or create water. See U.S. Ans. Br. 53-54. No decree has yet been entered by this Court based upon such speculation. The Project Act did not require California to underwrite the cost of Hoover Dam in order to dedicate to Arizona most of the additional waters it would make available, while relegating California to finding ways to use the Pacific Ocean to supply our cities and farms.

Before or after a decree in this case is entered, its effect on present projects and the prospects of future projects must be appraised. We urge that this be done before, rather than afterward. The purpose is not to persuade the Court to rewrite the law of the river to avoid a harsh result, but to persuade the Court that the Master's proposed rewriting of that law frustrates its intent and purpose.

The Metropolitan Water District's Colorado River Aqueduct would be wholly deprived of water by the decree recommended, even if new projects are not built

to divert from the main stream above Lake Mead. This is not because of drouth, which everyone in California recognizes has diminished the supply. Disaster is in prospect because the Master proposes to write a decree which reverses both the clear language of the Project Act and the California Limitation Act, and an interpretation of those acts accepted and asserted by both Arizona and California in the decades since 1928, both in this Court and in every other forum: (1) the limitation on California incorporates the Colorado River Compact; (2) priority interstate characterizes water rights within the limitation.

Water rights are property rights, and these two positions, correct in the first instance, have become rules of property.

SUMMARY OF THE ARGUMENT

I. California Claims

California seeks only the 4.4 million acre-feet annually plus the one half of excess or surplus to which her appropriative and contract rights are restricted by the California limitation.

The two major errors in the Master's Report are (1) severance of the Colorado River Compact from the limitation and (2) abrogation of priorities in "Article III(a) waters" (considered *infra* parts II and III, respectively). The combined effect of these errors is to restrict California to less than the 4.4 million acre-feet specified in the first component of the limitation. California can receive no more than 3.8 million acre-feet within the lower basin's Compact ceiling of 8.5 million acre-feet imposed by Article III(a) and (b).

California can receive no more than 3.5 million acre-feet on any realistic appraisal of the permanent water supply.

Reversal of either one of the Master's errors would probably assure California of at least 4.4 million acre-feet. We do not oppose full development of present projects in Arizona and Nevada, or initiation of any new projects if the priorities of our long-established projects to 4.4 million acre-feet are protected, and our rights to one half of excess or surplus are recognized.

II. The Severance Issue

The answering briefs of the other parties invoke a legislative history which cannot itself serve as the basis for any construction of the limitation, and much less as the basis for the Master's severance of the Colorado River Compact from the limitation.

That legislative history would relate the "Article III(a) waters" in the limitation to 7.5 million acre-feet of flow of water at Lee Ferry, 275 miles above Lake Mead. The Master himself rejected this legislative history for compelling reasons about which the opposing briefs are silent. That legislative history could not bear its plain meaning, even had it been expressly incorporated in the statute, because of the immutable laws of nature which neither Congress nor this Court can alter, amend, or revoke: The 7.5 million acre-feet of flow at Lee Ferry cannot produce 7.5 million acre-feet of consumptive use (diversions less returns) below Lee Ferry, because of nonbeneficial losses such as evaporation and transpiration which occur before water is diverted for consumptive use. Attempted allocation of those nonbeneficial losses presents almost insuperable legal and

administrative difficulties, the solution of which no one has attempted.

The Master construes the limitation's reference to "Article III(a) waters" apportioned by the Compact to mean 7.5 million acre-feet of consumptive use of water from the "mainstream," Lake Mead and below. If this legislative history selected by Arizona and the United States were to be the attempted basis for a decree, that decree would not resemble the one recommended by the Master. His decree is based on a "contractual allocation scheme" deduced from Lake Mead contracts. Nothing the Secretary may conceivably be authorized to do by such contracts can allocate waters "let down" at Lee Ferry, 275 miles above the headwaters of Lake Mead.

III. The Priority Issue

The answering briefs of the other parties give almost cavalier treatment to this major issue: Does any provision in the law of the river provide that priorities in "Article III(a) waters" are arrested at state lines? Part III is long because we must prove a negative. the provision destroying priority does not exist, whatever may be the basis of the water right—appropriation or contract, or both.

The Master recognizes that *intra*state priorities apply to "Article III(a) waters." He recognizes that *inter*state priorities prevailed throughout the lower basin prior to the Project Act and continue effective since the Project Act (within the ceilings imposed by the Compact on the lower basin) in every part of the lower basin except the "mainstream." No party seriously chal-

lenges these conclusions. The law of the river confirms that interstate priorities in "Article III(a) waters" have not been abrogated either expressly or by implication.

These conclusions, we believe, are unchallengeable:

(1) The principles underlying the law of prior appropriation, which have prevailed throughout the arid West for 100 years both interstate and intrastate, dictate priority except where priority principles have been expressly and unmistakably modified.

(2) The Colorado River Compact, essentially an *inter*basin agreement, expressly recognizes priority as the only basis of *intra*basin water rights, except where modified by agreement.

(3) Section 5 of the Project Act authorizes the Secretary to contract for the storage of water in Lake Mead and for its delivery to water users at agreed points below Lake Mead, but no word suggests priority between two contractees on one side of the river, but proration if they are on opposite banks. The Project Act's preservation of interstate priorities among contractees, which is supported by sections 8(a), 14, and 18, is conclusively established by two prior decisions of this Court.[2]

Contrary to the extended argument in Arizona's answering brief, the legislative history does not prove that the Project Act either made or authorized any federal interstate allocation of Colorado River waters within the lower basin. In a separate volume of appen-

---

[2]Arizona v. California, 283 U.S. 423, 464 (1931); United States v. Arizona, 295 U.S. 174, 183 (1935).

dixes accompanying this reply brief, we supply the relevant legislative history which Arizona omits and the context for that which Arizona includes.

(4) The limitation on California is correctly recognized by the Master as a limit and not a grant. The limitation cannot be a pro rata allocation, since it is not an allocation of any kind. If the Master is correct that the Colorado River Compact is merely a limitation on appropriations, then the quantities specified for Arizona and Nevada in the proposed tri-state allocation in the second paragraph of section 4(a) (which proposed no allocation for California) are also no more than limitations—certainly not allocations, pro rata or otherwise.

(5) The 1944 water delivery "contract" with Arizona, an essential part of the "contractual allocation scheme," expressly negatives any intent on the part of the Secretary to create a pro rata allocation.

(6) The asserted administrative practice, custom, or usage supporting proration—never pleaded, proved, or otherwise supported—is nonexistent.

IV. The Jurisdictional Issue

The jurisdictional issue is raised by two aspects of the proposed decision: (1) truncation of the river at Lake Mead and a decree confined to Lake Mead and below; (2) failure to determine water supply or to give any effect to the Colorado River Compact.

If Arizona had sought to quiet an alleged title to water from Lake Mead or below, and had alleged a determination to build the Central Arizona Project

from a still undecided location, possibly above Lake Mead and possibly below, her complaint would have disclosed on its face the absence of a justiciable controversy.

If Arizona and California had alleged in their respective complaint and answer that there is water for Arizona's immediate demands and enough for California's existing uses "unless and until many vast new projects, some of which are not even contemplated at this time, are approved by Congress and constructed" (Rep. 115), the pleadings would have disclosed on their face the absence of a justiciable controversy.

Yet this is the posture of the "controversy" which the Master's Report describes. We believe that he is wrong. The controversy which the parties brought to this Court, and tried, relates to the dependable water supply in the lower basin. That controversy is justiciable. That controversy the Master declines to decide.

The effect of the premises on which the Master bases his recommended decree is to encourage both upper and lower basins to continue to develop economies on the same very small margin of presently uncommitted water. The end result would not only be the destruction of the water supply of one of California's great existing projects (the Colorado River Aqueduct of the Metropolitan Water District) within the near future; it would also be a regional disaster, seriously injuring every part of the Colorado River basin.

ARGUMENT

I. CALIFORNIA SEEKS ONLY TO PRESERVE RIGHTS OF CALIFORNIA USERS TO 4.4 MILLION ACRE-FEET PER ANNUM PLUS ONE HALF OF "EXCESS OR SURPLUS WATERS"

A. The Decision Proposed by the Special Master Would Restrict California to No More Than 3.8 Million Acre-Feet Annually of the Lower Basin's Compact Waters

The briefs of our adversaries misstate the effect of the Special Master's recommended decision and California's reasons for opposing it. Arizona has said that California is bound by the covenant of the limitation and "should be estopped from repudiating her act." (Ariz. Op. Br. 72.) The United States says (U.S. Ans. Br. 51):

> "So long as California gets its 4,400,000 acre-feet, plus one-half of the surplus over 7,500,000 acre-feet, it cannot complain that its rights are not being fully met."

California claims no greater right to Colorado River system waters than is permitted by the California limitation:

(1) 4.4 million acre-feet from the 7.5 million acre-feet of "waters apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact," plus

(2) one half of any "excess or surplus waters unapportioned by said compact" over and above that 7.5 million.

The major issue is: Will California receive the 4.4 million acre-feet specified in the first component of the limitation?

The decree recommended by the Special Master would, in effect, erase the figure 4.4 million acre-feet and substitute a figure of no more than 3.8 million. That decree would also, in effect, erase totally the second limitation component which stipulates one half of any "excess or surplus waters." These consequences flow inevitably from the joint operation of two separable aspects of the Master's proposed decision:

1. *The "severance issue"*

The Colorado River Compact confers upon the lower basin a right to a total consumptive use from the Colorado River system in the lower basin (the main stream from Lee Ferry and below plus all tributaries) of no more than 8.5 million acre-feet per annum, characterized by the Master as a "ceiling" or "embargo" on lower basin appropriations. (See Rep. 142-44.) About 2 million acre-feet of that 8.5 million acre-feet is now used from the dependable supply of the lower basin tributaries (Calif. Op. Br. 20, 22-23; Calif. Ans. Br. 10 n.7), leaving not more than 6.5 million acre-feet to be claimed within the Compact "ceiling" from the main stream.

Section 4(a) of the Project Act (the first paragraph of which specifies the terms of the limitation accepted by California) refers to (1) the waters apportioned to the lower basin by Article III(a) of the Colorado River Compact and (2) any excess or surplus waters unapportioned by the Compact. The Master severs these express references to the Compact from section 4(a) as "inap-

propriate" (Rep. 173) and relates both funds of water solely to "mainstream" waters (Lake Mead and below). All uses made by projects diverting from the lower basin tributaries or from the main Colorado River between Lee Ferry and Lake Mead are excluded from consideration. See Rep. 173, 183.

That severance produces the following disparity in the "mainstream" between supply and demand: Against a "mainstream" supply which cannot exceed 6.5 million acre-feet when the Compact ceiling is enforced (because 2 million acre-feet of the lower basin's 8.5 million acre-foot Compact allocation is accounted for by present uses on lower basin tributaries[1]), the effect of the Master's construction of section 4(a) of the Project Act is to marshal demands which vastly exceed that supply. The demands which the Master regards as assertable solely against the "mainstream" supply are: (1) Demands to 7.5 million acre-feet of "Article III(a) waters," *i.e.*, the 4.4 million acre-feet to which California agreed her claims are limited and the 3.1 million acre-feet which may be claimed only by Arizona and Nevada; plus (2) demands to all "excess or surplus waters" over and above that 7.5 million acre-feet.

The issue then arises whether the shortage of at least one million acre-feet to supply the III(a) demands recognized by the Master against the "mainstream" (7.5 less 6.5) is to be borne by the 3.1 million acre-feet

[1]At present, uses from the main Colorado River between Lee Ferry and Lake Mead are minimal. However, if any new project, such as the Central Arizona Project, is authorized to divert from that upper reach of the river, the present figure of 2 million acre-feet of uses on "tributaries" would increase accordingly and the "mainstream" supply in Lake Mead and below within the Compact ceiling would shrink correspondingly.

of claims (to the extent their priorities, over one half now unused, are junior to our own) from which we are excluded, or whether that shortage may invade the priorities of our long-established projects to 4.4 million acre-feet.[1a]

2. *The "priority issue"*

The Special Master's recommended decree would allocate to California 44/75 of the "Article III(a) waters" (defined as the first 7.5 million acre-feet (or less) of "mainstream" waters available for consumptive use annually), not a firm 4.4 million acre-feet thereof. If the Master's formula is confirmed, California's right to "mainstream" waters shrinks to no more than 3.8 million acre-feet annually (44/75 of 6.5 million acre-feet[2]) whenever the Compact ceiling of 8.5 million acre-feet is enforced against the lower basin.[2a] Yet, Cali-

---

[1a]Within the Compact's ceiling of no more than 6.5 million acre-feet from the main river from Lee Ferry to Mexico, there is obviously no water to supply demands to "excess or surplus" above 7.5 million acre-feet.

[2]The Master derives the fractions 44/75, 28/75, and 3/75 (Rep. 233) from a "contractual allocation scheme" (or "system") (Rep. 221, 232) which he "deduced" (Rep. 237) from the Secretary's water delivery contracts construed with the following gloss: that the Secretary intended to effectuate substantially (although not precisely) the allocation set forth in the second paragraph of § 4(a) of the Project Act (authorizing an interstate compact which no state ratified) in conjunction with the limitation specified in the first paragraph of that section (Rep. 222-25). We deny that any "contractual allocation scheme" exists (Calif. Op. Br. 138-94). But if it does exist, we deny that it is the scheme described by the Master (Calif. Op. Br. 195-206) or that it abrogated priorities in "Article III(a) waters" and substituted parity (Calif. Op. Br. 206-31). See also Calif. Ans. Br. 36-75, 106-29, 136-40.

[2a]If, as we believe, the permanently dependable supply will support less than 6 million acre-feet of consumptive use from the Master's "mainstream," California's share, under the Master's formula, would not exceed 3.5 million, unless "present perfected rights" exceeded that quantity. The decree proposed would postpone determination of their magnitude to later proceedings.

fornia's annual consumption as of the date of the trial was 4.6 million acre-feet. By 1960 California uses had increased to about 4.9 million acre-feet. (See Calif. Op. Br. 14, 15.)

B. The Decision Proposed by the Special Master Should Be Modified To Preserve California's Firm Right to 4.4 Million Acre-Feet

It is improbable on anybody's theory that the dependable supply of the main river will furnish any substantial quantities of "excess or surplus."[2b] Therefore, we are concerned primarily with protecting the rights of California's long-established projects to 4.4 million acre-feet per annum as against proposed new projects in Arizona and Nevada. California's rights to 4.4 million acre-feet are clearly protected if the Court reverses the Master on both issues (the "severance" issue and the "priority" issue).

If the Court reverses only the Master's excision of the express reference in the limitation to the Colorado River Compact (the "severance issue"), California will probably receive her 4.4 million acre-feet. If the Court reverses only the Master's substitution of proration for priority in "Article III(a) waters," California's 4.4 million acre-feet is assured.

[2b]The permanently dependable supply in the main river, we believe, will sustain not more than 6 million acre-feet of consumptive use. Of this use, 5.5 million acre-feet would be identified, on California's contentions, with the water apportioned by Article III(a) of the Compact, the remaining 2 million being accounted for by presently existing uses of the dependable supply on the tributaries under long-established appropriations which were "rights which may now exist" in 1929. The "excess or surplus" in the main stream dependable supply thus would be not over 500,000 acre-feet (6 minus 5.5), and California's share not over 250,000 thereof, or 4.65 million acre-feet in all.

The reasons which compel reversal at least in one respect or the other (and we think in both respects) are discussed below in parts II and III, respectively. In part IV we deal with the overriding considerations of justiciability and water supply.

There can be no doubt that California has rights to at least 4.4 million acre-feet annually, plus one half of "excess or surplus waters" up to 978,000 acre-feet.[3]

---

[3]The United States, in its answering brief, seems to say that it does not understand why, if California is limited to one half of excess or surplus, we can claim 978,000 acre feet of it, while conceding to Arizona and Nevada only 180,000. (U.S. Ans. Br. 32 n.9.) We do not so contend. We say that if existing projects in California were fully served to the extent of 5.378 million acre-feet of constructed capacity, they would be dependent to the extent of 978,000 acre-feet on the existence of excess or surplus, whereas existing projects in Arizona and Nevada, which will require when fully developed about 1.3 million, would be dependent on excess or surplus to the extent of 180,000 acre-feet of that requirement. (That 180,000 acre-feet consists of 152,000 in Arizona plus 28,000 in Nevada; see Calif. Findings and Conclusions (April 1, 1959), table, p. XII-16.) Since Arizona and Nevada, even with their junior priorities, can claim a quantity of excess or surplus equal to California's one half, it follows that in the happy but unlikely event that the water supply will support use by California of that surplus to the extent of 978,000 acre-feet, it must do so for Arizona and Nevada, enabling them to expand by about 800,000 acre-feet (978,000 minus the 180,000 acre-feet of surplus which existing projects will need when fully developed). But if the water supply, as we believe, will support substantially less than the 6.5 million acre-feet of consumptive use from the main stream which will be permitted by the Compact ceiling whenever that ceiling is enforced, the "surplus" to be equally divided will not exceed, on a permanent basis, the million acre-feet referred to in Article III(b). Of this, on our contentions, California could use 4.9 (4.4 plus one half of the 1 million of III(b) water), and Arizona and Nevada 1.6 (1.1 plus one half of this 1 million). The true expectancy for all three states would be somewhat less because the dependable supply is about 6 million, thus less than the Compact ceiling of 6.5 million. See note 2b, *supra*.

Cf. Arizona's erroneous statement (Ariz. Ans. Br. 139): "[T]he California protestation that unless she receives 5,378,000 acre-feet of Colorado River water each and every year she will be visited with disaster is without substance." Arizona attempts to disprove a contention that we have never made.

However, it has been said that bases on which we claim our rights have not been made clear. The Government says (U.S. Ans. Br. Br. 16 n.3):

> "Throughout the trial of the case, and in the briefing for the Special Master, California's presentation has involved a number of alternative positions."

We have always asserted clearly and consistently the same two bases for our rights. In the phraseology used in the first paragraph of section 4(a) of the Project Act, the twofold bases of California's rights are: (1) "rights which may now exist," that is, appropriations made prior to and subsisting as of the effective date of the Project Act (June 25, 1929) which could be satisfied from the unregulated flow without Hoover Dam; and (2) "contracts made under the provisions of this Act," that is, appropriations initiated after the Project Act by contracts for the incremental supply ("waters stored" in the language of section 5 of the Project Act) made available by Hoover Dam. Our rights in both categories have been validly initiated and diligently pursued (Calif. Op. Br. 10-14 and appendix at A1-37), establishing our priorities upon both bases.

California has clearly and consistently asserted these same twin bases—existing rights and contracts—in 1953 in our pleadings,[4] in 1956 in our statement of position[5] and in our opening statement,[6] in 1959 in

---

our briefs and proposed findings and conclusions,[7] and finally, in 1960 in our opening brief before this Court.[8] We reassert them now.

C. The Adoption of California's Contentions Would Not Halt Further Development in Arizona and Nevada

The answering briefs of the other parties reveal this misunderstanding of California's position, manifested in its most extreme form in the Government's answering brief (U.S. Ans. Br. 3):

> "[T]o follow the solution proposed by California would stymie further development in Arizona and Nevada, including the effectuation of present federal projects, and permit California, by default, to exceed the limitation on use in that State which, as a condition precedent to authorization of the Boulder Canyon Project, Congress imposed[9] in anticipation of California's ability to expand its uses of mainstream waters more rapidly than the other States."[10]

---

[7] *E.g.*, Calif. Findings and Conclusions (April 1, 1959), introduction, p. iii; Calif. Rebuttal Brief 13-15 (June 30, 1959).

[8] *E.g.*, Calif. Op. Br. 37.

[9] (Footnote ours.) It is clear that the limitation was imposed not by congressional fiat (as the United States seems to suggest) but rather by the consent of California in her Limitation Act. See Calif. Op. Br. 128-29, 193-94.

[10] *Accord*, U.S. Ans. Br. 19: "It would be undesirable to abandon needed development in Arizona and Nevada in order to protect against possible future shortages which by reason of scientific discoveries or other factors may never occur." *Id.* at 54: "California would go too far in mortgaging the present to protect the remote future, perhaps because it is Arizona's present that will be sacrificed as security for California's future." See also Nev. Ans. Br. 26: "Nothing in the theory of judicial apportionment justifies what is, in effect, an economic block, or which, as California states, in effect, to Nevada: 'We will let you complete the projects presently existing, but beyond that you can never go.'"

See also Rep. 135.

This assertion is wholly wrong. California neither seeks such results nor makes any contention which would produce such results.

1. *As to presently authorized projects*

Under California's contentions, all existing main stream projects in Arizona and Nevada can proceed to full development. Our opening brief is explicit (p. 292): "The decree which California seeks . . . would fully protect all existing main stream projects in Arizona and Nevada, to the full extent of their ultimate development." More specifically, that development (with a very minor exception) would be assured water from the dependable and permanent supply of the main Colorado River in the lower basin (Calif. Op. Br. 16-19, 20-22, tables 2 and 3). Nevada, at least, recognizes this concession. (Nev. Ans. Br. 26; *cf.* Ariz. Ans. Br. 139-41.)

2. *As to proposed new projects, such as the Central Arizona Project*

Proposed new projects in Arizona and Nevada are not prohibited if California's contentions are accepted. Again, our opening brief is explicit (p. 292): "We do not oppose any such [new] projects [in Arizona and Nevada], if the risk of miscalculation of the water supply rests (as it does in every state of the arid West) on the new ventures, rather than on the existing projects built on the basis of decisions not now reversible and by investments not now recoverable." This principle is most conducive to "optimum development" (U.S. Ans. Br. 3) of the water resources of the lower Colorado River basin. (*Infra* part III-A, pp. 38-44). If Arizona believes her own contentions about the abundant water supply, the risk of accepting junior priorities for such new ventures is negligible.

II. THE LEGISLATIVE HISTORY OF THE PROJECT ACT DOES NOT SUPPORT SEVERANCE OF THE "COLORADO RIVER COMPACT" FROM THE CALIFORNIA LIMITATION AGREEMENT

A. The Legislative History of the California Limitation on Which Our Opponents Rely Cannot Be Read Literally

If there were any point to the quip that only when the legislative history is ambiguous do we turn to the language of the statute, here is that case!

We shall not restate the argument from our opening brief. (Calif. Op. Br. part Two, pp. 69-137.) We shall confine ourselves to the significance to be attached to the legislative history presented by the United States, Arizona, and Nevada to buttress the Master's conclusions. That history in fact contradicts the conclusion of the Master, who says he has considered it and rejected it, and for compelling reasons to which none of the other parties even refer. If the decree were to be written from that history, the Master's decree would have to be altered at least as drastically as the Master has altered the literal meaning of the limitation.

All of the other parties ignore (as does the Master) all contradictory indications in the legislative history, in the terms of section 4(a) of the Project Act, and in all other provisions of the Project Act which recognize that the Compact applies to the Colorado River system including tributaries. Instead, they rely upon statements of some Senators that the first term of the limitation restricts California to 4.4 million acre-feet of the average annual flow of 7.5 million

acre-feet at Lee Ferry which Article III(d) obligates the upper states to "let down" or which "went down" at Lee Ferry to the lower states.[1] On the same assumptions, the tri-state compact which was authorized in the second paragraph of section 4(a) would refer to that 7.5 million acre-feet at Lee Ferry and would have apportioned 2.8 million acre-feet of this flow to Arizona and .3 million acre-feet to Nevada. This is the whole message of the Senators' statements that the United States, Arizona, and Nevada reply upon in the opening and answering briefs.

Thus, the California limitation would be read as if it limited California to the "aggregate annual consumptive use (diversions less returns to the river)" of 4.4 million acre-feet "of the waters apportioned to the lower basin States by paragraph (*d*) of Article III of the Colorado River compact, plus not more than one-half of any excess or surplus waters unapportioned by said compact." If so read, Senator Phipps when he inserted the perfecting amendment which specifies "paragraph (*a*)" and Senator Hayden when he expressed approval were both colossally mistaken.[2] In the second paragraph (tri-state compact) of section 4(a), "paragraph (a) of Article III" must likewise be rewritten.

The Master gives two reasons why this legislative history cannot be followed, and one why it should not be followed. It cannot be followed because:

(1) Physically, the 7.5 million acre-feet of Lee Ferry

---

[1]U.S. Ans. Br. 38-46; Ariz. Ans. Br. 62-67; Nev. Ans. Br. 55-57. *Accord,* Ariz. Op. Br. 63-67, 71-72.

[2]70 CONG. REC. 459 (1928), quoted in Calif. Ex. 2015 (Tr. 11,173), at 54.

flow cannot sustain 7.5 million acre-feet of consumptive use (diversions less returns) at any point below Lee Ferry (Rep. 144, 188).

(2) Almost insuperable administrative difficulties would attend tracing water downstream from Lee Ferry to points of diversion and assigning the non-beneficial losses among users thereof (Rep. 187, 193). No one has yet attempted even to suggest the terms which would go into such a decree, let alone how it would be administered.

These two "cannots" overshadow the tremendous "should not" which would otherwise be compelling even if it stood alone. The legislative history thus relied on results, as the Master concedes (Rep. 188-93), from the failure of Senators Pittman and Hayden to understand the proposal of the upper division Governors' Conference in 1927 to divide the flow of the river at Lee Ferry.[3] This confusion should not be permitted to frustrate the clear intent and purpose of Congress, undeviatingly expressed in both the text of the Project

---

[3]The United States (U.S. Ans. Br. 39), Arizona (Ariz. Ans. Br. 66-67), and Nevada (Nev. Ans. Br. 56-57) all rely upon the recommendation of the upper division governors in 1927 for a tri-state allocation of the Article III(d) flow at Lee Ferry. The Master states that "Congress never clearly understood" that the governors' recommendation related to their states' Article III(d) obligation. Senator Pittman "did not adopt, or perhaps failed to grasp, that portion of the governors' resolution which expressly found the source of the allocated waters in the Article III(d) obligation of the Upper Division" so that he described the governors' proposal "in apparent misunderstanding of the governors' recommendation." Finally, the Master concludes that "all subsequent discussion in the Senate flowed in the same channel." (Rep. 189-90.)

Act[4] and throughout the legislative history, that the Compact, whatever it meant,[5] must control the Project Act, the limitation, the contracts, and all rights arising under or recognized by any of these inseparable documents.[6]

One can speculate here about what other term in the limitation must yield if "paragraph (*a*)" were to be written "paragraph (*d*)." Speculation is not useful, however, except to demonstrate one thing: Any of the modifications which suggest themselves would yield a

---

[4]The Master writes (Rep. 173 n.32): "It is true that certain sections of the Project Act apply to the Colorado River System. The explanation for this is that in those sections Congress was dealing with problems which had system-wide application. . . . But it is clear that many other sections of the Project Act apply only to the mainstream, and this is understandable because in them Congress was dealing only with mainstream problems." The Project Act references in explicit terms in §§ 6, 13(b), 13(c), 13(d), 15, 16, and 20 to "tributaries" or Colorado River "system" in fact show that Congress recognized that the Compact applies to tributaries. Moreover, the cause of concern in the limitation provision, § 4(a), was water rights, and specifically water rights in the event of only six-state ratification of the Colorado River Compact. No reason is suggested, and none can be discovered, why if Congress was concerned with subjecting the *system* to the Compact, it was interested with respect to the limitation only in the water rights in the "mainstream."

[5]The Government contends that the Compact should not be construed in this suit in the absence of the upper states. (U.S. Ans. Br. 30-31 n.7.) The law of this case to the contrary was established by this Court's per curiam order denying California's motion to join the upper states. 350 U.S. 114 (1955), *rehearing denied,* 350 U.S. 955 (1956). *Accord,* Hinderlider v. La Plata River & Cherry Creek Ditch Co., 304 U.S. 92, 110-11 (1938). The pleadings ask for construction of the Colorado River Compact, and all parties including the United States explicitly recognized in those pleadings the necessity that it be construed.

[6]Arizona asserts that California has "bottomed her position upon an over-simplified and purely theoretical equation: Project Act = Compact = System water (main stream + tributary)" (Ariz. Ans. Br. 60). Arizona misses the point; the reference to the Compact is compelled by the purposes of the limitation. See Calif. Op. Br. 112-17; see also p. 29 *infra.*

total net result to California substantially more favorable than the Master's recommended decree.

If the statements of some Senators that they were dividing the Lee Ferry III(d) delivery is accepted as a premise, the consequence is to eradicate the term "consumptive use," expressly defined in the limitation as "diversions less returns to the river," as the thing divided. Conceivably, this eradication of the term "consumptive use" might produce a decree specifying 44/75 of the gross diversions to California, 28/75 to Arizona, and 3/75 to Nevada. Because only the smallest of the three California projects (Palo Verde) has significant return flow and because all of the large existing Arizona projects have return flow, this would provide much more water proportionately for California.

There is legislative history to support this view. Senator Hayden told the Senate expressly that the 2.8 million acre-feet that Arizona would receive upon ratification of the tri-state compact which his amendment authorized (the second paragraph of section 4(a)) would allow Arizona gross diversions of that quantity, leaving nearly one million acre-feet of return flow available to satisfy Mexico (70 CONG. REC. 463, 464, 465). In terms of consumptive use ("diversions less returns to the river"), the 2.8 million acre-feet would provide 1.8 million acre-feet only for Arizona.[7] This is the only explanation which even partially[8] squares his

---

[7]The language of the second paragraph which provides 2.8 million acre-feet "for [not "of"] exclusive beneficial consumptive use" (not defined) in Arizona would easily yield to this construction.

[8]We say "partially" because 7.5 million acre-feet of flow at Lee Ferry would not produce 7.5 million acre-feet of gross diversions (much less diversions less returns) at points downstream from Lee Ferry.

proposed allocation of 7.5 million acre-feet with his explanation of where the water so divided was to come from—the III(d) delivery at Lee Ferry.

B. No Legislative History Supports the Master's Construction of the Limitation

The Master's decree is not supported by any legislative history at all. He rejects the literal language of the debates which would equate "Project Act III(a)" with "Compact III(d),"[9] as clearly as he does the literal language of the statute which would equate "Project III(a)" with "Compact III(a)." His synthesis of a third equation of "Project Act III(a)" with "7.5 million available from Lake Mead and below" cannot be justified on any view that it conforms to what any member of Congress thought the Colorado River Compact means. No one in Congress, directly or indirectly, expressly or impliedly, suggested that the Colorado River Compact in any of its provisions refers to a cate-

---

[9]The United States, Arizona, and Nevada also reject the literal meaning of the debates.

The United States includes in the scope of § 4(a) the depletions on lower basin tributaries, such as the Little Colorado, above Lake Mead. These tributary waters rise in the lower basin and never pass Lee Ferry (Calif. Op. Br. plate 11). See, *e.g.*, U.S. Op. Br. 20: "We suggest that the 100,000 acre-feet of Little Colorado depletions is part of the total mainstream supply available for allocation. This is necessary to achieve Congress' purpose to impound and regulate 'substantially all of the mainstream water' and to accomplish the interstate allocation established by the Section 4(a) limitation on California . . . . We urge the Court to adopt this view."

Cf. Rep. 187: "The United States at one time urged . . . that Section 4(a) limits California to a part of the water flowing at Lee Ferry."

Nevada, and sometimes Arizona, endorse the Master's definition of the "mainstream," by necessary implication rejecting the legislative history which is quoted equating Articles III(a) and III(d) of the Colorado River Compact. (See Calif. Ans. Br. 77-78, 96-106, 135.)

gory of uses from the "mainstream" which begins at Lake Mead.[10] The site of Hoover Dam was undecided when the Compact was negotiated. The Compact is deliberately written to encompass the possibility of construction of the proposed dam "within or *for the benefit of* the Lower Basin" (Art. VIII; emphasis added), *e.g.*, at Glen Canyon in the upper basin.

Even today, there is no contention by any party that Article III(a) of the Colorado River Compact is restricted to the "mainstream," Lake Mead to Mexico.

The case against the Master's construction, however, is far stronger than a total absence of legislative history to support it. His construction would totally frustrate the purposes of the limitation about which there can be no dispute.[1] His construction is based upon rewriting statutory language to give it a meaning which no rational legislative body would have accepted if express language incorporating that meaning had been presented. This can be simply demonstrated:

(1) Suppose that a limitation had been presented which said: "California agrees to be limited to 4.4 million acre-feet of the first 7.5 million acre-feet plus

---

[10]We understand Arizona to argue that the Compact and limitation are reconcilable only on Arizona's alternative argument that the Compact applies to the main stream beginning at Lee Ferry but excludes all lower basin tributaries, or that Congress so construed it.

[1]Rep. 165. "Absent seven-state ratification of the Compact, the Upper Basin required protection against appropriations in the Lower Basin in excess of the Compact apportionment. The Upper Basin feared that Arizona might not ratify, in which event California, unless limited, would be able to appropriate from the mainstream substantially all of the Lower Basin apportionment, leaving Arizona free to make further appropriations from the mainstream outside the Compact ceilings. The limitation on California left a sufficient margin for exploitation by Arizona so as to secure the Upper Basin against undue encroachment by the non-ratifying state." *Accord*, U.S. Ans. Br. 38-41.

not more than one half of all waters available in excess of that quantity from the main Colorado River from Lake Mead to the Mexican boundary; California is not limited with respect to any diversion made above Lake Mead."

Obviously, this would not serve the purpose of the limitation, which was to protect the upper basin from the consequences of Arizona's failure to ratify the Colorado River Compact. When the Project Act was passed, Metropolitan Water District was exploring diversion routes for its aqueduct from the main stream above the site of Lake Mead. The Parker Dam route from below Lake Mead was not selected until more than a year after the Project Act passed. (Calif. Op. Br. 125-26.) A limitation on California to stated quantities of water in addition to what it might divert from above Lake Mead would have been as irrational as a decree in this case omitting from its scope Central Arizona Project diversions above Lake Mead. That is what this decree omits.

(2) The Master says that the secretarial contracts substantially effectuated the allocation contemplated by the tri-state compact, authorized by section 4(a) of the Project Act, but never ratified by any state. Suppose that Congress had been invited to authorize such a compact, rewritten to state what the Master finds in the second paragraph. It would say, in substance: "There is hereby allocated from the first 7.5 million acre-feet of consumptive use from the main stream of the Colorado River from Lake Mead to the international boundary 2.8 million acre-feet to Arizona and .3 million acre-feet to Nevada.[2] These quantities

[2]The tri-state compact would have made no allocation to California.

are not to be diminished by reason of whatever uses may be made by or in Arizona or Nevada of water from the main stream or tributaries above Lake Mead or from tributaries which supply water to that portion of the main Colorado River from which these allocations are made."

Such a proposal would never have received a moment's serious consideration. No decree, no contract, no compact, no appropriation, no water right, whether belonging to an individual or a state, has ever had these characteristics: (a) The parties whose agreement or consensual acts established the right are under no obligation to permit the water to continue to flow to the points of diversion agreed upon; (b) owners of the right may themselves divert the water before it has reached the points of diversion agreed upon without, however, diminishing their rights at the points of diversion.

Yet these are the irrational and self-defeating consequences which the Master's decree produces. The consequences flow from a disregard of a term in section 4(a) which language could not make more clear.

The most striking feature of the Master's decree is the liberation of the Central Arizona Project from the adjudication if that project diverts water above Lake Mead. The existence of a dependable water supply for a Central Arizona Project was the question which precipitated this suit. We have already called to the Court's attention the current studies of the United States and Arizona, given impetus by the circulation of the draft report, to make the diversion for a Central Arizona Project from the main stream above Lake Mead. (Thirteenth Annual Report of the Arizona Interstate

Stream Commission (1960), p. 31, quoted Calif. Op. Br. 125.) On March 17, 1961, Arizona enacted emergency legislation appropriating funds to be used "under contract with the bureau of reclamation for the purpose of making investigations and studies of a dam at the Bridge Canyon site on the Colorado River and of works necessary for the diversion and transportation of water *from the Colorado river* to areas in Arizona . . . . ."[3] (Emphasis added.) We assume that the "Colorado river" as used in Arizona's statute includes the main stream from Lee Ferry to Lake Mead. On April 24, 1961, the United States and Arizona entered into the contract authorized by that legislation.

The recommended decree constitutes judicial legislation rather than construction. For convenience we have at times used the word "construction" in discussing the Special Master's treatment of the California Limitation Act. In fact, the Special Master does not construe the words used by the Congress and the California Legislature. He does not ascribe some shade of meaning to those words or adopt the more reasonable as between two or more possible meanings. Instead he strikes the controlling words entirely as an "inappropriate reference to the Compact" (Rep. 173), and substitutes different words having a completely different meaning. Under the constitutional division of powers, it is the function of the legislative branch, not the judicial, to rewrite or amend statutory language. The adoption of

---

[3]ARIZ. LAWS 1961, ch. 39, § 2, at 107. Reference is also made to diversion "to the Central Arizona Project area," § 2, at 108; see also the title, referring to "diversion and transportation of water to Central Arizona Project and other areas." *Id.* at 107. Text of this Arizona statute is quoted at 133-35 *infra*.

the Special Master's Report would constitute judicial legislation.

The law of contract applies to the statutory compact. Furthermore, our adversaries completely overlook the contractual nature of the "statutory compact" between the United States and California resulting from the Boulder Canyon Project Act and the California Limitation Act. That statutory compact should be construed under the law of contract. The words used should be accorded their ordinary meaning and not be modified by any intent on the part of one of the parties, not disclosed by the words used.[4]

C. The Legislative History, Like the Language of the Statute, Must Be Read in the Light of the Plain Purpose of Section 4(a)

None of the other parties or the Special Master consider the construction of the limitation in light of the most persuasive form of legislative history: the purposes of the limitation set forth in the first paragraph of section 4(a) of the Project Act. The transcendent purpose of the limitation was to provide protection to the upper basin substantially equivalent to the protection that would be afforded by seven-state ratification of the Colorado River Compact, as both the Master and the United States recognize.[5]

Achievement of that purpose required exact integration of the proposed tri-state compact with the Colorado River Compact to which it was made "subject in all particulars."

---

[4]Hotchkiss v. National City Bank, 200 Fed. 287 (S.D.N.Y. 1911), *aff'd*, 201 Fed. 664 (2d Cir. 1912), 231 U.S. 50 (1913).
[5]Rep. 165, quoted *supra* p. 25 note 1; U.S. Ans. Br. 38-41.

The Master's construction of section 4(a) would permit diversions above Lake Mead by all three states, circumventing and frustrating the purposes of the limitation and the tri-state compact.

The Master, supported by our opponents, says that the Senate, in enacting section 4(a) of the Project Act, employed the reference therein to Article III(a) of the Compact as "shorthand" for 7.5 million acre-feet of consumptive use from Lake Mead and below. (Rep. 173, 190.) If so, the Senate (1) authorized the allocation in perpetuity among Arizona, California, and Nevada, from this segment of the river, of a quantity which is at least 1 million acre-feet in excess of the ceiling which the Compact imposed on appropriations from the whole main river, including the reach between Lee Ferry and Lake Mead, but (2) directed the Secretary to conform to the Compact in operating the reservoir from which their delivery should be made, and (3) therefore intended that whenever the Compact ceiling on lower basin appropriations was enforced, California should receive, not 4.4 million acre-feet, but 3.8 million of "Article III(a) water" and no "excess or surplus."

We believe that Congress intended that California should be permitted to appropriate and use 4.4 million acre-feet, not 3.8 million, of the waters within the Compact III(a) ceiling. This means that the 3.1 million from which Congress intended to exclude California must be found where Congress said it should be found, *i.e.*, in the waters of the system apportioned by Article III(a) of the Compact, and not merely in the waters of the main river or in the Master's still more restricted "mainstream."

It is unrealistic to believe that Congress, in writing

section 4(a) of the Project Act and under the anxious eyes of the upper basin Senators, either (1) proposed an allocation in perpetuity among Arizona, California, and Nevada of a million acre-feet in excess of the Compact ceiling, or (2) misled California to limit her rights to 44/75 of a quantity which could never come within 600,000 acre-feet of the agreed 4.4 million if the Compact ceiling were enforced, or (3) did not mean it when it directed that the Compact should be enforced in administering all contracts "anything in this Act to the contrary notwithstanding" (Project Act section 8 (a)).

D. California Is Not Excluded From Participation in Article III(b) Waters Under Any Construction of the Limitation

The answering briefs of all the other parties join the Master (Rep. 168-69, 180 n.40) in chiding California for the following purported inconsistency in our argument: We are charged with arguing that the limitation reference to "Article III(a) waters" should be read literally, but that the limitation to one half of the "excess or surplus waters" should not be read literally (supposedly the "literal" reading excludes California from the Article III(b) waters).

This misstates our argument, and is based on a premise which is utterly unsupportable. We say that "waters apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact" can only be read as a reference to Article III(a) of the Compact. More explicit language to effectuate that intention could not be devised.

We say that "excess or surplus waters unapportioned by said compact" must be read as referring to the Colorado River Compact and to Compact categories of water. Again, this is a necessary conclusion unless the word "compact" is to be erased altogether. That conclusion follows from a literal reading of the word "compact" wherever it appears, but it does not by itself answer two further questions about "excess or surplus":

1. To what Compact categories did Congress and the California Legislature intend to refer?

2. Is the one million acre-feet referred to by Article III(b) "apportioned" or "unapportioned" by the Compact?

This second question, while it may shed light on the answer to the first, cannot be conclusive. It is obvious that the Compact negotiators, whether they regarded III(b) as apportioned or unapportioned, did not intend to exclude California from its use.

The Master, in effect, answers the first question in our favor when he finds that Congress had no intent to exclude California from sharing in that one million acre-feet (Rep. 196-200); he answers the second against us. We think he was right in answering the first question, which is decisive, and wrong in answering the second, which is not. Only by inference is the second question answered against us: In Article III(f) reference is made to waters "unapportioned by paragraphs (a), (b), and (c)." This reference, the Master says, overrides the language of Article III(b) which avoids the words "apportioned in perpetuity" (used in Article III(a)) and substitutes the awkward phrase, "is hereby given the

right to increase its use."[6] Why did the Compact not expressly apportion 8.5 million acre-feet to the lower basin, if that was the intent? The Master attempts no explanation; there is none.[7]

If, however, there were a rule of "ambiguous in one is ambiguous in all," our choice is still clear. California would be hurt by exclusion from III(b) water, but ruined by rewriting the III(a) limitation based on the III(b) ambiguity.

---

[6]Arizona's counsel in Arizona v. California, 283 U.S. 423 (1931), completely demolished the argument that the Compact "apportioned" the III(b) water. See quotation in Calif. Op. Br. 108-09.

The assumption of the Master and the other parties that a "literal reading" of the limitation and the Compact would exclude California from Article III(b) waters is wrong. The Master's Report itself states or implies at least three contradictory "literal" meanings of "excess or surplus waters," under one of which California would share in Article III(b) waters (Calif. Op. Br. 107 n.9). The Government purports to assert this "literal" meaning of the Compact (U.S. Ans. Br. 32) while simultaneously contending (erroneously, *supra* p. 22 note 5) that the Compact cannot be construed in the absence of the upper basin states (*id.* at 30 n.7).

[7]Arizona erroneously says that this argument modifies our position before the Master; we made the identical argument to the Master (Calif. Op. Br. 82-83 (April 1, 1959)).

III. THE PRIORITIES OF CALIFORNIA'S ESTABLISHED PROJECTS UP TO 4.4 MILLION ACRE-FEET ANNUALLY SHOULD BE PROTECTED FROM IMPAIRMENT BY NEW PROJECTS IN ARIZONA AND NEVADA

Statement of the Issue

The issue is: Do the priorities in "Article III(a) water"[1] (however defined) stop at state lines?

The issue relates only to "Article III(a) water."[2] It relates not to a general question of priority versus parity with respect to water rights under Project Act or reclamation law contracts, since there is no substantial argument with the Master's conclusion that priori-

---

[1]We use "Article III(a) water" as a convenient term to refer to what the California limitation calls "the waters apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact," however that descriptive term in the limitation may be defined.

[2]Allocation of shortages in "excess or surplus waters unapportioned" by the Colorado River Compact is not in issue for two reasons: (1) Because California's priorities absent the limitation would entitle California to more than one half, this term of the limitation has the effect of proration. It does not, however, prescribe proration, because priority would clearly apply to all rights in "excess or surplus" if the aggregate rights of states other than California in excess or surplus totaled more than one half. (2) If the Master's severance of the Compact from the limitation is upheld, "excess or surplus" is nonexistent, except on a short-term temporary basis, and unavailable to everyone as a basis for project planning, which requires a dependable supply (Rep. 133, 239). There can be no shortages in "Article III(a) water" until "excess or surplus waters unapportioned" by the Compact are exhausted; from that time all water rights must be satisfied, if at all, from "Article III(a) water."

ties prevail intrastate until a state line is reached.[3] It relates only to water used from the Master's "mainstream," since no alternative basis other than equitable apportionment and priority of appropriation for water rights from the rest of the river system is suggested.[4]

---

[3]"Section 18 [of the Project Act] . . . directs that state law shall govern intrastate water rights and priorities . . . ." (Rep. 237.) Recommended decree art. II(C)(1), Rep. 350.

"We agree [with the Master] . . . that state law shall govern intrastate water rights and priorities . . . ." (Ariz. Op. Br. 99.) *Contra*, "The same considerations which led the Master to conclude that the Project Act envisions a ratable sharing of water between the states in the event of shortage impels the conclusion that Congress contemplated that ratable sharing among the users within a state should also obtain in times of shortage." Ariz. Ans. Br. 165. Compare the Arizona Act of March 17, 1961 (ARIZ. LAWS 1961, ch. 39, p. 107), subordinating Central Arizona Project rights to contracts of all water users in Arizona, quoted in part, pp. 92-93 *infra*. Nevada does not object to the Master's upholding of intrastate priority. The United States argument in its opening brief was directed to excising the word "state" and inserting the word "applicable" in the provisions of the Master's Report recognizing intrastate priorities, an exercise which may make no difference to the result, however the semantic problem is resolved. U.S. Op. Br. 24 n.5.

[4]The Master so concludes (Rep. 316).

Arizona's alternative argument is that "Article III(a) water" in the limitation refers to a Colorado River Compact applicable to the lower basin main stream only, beginning, however, at Lee Ferry, but no explanation is offered about the basis, under that construction, of any rights at all from the main stream above Lake Mead, where the Secretary cannot contract to store and deliver Lake Mead water.

Nevada's argument that we misuse the term "equitable apportionment" is disposed of by the Special Master. See Rep. 326-27 and cases there cited. "Equitable apportionment" is the Court's term employed in Wyoming v. Colorado, 259 U.S. 419, 464 (1922), the first interstate water rights case in the original jurisdiction to result in a decree. That decree applied priority of appropriation across state lines, as the Court had earlier done in its appellate jurisdiction. Bean v. Morris, 221 U.S. 485 (1911). *Cf.* Washington v. Oregon, 297 U.S. 517, 526 (1936): "The question remains whether the Oregon irrigators as a result of all their acts are taking to themselves more than their *equitable proportion* of the waters of the river, priority of appropriation being the basis of division." (Emphasis added.)

It relates only to the legal effect of the Colorado River Compact, the Project Act, the Limitation Act, and water delivery contracts which became effective on or after June 25, 1929, since it is clear that priority characterized all water rights interstate and intrastate prior to that date. (Rep. 316.)

Furthermore, it is an issue which perhaps need not be decided at all if the Master's conclusion severing the Compact from the limitation, considered in part II of this brief, is reversed. If "waters apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact" refers to the lower basin's Article III(a) Compact apportionment, the possibility of a shortage is sufficiently small that decision as to how that shortage might be allocated may be presently unnecessary. The dependable supply of the main river below Lee Ferry, *plus* that available for use on the tributaries, exceeds the Compact III(a) apportionment of 7.5 million acre-feet. (See Calif. Op. Br. 20-21.)

If, however, the Master's severance conclusion is sustained, the priority issue is critical. In that event, the priority issue means more than 600,000 acre-feet of annual consumptive use to California. Proration as applied by the Master to the quantity of water which the lower basin may use from the main river when the Compact ceiling of 8.5 million acre-feet is enforced would give California about 3.8 million acre-feet[5] (44/75 of 6.5 million available from the main river

[5]California would receive less than 3.8 million if the dependable supply will sustain less than the Compact ceiling of 6.5 million acre-feet of consumptive use from the main river. If that supply is 6 million or less, as we believe, California's share under the formula would be 3.5 million or less.

within that ceiling) whereas priority would probably give California 4.4 million acre-feet from the same supply.

The priority issue appears to be of urgent concern to only one party—California. Our adversaries insist that the shortage of which we complain is ephemeral and remote. If they are right, California is in any case assured of the 4.4 million acre-feet which the first term of the limitation specifies.[6] The issue is unique in adversary litigation, because its resolution in California's favor permits California at least 600,000 acre-feet on California's contention, without any other state losing anything on its own contentions.[7]

The basis for the conclusion that interstate priorities do not exist in "Article III(a) water" has never been clearly identified. The Master describes the principle as "sovereign parity" (Rep. 236), and suggests that it is gleaned from the periphery of a Colorado River Compact which he holds otherwise to be irrelevant. The Master applies "parity" only to the "mainstream," and there only to "mainstream" rights with respect to each other, although no one suggests that sov-

---

[6]"California cannot complain that these [present perfected] rights are not given sufficient recognition because in its Limitation Act it specifically accepted, as the Project Act required, the 4,400,000 acre-foot allocation, plus one half of the surplus, in satisfaction of 'any rights that may now exist.' So long as California gets its 4,400,000 acre-feet, plus one-half of the surplus over 7,500,000 acre-feet, it cannot complain that its rights are not being fully met." (U.S. Ans. Br. 51.)

[7]Priority would also protect California if the water supply physically available is less than the 8.5 million acre-foot Compact ceiling, 6.5 million of which is from the main river. The "mainstream" supply could drop to about 5.5 million acre-feet before California's priorities up to the 4.4 million acre-feet could be challenged by priorities in Arizona. Calif. Conclusion 7A:201(3), p. VII-4, and table 2, p. VII-6.

ereignty or the Compact under anyone's construction is so confined. The other parties, who support the Master, are not much more specific. Therefore, since the source of "sovereign parity" appears to be a general but otherwise unidentified principle, we turn first to the principles which should control either in the absence of applicable statute or agreement, or if there is a hiatus in the applicable statutes or agreements.

A. In Any Competition of Principles, 100 Years of Experience Has Proved That Parity Must Yield to Priority

If it were clear that Congress had not legislated or the parties had not agreed how interstate shortages in Article III(a) waters are to be allocated, the rule of priority which governed all interstate rights prior to June 25, 1929,[8] must apply: Shortages in "Article III(a) water" are allocated by priority.

If it were clear that Congress had left to this Court the rule to be fashioned with respect to how these interstate shortages are to be allocated, the principles of priority which this Court and other federal and state courts have consistently applied[9] supply the answer: Shortages in "Article III(a) water" are allocated by priority.

If it were concluded that Congress by legislation or the parties by agreement had provided a rule as to how interstate shortages are to be allocated, but so am-

[8]June 25, 1929, is the date of the presidential proclamation which made effective simultaneously the Colorado River Compact (among six states), the Project Act, and the California limitation. (Rep. 26-27.)

[9]See, *e.g.*, Weiland v. Pioneer Irr. Co., 259 U.S. 498 (1922), and cases cited in Wyoming v. Colorado, 259 U.S. 419, 470-71 (1922).

biguously as to leave in doubt what rule they had attempted to state, the experience plus the legislative and judicial wisdom of more than 100 years of western water law provide the answer: Shortages in "Article III(a) water" are allocated by priority.

The cardinal element of priority of appropriation is first in time, first in right. The purpose of priority of appropriation is to protect existing projects. Where its strict application in interstate adjudications does not best serve that purpose, the strict application is modified to suit the purpose.[10]

The proration principle protects no one: Every project exists at the hazard of every other project.

The disagreement in this case relating to the source of title to water rights does not affect the priority issue. The resolution of this issue does not, and should not, turn upon abstract legal concepts concerning source of title.[1] So far as the resolution of the issue depends on principle, the principle comes from the physi-

---

[10]Nebraska v. Wyoming, 325 U.S. 589, 618-19, 621-22 (1945). Rep. 326-27.

[1]Endless mischief has been created by mechanically applying legal doctrines in resolving western water controversies. An outstanding example is Lux v. Haggin, 69 Cal. 255, 10 Pac. 674 (1886), in which the majority of the court decided that riparian concepts imported from humid England controlled water rights in arid California. A constitutional amendment, numerous statutes, and extensive litigation have not yet entirely succeeded in rectifying the court's mistake. See United States v. Gerlach Live Stock Co., 339 U.S. 725, 742-55 (1950), for a review of the development of California water law. In sharp contrast to Lux v. Haggin is Mr. Justice Holmes' opinion in Boquillas Land & Cattle Co. v. Curtis, 213 U.S. 339, 345 (1909). Mr. Justice Holmes crisply disposed of an argument that riparian concepts were transported to Arizona by statutory importation of the common law: "[I]t is far from meaning that patentees of a ranch on the San Pedro are to have the same rights as owners of an estate on the Thames."

cal conditions of the region where the principle must be applied.[2] Priority responds to the prevailing conditions, proration does not.

The principles of priority of appropriation make possible the optimum development of the Colorado River system in the lower basin. In the absence of those principles, there would have been no development throughout the area regarded more than a century ago as uninhabitable desert. The fundamental ingredients of that law—first in time is first in right,[3] relation back,[4] and beneficial use[5]—have been adopted by every western state as the essential part of its internal law. They also are an essential part of the reclamation law, with the result that federal-state jurisdictional conflicts, while highly publicized, have been infrequent and incon-

---

[2]"The miner's need was more than a convenience—it was a necessity; and necessity knows no law. But conditions were favorable for necessity to make law, and it did—law unlike any that had been known in any part of the Western world." United States v. Gerlach Live Stock Co., 339 U.S. 725, 746 (1950), reviewing the genesis of the priority principle.

[3]One who first initiates a project to put water to beneficial use and proceeds thereafter with due diligence has priority over rights later initiated. In the event of water shortage, its burden is visited in inverse order of the priorities established by the dates of initiation of their respective rights.

[4]A water user is entitled to the full requirement of his project upon its diligent completion with his priority dated back to the first initiation of his right.

[5]Beneficial use is the basis, the measure, and the limit of the appropriation right in every state, as § 8 of the Reclamation Act of 1902 declares shall be true of rights served by federal reclamation projects.

sequential.[6] With one possible exception, it is not neces-

---

[6]The most widely noticed case is Federal Power Comm'n v. Oregon, 349 U.S. 435 (1955), approving the Federal Power Commission's license for a hydroelectric development on a non-navigable stream in Oregon over opposition of Oregon. But, with respect to priorities versus proration, article 28 of the approved FPC license provided:

"Any rights to the use of waters in the Deschutes River and its tributaries in connection with the licensee's project under this license shall be subordinate to:

"(i) All existing rights, whether or not perfected, to the waters of the Deschutes River and its tributaries for domestic, stock, municipal and irrigation purposes, including the right to store any such waters in the proposed Benham Falls, Post and Prineville reservoirs and in the existing Crane Prairie, Crescent Lake, and Wickiup reservoirs; and

"(ii) The use of additional flows of the Deschutes River and its tributaries pursuant to rights which may be initiated hereafter for the diversion and storage of waters for domestic, municipal, stock, and irrigation purposes in connection with any reclamation projects undertaken pursuant to the Federal Reclamation Laws (Act of June 17, 1902, 32 Stat. 388, and acts amendatory thereof or supplementary thereto) the amounts of water to be used under the additional rights, together with the uses under existing rights whatever they may be, not, by reason of the additional right, to exceed these quantities:

"(a) Deschutes River and its tributaries above Cline Falls—entire flow; (b) Squaw Creek—all flows during the non-irrigation season; (c) Lake Creek—20,000 acre-feet annually; (d) Crooked River and its tributaries—all the flows above the highway bridge at the place where U.S. highway 97 crosses the Crooked River Canyon; (e) Crooked River below the highway bridge not to exceed 2,500 acre-feet annually for the proposed Deschutes project domestic water system; and (f) an additional 400 second-feet that may be taken above the licensee's project either from the Deschutes River below Cline Falls or the Crooked River below the highway bridge during the irrigation season." Portland Gen. Elec. Co., 10 F.P.C. 445, 458-59 (1951).

sary to resolve such conflicts here.[7] Necessity created and shaped this body of law; no legislative body has changed it, or ratified any agreement to change it, and no agreement has changed it with respect to "Article III(a) water."

The rationale for the creation of each element in priority of appropriation has been stated in our opening brief;[8] the reasons for the rules have not been and cannot be successfully challenged by any party. One hundred years of history cannot be ignored.

Priority principles do not stop projects from being built. They do permit risk of shortage to be calculated by placing risks primarily upon new projects rather than old ones.

If any doubt remained as to the choice of priority or proration, the foundation principle of equitable apportionment should resolve that doubt. This Court in *Wyoming v. Colorado,* 259 U.S. 419, 465 (1922), adopted the policy of the United States: "to recognize and give its sanction to the policy which each [state] has adopted." In the Colorado River basin the policy

---

[7]The only dissent from the principles here stated which requires notice is the apparent contention of the United States that navigable waters are not subject to appropriation (U.S. Ans. Br. 64-65). That gratuitous contention cannot be taken seriously, since most waters of the West are legally navigable, or tributary to navigable waters to which the commerce power of the United States clearly extends. The evidence in this case should have put that contention to rest forever. The Secretary of the Interior has issued several thousand patents of desert land under the Desert Land Act based on express secretarial determinations, repeatedly made, that appropriations from the Colorado River main stream are valid. Such patents have been issued on these determinations in both Arizona and California before and since the enactment of the Project Act. See Calif. Op. Br. A5-6, A10-11; Calif. Finding 6E:101, pp. VI-14 through 16.

[8]Calif. Op. Br. 54-68.

which each state has adopted in its own law is priority (Rep. 22).

With respect to shortages in "Article III(a) water" no reason has been offered for curtailing priorities at state lines. Interstate proration is an anomalous exception to the general rule of priority. Priority prevails, under the Master's decision, (1) in all parts of the lower basin except the "mainstream," (2) on the "mainstream" to determine conflicts between rights below Lake Mead and competing rights above Lake Mead, (3) within each state throughout the lower basin as determined by state law, (4) with respect to federal "mainstream" reservations intrastate, and (5) with respect to "present perfected rights," interstate and intrastate. The United States, Arizona, and Nevada argue to support proration interstate of rights to "Article III(a) water," but none of them have offered any reasonable explanation of who did it, how it was done, or why.

It is conceded that no statute, federal or state, and no agreement, federal or state, expressly abrogated priority or expressly imposed proration in allocating shortages in "Article III(a) water." The parties endorsing proration rest their contention on inference, but they agree neither with the Master nor with each other upon the source of that inference.

Sources for the inference of proration variously relied upon by the Special Master, the United States, Arizona, and Nevada are these: (1) The Colorado River Compact, (2) some of the terms of the Boulder Canyon Project Act, (3) part of the background and history of the Boulder Canyon Project Act, (4) si-

lence (congressional, secretarial, or both), (5) assumed custom, usage, and administrative practice. None of these sources sustain any inference of proration of shortages in "Article III(a) water" interstate.

B. The Colorado River Compact Confirms Priority as the Characteristic of Rights to "Article III(a) Water"

1. *The terms of the Compact explicitly recognize and preserve appropriative priorities as the basis of water rights within each basin*

There are two provisions which are explicit:

(1) *Article III(a).* The Compact provides that the apportionment of 7.5 million acre-feet of consumptive use to each basin from the Colorado River system "shall include all water necessary for the supply of any rights which may now exist." When the Compact was negotiated there were only three kinds of rights in existence in the Colorado River basin:

(a) Appropriative rights;

(b) Rights of federal reservations (characterized by priority at the date of creation of the reservation (Rep. 350-53));

(c) Riparian rights, limited to California, which alone had any riparian elements in its law, and which were and are of no quantitative significance on the Colorado River.

(2) *Article VI.* The Compact provides:

> "Should any claim or controversy arise between any two or more of the signatory States: (a) with respect to *the waters of the Colorado River System not covered by the terms of this compact;*

. . . the Governors of the States affected, upon the request of one of them, shall forthwith appoint Commissioners with power to consider and adjust such claim or controversy, subject to ratification by the Legislatures of the States so affected.

"Nothing herein contained shall prevent the adjustment of any such claim or controversy by any present method or by direct future legislative action of the interested States." (Emphasis added.)

The Master explains as follows the words which we have emphasized above in Article VI (Rep. 144):

"As between Lower Basin states 'the waters of the Colorado River System [are] not covered by the terms' of the Compact. (Colorado River Compact, Art. VI(a); see Ariz. Exs. 46, 49.)" (Bracketed word inserted by Master.)

"The adjustment of any such claim or controversy by any present method" is a clear reference to the law of equitable apportionment, applied by this Court in the exercise of its original jurisdiction (Rep. 140-41):

"Throughout the Colorado River Basin, when the Compact was negotiated, the law of prior appropriation governed the acquisition of water rights. In 1922, before the opening of the Sante [*sic*] Fe meetings of the Compact commissioners, the Supreme Court had applied the law of prior appropriation as the guiding principle in an equitable apportionment suit on an interstate stream. *Wyoming v. Colorado,* 259 U.S. 419, decided June 5, 1922. As appears from the commissioners' re-

ports, Article III(a) and (b) is intended to prevent the application of the priority rule between the two Basins, a result accomplished by placing limits on the acquisition of appropriative or other water rights in each Basin (Ariz. Exs. 49, 51)."

These express terms of the Compact conclusively negative any contrary inference. So also does the obviously catastrophic consequence of any inference that interstate rights within each basin were destroyed. Even if no express language in the Compact could be found, it is irrational to infer an intent to destroy both existing rights and the basis for acquisition of rights within each basin, leaving nothing to take the place of that which is destroyed.

2. *The Compact provides no "background" principle of parity*

The Master writes:

"[T]he Project Act approved the Colorado River Compact, and thus the Compact provides the background for the enactment of the Project Act. The Compact treats the Upper and Lower Basins on a parity one to the other in regard to the division of water; priority of appropriation is not an operative factor under the Compact." (Rep. 235.)

The Master himself recognizes that this is not true. "Although Article III(a) and (b) is not expressed in terms of appropriative rights, this is the purport of that Article." Rep. 140.[9] Article III(d), described

[9]To the same effect, see Rep. 196: "The Compact puts an embargo upon the acquisition of appropriative rights in excess of the limits set by Article III(a) and (b). The first call upon any remaining water goes to supply Mexico. . . . In effect, Article III(a) and (b) establishes quotas of allowable appropriations."

as the "guarantee of the Compact" (Rep. 144), established a priority in favor of requirements below Lee Ferry for the purpose obviously of satisfying "rights which may now exist" recognized in both the Compact and California limitation in identical terms.

The Compact is instinct with the principle of priority. Article III(c) recognizes a priority in the rights covered by the III(a) and (b) quantities, as against rights dependent on existence of a surplus in excess of those quantities. This III(c) surplus is to be sacrificed to Mexico before rights in the other two categories are to be diminished.

The Master himself recognizes that priority, not parity, characterizes rights in "Article III(a) water" when he finds in both Compact and limitation a word clearly there, although unstated—"first." He says these words mean the "first" 7.5 million acre-feet. Rep. 305-06.

"First" as used by the Master takes its meaning from principles of priority. It does not mean the "first" 7.5 million acre-feet used in the first months of the year, but "first" referring to the first or prior rights. The water used by a long-established project in December is within the "first" 7.5 million acre-feet, although the water used earlier in January by a new project is not. The Master has thus proved, without conceding, that priority principles are implicit and unavoidable, and that these principles are the essential background against which every document in the law of the river must be read if the documents are to make sense.

C. The Project Act Did Not Substitute Proration for Priority in Interstate Rights to "Article III(a) Waters" nor Did It Authorize the Secretary of the Interior To Do So

The Master and all parties who have filed briefs substantially agree that priorities control all intrastate water rights. The only material disagreements relate to the source of the right (federal or state) and whether priority is determined by a state appropriation or by a federal contract. These differences have no apparent interstate consequences. In terms of the recommended decree, the major controversy appears to be whether article II(C)(1) should specify "state law" (the Master's term) or "applicable law" (the United States term). The United States does not say what substantive difference this amendment would make.[1]

Are priorities in "Article III(a) water" limited to their intrastate effect? The Compact can have no such effect within the lower basin. Neither can the Project Act.

---

[1]The Master concludes that § 18 of the Project Act "provides in effect that state law shall govern water rights and priorities intrastate." Rep. 240. Arizona sometimes agrees (Ariz. Op. Br. 99) and sometimes disagrees with this result (Ariz. Ans. Br. 165), but offers no objection to article II(C)(1) of the recommended decree. Rep. 350. Neither does Nevada. The United States objects to the provision of article II(C)(1) which enjoins the United States from releasing water for "any use or user in violation of state law" but indicates that the prejudicial effect of this asserted error would be cured by substituting "applicable law" for "state law." U.S. Op. Br. 24 & n.5. The United States by footnote suggests that "presumably" the "rule of ratability would apply" as between contracts with Arizona projects since they make no provision as to relative priority. *Id.* at 30 n.10. The United States urges that priorities attaching at the date of execution of contracts determine relative rights of appropriators above Lake Mead and contractees below Lake Mead, at least intrastate, but fails to explain how water rights of contractees who have priorities vis-a-vis upstream appropriators are to be prorated vis-a-vis each other. See Calif. Ans. Br. 44-45.

1. *Section 5 provides no basis for a pro rata interstate "contractual allocation scheme"*

The search focuses on section 5. If the Project Act authorized the Secretary to create a "contractual allocation scheme" which stops priorities in "Article III-(a) water" at state lines, it did so in section 5 (first paragraph), or not at all. Section 5 is the source and the measure of whatever authority Congress delegated to the Secretary to affect water rights—intrastate or interstate—by contracts. Simply reading its text establishes that section 5 cannot support even a reasonable argument that Congress conferred on the Secretary a power it disclaimed in itself to allocate water or water shortages by a "contractual allocation scheme" with the attributes of an interstate compact.[1a] The other sections of the Project Act, its legislative history, and its administrative construction overwhelmingly reinforce the conclusion from the textual analysis.

The terms of section 5 of the Project Act are simple and straightforward. Section 5 authorizes the Secretary to contract with water users for storage of water

---

[1a]Water delivery contracts authorized by § 5 of the Project Act do not create any interstate "allocation." We here use the word "allocation" to describe the creation of any interstate right (whether characterized by parity or priority) like that created by an interstate compact. Article III(a) of the Colorado River Compact is an "allocation" in this sense. In a different sense, an appropriation made under state law and given recognition across state lines by the doctrine of Wyoming v. Colorado, 259 U.S. 419 (1922), may be an "allocation" both to the appropriator and to the state whose rights are recognized in the original jurisdiction. Likewise a contract with a water user who thereby acquires a right to water stored in Lake Mead may be called an "allocation." However, it is only the assertion that the Secretary made compact-like "allocations" by secretarial "commitments" to states which creates any issue in this case.

in Lake Mead and delivery of the water stored at agreed points on the river on charges that will defray expenses of the United States. The contracts shall be "for permanent service" and shall "conform to" section 4(a) of the Project Act. No person may have the use of water stored without a secretarial contract.[2]

The "permanent service" requirement was undoubtedly designed to assure, so far as humanly possible, the stability of deliveries from Lake Mead storage (see Rep. 238-40). The need for stable water deliveries shaped the law of prior appropriation (*supra* pp. 39-42). Parity impairs stability of water deliveries and thus tends to defeat permanent service. Contracts for permanent service should not be transmuted to contracts for impermanent service by permitting "commitments" for future section 5 contracts to dilute existing contracts for "Article III(a) waters."

Section 5 presents no difficult questions of construction in the absence of an effort to convert it to a pur-

---

[2]Section 5: "That the Secretary of the Interior is hereby authorized, under such general regulations as he may prescribe, to contract for the storage of water in said reservoir and for the delivery thereof at such points on the river and on said canal as may be agreed upon, for irrigation and domestic uses, and generation of electrical energy and delivery at the switchboard to States, municipal corporations, political subdivisions, and private corporations of electrical energy generated at said dam, upon charges that will provide revenue which, in addition to other revenue accruing under the reclamation law and under this Act, will in his judgment cover all expenses of operation and maintenance incurred by the United States on account of works constructed under this Act and the payments to the United States under subdivision (b) of section 4. Contracts respecting water for irrigation and domestic uses shall be for permanent service and shall conform to paragraph (a) of section 4 of this Act. No person shall have or be entitled to have the use for any purpose of the water stored as aforesaid except by contract made as herein stated."

pose for which it manifestly was not intended. It is impossible to find in it the authorization for a contractual allocation scheme which establishes proration—interstate only—of shortages in "Article III(a) water." There are at least three major obstacles.

a. The "contracts" asserted to create the "contractual allocation scheme" are not contracts authorized by section 5

The scheme derives, in essential part, from the 1944 Arizona contract, concerning which the United States says (U.S. Ans. Br. 47-48):

> "It is our understanding that this contract with Arizona does not by itself authorize the actual delivery of water in compliance with Section 5 of the Project Act, since that Section requires that the contracts be entered into with the actual users of the water. Rather, this contract is in the nature of a commitment by the Secretary to enter into contracts with users in Arizona up to the limit of 2,800,000 acre-feet. In this sense it is an allocation by the Secretary of that amount of water for future contractual use."

The United States is manifestly correct that the "contract" fails to meet the requirements of section 5, but the United States cannot find in the statute or anywhere else authority for a "commitment" which is "in this sense" an "allocation."

Even if the "commitment" is a binding obligation, to which this Court should give full effect, it cannot be a commitment to do more than to write section 5 water

delivery contracts.[3] These contracts are characterized by priority, not parity. A commitment to do any act cannot have greater consequences than the act itself.

b. No term in section 5 curtails priorities at state lines

Section 5 authorizes contracts for storage and delivery at agreed points of stored water. Nothing in the language suggests a difference between two contracts to serve two users, both of which are on the Arizona side of the river, and two contracts to serve two users, one of which is in California and the other in Arizona. If intrastate priority becomes interstate parity in "Article III(a) water," nothing in section 5 prescribes that result.

Nor does the requirement of section 5 that contracts shall "conform to paragraph (a) of section 4" produce that result. We agree with the Master's construction of that quoted phrase (Rep. 163): "In so far as Section 5 refers to the second [tri-state compact] paragraph of Section 4(a) it is for the purpose of requiring the Secretary to respect the compact if ratified by the [three] states." The Master rejects Arizona's contention that this paragraph established a mandatory formula controlling the Secretary's contractual authority.[4]

---

[3]"Commitment" is not an apt description for the 1944 Arizona contract since the Secretary does not purport to commit himself to do anything at all. He might do nothing, or he might dispose of all waters covered by his "commitment" by creating one or more federal reservations, which, by the terms of article 7(*l*) of the 1944 contract would discharge *pro tanto* the obligations under the commitment. The Secretary has never been asked to write a contract for the proposed Central Arizona Project, and indeed, if the diversion for the project is above Lake Mead, he could write no such contract under the authority of the Project Act.

[4]Rep. 162-63, 202. We treat the legislative history refuting Arizona's argument in appendix E in our separate appendix volume.

Had there been a seven-state Colorado River Compact ratified within six months of passage of the Project Act with neither the tri-state compact nor California limitation, "conform to section 4(a)" in section 5 would have meant "conform to the Colorado River Compact" and nothing more. If the limitation is effective,[5] it means "conform to the Colorado River Compact" (a mandate repeated in section 8(a)) and "conform to the California limitation."

"Conform to" the limitation does not mean parity. The limitation is not a grant to California (Rep. 231) or to any other state. The limitation is written in the unmistakable language of appropriation—not parity. The limitation places a ceiling on the aggregate of California's "rights which may now [June 25, 1929] exist" and California's rights to "initiate" or "perfect" rights thereafter.[5a] The aborted tri-state compact, even if effective, could not be construed to make an allocation to three states on a parity, since no allocation is stated or

---

[5]We excepted to the Master's determination "that the limitation upon use of water in California set out in the first paragraph of section 4(a) of the Project Act and accepted by the reciprocal California Limitation Act continues operative despite the Report's conclusion that Arizona effectively ratified the Compact on February 24, 1944, thereby effecting seven-state ratification of the Compact (Report, pp. 27, 166-67)." Calif. Exception IV-3, p. 24. We have not argued this exception, since it would not appear to result in a more favorable treatment for California than acceptance of the limitation and a seven-state Compact, both properly construed. Our contracts were all executed when the limitation was clearly applicable to California rights.

[5a]Consistently with the Master's construction of the Colorado River Compact (Rep. 141-42, 149) and the limitation on California (Rep. 231), the quantities specified with respect to Arizona and Nevada in the second paragraph of § 4(a)—if the "conform to" language in § 5 has any relation at all to that paragraph—can mean no more than limitations on appropriations of those states, not "a source of rights as against the other Lower Basin States" (*ibid.*).

intended to any states other than Arizona and Nevada. Priority of appropriation would still be the basis of California's right.

c. The contracts authorized by section 5 are limited to "water stored" in Lake Mead

The "contractual allocation scheme," of which the "commitment" to Arizona is an essential part, is an invention which requires "water stored" in Lake Mead to be coextensive with the water to be allocated. This is an impossibility for at least two reasons relating to the definition of "water stored" in section 5:

(1) "Water stored" in Lake Mead cannot be the "waters apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact" to which the California limitation refers. This is true whether Article III(a) of the Compact includes both the main river and tributaries in the lower basin, as the Master holds, or whether it is applicable only to the main river in the lower basin beginning at Lee Ferry, as Arizona argues. The Master seeks to hurdle this obstacle to the "contractual allocation scheme" by construing the limitation to refer to 7.5 million acre-feet from a newly defined "mainstream" which begins at Lake Mead. This is a formidable hurdle. No one can imagine any compact which would divide waters between two basins or territories which are not contiguous by 275 miles, the length of the Colorado River between Lee Ferry and Lake Mead.

Although the Master breaks the "conform to" link between section 5 and the tri-state compact authorization in section 4(a) (Rep. 162-63), he nevertheless welds the tri-state compact into section 5 by a discovery that the Secretary voluntarily did what neither section

5 nor 4(a) commands him to do: The Secretary imposed on the states an allocation that Congress authorized the states to impose upon themselves, substantially effectuating by contracts the unratified tri-state compact. Rep. 222-24.

That tri-state compact, if ratified as the Master has rewritten it, would be the strangest interstate agreement ever executed. None of the three compacting states are obligated to respect the compact apportionments, but all are left free to make diversions unlimited by the compact from above the "mainstream" to which the compact alone applies. The compact would lay the foundation only for litigation, since it would settle no interstate right except as the states might choose "mainstream" points of diversion. Can anyone seriously suggest that if the tri-state compact actually authorized by section 4(a) had been accepted by the states, the Central Arizona Project diverting above Lake Mead would be exempt from its scope? This analysis proves that section 5 and section 4(a) were never intended to be and were never conceived to be coextensive. Section 5 applies to "water stored" in Lake Mead, section 4(a) to the 7.5 million acre-feet apportioned to the lower basin by the Colorado River Compact and the "excess or surplus" above that apportionment. The attempt to make sections 5 and 4(a) mirror images of each other does violence to the language and the purpose of both sections.

(2) "Water stored" in Lake Mead cannot include all the water used from the Master's "mainstream" (Lake Mead and below). By no one's definition of "water stored," which section 5 authorizes the Secretary to contract to deliver to users, does it include either inflow from tributaries which reach the main

stream below Lake Mead, or water required to satisfy natural flow rights which existed before Hoover Dam was authorized.

Nevertheless, the Master's "mainstream" invention is essential to the "contractual allocation." Without his invention the resource to be allocated cannot be coextensive with the contract device which is the exclusive basis of his allocation.

The Master justifies including the inflow from the Bill Williams in the "water stored" and subjecting it to secretarial allocation because (in part) he says, the Project Act treated it as *de minimis*. Rep. 184. In fact, its inflow has averaged about 117,800 acre-feet per year (see Rep. 121), which is almost twice the amount of the combined diversion requirements of three of the five main stream Indian reservations adjudicated by the Master (Decree art. II(C)(2)(a)-(c), Rep. 350-51).

The Master's inclusion of the water required to satisfy natural flow rights with "water stored" has no justification whatever. That "water stored" does not include water required to satisfy natural flow rights is firmly established by (1) the law of water rights; (2) the administration of the Project Act; (3) the construction of that act by this Court.

Stored water is the water made available for use by a storage reservoir, not available for use from the previously unregulated natural flow.[5b] See *Gila Valley Irr.*

[5b]See S. REP. No. 592, 70th Cong., 1st Sess., pt. 1 (March 20, 1928), on the fourth Swing-Johnson bill at 4: "The . . . amendment to the effect that no charge shall be made for irrigation water through the all-American canal is to avoid duplication of charge on the lands. *These lands already have a water right,* and since they are to reimburse the Government under the reclamation law the act should be perfectly clear that the lands are not to pay additional charges for water service." (Emphasis added.)

Dist. v. United States, 118 F.2d 507, 508-09 (9th Cir. 1941). The definition of stored water there stated is from the decree entitled Globe Equity No. 59 (Ariz. Ex. 103 (Tr. 382)), where it is applied to the San Carlos Reservoir on the Gila River.[6]

The same meaning was given to the term by the Acting Secretary of the Interior when he advised Palo Verde Irrigation District (Calif. Ex. 351, Tr. 9929):

> "Section 5 of the Boulder Canyon Project Act approved December 21, 1928 (45 Stat. 1057), provides that the Secretary of the Interior is authorized, under such general regulations as he may prescribe, to contract for the storage of water and for its delivery at such points on the river as may be agreed upon, to be used for irrigation and domestic purposes. Contracts for the purchase of stored water for the uses stated shall be for permanent service. No person, irrigation district, or other entity shall have, or be entitled to, the use of stored water for any purpose, except upon execution of the necessary contract.
>
> "If no stored water is required by the Palo Verde Irrigation District, no contract between that district and the United States will be required. Those possessed of prior rights to the unregulated flow of the river will be privileged to continue the

---

[6]The Court employed a somewhat different definition of stored water in Nebraska v. Wyoming, 325 U.S. 589, 631 (1945). The Court recognized, however, that "stored water" is not all the water which flows through a dam impounding a storage reservoir. After citing the *Gila Valley* case, the Court indicated that the definition employed on the North Platte was "perhaps a departure from the ordinary meaning of storage." *Ibid.*

enjoyment of those rights without interference by storage in the Boulder Canyon reservoir."

On August 25, 1931, Dr. Elwood Mead, Commissioner of Reclamation, wrote to W. P. Whitsett, Director, Metropolitan Water District, as follows:[6a]

> "My attention has been called to the use of certain extracts from my letter of February 28 to Mr. S. C. Evans, Executive Director, Boulder Dam Association, in reply to his letter of February 3, which, taken separate from their context, are being construed by opponents of the Metropolitan District as casting doubt on the water right conferred by your contract with the United States. The interpretation which apparently is being attributed to these extracts was not intended. The letter of February 3 from Mr. Evans and my reply of February 28 relate chiefly to the design and construction of Hoover Dam. The matter of storage and distribution of water is involved only incidentally.
>
> "The extracts to which reference is made read as follows:
>
> " 'You will, however, realize that authoritative answers to the various phases of the matter can only be given by the courts. It might not be amiss also to bear in mind that the Secretary of the Interior has no authority to designate the

[6a]The letter is Calif. Ex. 7703, incorporated in the California Offer of Proof, the documents which are before the Court as volume 25 of the California exhibits. Arizona faults us for referring "to these excluded documents as if they had been admitted in evidence as competent." Ariz. Ans. Br. 26. All of the documents are certified; their contents are judicially noticeable. United States v. Louisiana, 363 U.S. 1, 12-13 (1960).

ownership of waters released from the Hoover Dam.'

"The last sentence above quoted was intended to apply to vested and inchoate rights in the unregulated flow of the Colorado River, with which it had been suggested storage in the Hoover Dam might interfere. My letter intended to convey the view that determination of such vested and inchoate rights in the unregulated flow of the river is a matter for the administrative officers of the State and the courts. The disposition of water stored in Hoover Dam, however, stands upon an entirely different basis. Section 5 of the Boulder Canyon Project Act expressly authorizes the Secretary of the Interior to contract for the storage of water in the reservoir and for the delivery thereof at such points as may be agreed upon. Accordingly there can be no doubt of the right of the Government to dispose of waters stored in the reservoir.[6b]

"Secretary Wilbur has heretofore requested the State to recommend an allocation of water designed to cover the natural flow as well as the floods stored in the reservoir in order that the whole subject-matter may be covered.

"This letter is written in order that you and others interested may be more fully informed regarding what was intended by the quoted portion of my letter of February 28.

Sincerely yours,

ELWOOD MEAD, *Commissioner.*"

[6b](Footnote ours.) Metropolitan's 1930 contract (art. 6) had been "without prejudice to any additional rights which the District may have or acquire in or to the waters of the Colorado River . . . ." Ariz. Ex. 38, Tr. 251.

The judicial definition by this Court is found in *Arizona v. California,* 298 U.S. 558, 570 (1936):

> "Without more detailed statement of the facts disclosed, it is evident that the United States, by Congressional legislation and by acts of its officers which that legislation authorizes, has undertaken, in the asserted exercise of its authority to control navigation, to impound, and control the disposition of, the surplus water in the river not already appropriated.[7] The defendant states contend, and Arizona does not deny, that the natural dependable flow of the river is already over-appropriated, and it does not appear that without the storage of the impounded water any substantial amount of water would be available for appropriation."[8]

---

[7](Footnote ours.) The Master sometimes recognizes the distinction between the water subject to contracts and the water not so subject: "[T]he [Project] Act clearly contemplates that *water unappropriated* as of that date [June 25, 1929] is to be made available for use within a state only if the Secretary, within his discretion, contracts for the delivery of the water to that state." (Rep. 153; emphasis added.) He also refers to the Secretary's power "to allocate the *unappropriated water* impounded in Lake Mead." (Rep. 210; emphasis added.) He inconsistently disregards the distinction when he asserts that "the Project Act was designed by Congress to establish the authority for an allocation of *all of the available water in Lake Mead and in the mainstream of the Colorado River downstream from Lake Mead*" (Rep. 152; emphasis added), and it is the latter concept which is embodied in his recommended decree.

[8]It is inconceivable that Mr. Justice Stone misspoke himself when he said "appropriation" or intended to use the term to describe a right devoid of priority. He defined the term in the same opinion (298 U.S. at 565-66):

> "It is conceded both by the bill of complaint and the returns that all the states in the Colorado River basin except California, and California so far as material to the present case, apply the doctrine of appropriation to the waters of flowing streams in their respective territories. Under this

Arizona does not dispute the Secretary's definition of "water stored" as the term stood in the statute in 1930 when the Secretary interpreted section 5. See pp. 57-58 *supra*. She seems to argue that the Palo Verde contract of 1933 somehow amended the statute. Arizona points to the recital in that contract that it was to the mutual interest of the parties that "the rights of the District in and to waters of the river be hereby defined." Arizona says that the district's "rights thus defined were to *stored* water, not to *natural flow*." Ariz. Ans. Br. 23.

The Palo Verde contract itself refutes this argument. In it the Secretary undertakes, as in the other contracts, to deliver to the district from storage "so much water as may be necessary to supply the District a total quantity, including all other waters diverted for use of the District from the Colorado River, in the amounts and with priorities in accordance with the recommendation of the Chief of the Division of Water Resources of the State of California, as follows . . . ." Rep. app. 424.

"All other waters diverted for use of the District from the Colorado River" refers to water diverted by

---

doctrine, diversion and application of water to a beneficial use constitute an appropriation, and entitle the appropriator to a continuing right to use the water, to the extent of the appropriation, but not beyond that reasonably required and actually used. The appropriator first in time is prior in right over others upon the same stream, and the right, when perfected by use, is deemed effective from the time the purpose to make the appropriation is definitely formed and actual work upon the project is begun, or from the time statutory requirements of notice of the proposed appropriation are complied with, provided the work is carried to completion and the water is applied to a beneficial use with reasonable diligence."

Palo Verde which is not "water stored" and delivered from Lake Mead; "all other waters" are waters which Palo Verde receives by virtue of its preexisting right in natural flow. Arizona says that the phrase "all other waters" was "inserted in the Palo Verde contract (and the other California water delivery contracts) to make certain that all Colorado River water diverted by the District, whether consisting solely of water released for delivery by the United States at the diversion point specified in the Palo Verde contract or made up in part of water released for other purposes or diverted by the District at other diversion points, should be charged to the District under its contract." Ariz. Ans. Br. 29.

Arizona's assertion is clearly wrong; it cannot bear any logical analysis. How could "water stored" in Lake Mead become "other waters" not stored in Lake Mead because diverted at a point other than that specified in the Palo Verde contract? Or, to put a harder question, how do "other waters" from the Bill Williams River, whose confluence with the main river is below Lake Mead, become "water stored" in that reservoir whatever may be the point of diversion?

Finally, the consequences of treating "water stored" as all water in the river from Lake Mead to Mexico have violently inequitable results, quite the converse of anything appropriately described as "sovereign parity."[9]

---

[9]The principle of sovereign parity has received expression in two interstate cases: "One cardinal rule, underlying all the relations of the states to each other, is that of equality of right. Each state stands on the same level with all the rest. It can impose its own legislation on no one of the others, and is bound to yield its own views to none." Kansas v. Colorado, 206 U.S. 46, 97

Arizona conceded to California 2.9 million acre-feet of natural flow rights as of 1929.[10] Our uncontroverted evidence shows our 1929 rights were much greater than Arizona conceded,[10a] but in any case if California now uses 4.4 of "III(a) water" no more than 1.5 million acre-feet of that quantity is stored water. Arizona's natural flow rights were about 250,000 acre-feet, and if she receives 2.8 million acre-feet, 2.55 million acre-feet of this quantity is "water stored as aforesaid."

Thus, while the Master's formula gives to California 44/75 of the first 7.5 million acre-feet of all water available for consumptive use from the "mainstream," or 58.6 per cent, most of this (at least 29/44) is represented by natural flow rights. But of the incremental or stored water, he gives Arizona approximately 58.6 per cent if the total supply reaches 7.5 million acre-feet for allocation. If, more realistically, the main stream supply is only 6 million acre-feet, Arizona's share of this stored

---

(1907). In Wyoming v. Colorado, 259 U.S. 419, 465 (1922), the Court explained its statement in Kansas v. Colorado: "What was there said about 'equality of right' refers, as the opinion shows (p. 97), not to an equal division of the water, but to the equal level or plane on which all the states stand, in point of power and right, under our constitutional system." The rule then applied was priority of appropriation across state lines. 259 U.S. at 470.

[10]Arizona alleged "that on June 25, 1929, projects had been constructed and were in operation in California for the irrigation of no more than 473,500 acres of land which required a net main stream depletion of about 2,902,000 acre-feet of water per annum." Ariz. Reply to Calif. Answer, par. 28(b), p. 26. Arizona calls this an "argumentative allegation" which we misinterpret and to which Arizona, because this is an original case, should not be held. Ariz. Ans. Br. 103 n.116.

In Colorado v. Kansas, 320 U.S. 383, 396 (1943), the Court said the force of Kansas' evidence was weakened by Kansas' allegations in Kansas v. Colorado, 206 U.S. 46 (1907).

[10a]See Calif. Op. Br. 12 n.5.

water under the decree is 69.8 per cent and California's only 21.8 per cent.[11]

No one has offered any explanation whatever of why the Arizona delegation in Congress opposed the Project Act, why Arizona sought to upset it in this Court, if this is truly its consequence.

---

[11]See Calif. Op. Br. 265:

ALLOCATIONS OF BENEFITS OF STORAGE RESULTING FROM THE MASTER'S FORMULA

A. If the supply will sustain only 6 million acre-feet of consumptive use:

State	Allocation	Use of natural flow	Incremental use of new water	Percentage of total incremental use of new water
Arizona	2,240,000	250,000	1,990,000	69.8
California	3,520,000	2,900,000	620,000	21.8
Nevada	240,000	0	240,000	8.4
Total	6,000,000	3,150,000	2,850,000	100

B. If the supply will sustain 7.5 million acre-feet of consumptive use:

State	Allocation	Use of natural flow	Incremental use of new water	Percentage of total incremental use of new water
Arizona	2,800,000	250,000	2,550,000	58.6
California	4,400,000	2,900,000	1,500,000	34.5
Nevada	300,000	0	300,000	6.9
Total	7,500,000	3,150,000	4,350,000	100

ALLOCATION OF SHORTAGES IN STORED WATER, CONTRASTED WITH ALLOCATION OF BENEFITS OF STORAGE, RESULTING FROM MASTER'S FORMULA

State	Percentage of shortage borne	Contrasting percentage of allocation of new water: If supply is 6 million	Contrasting percentage of allocation of new water: If supply is 7.5 million
Arizona	37⅓ (28/75)	69.8	58.6
California	58⅔ (44/75)	21.8	34.5
Nevada	4 (3/75)	8.4	6.9
Total	100	100	100

2. *Provisions of the Project Act other than section 5 negative proration in any "contractual allocation scheme"*

The arguments of the opposing parties center on various attempts (1) to explain away sections 18, 14, and 8(a) of the Project Act; (2) to draw inferences from sections 8(b) and 6 to support the Master's conclusions.

a. Sections 18, 14, and 8(a) of the Project Act are irreconcilable with a pro rata "contractual allocation scheme"

Section 18 of the Project Act was the basis of this Court's holding, expressly identified by Mr. Justice Brandeis as holding, "that the Boulder Canyon Project Act does not purport to abridge the right of Arizona to make, or permit, additional appropriations of water flowing within the State or on its boundaries," *Arizona v. California,* 283 U.S. 423, 464 (1931). Arizona and the United States insist that this is not the holding, although Mr. Justice Brandeis said it was.

It is only useful to reenter this argument to reiterate that the Court called it a holding, and that this statement is the Court's stated reason for its decision. Section 18 was quoted and relied on for that result. If the Court were wrong, can anyone explain any conceivable function for the final provision of section 18: "except as modified by the Colorado River compact or other interstate agreement"? What provision in the Colorado River Compact determines *intrastate* rights, or what prompted the odd notion that any other interstate agreement might do so? If the Master's view that sec-

tion 18 has only intrastate effect is correct, the Court erred in finding it even relevant to the problem.[12]

The unanswered question remains: If section 18 is not to be given the construction accorded it by the Court in the first Colorado River suit brought by Arizona, what is the function of that section?

There is an equally significant silence on the part of our opponents about section 14, which makes the Project Act a supplement to the Reclamation Act of 1902 and its amendments and supplements.[13] Section 8 of the Reclamation Act of 1902 is quoted by the Master and relied upon, along with section 18 of the Project Act, for the conclusion (incorporated in the recommended decree) that state law governs rights and priorities among intrastate users. Rep. 217-18.

Two cases in this Court, one before and one after passage of the Project Act, expressly take the view that section 8 has interstate effect: *Wyoming v. Colorado,* 259 U.S. 419, 463 (1922); *Nebraska v. Wyoming,* 325 U.S. 589, 612-14 (1945).

Section 8(a) of the Project Act is perhaps even more significant, since it leads Arizona and California to something close to agreement about its purpose. Sec-

---

[12]Arizona castigates us for relying on Senator King, the author of § 18, "who bitterly opposed the Swing-Johnson bills as providing for an interstate allocation of water in violation of state sovereignty, when California's Congressman Swing and Senator Johnson, the bills' authors, never denied this would be their effect, never attempted to modify those provisions which Senator King found obnoxious, but instead pushed the legislation through to final passage." Ariz. Ans. Br. 10. In fairness Arizona should have added that Senator King voted for the Project Act. 70 CONG. REC. 603 (1928).

[13]United States v. Arizona, 295 U.S. 174, 183 (1935), applies this rule to the Project Act. See Calif. Op. Br. 144-45.

tion 8(a) subjects, *inter alia,* "all users and appropriators" to the Colorado River Compact, anything to the contrary in the act notwithstanding. The term "appropriators" suggests at least an apprehension that there might be appropriators. Arizona says that this upper basin amendment was designed to protect the upper basin against "persons claiming rights" to more water than specified in the Compact. Ariz. Ans. Br. 16.

Arizona is correct, but she misses the important point. There was never any doubt, at least after the decision in *Wyoming v. Colorado,* 259 U.S. 419 (1922), that there were appropriators, and that there would be additional appropriators, particularly in Arizona. The easy solution would have been to provide that appropriation was abolished, but the Project Act did not say so, and what is said in section 8(a) is inconsistent with any notion that the Project Act had somehow inferentially prescribed that abolition.

b. No inference from sections 8(b) and 6 supports any "contractual allocation scheme"

The inference Arizona and the United States would draw from section 8(b) is unwarranted. This section provides that a future two-state or three-state compact relating to division of the benefits from the use of water, including power, shall be subject to earlier executed contracts under section 5. The inference they would have the Court draw is that Congress thus recognized that section 5 authorizes an interstate allocation based on proration.

In fact, section 8(b) is a wise, proper, and necessary provision. A compact should not attempt to alter property rights earlier established by section 5 con-

tracts with water users, but this does not by any inference conceivable convert the authorization to write section 5 contracts into authority to create a compact-like interstate allocation.

Section 8(b) has never been recognized as having the effect which our adversaries seek to give it. If they were correct, the secretarial "commitment" to execute water delivery contracts is beyond the power even of an interstate compact to alter. Yet both the Master and the United States note that this suit is here because efforts at settlement have been unsuccessful. No one has supposed that settlement by compact was statutorily foreclosed ever since secretarial "commitments" were executed.

The United States and Arizona emphasize an argument based on section 6 of the Project Act: Satisfaction of "present perfected rights in pursuance of Article VIII of said Colorado River compact" as a function to be served by Hoover Dam implies a refusal to recognize rights which do not satisfy the definition of "present perfected rights." U.S. Ans. Br. 49-50; Ariz. Ans. Br. 53-57.

"Present perfected rights" was written into section 6 as an amendment insisted upon by the upper basin. The purpose is clear: the provision says, in effect, that Lake Mead is *the* reservoir to which Article VIII of the Compact refers, and it is to be used for the purpose Article VIII describes—that is, to satisfy lower basin present perfected rights to the end that they

may not be asserted against the upper basin.[14] Thus, it is perfectly clear that section 6 means what it says, and is a direction that Lake Mead is to be used to honor present perfected rights. Section 6 supports no inference whatever that perfected rights or any other rights within the lower basin are destroyed or impaired.

The Master's conclusion permits a dubious inference to override a clear mandate, which is anything but inferential. The mandate, in section 18, is described by the Master with complete accuracy except for his discovery of the word "intrastate" (Rep. 218):

> "The fact that the Project Act is denominated as a supplement to the Reclamation Acts buttresses the conclusion, apparent from the plain language of Section 18 itself, that state law governs rights and priorities among *intrastate* users." (Emphasis added.)

The inference, however, leads the Master to qualify this mandate, preferring a junior right, "perfected" on June 25, 1929, to a senior right not "perfected" on that date. This is, as he says, "in certain particulars inconsistent with principles of priority of appropriation." Rep. 234. The inference thus overrides the

---

[14]Article VIII (first paragraph) of the Compact provides (Rep. app. 376):

> "Present perfected rights to the beneficial use of waters of the Colorado River System are unimpaired by this compact. *Whenever storage capacity of 5,000,000 acre-feet shall have been provided on the main Colorado River within or for the benefit of the Lower Basin, then claims of such rights, if any, by appropriators or users of water in the Lower Basin against appropriators or users of water in the Upper Basin shall attach to and be satisfied from water that may be stored not in conflict with Article III.*" (Emphasis added.)

mandate of section 18 which is prefaced: "Nothing herein shall be construed . . . ."

Should Congress have said, "Nothing herein, including inferences subsequently discovered, shall be construed . . . ."?

The inference which our adversaries would draw from section 6, insofar as it is offered to support the Master's conclusion, falls far short of achieving that purpose even if valid. The Master does not hold that all priorities except "present perfected rights" are abolished. To the contrary, he holds that priorities of rights other than "perfected rights" survive but are operative only intrastate. The abolition of their interstate effect is accomplished, say our opponents, by a provision (section 6) which Arizona elsewhere stoutly argues has only interbasin and not intrabasin significance. See Ariz. Op. Br. 46-56; Ariz. Ans. Br. 55-57. The argument disproves this inference.

3. *The legislative history of the Project Act confirms the nonexistence of the "contractual allocation scheme"*

Reference to the legislative history of the Project Act confirms that (1) Congress did not make an interstate allocation of "Article III(a) waters" and did not authorize the Secretary to do so; (2) Congress did not abrogate priority principles interstate and did not authorize the Secretary to substitute proration for priority as the guiding principle for distributing shortages of "Article III(a) waters" interstate.

a. No federal allocation was authorized

The legislative history of the Project Act leaves no room for Arizona's argument that Congress intended

to impose a federal apportionment of III(a) waters upon the states, either directly or by authority delegated to the Secretary.[1]

Members of Congress who shaped the Project Act were agreed that interstate compact or equitable apportionment by this Court were the only ways in which an interstate allocation could be accomplished. The assumption of the states and of Congress was made explicit in the closing debates by Senator Bratton, one of the principal architects of the provisions of section 4(a):[2]

> "There are only two ways known to me through which title to water of an interstate stream, either for purposes of irrigation or development of power, may be adjudicated. One is by a compact or agreement—the method sought to be followed in this case—and the other is by a decree rendered in a suit instituted originally in the Supreme Court of the United States."

The Arizona assertion that "no one denied that the various Swing-Johnson bills provided for a federal allocation of water among the states" (Ariz. Ans. Br. 35) is demonstrably wrong.[3] Supporters of the bills consistently and often pointed out that the bills did not

---

[1]Ariz. Ans. Br. 35, 43-44.

[2]70 CONG. REC. 330-31 (1928). Senator Bratton's view was shared by all of his contemporaries in Congress who spoke upon the subject. We collect pertinent legislative references on this point in appendix A in our separate appendix volume.

[3]In our answering brief we cited representative statements of authors and proponents of the bills refuting Arizona's statements. See Calif. Ans. Br. 51-56. Appendix B to this brief is a compilation of pertinent legislative history on this subject.

purport to make or authorize any kind of federal allocation.[4]

Arizona's assertions to the contrary are based upon extracts from the legislative history which, in context, are not relevant to the points for which Arizona cites them. Arizona says that the Project Act was passed over the "bitter cry of the opposition" that "this federal allocation" was unconstitutional (Ariz. Ans. Br. 35). She implies that "this federal allocation" was the California limitation and the tri-state compact authorized by section 4(a) transported into federal water delivery contracts by the "conform to" language of section 5. But the numerous extracts Arizona cites (Ariz. Ans. Br. 35-43) are wholly unrelated to those provisions of sections 4(a) and 5. No one found Arizona's "federal allocation" in the limitation provision, the tri-state compact authorization, or the future water delivery contracts. The conversation Arizona cites was primarily about congressional approval of the Colorado River Compact without seven-state ratification.[5]

Senator Hayden's "bitter cry" was not about a "federal allocation" by the limitation, the tri-state compact, or the water delivery contracts. His cry was that any attempt to effectuate the Colorado River Compact

---

[4]Provisions of the bills which made the Colorado River Compact effective without seven-state ratification were attacked on the ground that congressional approval of the Compact without unanimous ratification amounted to a "federal allocation" of water. Sponsors of the legislation refuted that objection by repeating the truism that no state could be bound by a compact without its consent, an answer affirmed by Mr. Justice Brandeis in Arizona v. California, 283 U.S. 423, 462 (1931). See app. B.

[5]In appendix C to this brief we put a representative number of Arizona's selections in their context.

without Arizona's ratification amounted to a federal allocation and as such was unconstitutional. Senator Hayden fought every effort to condition the effectiveness of the act upon less than seven-state Compact ratification[5a] because Arizona could thus stop authorization for the dam by withholding her own ratification of the Compact. Arizona could retain her favorable bargaining position in negotiating an intra-lower basin compact only so long as California's efforts to obtain Hoover Dam were thwarted.

Senator Hayden knew that the limitation provision and the tri-state compact authorization did not impose a federal allocation upon the states directly or indirectly. He voted against the bill after the mandatory tri-state compact authorization was withdrawn.[6]

If Congress in the Project Act had abrogated priorities in the lower basin and had apportioned lower basin waters or authorized the Secretary to institute a pro rata apportionment of those waters, Senator Hayden should have announced a great Arizona victory. He did no such thing. In 1930, he pleaded with Congress not to appropriate funds for the construction of Hoover

---

[5a]See, *e.g.*, 70 CONG. REC. 388-94 (1928).

[6]70 CONG. REC. 603 (1928). The rejected version of the tri-state compact (Calif. Ex. 2011, Tr. 11,173) would indirectly have effected an allocation because the Project Act would not have become effective without ratification of the tri-state compact. Even as it was originally drafted, however, it did not impose a federal allocation. By its terms ratification by the states of the tri-state compact, as well as the Colorado River Compact, was a condition to effectiveness of the act; those allocations (to Arizona and Nevada only, with no allocation to California) were not imposed unilaterally by Congress, but were to become operative only by the action of the state legislatures. See Calif. Op. Br. 183-85.

Dam,[7] explaining that if the dam were built, California's accelerated appropriations would give California an undue share of the waters of the river. Senator Hayden told the Senate committee which held hearings on the appropriation bill why the negotiation of an interstate compact dividing lower basin waters was necessary to Arizona after the Project Act had been enacted:[8]

> "Senator GLASS. Do you construe the provision of the law which you have just read so as to make the whole plan contingent upon the completion of the agreement?[9]

---

[7]Pursuant to § 4(b) of the Project Act, the Secretary of the Interior had executed power contracts to provide adequate revenue to insure reimbursement to the United States for the cost of the dam. The contracts were expressly conditioned upon the appropriation of funds by Congress for construction of the dam and were to become effective "as soon as the first Act of Congress appropriating funds for commencement of construction of Boulder Canyon Dam has become law." See arts. 26 and 20 in the Secretary's contracts with Los Angeles and Metropolitan Water District, respectively, in HOOVER DAM POWER AND WATER CONTRACTS, Sp. M. Ex. 2 for iden. (Tr. 212) at 309, 336.

[8]*Hearings on H.R. 12902 Before a Subcommittee of the Senate Committee on Appropriations,* 71st Cong., 2d Sess. 170-71 (1930).

On the Senate floor, Senator Hayden later stated that "constitutional lawyers in this body said that it was impossible for the Congress of the United States to divide the waters of rivers." 72 CONG. REC. 11770 (1930).

Similarly, he told the Senate (*id.* at 11755):

> "[I]f the dam shall be built at Boulder Canyon and if Congress shall appropriate the money to build the all-American canal, and the cities of southern California do divert the water, as they contemplate doing, out of the Colorado River over on to the coastal plain—if those things shall be done first without an agreement between Arizona and California, California will acquire a *prior vested right* to the greater and an unfair proportion of the waters of the Colorado River." (Emphasis added.)

[9](Footnote ours.) Senator Hayden had just read the language of the second paragraph of § 4(a) of the Project Act, authorizing a tri-state compact among Arizona, California, and Nevada.

"Senator HAYDEN. No. I say to you, Senator, very frankly, that that is not true. It could not be true, because the Congress of the United States does not possess the power to divide the waters of rivers among States. That is a result which could only be accomplished by the States through compacts.

"Senator MCKELLAR. Senator Hayden, suppose the agreement is not made; suppose Arizona and Nevada and California are unable to agree. Then what happens?

"Senator HAYDEN. What will happen is that the waters of the Colorado River will be impounded in the Boulder Canyon Reservoir and made available for use; large quantities of water will be taken out of the Colorado River into the great all-American canal; over 1,000,000 acre-feet will be further taken out of the river by a pumping plant, and taken over into the coastal plain of California in the vicinity of Los Angeles; they will be put to beneficial use; and, once having acquired a prior right to its use, no other State can obtain the use of those waters.

"Senator MCKELLAR. What are the chances of an agreement? How far apart are you?

"Senator HAYDEN. That is why I asked Colonel Donovan to come here to testify regarding the negotiations between the States of Arizona and California.

"In answer to the question asked by Senator Glass—and then I shall ask Colonel Donovan to

proceed—you will remember that the Senators from Arizona strenuously opposed the enactment of the Boulder Canyon project act. After many days of discussion we were approached, principally through the Senator from Wyoming, Mr. Kendrick, who said to us, 'If we can work out in this bill a fair division of the waters of the lower Colorado River Basin, will you cease your opposition?' Senator Ashurst and I answered, 'That is exactly what it is all about. If you can do that, we are ready to quit right now.' The Senator from Wyoming said, 'I shall see what can be done.' Senator Kendrick afterwards came back and reported to us that it was impossible for Congress to make such an apportionment, because it is not within the power constitutional [*sic*] of Congress to divide waters. The Senator, however, said, 'We will come the nearest thing to it. Congress will limit California to 4,400,000 acre-feet of water out of the primary apportionment of lower basin water, and will indicate in advance the kind of an agreement which ought to be made by the three lower basin States in dividing the water among them.'

"That is what was done in the Boulder Canyon project act. It was thoroughly understood at the time that there was no legal way of imposing such an agreement on the three States by an act of Congress. But the Arizona contention is that it was contemplated in the act that such an agreement would be made, and it was clearly indicated how it should be made; and I state to you that the Arizona and Colorado River Commission has earnestly and

in good faith sought to make that very kind of an agreement.

"Senator GLASS. Your proposition now is to enforce agreement by witholding appropriation?

"Senator HAYDEN. Exactly."

b. Priorities were not abrogated

The legislative history of the Project Act contradicts Arizona's contention that the act was intended to supersede equitable apportionment and priority principles interstate within the lower basin (Ariz. Ans. Br. 17-18). What the legislative history does reveal is that both friend and foe of the Swing-Johnson bills were in agreement that priority of appropriation would survive enactment of the Project Act and retain its interstate applicability in the lower basin except as modified by interstate agreement.[1]

Extracts from legislative history cited by Arizona do not relate to a congressional attempt to modify or destroy priorities and equitable apportionment within the lower basin. In context, the cited remarks relate to the modification of *interbasin* priorities by the Colorado River Compact.[2]

Arizona particularly relies upon a colloquy between Senators Walsh and Johnson which she argues clearly established Senator Johnson's intent to substitute secretarial water delivery contracts for the principles of ap-

---

[1]In appendix D to this brief we collect representative extracts from the legislative history conclusively tablishing this proposition.

[2]Appendix D includes a compilation of those extracts presented in the context in which the remarks occurred.

propriation and equitable apportionment as the basis for division of "mainstream" waters. Ariz. Ans. Br. 45-46. Read in the context in which this colloquy occurred it is apparent that Senator Johnson did not entertain any such intention and that his colleagues in the Senate did not attribute that intention to Senator Johnson.[3]

Any collection of clippings from congressional hearings and debates is far less revealing of congressional intent than the purpose which Congress intended to serve in enacting the limitation provision. The structure of the Project Act does not make sense if it is assumed that Congress really intended to impose a federal allocation upon the states in disregard of their rejection of the suggested allocation and in demolition of priority principles, notwithstanding the meticulous care with which Congress repeatedly established consensual compacts, not coercion, as the statutory pattern.

The objective of the upper basin was seven-state ratification of the Compact. Arizona refused to ratify, however, unless she secured similar protection against California's priorities in the lower basin through a tri-state compact. The Special Master has accurately identified the considerations which prompted Congress to require California to agree to limit her uses. Here is his description of the genesis of the California limitation provision in section 4(a) (Rep. 165):

> "Absent seven-state ratification of the Compact, the Upper Basin required protection against appro-

[3]The Walsh-Johnson colloquy is set in context with explanatory materials in appendix D, pp. 127-31.

priations in the Lower Basin in excess of the Compact apportionment. The Upper Basin feared that Arizona might not ratify, in which event California, unless limited, would be able to appropriate from the mainstream substantially all of the Lower Basin apportionment, leaving Arizona free to make further appropriations from the mainstream outside the Compact ceilings. The limitation on California left a sufficient margin for exploitation by Arizona so as to secure the Upper Basin against undue encroachment by the non-ratifying state.

"Similarly, Arizona and Nevada were concerned that *California's rapid development would enable that state to appropriate most of the mainstream water available in the Lower Basin.* The California limitation afforded these states protection against this eventuality. . . ." (Emphasis added.)

Why would the upper basin and Arizona have feared California's appropriations if interstate priority principles were either (a) totally abrogated or (b) limited to waters put to use prior to 1929? Obviously, waters which had been put to use prior to the time the dam was built did not depend upon the creation of storage; rights to those waters, whatever their quantity, were nevertheless insufficiently large, of themselves, to preempt most of the lower basin allocations, thus forcing Arizona to encroach upon the upper basin's apportionment. The limitation must therefore have been premised on the assumption that the Project Act would not restrict the interstate applicability of priority principles absent interstate agreement to the contrary.

Failing seven-state agreement, the resulting compromise was approval of the Compact upon six-state rati-

fication and enactment by California of the limitation specified in section 4(a). That the compromise left priority principles unimpaired in Arizona and limited only quantitatively in California was the view supplied to the Congress by Senator Hayden in 1930 in opposing the initial appropriations for Hoover Dam (*supra* pp. 74-77); it was the decision of this Court in 1931 in *Arizona v. California,* 283 U.S. 423.[4]

D. The Secretary Has Not Purported To Abrogate Interstate Priority in Article III(a) Water

If the Project Act authorized a "contractual allocation scheme" with interstate parity in "Article III(a) water," an indispensable element of that scheme is the 1944 Arizona contract. Ariz. Ex. 32, Tr. 248. Here is what that contract says about priorities (Rep. app. 403, 405):

Article 7(l): "Present [1944] perfected rights to the beneficial use of waters of the Colorado River system are unimpaired by this contract."

Article 10: "Neither Article 7, nor any other provision of this contract, shall impair the right of Arizona and other states and the users of water therein to maintain, prosecute or defend any action respecting, and is without prejudice to, any of the respective contentions of said states and water users as to . . . (5) what limitations on use, rights of use, and relative priorities exist as to the waters of the Colorado River system . . . ."

This express language leaves beyond argument an absence of secretarial intent to create the scheme which

[4]See Calif. Op. Br. 139, and this brief at 65-66 *supra.*

the Master constructs from the Secretary's contracts. It negates any implication that "silence" substituted interstate proration for interstate priorities; article 10(5) is not silent. Furthermore, it does not reserve the question of whether interstate priorities or interstate parity shall govern; it obviously reserves contentions as to all relative priorities.

E. No Congressional or Secretarial Silence Supports Any Inference That Priorities in "Article III(a) Water" Have Been Supplanted by Proration

No operative provision in the Project Act or in the contracts expressly provides for proration of shortages in "Article III(a) water."[1] Project Act sections 12 and 14 (incorporating by reference section 8 of the Reclamation Act) and Project Act section 18 command the application of priority principles to such shortages both interstate and intrastate (*supra* pp. 65-66).

However, even if the statute and the contracts were completely silent, the same conclusion would follow. Priority in "Article III(a) water" is compelled because priority is the law throughout the West except where priority has been clearly and expressly abrogated. The necessity which has shaped that law would compel the adoption of priority here, even if this case required the judicial construction of a rule for allocation of shortages.

---

[1]Clause (4) of the proposed tri-state compact in the second paragraph of § 4(a) of the Project Act set forth a different proration formula (and one more favorable to California) than the Master's proration formula. It dealt solely with the impact of the Mexican burden. However, that tri-state compact was never ratified by any state; hence, none of its provisions became operative. See discussion *infra* pp. 82-83.

Neither statute, Compact, nor contract prescribes, expressly or by implication, interstate parity in "Article III(a) water."

Alleged silence is the only common denominator of the arguments of the other parties that proration was substituted for priority by implication. However, no party endorsing proration is able to agree with any other party either about whose silence is relevant or about what other factors, if any, are coupled with silence to bring about that result. None of their arguments can be sustained.

1. *Arizona's contention that section 4(a) supports the Master's proration formula is unsound*

Arizona seems to rely solely upon section 4(a) of the Project Act to support interstate parity, on the following reasoning:[2] Congress in section 4(a) did not consider the problem of shortages expressly. However, proration is "implicit in the basic purpose [of section 4(a)] to make an equitable division of water." Therefore, "Congress must be presumed to have intended that a lesser quantity than 7,500,000 acre-feet should be divided among the states in the same proportions as those which it specified for the division of the 7,500,000 acre-feet," that is, 28/75 (37%) to Arizona, 44/75 (59%) to California, and 3/75 (4%) to Nevada. Ariz. Ans. Br. 95-96.

First, Arizona's major premise—that section 4(a) is silent concerning shortages in "Article III(a) water"

---

[2]In her new argument to support *intrastate* proration, Arizona relies upon "the same considerations which led the Master to conclude that the Project Act envisions a ratable sharing of water between the states." Ariz. Ans. Br. 165.

—fails. Clause (4) of the proposed tri-state compact in the second paragraph of section 4(a) expressly provides that shortages to supply any Mexican Treaty burden, if the surplus proves insufficient, should be met equally by Arizona and California from the main stream.[3] That section 4(a) proration formula (which requires California to bear 50% of any shortage) is not espoused by the Master, Arizona (although her argument logically should require that result), or by any other party, but it is more favorable to California than the Master's formula (which requires California to bear 44/75 (about 59%) of any shortage).

Second, Arizona disregards secretarial intent. The Secretary was not required precisely to follow the authorized allocation set forth in section 4(a) (Rep. 162-63; Calif. Ans. Br. 126-27) and he plainly did not do so. Rep. 222-24. If secretarial contracts make some kind of allocation, the secretarial intention is germane. Secretarial contracts and "commitments" expressly prorate "excess or surplus waters" only. The Secretary has

---

[3]Clause (4) provides in part "That . . . if, as provided in paragraph (c) of Article III of the Colorado River compact, it shall become necessary to supply water to the United States of Mexico from waters over and above the quantities which are surplus as defined by said compact, then the State of California shall and will mutually agree with the State of Arizona to supply, out of the main stream of the Colorado River, one-half of any deficiency which must be supplied to Mexico by the lower basin."

Clause (4) also confirms that the lower basin's share of the Mexican Treaty deficiency is calculated by reference to "paragraph (c) of Article III of the Colorado River compact." We take it that this reference to the Compact is not "inappropriate" (see Rep. 173). The systemwide scope of Article III(c) of the Compact is explained in Calif. Ans. Br. 22-24. The lower basin's share of the Mexican Treaty burden cannot be calculated under the Colorado River Compact and clause (4) of the tri-state compact solely by reference to consumptive use of "mainstream" waters.

rejected the proration provision of clause (4); his contracts contain no provisions specifying proration of "Article III(a) waters." The inescapable inference is that the Secretary thus intended to preserve priority and not to substitute proration among contractees sharing "Article III(a) water." See Calif. Op. Br. 216-17, 222-25.

2. *The United States contention that administrative practice supports the Master's proration formula is unsound*

Although the interstate priority issue is one of two vital questions now presented in this suit, the United States in its major brief on the merits (U.S. Ans. Br. 1) devotes to that issue only this one short paragraph (*id.* at 52-53):

> "The decree orders a pro rata reduction of these quantities[4] if insufficient water is available to meet the full allotments. Although it might have been argued that the Secretary of the Interior is authorized by the Project Act to determine how deficiencies should be met, just as he is authorized to make the allotments in the first place, the pro rata reduction of allotments in the case of deficiencies has been the practice generally followed by the Secretary of the Interior for 59 years in his administration of reclamation projects. It is reasonable to construe these contracts in the light of this history."

[4](Footnote ours.) *I.e.*, of "the apportionment from the first 7,500,000 acre-feet available in the mainstream of the Colorado River of 2,800,000 acre-feet for use in Arizona, 4,400,000 acre-feet for use in California, and 300,000 acre-feet for use in Nevada" (U.S. Ans. Br. 52).

The Government does not clearly say whether it relies upon the silence of Congress or of the Secretary, or of both. In any event, the Government's argument is unsound because there is no practice in the administration of reclamation projects to support the Master's interstate proration of "mainstream" waters.

The United States answering brief never identifies nor attempts to prove the administrative practice on which it relies. No such administrative practice has been pleaded, proved, argued, or briefed. The Government provides not one citation of authority, not one reference to the record or to facts which may be judicially noticed, and not one cross reference to some other writing.

Time has not permitted an investigation of this newly asserted but unexplained practice "generally followed by the Secretary of the Interior for 59 years in his administration of reclamation projects." We doubt that much relevant administrative practice can be found: First, the several water users diverting from Lake Mead and the main Colorado River below are not in any sense one project.[5] Those users are very different. See Rep. 32-39, 50-71, 73-75. Some, like the Yuma Project with divisions in both Arizona and California (Rep. 50-51, 60-61), are federal reclamation projects, and some, like the Indian projects (Rep. 85-88), are federal reservations (but not reclamation projects). Some are not federal projects at all but are water districts created under state law (like Palo Verde Irrigation District and the Metropolitan Water District in California

[5]See United States v. Arizona, 295 U.S. 174, 185-87 (1935); *cf.* United States v. Gerlach Live Stock Co., 339 U.S. 725, 733, 737-39 (1950).

(Rep. 58-60, 61-69)), municipalities (like Henderson or Boulder City, Nevada (Rep. 73, 74-75)), or private businesses (like Basic Management Industries, Nevada (Rep. 74)). Second, we know of no "contract" executed by the Secretary of the Interior under the reclamation laws which resembles in any way the "commitments" to the states of Arizona and Nevada upon which the Master's interstate proration scheme rests. See *supra* pp. 51-52. Third, we know of no reclamation project where different rules regarding shortages apply interstate than apply intrastate. See *supra* pp. 34-35 & note 3.

However, the decisions of this Court have dealt with two instances involving secretarial administrative practice outside the Colorado River basin,[6] each of which reinforces the applicability of priority principles to uses of "mainstream" water from Lake Mead and below.

In *Nebraska v. Wyoming,* 325 U.S. 589, 633 (1945), the Court, in a somewhat comparable situation, recognized the interstate priority of the North Platte Project

---

[6]Note at least two instances of secretarial administrative practice with respect to the "mainstream" of the Colorado River:

General Regulations for the Storage of Water in Boulder Canyon Reservoir and the Delivery Thereof in Arizona, issued Feb. 7, 1933 (Ariz. Ex. 28, Tr. 244): Art. 10(c) of the proposed annexed contract provides in part that "this [proposed] contract is without prejudice to relative claims of priorities as between the State of Arizona and other contractors with the United States, and shall not otherwise impair any contract heretofore authorized by said regulations" pursuant to which the California contracts were executed.

Gila Project Finding of Feasibility, approved by the President on June 21, 1937 (Ariz. Ex. 60, Tr. 269): "In all sales of water rights it will be necessary to prescribe that the water supply of the [Gila] project is subject to the Colorado River compact, and to the Boulder Canyon Project Act and to the sales of water under the compact and said act" and to any treaty with Mexico.

See also Calif. Op. Br. 162-65, 227-28.

in Wyoming and Nebraska over the Kendrick Project (formerly known as the Casper-Alcova Project) in Wyoming. Both are federal reclamation projects on the North Platte River. That priority was required by an express provision in the 1935 contract between the United States and the Casper-Alcova Irrigation District serving the Kendrick Project.[7] This administrative practice is significant because the authorization for the Kendrick Project is apparently silent on how deficiencies should be borne as against other reclamation projects.[8] Subsequently, in 1937, Congress provided that the Kendrick Project should be junior to future projects in Colorado,[9] apparently in recognition that without such legislation future Colorado projects would be subordinate.

In *Ickes v. Fox,* 300 U.S. 82 (1937), this Court rejected an effort by the Secretary of the Interior to

---

[7]325 U.S. at 633 n.18:

"The contract provides:

"'It is expressly agreed that the development of the Casper-Alcova Project and the irrigation of lands under it is in no way to impair the water rights for the Federal North Platte Reclamation Project in Wyoming and Nebraska, and the said North Platte Project, and Warren Act contractors under it are to receive a water supply of the same quantity as would have been received if the Casper-Alcova Project had not been constructed and operated.'"

[8]See U.S. BUREAU OF RECLAMATION, DEP'T OF THE INTERIOR, BUREAU OF RECLAMATION PROJECT FEASIBILITIES AND AUTHORIZATIONS 499 (1957).

[9]See Interior Department Appropriation Act for 1938, ch. 570, 50 Stat. 595 (Aug. 9, 1937): "[N]either the construction, maintenance, nor operation of said [Kendrick] project shall ever interfere with the present vested rights or *the fullest use hereafter* for all beneficial purposes of the waters of said [North Platte] stream or any of its tributaries within the drainage basin thereof in Jackson County, in the State of Colorado, and *the Secretary of the Interior is hereby authorized and directed to reserve the power by contract to enforce such provisions at all times . . . .*" (Emphasis added.)

reduce water deliveries to landowners in the Sunnyside Division of the Yakima Project in the State of Washington in violation of the landowners' vested appropriative rights under state law based on actual beneficial use. The Secretary had attempted to charge those landowners additional rental for all water delivered in excess of three acre-feet per acre per annum in order to meet a deficiency in the cost of construction of Cle Elum dam and reservoir serving Kittitas Reclamation District and other lands which are other divisions of the Yakima Project in Washington. See lower court's opinion, *Ickes v. Fox*, 85 F.2d 294, 296, 297 (D.C. Cir. 1936). In a later installment of the same litigation, the Court of Appeals for the District of Columbia restated the basis of the Supreme Court's decision:[10]

> "Reading the Reclamation Act in the light of the decision in Ickes v. Fox, we find the situation in this case to be as follows: The water-rights of appellants are not determined by contract but by beneficial use. The Secretary of the Interior in operating the project is in the position of a carrier of water to all entrymen in the Reclamation project. He is not obligated to furnish any more water than is available. Under the Reclamation Act he is not authorized to furnish any water at all except for beneficial use. He must distribute the available water according to the priorities among the different users which are established by the law of the State of Washington. He has no concern in disputes between the various entrymen which concern their respective priorities, other than as a stakeholder."

[10]Fox v. Ickes, 137 F.2d 30, 33 (D.C. Cir. 1943), *cert. denied*, 320 U.S. 792 (1943).

3. *Nevada's contention that equitable apportionment principles, administrative practice, and custom and usage support the Master's proration formula is unsound*

Nevada appears to rely upon the sum of congressional and secretarial silence[1] in conjunction with what she conceives to be equitable apportionment principles, administrative practice, and custom and usage to support the Master's proration formula. In each instance, her reliance is misplaced. Somewhat inconsistently, Nevada asks for a "floor," in reality a super-priority, below which her uses can never be reduced (Nev. Op. Br. 58).

Nevada's contention that equitable apportionment principles support the Master's proration formula[2] is unsupportable. Where the Master applies equitable apportionment principles, *e.g.*, on the upper Gila, he applies priorities, not proration, subject to the protection of existing economies (Rep. 324-28, 331). It is beyond question that the basic elements of any equitable interstate apportionment are priority of appropriation and protection of existing projects (Rep. 326-28; Calif. Op. Br. 64-65; Calif. Ans. Br. 136-40; *supra* p. 35 note 4). Both are the antithesis of proration.

Nevada's contention that administrative practice sup-

---

[1]Nev. Ans. Br. 28: "Neither the Project Act nor any of the contracts provide for proration in years of short water supply."

[2]*Id.* at 29: "The provisions [in the recommended decree] for proration in short water years . . . is a concrete expression of this rule of parity between States. It is a very effective and proper method of exercising the power of equitable apportionment by judicial decree."

ports the Master's proration formula[3] is in error for the same reasons given above concerning the United States similar contention (*supra* pp. 84-88).

Nevada argues that there is some uniform custom and usage for prorating stored water which supports the Master's proration formula.[4] Nevada is wrong. No such custom or usage has been pleaded, proved, argued, or briefed. In support, Nevada provides not one citation of authority, not one reference to the record or to facts which may be judicially noticed, and not one cross reference to any other writing.

The laws of Arizona and Nevada, in 1929 (when the Project Act became effective), in 1944 (when the purported Arizona and Nevada "contracts" were executed), and now, do not establish any uniform general practice of prorating shortages.

The Arizona law

A 1921 Arizona statute, consistent with the emphasis given to principles of priority in an early leading case,[5] subjected the distribution of water by irri-

---

[3]*Id.* at 38-39: "All of these rights [in California] being for water stored by the Secretary would be, under the generally accepted pattern of Western water law and under the practice of the general Reclamation Law, of equal priority with other storage contracts executed by the Secretary for uses in either of the States of Arizona or Nevada."

[4]Nev. Ans. Br. 32: "In every instance, it has been the universal custom that contracts for storage water for any given reservoir are of equal priority, and in times of shortage the owners of storage space share pro-rata."

Id. at 40: "We mention again the universal rule that contracts for storage water out of any given reservoir stand on a parity."

See also *id.* at 38-39, quoted *supra* note 3.

[5]Gould v. Maricopa Canal Co., 8 Ariz. 429, 76 Pac. 598 (1904), *appeals dismissed,* 195 U.S. 639 (1904), in which the court declared that all landowners under a canal who had irrigated therefrom "became appropriators, and possessed of rights of appropriation in the order of their priority." 8 Ariz. at 447, 76 Pac. at 601.

gation districts to the "law of priorities."[6] In case of shortage, the "laws of priorities" controlled over proration.[7] This was the law of Arizona in 1929 when the Project Act became effective.

Between 1929 and 1944, Arizona adhered to those principles of priority, as evidenced not only by decisions of her supreme court,[8] but also by the retention of that 1921 legislation.[9]

---

[6]ARIZ. LAWS 1921, ch. 149, § 6, at 331: "Subject to the law of priorities all water of the district available for distribution shall be apportioned to the lands thereof pro rata . . . ." The remainder of the section, not material here, related to withholding of water deliveries for nonpayment of charges. The statute remained unamended through 1928. ARIZ. REV. CODE OF 1928, § 3344 (Struckmeyer).

[7]ARIZ. LAWS 1921, ch. 149, § 24, at 350: "In case the water available in any district shall be insufficient at any time to supply all lands of the district susceptible of irrigation therefrom and otherwise entitled to water, it shall then be the duty of the board of directors to provide for the distribution of all available water upon certain or alternate days to different localities as the board in its judgment may deem to be for the best interests of all parties concerned, and so that such available water shall be distributed in *as nearly equal proportions as possible* to all such lands of the district *subject to the laws of priorities.*" (Emphasis added.) See also ARIZ. REV. CODE OF 1928, § 3395 (Struckmeyer).

[8]Olsen v. Union Canal & Irr. Co., 58 Ariz. 306, 119 P.2d 569 (1941), held that canal companies are under a duty to carry the water of appropriators "in the order of the priority of the land served, and upon equal terms. This also has been the law of Arizona for nearly forty years, affirmed by both this court and the legislature of the state." *Id.* at 317, 119 P.2d at 573. The *Olsen* holding was summarized in Whiting v. Lyman Water Co., 59 Ariz. 121, 124 P.2d 316 (1942), as meaning "that the right to the delivery of water by the owners of a canal and reservoir system depends *entirely upon the right of appropriation* held by the water user, and is not in any manner dependent upon his owning stock in such a corporation." *Id.* at 124, 124 P.2d at 317. (Emphasis added.)

[9]The first clause of § 6, *supra* note 6, reappears in ARIZ. LAWS 1931-1932, 1st Spec. Sess., ch. 8, § 1, at 20 with "priorities" changed to "priority." It remained unamended through 1939. ARIZ. CODE 1939, § 75-222.

For § 24 of the 1921 act, *supra* note 7, see ARIZ. CODE 1939, § 75-424.

The present law of Arizona appears to be substantially the same as in 1944.[10] The burden of shortages is borne in inverse order of priorities unless there is some express provision to the contrary.[1] A recent Arizona statute appropriating funds to study the Central Arizona Project under contract with the Bureau of Reclamation subordinates that project's rights to those of all existing contractees and users of main stream water in Arizona:[2]

---

[10]The first clause of the section relating to distribution generally is the same as in § 75-222 of the 1939 code, *supra* note 9. ARIZ. REV. STATS. ANN. § 45-1588(A) (West 1956).

Section 24 of the 1921 act, *supra* notes 7 and 9, relating to distribution in case of insufficient supply, has been condensed somewhat; but the changes are in form rather than substance, and the last clause, from "distributed in as nearly equal proportions as possible" to the end, has not been changed. ARIZ. REV. STATS. ANN. § 45-1589 (West 1956).

[1]*E.g.*, in Adams v. Salt River Valley Water Users' Ass'n, 53 Ariz. 374, 89 P.2d 1060 (1939), the charter of the association provided in article V, § 6, for delivery of "that proportionate part of all stored and developed water," *id.* at 381, 89 P.2d at 1063, evidently referring to storage expected to be made available by Roosevelt Dam. See Calif. Op. Br. 120. Since article 1 of the 1904 contract between the Government and the association (Calif. Ex. 3, Tr. 1816, at 3-4) provided that rights of shareholders to the use of water should be determined under "said act" (referring to the Reclamation Act of 1902) and "the rules and principles set out in said articles of incorporation," the basis was established for proration of the stored water, and this would seem to explain why the Kent decree of 1910 (Ariz. Ex. 101, Tr. 380), quoted in part in the *Adams* case *supra*, 53 Ariz. at 380, 381, 89 P.2d at 1063, so provided.

Cf. State v. Laramie Rivers Co., 59 Wyo. 9, 43, 136 P.2d 487, 498 (1943): "An appropriation by the water user from a canal, then, is just as essential for the purpose of acquiring a water right as it is for an appropriator from a stream. Even the doctrine of *priority obtains in such case, as in others . . . unless, perchance, modified by provisions for pro-rating. . . .*" (Emphasis added.)

[2]ARIZ. LAWS 1961, ch. 39, § 2, at 108. Text of the act is at 133-35 *infra*.

"[T]he contract with the bureau of reclamation shall provide that the investigations and studies shall be restricted to only that quantity of water which may be available for use in Arizona, after the satisfaction of all existing water delivery contracts between the secretary of the interior and users in Arizona for the delivery of main stream water, and that nothing shall be done thereunder which will impair existing rights in Arizona for the diversion and use of Colorado River water."

The city of Yuma's federal water contract, signed after the close of the trial in this case, does not provide for proration; to the contrary, it subordinates Yuma's rights to stored waters to all diversions at Imperial Dam for agricultural uses in Arizona.[3]

The Nevada law

Allocation of shortages according to inverse order of priorities appears to be the only practice consistent with *Prosole v. Steamboat Canal Co.*, 37 Nev. 154, 140 Pac. 720, 144 Pac. 744 (1914), in which defendant company was enjoined from reducing deliveries to plaintiffs below the 50 inches of water which the company had delivered for about 19 years. The court held that plaintiffs were appropriators in the same sense as if they had diverted directly from a public stream, and that the canal company was under an implied contractual obligation to continue deliveries at the previous rate, physical availability permitting, so long as there was no interference with rights of appropriators under the same system who were prior in time. *Id.* at 165,

---

[3]Calif. Ex. 7611 for iden. (Tr. 22,760), art. 6(a)(1), p. 4 of second pagination.

140 Pac. at 724.[4] The *Prosole* case has been treated as settling the law of Nevada that the right to the use of water is appurtenant to the land irrigated.[5]

No Nevada statute has been discovered relating to the division of shortages in stored water.[6]

F. The Master's Proration Formula Would Provide an Illogical and Impractical Hybrid System of Water Rights in the Lower Basin

The hybrid system of water rights recommended by the Special Master and supported to differing extents by the United States, Arizona, and Nevada reaches results which cannot be defended either logically or practically.

---

[4]The court summed up its decision in this significant language (37 Nev. at 166, 140 Pac. at 724):

> "It is the duty of the diverting corporation in cases of this kind, where a consumer has once established a right to the use of water by acquiring the same and applying it to a beneficial purpose, to continue to furnish him water *in preference to latter* [later] *applicants,* provided he has never waived his rights nor forfeited the same. The company has the right, and *it is its duty, to discriminate* between appropriators of water from their irrigation system, *giving the preference to those appropriators who are oldest in point of time.*" (Emphasis added.)

[5]See, *e.g.,* RFC v. Schmitt, 20 F. Supp. 816, 819 (D. Nev. 1937), *rev'd on other grounds sub nom.* Pacific States Sav. & Loan Corp. v. Schmitt, 103 F.2d 1002 (9th Cir. 1939), in which the *Prosole* case is said to recognize the "intimate relationship between land and water beneficially applied upon it, whether the water is directly appropriated or obtained through the intermediary of a canal company . . . ." *Id.* at 1004. RFC v. Schmitt involved lands which were dependent on stored water (20 F. Supp. at 818), but no issue of proration versus priority was considered.

[6]*Cf.* Interior Department Appropriation Act for 1926, ch. 462, 43 Stat. 1168 (March 3, 1925), providing that existing uses in the Newlands Project, Nevada, should be prior to the rights of a proposed new division of that project: *"Provided further,* That the existing water rights of the present water users of the Newlands project shall have priority over the water rights of the proposed Spanish Springs division . . . ."

We have already seen the unfair results of the dual system of interstate water rights proposed by the Special Master wherein priorities still apply to competing rights of "mainstream" users against "tributary" users above Lake Mead in other states (and presumably against those in the same state) but proration controls competing interstate rights of "mainstream" users *inter sese*. See Calif. Op. Br. 228-31. We have also seen the impossible situation created by the application of such a dual system intrastate, as advocated by the United States (Calif. Ans. Br. 39-46).[1]

A further example is presented by the Master's conclusion that priorities must be observed intrastate, but not interstate except for "present perfected rights." The consequence of such blunted priority is strikingly illustrated by the plight of wildlife refuges. These refuges are astride the main stream of the Colorado River where it forms the Arizona-California boundary. They have a priority date, on both sides of the river, of 1941. See Decree art II(C)(2)(g) and (h), Rep. 352-53. On the Arizona side of the river, those refuges have an abundant water supply under almost any conceivable condition; the 1941 priority date is superior to the priorities of a number of existing projects in

---

[1]Suppose, under the Government's theory, a senior contract user in Arizona below Lake Mead sues a junior appropriator in Arizona above Lake Mead. Among the unresolved and unresolvable problems of the Arizona contractee are these: (a) In what court should he seek redress? (b) Is the United States an indispensable party? (c) If the United States is indispensable, has it waived its sovereign immunity? (d) How can the contractee, if otherwise successful, establish that the Secretary would release any water from Lake Mead for his use? (e) If the contractee prevails, how can he obtain more than 28/75 of whatever water he is held entitled to?

Arizona and to any future Central Arizona Project. In California, however, there is no reasonable expectancy of any water supply for those refuges; the 1941 priority date is junior to all rights in California. The Master's decision requires not only the states, but the ducks, to fix the boundary line with precision. Enforcement of the Master's decree requires an advance in technology which will enable those charged with its enforcement to dry up the California one half of a duck marsh.

G. The Relevant Interstate Priorities for Existing Main Stream Projects Can Readily Be Determined and Incorporated in Any Decree

The priorities for existing projects in Arizona, California, and Nevada diverting from the main Colorado River can be easily determined, without unduly delaying or complicating the resolution of this controversy. The Court, at this time, may decide only to establish that such rights (with California's priorities limited to 4.4 million acre-feet annually by the limitation) are senior to any rights for new projects.

There are fewer than 30 such existing projects using waters from the main river, in all states.[2] The priorities for eight of these, the federal reservations, are already adjudicated in the recommended decree (Decree art. II(C)(2), Rep. 350-53). The other existing projects are also identified by the Master. Rep. 50-71, 73-75; see also Calif. Op. Br. app., tables 1-3.

---

[2]Excluding miscellaneous small uses in Arizona and California outside organized districts or federal projects and reservations. See Tr. 11,977-12,002 (Rowe); Calif. Op. Br. app., tables 1, 2.

There are a number of alternative procedures available to the Court to make the requisite determinations of whatever interstate priorities are recognized by this Court:

(1) The Court may utilize the machinery proposed by the Special Master for determination of "present perfected rights," to determine the magnitude and priorities of rights of existing projects. See Decree arts. II(B)(5) and (6) (Rep. 348-49) and VI (Rep. 359).

(2) The Court may refer the matter to a Special Master to make those determinations from the record with authority to supplement the record as may be necessary or desirable and to report his findings of fact, conclusions of law, and recommendations to the Court.

(3) The Court may make those determinations from the record. See Calif. Op. Br. app., tables 1-3.

Finally, it should be noted that priority principles can readily be made a part of any "contractual allocation scheme," even if the Master's recommended decision were not reversed in any other respect. This is demonstrated by the Master's scheme itself in which "priority of 'present perfected rights' regardless of state lines" controls the allocation of water "in the extremely improbable event that releases [from Lake Mead] do not satisfy the rights perfected in any of the states [of Arizona, California, and Nevada] as of the effective date of the Act" (Rep. 312). We simply propose that a broader but no more difficult priority system be incorporated into any decree for the protection of projects existing at the date of the decision.

IV. IF THE CONCLUSIONS REACHED BY THE SPECIAL MASTER AND URGED BY THE OTHER PARTIES ARE CORRECT, THIS CONTROVERSY IS NOT JUSTICIABLE

Statement of the Issue

Arizona initiated this suit to quiet an alleged title to 3.8 million acre-feet per annum (subject to the rights of New Mexico and Utah) from the 8.5 million acre-feet available to the lower basin from the Colorado River system under the Colorado River Compact.[1] Arizona alleged that more than 1.7 million acre-feet of the claimed 3.8 million acre-feet from main stream and tributaries was unused by Arizona and required for the proposed Central Arizona Project and other proposed projects, unidentified.[2] Arizona alleged that California was using Arizona's water.[3]

---

[1]Arizona's first prayer was that "1. Its title to the annual beneficial consumptive use of 3,800,000 acre-feet of the water apportioned to the Lower Basin by the Colorado River Compact be forever confirmed and quieted, subject only to the rights of the States of Utah and New Mexico and to the availability of such water under the Colorado River Compact." Ariz. Bill of Complaint, p. 30, tendered August 13, 1952.

[2]"Arizona is not now presently using all of the aforesaid 3,800,000 acre-feet of water to which it is entitled annually. In excess of 1,700,000 acre-feet out of the said 3,800,000 acre-feet is not being presently used and consumed in Arizona, and is available for such use and consumption under the Arizona Projects hereinafter mentioned." *Id.* at 21.

[3]"Defendants and each of them have threatened for many years to use and consume, and are now actually using and consuming, quantities of Colorado River water in excess of 4,400,000 acre-feet annually. . . . Defendants have no firm right to divert and take annual quantities of Colorado River water in excess of 4,400,000 acre-feet, and their use of such quantities of

California welcomed the opportunity for a resolution by this Court of that controversy.[4]

The controversy which the parties thus brought before this Court in 1952 and 1953 did not involve a present shortage of water. It involved an acknowledged shortage of the dependable supply, permanently available to the lower basin states under the Colorado River Compact.[5]

The Master accurately describes the reasons why a resolution of the controversy is necessary. First, new projects cannot be built if their water supply is subject to major uncertainty (Rep. 130-32). Second, existing projects on which whole communities have come to depend cannot serve their functions if their future is uncertain (Rep. 133-35). The Master is demonstrably correct in the principles he thus states. He is demonstrably wrong in their application.

---

water in derogation of the rights of Arizona should be enjoined and forever restrained." *Id.* at 29.

Arizona's second prayer was that "The title of the State of California to the annual beneficial consumptive use of the waters of the Colorado River System apportioned to the Lower Basin by the Colorado River Compact be fixed at and forever limited to 4,400,000 acre-feet and be made subject to the availability of such water under the Colorado River Compact." *Id.* at 30.

[4]Return of Defendants to Rule To Show Cause and Brief in Support of Return, filed December 8, 1952.

[5]The Secretary of the Interior in 1948 reported to Congress with respect to the Central Arizona Project: "If the contentions of the State of Arizona are correct, there is an ample water supply for this project. If the contentions of California are correct, there will be no *dependable water supply* available from the Colorado River for this diversion. *While the necessary water supply is physically available at the present time in the Colorado River,* the importance of the questions raised by the divergent views and claims of the States is apparent. . . . It [the controversy] can be resolved only by agreement among the States, by court action, or by an agency having jurisdiction." (Emphasis added.) Ariz. Ex. 70 (Tr. 308), at 141 in Arizona's bound exhibits; quoted at Rep. 30-31.

A. The Proposed Decree Does Not Apply to a Proposed Central Arizona Project Diverting Above Lake Mead

There is only a contingent possibility that the decree would apply to the water which Arizona would divert for the Central Arizona Project—the water supply for which was the object of Arizona's lawsuit. Arizona's evidence and the record before four Congresses disclose that Arizona has never decided whether she wants a Central Arizona Project diverting from Marble Canyon, from Bridge Canyon, or from Parker Dam. See Calif. Op. Br. 7. The first two points named are on the main Colorado River above Lake Mead, to which the decree does not apply. The Thirteenth Annual Report of the Arizona Interstate Stream Commission to the Governor of Arizona (1960) discloses that circulation of the Special Master's draft report prompted cooperative surveys by the stream commission and the United States Geological Survey of the Marble Canyon diversion route. See Calif. Op. Br. 125.

If a Central Arizona Project is authorized diverting from the Colorado River above Lake Mead, the decree recommended by the Master, which allocates only "mainstream" water in Lake Mead and below, is worse than useless. The Master's Report clouds the problems which the decree fails to solve. The Report first asserts that if Congress authorizes a Central Arizona Project to divert above Lake Mead, "at that time Congress can determine whether or not Arizona's diversions above Lake Mead shall be chargeable to her under the present

contractual apportionment." Rep. 228. Obviously, this Court cannot base a decree upon a prediction of what, if anything, Congress will do in the future. Then, in a footnote to this quoted statement, the Report says that "the doctrine of equitable apportionment *may* affect diversions in this reach of the River [above Lake Mead]. See pages 316-318, *infra*." Rep. 228 n.86. (Emphasis added.) The reference *infra* is to the determination in the Report that "the conclusion is *inescapable* that principles of equitable apportionment still control rights of mainstream states [diverting from Lake Mead and below] in waters of the tributaries of the Colorado River in the Lower Basin [including the main stream above Lake Mead]." Rep. 317. (Emphasis added.) The Master adds, however, that "the mainstream rights to tributary inflow ought not now be adjudicated." Rep. 319.[6]

B. On the Master's Water Supply Premises, the Proposed Decree Resolves No Real Case or Controversy Even if a Proposed Project Diverts From the "Mainstream"—Lake Mead and Below

1. Physical availability: water supply

In the prior interstate water cases dependable water supply has been determined. Rep. 100. The necessity

---

[6]" 'Before this court can be moved to exercise its extraordinary power under the Constitution to control the conduct of one State at the suit of another, the threatened invasion of rights must be of serious magnitude and it must be established by clear and convincing evidence.' New York v. New Jersey, 256 U.S. 296, 309; North Dakota v. Minnesota, 263 U.S. 365, 374; Connecticut v. Massachusetts, 282 U.S. 660, 669; Missouri v. Illinois, 200 U.S. 496, 521." Washington v. Oregon, 297 U.S. 517, 522 (1936), quoted at Rep. 319-20.

for the Court to do so, despite greater difficulties than this case presents, has not been questioned. The determination is necessary in the first instance to determine the jurisdictional issue. The original jurisdiction is invoked only if it is shown that there is a basic necessity for a decision. That necessity does not exist unless the claims in fact exceed the supply.[7] Furthermore, as we shall see (*infra* pp. 105-27), that same water supply determination is necessary to test the effect of any proposed decree.

The Master says (Rep. 115): "Existing California uses[8] are in no danger of curtailment unless and until many vast new projects, some of which are not even contemplated at this time, are approved by Congress and constructed."[9] If this is so, the controversy with Arizona is illusory.

The necessity for a water supply determination is shown by the fact that the sharpest controversy is over

---

[7]Arizona challenges application of the "claims-exceed-the-supply" test of justiciability, asserting that this is a case in the nature of interpleader, over which the Court has exercised jurisdiction in the past. Arizona's citation of Texas v. Florida, 306 U.S. 398 (1939), Ariz. Ans. Br. 100, exposes the error in her argument. Original jurisdiction in that case rested on the fact that the death tax claims against a decedent's estate by the federal government and the states of Texas, Florida, New York, and Massachusetts totaled a sum greater than the net value of the estate. 306 U.S. at 405-12, especially 409 & n.2. The case illustrates the "claims-exceed-the-supply" test.

[8](Footnote ours.) We sought a decree which would allocate California 4.6 million acre-feet from the dependable supply, almost identical in quantity to our then existing uses. See Rep. 128 & n.73.

[9]Contrast: "But, despite a present unsatisfied demand for water in the Lower Basin, it is impossible to develop further uses of the water because of the cloud on its legal availability." Rep. 132-33.

what the effect of the decree is. The United States says: "So long as California gets its 4,400,000 acre-feet, plus one-half of the surplus over 7,500,000 acre-feet, it cannot complain that its rights are not being fully met." U.S. Ans. Br. 51. We complain because the decree permits us far less than 4.4 million acre-feet, and far less than enough to satisfy the known requirements of the California projects which Congress knew and intended were to be served. The fact, as between these contentions, is unascertainable without a water supply determination. Surely, no one can seriously contend that the determination is irrelevant.

2. *Legal availability: the Compact*

This case is not justiciable unless effect is given to the Colorado River Compact's restrictions on the quantity of water available from the main stream[10] (6.5 million acre-feet)[1] to satisfy the claims of Arizona, California, and Nevada. Justiciability of the controversy among Arizona, California, and Nevada depends upon a determination that their claims to the waters of the entire main stream exceed the supply which will be available to satisfy them. On the basis of historical main stream supply, this test has not been met. The total claims of all three states from the main stream do not exceed 9 million acre-feet of consumptive use for their

---

[10]We use the expression "main stream" to denote the Colorado River between Lee Ferry and the Mexican boundary, as distinguished from the Master's word of art, "mainstream," which he coins to describe Lake Mead and the main Colorado river below. The "mainstream" waters thus include the inflow from the Bill Williams River.

[1]See p. 11 *supra*.

existing and proposed projects.[2] The flow at Lee Ferry required to supply all these claims, in addition to supplying Mexico its guaranteed 1.5 million acre-feet and all losses between Lee Ferry and the boundary (these losses are about 1 million in excess of offsetting contributions of tributary inflow), is slightly less than 11.5 million acre-feet.[2a] The average annual historic flow at Lee

---

[2]"The contracts which the Secretary of the Interior entered into . . . provide for the delivery annually of 8,462,000 acre-feet of water stored at Hoover Dam." U.S. Petition of Intervention, par. XX, p. 18. This does not include any quantitative value for the one half of "excess or surplus" which the Master awards to Arizona from the "mainstream." In the United States view, the contract quantity is less than that stated, by the amount of lower basin depletions above Lake Mead. See U.S. Exception II.

[2a]The loss figures on which we rely are those supported by testimony of California witness Stetson and Arizona witness Erickson. See Calif. Op. Br. A45-A46, plates 7 and 8 and the table preceding plate 7 for comparison of comparable loss figures in other studies in evidence.

Arizona attempts to show that all figures relating to losses and gains should be ignored, by tabulating (1) "greatest loss" plus "least gain" compared to (2) "least loss" plus "greatest gain." Ariz. Ans. Br. 122. Arizona's tabulation is meaningless, but the water supply studies of which it is a hopeless mixture are not meaningless. The impression Arizona seeks to convey is that (1) the most pessimistic expert view results in a net loss (not including Mexican Treaty deliveries) of 1,325,000 acre-feet, while (2) the most optimistic expert view results in a gain of 165,000 acre-feet. Each view, pessimistic or optimistic, is a composite of figures from a number of studies in evidence, plus some figures that cannot be found in the record. These composite figures were not even suggested by any witness. Valid comparisons are found by examining the end results of comparable water supply studies, not in comparing a mixture of components of various water supply studies created by counsel. The Arizona techniques can be illustrated: Reservoir evaporation can be eliminated by the expedient of keeping reservoirs empty, but passing all water through the reservoir as spill under such operation naturally wastes all the water otherwise available for storage. Had there been one such operational study in evidence, Arizona would compound the following mixture: (1) Zero reservoir loss for the optimistic column of the tabulation; (2) astronomical spill for the pessimistic side. The only point proved: The isolated components of separate reservoir operation studies cannot be selected and combined in this way to prove anything at all.

Ferry for any of the 10-, 20-, or 30-year periods reported by the Master was not less than about 11.7 million acre-feet and for the last four decades the historical average has been about 12.7 million acre-feet.[3] Rep. 109.

The supply historically available has thus exceeded the aggregate of the claims for all future use tendered for adjudication here, and if the certainty of further depletion of this supply by expanding upper basin uses were not the unspoken premise of the Master's Report, this case would not be presently justiciable.

C. Tested by the Realities of Water Supply, the Proposed Decree Destroys California's Existing Projects

A water supply determination is necessary not only to establish the jurisdiction of this Court but also to test the effect of any proposed decree. That effect is now the focus of this controversy. We say that the proposed decree would be ruinous to California projects. These are its manifest results:

(1) With a full lower basin Compact supply—8.5 million acre-feet of consumptive use from the Colorado River *system*—the decree would limit California to about 3.8 million acre-feet of consumptive use within the

---

[3]Calif. Op. Br. 232 n.1. Records at Lee Ferry began just prior to the water year 1921-1922. Ariz. Ex. 98 (Tr. 363), at 520.

"Historic flow" is the actual flow, recorded or estimated, for any specified past period of time at a specific point on a river.

Compact "ceiling."[4] That 3.8 million acre-feet is not enough to satisfy the California rights which are prior to Metropolitan Water District. If a Central Arizona Project or other project is built to divert water from above Lake Mead, California's figure may be even smaller than 3.8 million acre-feet.

(2) With the 6 million acre-foot dependable supply from the main stream actually available for consumptive use in Arizona, California, and Nevada (requiring a flow of about 2.5 million acre-feet greater at Lee Ferry to supply Mexico and all losses),[4a] California would receive about 3.5 million acre-feet. Again, the 3.5 figure, based on the water supply evidence introduced before the Master's truncated "mainstream" beginning at Lake Mead had been invented, may be smaller if a major project is built to divert above Lake Mead.

Either result manifestly defeats the intent and purpose of Congress with respect to the specific projects whose requirements were known and intended to be satisfied under the Boulder Canyon Project Act. The result is demonstrably contrary to the purposes of every Secretary of the Interior who has administered the Project Act.

The focus of the controversy is not whether the result which we have described can be squared with the statute, as of course it cannot, but whether such a result will truly take place. The Master and our opponents deny

---

[4]44/75 of 6.5 million acre-feet, the quantity which may be appropriated from the main river under the 8.5 million acre-foot ceiling after accounting for 2 million acre-feet of uses on the tributaries under that ceiling. See p. 11 *supra*.

[4a]See p. 104 note 2a *supra*.

that it will for a variety of reasons which require brief but separate examination:

(1) The upper basin will not use all water apportioned to it under the Colorado River Compact, or anything approaching that quantity.

(2) An increase in upper basin use that would seriously impair the water supply for California's existing projects is so remote that the possibility now merits no serious consideration.

(3) It is possible that technology may solve all water problems of California before the decree restricts California uses.

(4) California is now wasting water, and hence her present uses are in excess of her legitimate requirements.

None can be sustained.

1. *The assertion that the upper basin will not use its apportionment*

The United States says (U.S. Ans. Br. 53):

> "The very foundation of California's argument is that the Upper Basin States will in the near future utilize the entire 7,500,000 acre-feet allotted to them by the Compact. . . . But even the California argument does not predict this result before 1990 (California Opening Br., p. 261) . . . ."

This is completely wrong. The "foundation of California's argument" is that the Compact ceiling on lower basin appropriations will be enforced in favor of expanding upper basin uses. It must be enforced if there is to be any substantial expansion above presently authorized

projects in the upper basin. If it is enforced, the lower basin's consumptive use *from the main stream* will be limited to 6.5 million acre-feet, long before upper basin uses are anywhere near 7.5 million. The Colorado River Storage Project Act of 1956 declares the purpose of Congress to make it possible for the upper basin states to utilize their full Compact apportionment. See Calif. Op. Br. 252-53.

California does not contend, has never contended, and is aware of no other party's contention that "the Upper Basin States will in the near future utilize the entire 7,500,000 acre-feet allotted to them by the Compact." Indeed, California's evidence leads to the conclusion that the upper basin may never physically be able to do so if it respects the upper division delivery obligation under III(d) of the Colorado River Compact.[5]

At page 261 of our opening brief, which the United States cites, we said, referring to our water supply motion:

"We offered to establish that the upper basin

---

[5]Upper basin annual depletion of 7.5 million acre-feet per annum at Lee Ferry requires 52 million acre-feet of effective storage in the upper basin (Calif. Exs. 2206, 2206A, Tr. 11,737) or about 75 million acre-feet of total storage capacity. Tr. 11,736 (Stetson). This is double the total presently existing and authorized upper basin reservoir capacity of 37.6 million acre-feet. Calif. Ex. 2203A (Tr. 11,720). It is doubtful that upper basin reservoir sites for 75 million acre-feet of storage can be found (Tr. 11,736 (Stetson)), and, if this storage were constructed, the added reservoir evaporation would offset the added conservation. Calif. Ex. 5610 (Tr. 22,469).

If reservoir losses are not a component of beneficial consumptive use, 7.5 million acre-feet of upper basin depletion at Lee Ferry is the equivalent of about 6 million acre-feet of beneficial consumptive use, contrasted with the 7.5 million acre-foot Article III(a) apportionment.

depletion would expand at such a rate that Metropolitan would lose its entire supply not later than 1990. The Master denies our motion for opportunity to do so (Rep. 112 n.41)."

We referred to permanent upper basin depletion at Lee Ferry of 6.19 million acre-feet per annum, which we believe is foreseeable by 1990 (Calif. Op. Br. A59). This, subtracted from the *maximum* undepleted or virgin flow average for any period ending with the present, would leave a residue at Lee Ferry too small to yield any water at all to Metropolitan under the Master's decree.[6]

2. *The assertion that upper basin use is remote*

As stated by the United States (U.S. Ans. Br. 53):

"The dangers depicted by California must be discounted on the basis of remoteness."

The United States seriously misunderstands our position. Our position is that rapidity of upper basin development was not put in issue by the pleadings, was not tried, and was not treated as relevant until oral argument on the Master's draft report. See Calif. Op. Br. A47-48, A55. If it is relevant, we are entitled to present evidence. We asked the Master for leave to do

---

[6]The maximum annual average virgin flow for any period ending with the latest year reported by the Master (Rep. 118) was 15.21 million acre-feet per year. Subtracting upper basin depletion of 6.19 million acre-feet would leave a flow of 9 million at Lee Ferry. Even if perfect regulation of this inflow is assumed, only 6.5 million would be available for beneficial consumptive use in the United States. See pp. 111-12 & note 2 *infra*.

so, and our motion was denied. We have renewed that motion to this Court.[7]

The Bureau of Reclamation's current plan for operation of upper and lower basin reservoirs contemplates firm annual releases of 9.8 million acre-feet from Lake Mead under 1975 conditions and 8.5 million acre-feet under year 2020 conditions of upper basin depletion (plus unusable spill in both instances).[8] After deduction of deliveries which must be made to Mexico and the losses below Hoover Dam, the Master's formula would permit California about 4.4 million acre-feet in 1975 and less than 3.7 million acre-feet 45 years later. (Calculations are in table 6 in the appendix of our opening brief.) We believe, and offered to prove, that the Bureau errs in predicting too slow an increase in use in the upper basin.

Arizona protests that the Bureau study is a power study, and therefore is not relevant to a determination of the water supply available for consumptive use (Ariz. Ans. Br. 130). Arizona overlooks that the objective of a power study is to determine the maximum quantity of water which can be made available in equal annual amounts. The objective and procedure of a study to determine the dependable annual supply available for consumptive use is identical.

---

[7]Calif. Op. Br. A39.

[8]U.S. Bureau of Reclamation, Regional Office, Region 4, Dep't of the Interior, Financial and Power Rate Analysis, Colorado River Storage Project and Participating Projects (September 1960). Copies have been made available to the Court, with our opening brief. Relevant portions of the data are tabulated in tables 4 and 5 in the appendix to California's opening brief.

Arizona also says that if water is required for consumptive use in the lower basin, the upper basin reservoirs will not be filled, and hence the water required for filling them will be available to the lower basin in addition to the releases that the Bureau plans.[1] We hope that Arizona's contention (in which the United States thus far has not joined) will prove to be true. However, any study of water supply available to the lower basin should be made on the assumption, until the contrary is established, that the Colorado River Storage Project reservoirs now under construction will be filled, and will serve the purpose which Congress intended for them in the 1956 Colorado River Storage Project Act.

The Bureau study rather conclusively establishes two things: (1) that water supply can and must be determined; (2) that there can be no reasonable contention that the destruction of California projects rendered inevitable by the decree is a distant possibility.

If there is to be even 7.5 million acre-feet of consumptive use available from the main stream in the lower basin (far less than the Master's comfortable prophecy, Rep. 115) there must be at least 10 million

---

[1]Ariz. Ans. Br. 131-32.
Compare Arizona's assumption that for a long period of time California may rely upon the use of large quantities of unused upper basin water (Ariz. Ans. Br. 125, 128-29) *with* Arizona's contention that California should not be permitted to consume unused Arizona water (apparently even though that water might otherwise waste into the Gulf of California) (Ariz. Op. Br. 106-08).

acre-feet of flow "let down" at Lee Ferry. That quantity is necessary to supply consumptive uses (7.5 million acre-feet), the Mexican Treaty obligation (1.5 million acre-feet), and to allow for the inevitable losses in excess of tributary inflow between Lee Ferry and the Mexican boundary (at least 1 million acre-feet).[2] A Lee Ferry flow of 10 million acre-feet annually is a full one third more than the average annual delivery guaranteed by the upper division to the lower division under the terms of Article III(d) of the Colorado River Compact. It is 1 million acre-feet in excess of the sum of the Article III(d) obligation and the entire Mexican burden imposed upon both basins.

There is not enough water in the river to sustain 10 million acre-feet of flow at Lee Ferry (thus 7.5 million acre-feet of consumptive use in the main stream below) unless (1) upper basin development is virtually halted (a prospect which Congress has unmistakably said shall not occur[3]), or (2) stream flow shall unaccountably increase far beyond the long-term average of any period ending with the present.

---

[2]Losses plus treaty deliveries to Mexico would be somewhat larger than 2.5 million acre-feet from a 10 million acre-foot flow at Lee Ferry. The Stetson and Erickson loss figures on which we rely to show that net losses plus Mexican deliveries are about 2.5 million acre-feet (Calif. Op. Br. app. A46) are associated with Lee Ferry flows smaller than 10 million acre-feet. Calif. Ex. 2216A (Tr. 11,825); Ariz. Ex. 366 (Tr. 18,097). See p. 104 note 2a *supra*.

[3]Colorado River Storage Project Act, 70 Stat. 105 (1956), 43 U.S.C. §§ 620-620*o* (1958).

The demonstration is simple. The average virgin (undepleted) flow at Lee Ferry for the 35-year period from 1922 through 1956 during which flow has actually been gaged[4] was 14 million acre-feet annually (Rep. 118).[5] If there is to be 10 million acre-feet of flow averaged annually, the depletions above Lee Ferry must not exceed 4 million acre-feet. *Present* depletions of the "virgin" flow above Lee Ferry are about 2.55 million acre-feet annually.[6] The upper basin can thus deplete no more than 1.45 million acre-feet in addition to existing depletions within that 4 million acre-foot margin.

Upper basin projects are now authorized by Congress which, when combined with existing uses, will deplete the flow at Lee Ferry by 3.9 million acre-feet.[7] This means that the upper basin has only 100,000 acre-feet to go in future authorizations before the 4 million acre-foot margin totally disappears. The Secretary of the Interior and congressional committees have reported favorably on new upper basin projects, nearly any one of

---

[4]Figures prior to 1922 are calculated from estimated historical flow.

[5]The period from water year 1922 to water year 1956 is the most reliable record available at Lee Ferry. See Tr. 11,820 (Stetson). These years also include the critical drouth period. Calif. Ex. 2202-A, (Tr. 11,713A), at 2. *Cf.* Rep. 109: "It might be that over a short period of less than ten years Hoover Dam could be operated flexibly enough to translate the total flow into an average yearly release. But it is most unlikely that this can be done over a longer period."

[6]See table, p. 115 & note 9 *infra*.

[7]See note 8 *infra*.

which, if authorized and constructed, would far exceed that 100,000 acre-foot margin.[8] The following tabula-

[8] *Hearings on H.R. 2206, H.R. 2207, H.R. 2208, and H.R. 2209 Before the Subcommittee on Irrigation and Reclamation of the House Committe on Interior and Insular Affairs,* 87th Cong., 1st Sess. 83(1961), in testimony of William I. Palmer, Asst. Commissioner of Reclamation:

Item	Average annual depletion at Lee Ferry in 1,000's of acre-feet
Existing and authorized prior to 1949:	2,550
Authorized by Public Law 485 [Colorado River Storage Project Act of April 11, 1956, 70 Stat. 105, 43 U.S.C. §§ 620-620*o* (1958)]:	
Evaporation by storage units	691
Participating projects	404
Section 11 (Blue River settlement)	190
Other authorizations:	
Collbran project, Colorado	7
Utah Construction Co., New Mexico	39
Private developments, Wyoming	17
Subtotal, existing and authorized	3,898
Proposed in S. 107:	
Navajo Indian irrigation	252
San Juan-Chama initial phase	110
Subtotal with S. 107	4,260
Animas-La Plata project	130
Subtotal	4.390
Other proposals before the Congress:	
Fryingpan-Arkansas project, Colorado	75
Savery-Pot Hook, Colorado-Wyoming	38
Subtotal, existing, authorized, and proposed	4,503
Mentioned in sec. 2, Public Law 485 [Colorado River Storage Project Act]:	
Preliminary data on 21 projects (excluding San Juan-Chama, Navajo, Animas-La Plata, and Savery-Pot Hook)	800
Total	5,303

tion demonstrates the calculation of the margin for future upper basin development:

DEPLETION AVAILABLE TO UPPER BASIN IF LOWER BASIN IS TO HAVE 7.5 MILLION ACRE-FEET OF CONSUMPTIVE USE FROM ENTIRE MAIN STREAM

	Millions of acre-feet
1. Average annual "virgin" flow at Lee Ferry, 1922-1956 (Rep. 118)	14.0
2. Required flow at Lee Ferry to satisfy lower basin consumptive use of 7.5 million acre-feet from main stream	10.0
3. Margin available for all upper basin depletions (1 minus 2)	4.0[9]
4. Depletions by all existing and authorized upper basin projects	3.9[10]
5. Margin remaining for future upper basin projects available without invading 7.5 million acre-feet of consumptive use from lower basin main stream (3 minus 4)	0.1

Moreover, the disappearance of that 100,000 acre-foot cushion will not await future authorizations for future upper basin projects. There is now 35 million acre-feet of new reservoir storage under construction in the upper basin.[11] Filling of these new reservoirs will begin with the closing of Glen Canyon Dam, scheduled

---

[9]Depletions by existing upper basin projects total 2.55 million acre-feet. Calif. Ex. 5536 for iden. (Tr. 21,354) (extract from a 1958 Bureau of Reclamation study of the Colorado River Storage Project, published as S. Doc. No. 101, 85th Cong., 2d Sess.) at 13.

This leaves a margin of only 1.45 million acre-feet (4.0 minus 2.55) for depletion by future upper basin projects, including about 1.35 million acre-feet which are now authorized (*supra* note 8).

The United States argues (U.S. Ans. Br. 53) that S. Doc. No. 101 forecasts the time at which the upper basin will use its *full* Compact apportionment. S. Doc. No. 101 does not do so.

[10]See *supra* note 8, subtotal, existing and authorized, 3,898,000 acre-feet per annum.

[11]See Calif. Ex. 2203A, Tr. 11,720.

for 1962.[1] Filling criteria have not yet been finally determined, but it is obvious that water to fill the new storage reservoirs will deplete the flow at Lee Ferry very substantially. For example, if reservoirs were filled at a regular annual rate over a period as long as 1962 to 1990, the average supply withheld from Lee Ferry would be 1.2 million acre-feet yearly.[2]

It is manifest that a reduction of California's supply under the recommended decree to 3.8 million acre-feet or less is neither remote nor avoidable unless the purposes of the Colorado River Compact, the congressional purpose of the Colorado River Storage Project Act of 1956, and the expectations of every upper basin state are frustrated.

The day the decree is entered, every state and every project in the lower basin will begin a study to determine the consequences of that decree.[2a] We again sug-

---

[1]Tr. 21,351-52 (Riter).

[2]If there is any doubt about this, evidence should be taken to establish the facts. See Calif. Op. Br. A39-A62.

[2a]Nevada does a complete about-face on the issue of water supply. She went to great lengths in her findings of fact and conclusions of law to show that water supply should be determined and that it should be based on the period 1930 through 1956. Nev. Findings XXVIII-XLVI and Conclusions 29, 30, pp. 63-75. Nevada asserted that "In determining the amount of water available for allocation among the Lower Basin States, the proper amount to be assumed as passing Lee Ferry is the minimum amount required to be permitted to pass that point by the States of the Upper Division, under Article III(d) of the Compact, namely, an average of 7,500,000 acre-feet." Nev. Finding XXX, p. 63.

In her answering brief before the Special Master (June 1, 1959), Nevada asserted: "If any concrete, definite, and worthwhile result is to be obtained from the vast expenditure of money and effort that has gone into this hearing, it would seem that there should be some determinations made with respect to the

gest that the consequences in terms of water supply should be known to the Court before the decree is entered.[8]

---

water supply upon which the Court is to act in its decree herein." Nev. Ans. Br. 70 (June 1, 1959).

Now just two years later in her answering brief of August 7, 1961, Nevada says that a finding as to the dependable water supply is not necessary and, in fact, cannot be made. Nev. Ans. Br. 47-48.

[3]Arizona's criticisms of our water supply studies (Ariz. Ans. Br. 112-27) are completely unfounded. They demonstrate a distortion, or lack of comprehension, of the water supply evidence.

Typical is Arizona's assertion that our water supply studies require "the *assumption* that suitable reservoir sites are available in the Upper Basin; that Congress will provide the effective storage capacity hypothesized by California's experts . . . ." Ariz. Ans. Br. 114. (Emphasis added.) See also *id.* at 119.

These are facts—not assumptions. Calif. Exs. 2203 and 2203A (Tr. 11,720) show and document that the Stetson water supply study is based upon presently existing or authorized reservoirs in the upper basin. Obviously those reservoirs are located at sites which are in use or have been fully investigated.

Three of the four major authorized upper basin reservoirs will soon begin filling, and the fourth will soon begin construction: Reservoir filling is planned to begin in Navajo Reservoir in the fall of this year, in Lake Powell (the reservoir behind Glen Canyon Dam) in the fall of 1962, and in Flaming Gorge Reservoir in the spring of 1963. On the Curecanti unit, highway relocation is now underway, and a prime construction contract will be awarded in early spring 1962. See Remarks of Frank M. Clinton, Regional Director, Region 4, Bureau of Reclamation, Before the Upper Colorado River Commission, on May 11, 1961, at Denver, Colorado, inserted in the appendix of the *Congressional Record,* June 14, 1961, as part of the extension of remarks of Hon. Wayne N. Aspinall, Colorado, pp. A4357-58. Lake Powell behind Glen Canyon Dam will provide about two thirds of the total existing and authorized upper basin storage. Calif. Ex. 2203A, *supra.*

Similarly, Arizona erroneously asserts that California water supply studies ignore "the fact that existing reservoir capacities will be reduced by future accumulations of silt." Ariz. Ans. Br. 118. In fact, California witness Stetson testified that silt accumulation was taken into account in the operational study of Lake Mead (Tr. 11,748) and is reflected in Calif. Ex. 2208A (Tr. 11,747). To the extent that "future accumulations of silt" decrease reservoir capacity, this decreases the safe annual yield which can be controlled by storage.

The recommended decree is an invitation to Congress to authorize simultaneous development in both the upper and lower basins upon the same small margin of unused water. The decree would set the basins on a collision course the outcome of which is disaster, not only to California, but to the entire Colorado River basin.

The interpretation of the "law of the river" may be sufficiently elastic, legally, to permit simultaneous development. The water supply is not. The assumption of the Master, endorsed by the United States,[4] Arizona, and Nevada, of abundant water to sustain all existing projects until "many vast new projects" are approved by Congress and constructed (Rep. 115) is demonstrably

---

[4]We find the United States argued position (U.S. Ans. Br. 19) impossible to reconcile with the position taken by the Department of the Interior and the Bureau of Reclamation in recent hearings on the Fryingpan-Arkansas Project. In May 1961, Assistant Commissioner of Reclamation William I. Palmer presented a Bureau study depicting conditions in the year 2020 in which the *total* annual scheduled releases from Lake Mead are 8.5 million acre-feet (plus unusable spills separated by long intervals of years). *Hearings on H.R. 2206, H.R. 2207, H.R. 2208, and H.R. 2209 Before the Subcommittee on Irrigation and Reclamation of the House Committee on Interior and Insular Affairs,* 87th Cong., 1st Sess., ser. 4, at 86-87, col. 18 (1961). Under such conditions, the total water available for consumptive use in California, Arizona, and Nevada would be 6.225 million acre-feet annually. See Calif. Op. Br. table 6.

Contrast the argument of the attorneys for the United States: "California's assertions that the decree will result in disaster for the Metropolitan Water District are based on the assumption that the Upper Basin States will utilize their entire allotment [7.5 million acre-feet?] in the near future. The right of the Upper Basin to all the water apportioned by the compact is not to be questioned but, as a practical matter, it is at best uncertain when Upper Basin developments will reach this point. It would be undesirable to abandon needed development in Arizona and Nevada in order to protect against possible future shortgages which by reason of scientific discoveries or other factors may never occur." U.S. Ans. Br. 19. (Bracketed material ours.)

wrong. The water supply of the Colorado River basin will permit some further development in each basin. It will not permit "vast new projects" in both.

3. *The assertion that technology will solve water problems*

We hope, of course, that the optimism asserted will be shown to be justified. No one in this case, however, has testified that there is any such prospect.[5] Overdevelopment predicated on the possibility of rescue by a technology not in being is a risk which we believe it would be irresponsible to undertake.[6] In any event, the risk should be assumed by those who find it attractive. Needless to say, the Project Act was not written on the theory that science would one day find a way to permit Californians to drink and irrigate with the waters of the ocean.

4. *The assertion that California is wasting water*

This has been thoroughly disproved in the evidence. It rests on the undisputed fact that large quantities of Colorado River water flow into the Salton Sea, a sea nearly as saline as the ocean. This discharge must carry out of the irrigated lands into Salton Sea at least as much salt as is deposited by irrigation or the lands will ultimately be rendered useless. The waters of the

---

[5]Nor has anyone suggested a way to salvage a half billion dollars of public investment by the people of California in the facilities which the decree will render useless. Calf. Op. Br. A27, A29, A33-34.

[6]The U.S. Geological Survey has estimated that about 40 million acre-feet of annual precipitation falls on the drainage basins of the Gila River and its tributaries, but only 3 million of this is recovered in runoff. Calif. Ex. 16 (Tr. 2718), at 24. The 37 million acre-feet of lost precipitation is likely to be available to Arizona as soon as the Pacific Ocean is available to California.

Colorado River at Imperial Dam contain materially over 1 ton of salt per acre-foot of water and salt content is increasing.[7] As more than 3.5 million acre-feet are diverted into the Imperial and Coachella valleys,[7a] nearly 4 million tons of salt enter and must be discharged from the irrigated area. This equivalent to 1000 trains of 80 carloads of 50 tons each is removed hydraulically instead of mechanically. If not so removed, this salt would render the soil useless.

Water discharged to maintain "salt balance" is not waste, in any pejorative sense, any more than sewage is waste. It is, indeed, agricultural sewage.

Arizona's answering brief speaks of California's "inefficient water uses and gross waste"—"a shameful waste of a precious commodity." Ariz. Ans. Br. 135. California's claim of 5.5 acre-feet per acre which must be diverted for the All-American Canal project "even after making use of reasonable conservation practices, is wholly unrealistic and grossly inflated." *Id.* at 133 n.185, 134. Eight numbered paragraphs in Arizona's footnote purport to provide specifics and documentation of this charge.

We shall not reply here in detail to these assertions: we have already done so. Arizona made the same assertions in her answering brief to the Special Master, and we replied in detail in appendix A to the Cali-

---

[7]Calif. Finding 4C:106(1) & n.5, at IV-21 through 22, citing testimony and exhibits in evidence by outstanding experts on the chemistry of soils and of irrigation water.

[7a]Calif. Finding 4C:105(2), at IV-20.

fornia Rebuttal Brief filed with him on June 30, 1959.[8]

However, we think that the following brief comments alone answer Arizona's contentions:

Arizona presented evidence relating to alleged waste of water by California projects in her initial case presented in 1956. Arizona presented more evidence on the same subject in rebuttal in 1958. Our evidence met both attacks fully.

The Master directed that the parties submit findings of fact and conclusions of law supporting not only their own cases (Arizona had made this a part of hers) but meeting those of her adversaries.[1] We responded to that direction. Arizona presented neither findings, conclusions, nor a brief which touched this subject. In her answering brief, Arizona made the assertions now made before the Court, based on evidence which had been fully refuted. Arizona objected to California's request for opportunity to file a rebuttal brief,[2] but the Master overruled the Arizona objection.

Our evidence with respect to Imperial Irrigation District established three things, none of which any Arizona evidence contradicted:

---

[8]These are the allegations specifically made in separately numbered paragraphs in Ariz. Ans. Br. 133 n.185:

1. Effective precipitation. Answered Calif. Rebuttal Brief submitted to the Master, June 30, 1959, p. A-13.
2. Salt content. Answered, *id.* at A-15.
3. Leaching requirement. Answered, *id.* at A-17.
4. Imperviousness of soil. Answered, *id.* at A-18.
5. Seepage losses. Answered, *id.* at A-21.
6. Pump recovery. Answered, *id.* at A-26.
7. Regulation loss. Answered, *id.* at A-28.
8. Domestic requirement. Answered, *id.* at A-30.

[1]Tr. 21,691.

[2]Letter of Arizona counsel of June 5, 1959. Nevada and New Mexico also sought leave to file rebuttal briefs.

(1) The irrigation efficiency of Imperial Irrigation District places Imperial toward the top of the list of Bureau of Reclamation Projects in the United States. This was the testimony of J. R. Riter, Chief Development Engineer of the Bureau of Reclamation. (Tr. 21,313.)

(2) The efficiency of Imperial is superior to that of the Arizona projects which divert at Imperial Dam on the Arizona side of the river.[3]

(3) The efficiency which Arizona would require of Imperial Irrigation District after elimination of "waste" is greater than that planned for the Central Arizona Project which Arizona sought to have Congress authorize.[4]

If the Court has any doubt on this score, we would suggest a decree which specifies minimum standards of efficiency applicable on both sides of the river. We are in favor of conservation. We will go as far as Arizona wishes in furthering conservation, so long as the standards are identical for similarly situated projects on both banks of the river.

D. In the Absence of Any Attempt To Determine the Consequences of the Decision Before It Is Made the Court Should Not Exercise Jurisdiction

The most fundamental difference which exists among the parties relates to the consequences of what the Master recommends the Court decide. We have iterated and reiterated that to California the consequences must

---

[3]Calif. Ex. 5106 (Tr. 20,768). This shows, for example, that Imperial diverts 7.11 acre-feet per acre per year. The Gila Project in Arizona diverts 10.32 acre-feet per acre per year.
[4]Calif. Ex. 3047 (Tr. 19,860).

be described by the word "disaster." Our adversaries insist we are wrong.

There can be no reasonable argument that to reduce California's rights to 3.5 million acre-feet (our expectancy on the basis of the water supply evidence) or 3.8 million acre-feet (our expectancy if there is a full Compact supply available to the lower basin) means disaster.[5] California was beneficially using about 4.6 million acre-feet of water at the close of the trial, and is beneficially using nearly 5 million acre-feet today.

Our adversaries answer arguments we have not made. The United States writes that "California would go too far in mortgaging the present to protect the remote future, perhaps because it is Arizona's present that will be sacrificed as security for California's future." U.S. Ans. Br. 54. Arizona charges us with including in our "existing needs" and "present requirements" water to irrigate 175,000 acres of new land never before irrigated. Ariz. Ans. Br. 133. Arizona says:

> "[T]he California protestation that unless she receives 5,378,000 acre-feet of Colorado River water each and every year she will be visited with disaster is without substance." Ariz. Ans. Br. 139.

Irrigation of 175,000 acres of new land in California is not in prospect. There is no issue in the case whose resolution would conceivably give California 5,378,000 acre-feet of water each and every year.

---

[5]California's 3.5 and 3.8 million acre-feet referred to in text may be further reduced if a Central Arizona Project or other project is built to divert water from the main stream above Lake Mead.

It is California's *present,* not California's future, which we defend. We defend it against projects for the future in the other states only because those future projects would be given, by the Master's decree, water rights which would impair our present projects.

The facts are tabulated on page 128 of the Master's Report where he lists present consumptive use by each California project. At the close of trial, California agricultural projects used 3.994 million acre-feet of water. Of that quantity, about 200,000 acre-feet was junior in right to (1) the Indian reservation rights in California which the decree would establish, and (2) Metropolitan's entire right of 1.212 million acre-feet. This 200,000 acre-feet now used will be unavailable to those agricultural projects on a permanent basis. There can be no question of expansion in California under anyone's view. The issue is, how much contraction?

The attack on Metropolitan Water District is equally unfounded. Arizona asserts that Metropolitan's entitlement, if confined to domestic use, is adequate to satisfy a population of the district expanded by 80 per cent (Ariz. Ans. Br. 133); that Metropolitan can look to alternate sources of water: the Feather River Project or the Pacific Ocean (*id.* at 137-39).

Neither assertion is justification for wiping out Metropolitan's entire supply. The unavoidable fact, as has been demonstrated, is that under the proposed decree there would be no water available for diversion from the Colorado by the great Colorado River Aqueduct.[6] No issue as to alternate sources of water for any California area was pleaded. Evidence with re-

[6]Calif. Op. Br. 266-67.

spect thereto was rejected as irrelevant.[7] If the issue were tried, the evidence would show that there is no plan in being or in prospect which could replace Metropolitan's Colorado River supply. The testimony shows without contradiction that the full quantity of contract water will be in use in the district by 1970.[8]

Neither Metropolitan's water nor that of any other project affected by the decree is limited to domestic use. Metropolitan's contract specifies "beneficial consumptive use" on the coastal plain of southern California.[9] Both irrigation and prevention of salt water intrusion which would otherwise destroy large ground water basins are beneficial uses. No one has thought that California water users are paying to pump Colorado River water over the mountains into southern California when it is not required.

The question before the Court is whether Metropolitan's contract for "permanent service" (subject, of course, to the vagaries of nature and the California Limitation Act) shall be respected, and not be subjected to destruction by projects not yet in existence.

Before or after a decree in this case is entered, its effect on present projects and the prospects of future projects must be appraised. We urge that this be done before, rather than afterward. The purpose is not to persuade the Court to rewrite the law of the river to avoid a harsh result, but to persuade the Court that the Master's proposed rewriting of that law frustrates its intent and purpose.

---

[7]Calif. Ans. Br. 140-42.
[8]Tr. 9829-31, 9834 (Morris).
[9]Ariz. Ex. 39, Tr. 252, art. 6.

These are the compelling facts:

(1) Every member of Congress recognized that the purpose and intent of the Project Act and all its associated documents was to serve California's three projects: Palo Verde, the All-American Canal, the Metropolitan Water District.[10]

The Committee reports on the Swing-Johnson (Project Act) bills contain explicit and detailed statements about the purpose of the Boulder Canyon Project to make possible a water supply for the growing population of the Metropolitan Water District's area.[11]

---

[10]Senator Hayden's declaration that the Project Act would provide for California 3.5 million acre-feet for the All-American Canal, .5 million acre-feet for Palo Verde and the Yuma Project, and 1 million acre-feet for the vicinity of Los Angeles out of a supply of 9.5 million acre-feet at the site of Hoover Dam (Calif. Op. Br. 236-37) was never contradicted. Senator Hayden left no doubt that he was against the act, but in 1930, during hearings on appropriations for Hoover Dam he reiterated the statement that the act, then passed, provided over one million acre-feet for the vicinity of Los Angeles. See pp. 74-77 *supra*.

[11]"The formation of a large public district, comprising the cities of Los Angeles, Pasadena, Glendale, Orange County cities, and such other cities as desire to join, is in process of formation for the purpose of building the necessary aqueduct from the river to the coast to supply these cities with domestic water. . . .

"The amount of water required by these cities is 1,500 second-feet [equivalent to about 1,100,000 acre-feet per annum]. This, of course, will not all be necessary at once, but as these cities are growing rapidly, they must look to the future and provide for their vital necessities.

". . . .

"Large storage at Boulder Canyon is ideally fitted to make it possible for these cities to procure a domestic water supply. . . ." H. REP. No. 918, 70th Cong., 1st Sess., to accompany H. R. 5773, pt. 1 (1928), Calif. Ex. No. 444 (Tr. 9,395).

See, to similar effect: S. REP. No. 654, 69th Cong., 1st Sess., to accompany S. 3331, pt. 1 (1926), Calif. Ex. 441 (Tr. 9395); H. REP. No. 1657, 69th Cong., 2d Sess., to accompany H. R. 9826, pt. 1 (1926), Calif. Ex. 442 (Tr. 9395); S. REP. No. 592, 70th Cong., 1st Sess., to accompany S. 728, pt. 1 (1928), Calif. Ex. 443 (Tr. 9395).

(2) The California Legislature, the Congress of the United States, every Secretary of the Interior, and the people of California who depend on these projects have acted on that hypothesis for more than three decades since the Project Act became law.

(3) One of California's three projects cannot survive under the decree recommended, even if new projects are not built to divert from the main stream above Lake Mead. This is not because of drouth, which everyone in California recognizes has diminished the supply. Disaster is in prospect because the Master proposes to write a decree which reverses both the clear language of the Project Act and the California Limitation Act, and an interpretation of those acts accepted and asserted by both Arizona and California in the decades since 1928, both in this Court and in every other forum: (1) the limitation on California incorporates the Colorado River Compact; (2) priority interstate characterizes water rights within the limitation.

Water rights are property rights, and these two positions, correct in the first instance, have become rules of property.[12]

---

[12]See Bristor v. Cheatham, 75 Ariz. 227, 231, 255 P.2d 173, 175 (1953):

> "It is generally so well known that we take judicial notice that, with faith in the foregoing declaration and assurance of this court [concerning the ground water law], many and large investments have been made in the development of ground waters. Under these circumstances the court's announcement of the rule becomes a rule of property, and rights acquired thereunder should not be disturbed 'unless the law is such as to leave the court no alternative' [citation]; and when a decision does become a rule of property, the rights acquired thereunder are entitled to protection under the law as declared. . . ."

Accord, City of San Diego v. Cuyamaca Water Co., 209 Cal. 105, 122, 287 Pac. 475, 483-84 (1930).

CONCLUSION

For these reasons the California defendants urge that (1) their exceptions which they have jointly made to the Report of the Special Master be sustained by this Court, and (2) the decree to be entered in this case be in conformity with those exceptions and the views presented in this brief and the California defendants' opening brief and answering brief.

TEXT OF STATUTES

1. Section 8 of the Reclamation Act of 1902, 32 Stat. 390, 43 U.S.C. §§ 372, 383 (1958):

> That nothing in this Act shall be construed as affecting or intended to affect or to in any way interfere with the laws of any State or Territory relating to the control, appropriation, use, or distribution of water used in irrigation, or any vested right acquired thereunder, and the Secretary of the Interior, in carrying out the provisions of this Act, shall proceed in conformity with such laws, and nothing herein shall in any way affect any right of any State or of the Federal Government or of any landowner, appropriator, or user of water in, to, or from any interstate stream or the waters thereof: *Provided,* That the right to the use of water acquired under the provisions of this Act shall be appurtenant to the land irrigated, and beneficial use shall be the basis, the measure, and the limit of the right.

2. Section 14 of the Boulder Canyon Project Adjustment Act, 54 Stat. 779 (1940), 43 U.S.C. § 618m (1958):

> Nothing herein shall be construed as interfering with such rights as the States now have either to the waters within their borders or to adopt such policies and enact such laws as they may deem necessary with respect to the appropriation, control, and use of waters within their borders, except as modified by the Colorado River compact or other interstate agreement. Neither the promulgation of charges, or the basis of charges,

nor anything contained in this Act, or done thereunder, shall in anywise affect, limit, or prejudice any right of any State in or to the waters of the Colorado River system under the Colorado River compact. Sections 13 (b), 13 (c), and 13 (d) of the Project Act and all other provisions of said Project Act not inconsistent with the terms of this Act shall remain in full force and effect.

3. Extracts from the Colorado River Storage Project Act, 70 Stat. 105 (1956), 43 U.S.C. §§ 620-620*o* (1958):

(a) Section 7, 70 Stat. 109, 43 U.S.C. § 620f:

The hydroelectric powerplants and transmission lines authorized by this Act to be constructed, operated, and maintained by the Secretary shall be operated in conjunction with other Federal powerplants, present and potential, so as to produce the greatest practicable amount of power and energy that can be sold at firm power and energy rates, but in the exercise of the authority hereby granted he shall not affect or interfere with the operation of the provisions of the Colorado River Compact, the Upper Colorado River Basin Compact, the Boulder Canyon Project Act, the Boulder Canyon Project Adjustment Act and any contract lawfully entered unto [*sic*] under said Compacts and Acts. Subject to the provisions of the Colorado River Compact, neither the impounding nor the use of water for the generation of power and energy at the plants of the Colorado River storage project shall preclude or impair the appropriation of water for domestic or agricultural purposes pursuant to applicable State law.

(b) Section 14, 70 Stat. 110, 43 U.S.C. § 620m:

In the operation and maintenance of all facilities, authorized by Federal law and under the jurisdiction and supervision of the Secretary of the Interior, in the basin of the Colorado River, the Secretary of the Interior is directed to comply with the applicable provisions of the Colorado River Compact, the Upper Colorado River Basin Compact, the Boulder Canyon Project Act, the Boulder Canyon Project Adjustment Act, and the Treaty with the United Mexican States, in the storage and release of water from reservoirs in the Colorado River Basin. In the event of the failure of the Secretary of the Interior to so comply, any State of the Colorado River Basin may maintain an action in the Supreme Court of the United States to enforce the provisions of this section, and consent is given to the joinder of the United States as a party in such suit or suits, as a defendant or otherwise.

4. ARIZ. LAWS 1961, Act of March 17, 1961, ch. 39, p. 107:

CHAPTER 39

Senate Bill No. 189

AN ACT

Making Appropriations to Arizona Interstate Stream Commission; Providing for Contract With Reclamation Bureau to Make Investigations and Studies of Bridge Canyon Dam and Works for Diversion and Transportation of Water to Central Arizona Project and Other Areas; Limita-

tion of Such Expenditures; Restrictions; Preventing Impairment of Existing Arizona Colorado River Rights; Providing for Annual Report Disclosing Amounts Expended and Results of Investigations.

Be it enacted by the Legislature of the State of Arizona:

Section 1. APPROPRIATION

The sum of one hundred fifty thousand dollars is appropriated to the Arizona interstate stream commission.

Sec. 2. PURPOSE

The sum appropriated under the provisions of section 1 shall be used under contract with the bureau of reclamation for the purpose of making investigations and studies of a dam at the Bridge Canyon site on the Colorado River and of works necessary for the diversion and transportation of water from the Colorado river to areas in Arizona; provided that not to exceed the sum of one hundred thousand dollars shall be used [108] for the investigation of Bridge Canyon Dam and of works necessary for the diversion of Colorado river water to the Central Arizona Project area; and provided further that the contract with the bureau of reclamation shall provide that the investigations and studies shall be restricted to only that quantity of water which may be available for use in Arizona, after the satisfaction of all existing water delivery contracts between the secretary of interior and users in Arizona for the delivery of main stream water, and that nothing shall be done thereunder which

will impair existing rights in Arizona for the diversion and use of Colorado river water. The commission shall make an annual report to the legislature and the governor on the 15th of January of each year, showing the amounts expended, and the results of their investigations and studies in all categories, coming under the provisions of this act.

Sec. 3. EXEMPTION

The appropriation made by this act is exempt from the provisions of sections 35-173 and 35-190, Arizona Revised Statutes, relating to quarterly allotments and lapsing appropriations.

Sec. 4. EMERGENCY

To preserve the public peace, health and safety, it is necessary that this act become immediately operative. It is therefore declared to be an emergency measure to take effect as provided by law.

Approved by the Governor—March 17, 1961.

Filed in the Office of the Secretary of State—March 17, 1961.

LEGISLATIVE HISTORY APPENDIXES ACCOMPANYING CALIFORNIA REPLY BRIEF

Introduction

Arizona's answering brief disputes the following two California contentions:

(1) "[O]ne of the major areas of legislative agreement expressed throughout the legislative history of the four Swing-Johnson bills (the last of which culminated in the Project Act) by proponents and opponents of the measure alike" was that "Congress could not make an interstate allocation of the waters of the Colorado River system, because interstate compact or litigation in this Court were the only two ways in which an interstate allocation could be accomplished." Calif. Op. Br. 181.

(2) "The Project Act preserved priority of appropriation and equitable apportionment in the 'mainstream' and in every other part of the Colorado River system in the lower basin." *Id.* at 159.

Arizona asserts that the legislative history does not support either contention:

> (1) "The legislative history is directly to the contrary. It unequivocally discloses that one of the major areas of *disagreement* between proponents and opponents of the bills was whether Congress had the constitutional authority to make such an interstate allocation of water. We repeat, no one denied that the various Swing-Johnson bills

provided for a federal allocation of water among the states. The bitter cry of the opposition was that, because of this federal allocation, the bills constituted an unconstitutional invasion by Congress of the rights of the states. On the other hand, the defenders of the bills argued vigorously for their constitutionality." Ariz. Ans. Br. 35.

(2) "[T]he true legislative history shows overwhelmingly the full realization by both friend and foe of the Swing-Johnson bills that they would inevitably supersede the interstate operation in the Lower Basin of the doctrines of prior appropriation and equitable apportionment." *Id.* at 17-18.

In these appendixes we demonstrate that Arizona's interpretation of the legislative history is wholly erroneous or misleading in five important respects.[1]

Appendix A

There was no disagreement between proponents and opponents of the Swing-Johnson bills that Congress did not possess the power to make an interstate allocation of water.[2] The Senators and Representatives who played key roles either in support of or in opposition to the Swing-Johnson bills were in agreement that an inter-

[1]To some extent, we repeat the legislative history presented in our opening and answering briefs in order that all legislative history on this issue may be gathered in one place for convenient reference.

[2]Arizona does not accurately identify the major area of disagreement. The issue was not whether Congress possessed the power to make an allocation of the waters of the Colorado River system; it was whether the Swing-Johnson bills purported to make any such allocation. We treat that issue in appendix B.

state division of water could be accomplished only by allocation by an interstate compact or litigation in this Court.

We here use the word "allocation" to describe the creation of any interstate right (whether characterized by parity or priority) like that created by an interstate compact. Article III(a) of the Colorado River Compact is an "allocation" in this sense. In a different sense, an appropriation made under state law and given recognition across state lines by the doctrine of *Wyoming v. Colorado,* 259 U.S. 419 (1922), may be an "allocation" both to the appropriator and to the state whose rights are recognized in the original jurisdiction. Likewise a contract with a water user who thereby acquires a right to water stored in Lake Mead may be called an "allocation." However, it is only the assertion that the Secretary made compact-like "allocations" to states which creates any issue in this case.

In appendix A, we present representative statements which demonstrate Congress' view that it could neither make nor authorize the Secretary to make any compact-like allocation.

Appendix B

Arizona's assertion that "no one denied that the various Swing-Johnson bills provided for a federal allocation of water among the states" (Ariz. Ans. Br. 35) is demonstrably wrong. The authors and proponents of the Swing-Johnson bills consistently pointed out that the bills did not purport to make or authorize a federal

allocation of any kind.[3] The charge by the Arizona and Utah opponents that approval of the Colorado River Compact without ratification by all seven basin states would constitute a "federal allocation" was repeatedly denied.[4] In appendix B, we detail the refutations of the arguments of the Utah and Arizona opponents that the bills purported to effect a kind of compact-like "federal allocation."[5]

Appendix C

The "bitter cry of the opposition" to which Arizona refers[5a] was not directed to any purported *intra*-lower basin allocation which Arizona argues Congress authorized in sections 5 and 4(a) of the Project Act. Rather, numerous statements Arizona quotes and cites in support of her argument relate primarily to the "federal allocation" which Arizona and Utah opponents of the bills argued Congress was attempting by approval of the Colorado River Compact with less than seven-state ratification.[6] The remainder of the citations provided by Arizona relate to two issues: (1) whether the alleged

---

[3]It was pointed out by the bill's proponents that no state could be bound by the Compact without its consent, a truism subsequently acknowledged by Mr. Justice Brandeis in Arizona v. California, 283 U.S. 423, 462 (1931).

[4]We have pointed out in our answering brief (Calif. Ans. Br. 50-56) that the arguments of the Arizona and Utah opponents of the bills with respect to § 5 (see Ariz. Ans. Br. 33-34) were thoroughly and repeatedly refuted by the authors and other proponents of the measure.

[5]Views expressed by opponents of an act are not persuasive legislative history. See Schwegmann Bros. v. Calvert Distillers Corp., 341 U.S. 384, 394-95 (1951); Mastro Plastics Corp. v. NLRB, 350 U.S. 270, 288 & n.22 (1956).

[5a]Ariz. Ans. Br. 35, quoted *supra* p. 2.

[6]Arizona had not ratified the Compact; in 1927 Utah had withdrawn her earlier six-state ratification. See Rep. 24-25.

federal ownership of the unappropriated, nonnavigable waters of the western states obviated the necessity for a compact among the seven states (an assertion which Congress rejected); and (2) whether Congress should use its power to condition the use of federal facilities and public lands to substantially effectuate the *inter*basin allocations of the Colorado River Compact. In appendix C, we provide this context for Arizona's extracts from the legislative history.

Appendix D

Whatever any member of Congress may have thought about the function of the contracts authorized by section 5 of the Swing-Johnson bills, both "friend and foe" assumed that the Project Act would not supersede the doctrine of priority of appropriation among the states of the lower basin as Arizona argues. All but one of the statements of the authors of the bill quoted by Arizona in support of her argument related solely to *inter*basin, not *intra*basin, matters. The context of the other statement quoted by Arizona (Senator Johnson in debate with Senator Walsh) demonstrates that Senator Johnson intended that priority principles would guide the Secretary of the Interior in executing contracts under the act. The views of the "foes" of the Swing-Johnson proposals, which Arizona does not cite, show that Arizona refused to ratify the Colorado River Compact and opposed all four Swing-Johnson bills because she feared that California appropriations would preempt most of the lower basin Compact allocation in the absence of an interstate agreement in the lower basin expressly limiting those priorities. In appendix D, we

present this view that priority principles were unimpaired by the Project Act.

Appendix E

In her answering brief (pp. 12-13, 31 n.35, 34 n.41) Arizona reiterates a basic argument presented in her opening brief (pp. 84-99): The requirement of section 5 of the Project Act that contracts shall "conform to" section 4(a) manifests a congressional intention to impose a federal allocation upon "mainstream" waters. The Master has rejected Arizona's argument that by the "conform to" language Congress required that the Secretary's contracts allocate "mainstream" waters to Arizona and Nevada precisely as specified in the unratified and inoperative tri-state compact specified in the second paragraph of section 4(a). See Rep. 162-63, 202. The legislative history of the "conform to" language demonstrates that Congress did not intend thereby to authorize or make any federal allocation; Congress intended to require the Secretary's contracts to conform to any interstate agreement specified in section 4(a) if it were ratified and thus became operative. In appendix E, we present the legislative history of the "conform to" language.

APPENDIX A

STATEMENTS BY PROPONENTS AND OPPONENTS OF THE SWING-JOHNSON BILLS EVIDENCE CONGRESS' VIEW THAT CONGRESS HAD NO POWER TO ALLOCATE THE WATERS OF THE COLORADO RIVER SYSTEM

Proponents*

Senator Bratton of New Mexico

Senator (and later Judge) Bratton was "one of the principal architects of Section 4(a)." Rep. 175 & n.34.

Speaking on the necessity of ratification of the Colorado River Compact, Senator Bratton made this assertion during debates on the fourth Swing-Johnson bill on December 10, 1928 (70 CONG. REC. 330-31):

> "There are only two ways known to me through which title to water of an interstate stream, either for purposes of irrigation or development of power, may be adjudicated. One is by a compact or agreement—the method sought to be followed in this case—and the other is by a [331] decree rendered in a suit instituted originally in the Supreme Court of the United States."

As Arizona recognizes (Ariz. Ans. Br. 46-47), Senator Bratton objected to imposing a tri-state compact on the states. There can be no dispute on this, as the following exchange between Senators Pittman and

---

*We categorize as proponents of the Swing-Johnson bills those Senators and Representatives who favored passage of the bill as evidenced by their recorded votes. See 69 CONG. REC. 9989 (1928) (House of Representatives vote on motion to recommit H.R. 5773, which would, in effect, have defeated the bill); 70 CONG. REC. 603 (1928) (Senate vote on H.R. 5773); *id.* at 837 (House vote on H.R. 5773 as amended by the Senate).

Bratton on this point during debates two days later on the proposed tri-state compact authorization clearly reveals. Senator Pittman, referring to the amendment, had just explained the situation as follows (70 CONG. REC. 470):

> "The amendment is in its present form because it has been modified by the Senator from Arizona. I can not see why any one of the three lower States should object to such an amendment. *It is not imposed as a condition of ratification. It is purely optional with them whether they want to agree to it or not.*" (Emphasis added.)

Senator Bratton then explained that he was opposed to the Pittman-Hayden tri-state compact amendment, even though permissive, because it might hamper and restrict state sovereignty (70 CONG. REC. 470-71):

> "Mr. President, I want to ask the Senator from Nevada whether, in his opinion, it is good policy, assuming that we have the power so to do, to provide in advance what shall be embodied in an interstate or tri-State agreement? In other words, the Federal Government is a sovereign government. Each State is a sovereign State. I seriously doubt the wisdom of the Congress embarking upon the policy of consenting in advance to the execution of an agreement or compact between States with such conditions, provisions, or limitations implied. In other words, I think what the Constitution contemplates is that when States desire to negotiate and agree among themselves, the Congress shall give its consent in advance that they may do so, and when they have done so and

submit the agreement here, the Congress shall either approve or disapprove what the States have done.

"But I seriously question the wisdom of the policy. No one in this body is more anxious than I am to see the three States in the lower basin agree mutually among themselves, but I doubt whether we can afford to embark upon such a policy in order to secure that result and that outcome. Unless the suggestion is mutually satisfactory to the three States I doubt very much the wisdom of our doing such a thing.

"I simply suggest that. I do not want to delay action on the bill. I want to expedite it in every way. But I am unwilling to have us take the step without pointing out the inherent danger that I believe I see in the establishment of such a precedent. *We ought to consent that the three States treat among themselves, unhampered and unrestricted by the Federal Government.* Then when they have reached an agreement let them submit it here for the consent of the Federal Government. *It partakes too much of hampering the States in the exercise of sovereignty. That alone would cause me to vote against the amendment, because I shall never give my consent to the Federal Government undertaking to control the States in negotiating with each other by saying, 'We point out in advance what you must do; you must put this and that in your agreement; you must embody this and that in your agreement.'*

"When we are dealing with sovereignties we should be exceedingly careful to keep within the

scope of our authority. So far as I know, the Federal Government has never done such a thing. I may be in error about it, but I think the usual course is to [471] consent that the States may enter into a compact without even indicating what shall be contained in the agreement, and then when it has been executed and reflects the combined agreement of the parties thereto and is submitted to Congress, we either approve or disapprove it. *To say that they may negotiate and agree under limitations of this kind, in my judgment, transcends the proper functions of the Federal Government.* This alone would control my vote upon the amendment if all other considerations were waved aside. I do not believe we can afford to pay this price in order to bring the three States into agreement." (Emphasis added.)

Senator King of Utah

Senator King, author of section 18 of the Project Act, opposed the Swing-Johnson proposals until the final debates on the fourth and final bill. After the adoption of his amendment which became section 18 of the act, he voted for the bill. See 70 CONG. REC. 593, 603.

On April 18, 1927, Senator King wrote Hon. Hubert Work, Secretary of the Interior, in connection with the Secretary's appointment of special advisors to report to him on various matters relating to the proposed development of the Colorado River. One of the principal objections raised by Senator King concerned what he believed was an implied assertion of federal ownership or control of all unappropriated waters in the

Colorado River basin. He forcefully asserted his opposition to this view as follows:[1]

> "I respectfully submit that no course should be taken by the Interior Department that would tend to prevent the six States from reaching an amicable and satisfactory agreement among themselves with respect to the development of the Colorado River and the utilization of the waters thereof. These States and their inhabitants are the ones who are principally concerned in the development of the Colorado River. They own the bed and banks of the stream; and the States referred to, not the Federal Government, control the waters of the Colorado River and its tributaries. The laws of these States determine how appropriations of water shall be made; and the control of the waters of the river, including its tributaries, is exclusively within the States through which the river and its tributaries flow. The Federal Government, as I shall show, has no control over these waters, except if the Colorado River is navigable, to prevent interference with navigation.
>
> "I respectfully submit that the instructions given to the advisers will be calculated to prevent the ratification of the compact by all the States. They will be regarded as an expression of the purpose of the Interior Department to take control of the waters of the river, regardless of the rights of the States, and to allocate them to the States without reference to the compact, and to construct

---

[1] *Hearings on S. 728 and S. 1274 Before the Senate Committee on Irrigation and Reclamation,* 70th Cong., 1st Sess. 441, 443-44 (1928).

a dam at Boulder Canyon and carry out the essential provisions of the so-called Swing-Johnson bill. Certainly these instructions will be regarded as an expression of a desire on the part of the Interior Department that advice shall be given that will tend to relegate the States to a subordinate position and assign to the National Government the undisputed control and ownership of all unappropriated waters of the Colorado River." (P. 441.)

"The most serious and important provision in the [Secretary of the Interior's] letters of instructions given to the advisors is found in the provision which, in effect, assumes that the Federal Government controls the waters of the Colorado River, or the water rights in the Colorado River. The language employed is as follows:

> Some of the major questions to be determined include the following: "Whether the Federal Government, by control of water rights, has power to allocate the unappropriated waters of the Colorado River to the basin States and make unnecessary a compact between the States."

"If it had not been for this instruction I would not have troubled you with this communication, but my interpretation of these words has constrained me to submit this letter. As I interpret these words, it seems that you take the position that the Federal Government 'controls the water rights' of the Colorado River. Obviously the waters of the Colorado River are referred to, and, of course, if the Federal Government has control of the waters of this river, or the 'water rights' therein, it possesses the same authority over the

waters of all other streams, navigable and unnavigable, in the United States. It seems to me that the position taken in these instructions is a challenge to a doctrine and policy which has prevailed in the United States from the beginning of the Republic. The meaning of these words can not be mistaken. The words assume that the Federal Government 'controls the water rights' of the Colorado River. The words 'water rights' undoubtedly mean the waters, certainly the unappropriated waters, of the river. That this is the interpretation intended to be placed upon these words is clear when the concluding words of the sentence are examined.

"The position boldly stated in this sentence is this:

> The Federal Government controls the waters of the Colorado River, and that being true, it has the power to allocate unappropriated waters to the States interested therein and therefore no compact among them is necessary.

"The premise of the sentence is that the Federal Government 'controls the water rights' of the river. So controlling them, the Interior Department is willing to have the opinion of the persons named upon the question of the power of the Government to allocate the unappropriated waters among the States of Utah, Nevada, Colorado, Wyoming, Arizona, and California, thus making unnecessary any compact. Of course, if the Government owns and controls the unappropriated waters of the river, it would seem that it would have the right to make disposition of the same and the States would have no voice in their allocation.

"I can place no other interpretation upon these words than an intent upon the part of the Interior Department to deny to the States the right to enter into an agreement among themselves with respect to the waters of the Colorado River and the tributaries thereof. If not, why are the advisers not permitted to investigate and pass upon the question as to the rights of the States in and to the waters of the Colorado River and the tributaries thereof? Why assume that they have no control over or rights in these waters, and that the Federal Government alone has the authority to control them? It would seem as though the Interior Department was making it impossible to obtain any other opinion from the advisers than that which is apparently desired; namely, [444] that the Federal Government can allocate all unappropriated waters of the river as it pleases, to individuals or to States, and that the latter have no voice in the matter.[2]

---

[2](Footnote ours.) Senator King's fears were not realized. Only two of the advisers appointed by the Secretary (Calif. Op. Br. 181 n.3) directly responded to the question, and their answers were in the negative. The answer submitted in the report of Hon. Frank C. Emerson, Governor of Wyoming (and Wyoming's Compact Commissioner), is set out in our opening brief. *Ibid.* Hon. James G. Scrugham, former Governor of Nevada (and Nevada's Compact Commissioner), replied to the Secretary as follows:

"(*c*) It is the opinion of eminent constitutional authorities that the Congress of the United States, through its constitutional prerogative of regulating commerce among the several States, has full authority to construct such works of river control without further permission from the interested States. The Supreme Court of the United States has held that such constitutional authority carries with it the power to control and equate the flow of navigable streams such as the lower Colorado River. While the beds and banks of a navigable stream are owned by the State through which the stream flows, or by the States abutting upon such streams, and while the States have sovereignty over

"I respectfully protest against this position of the Interior Department and its officials. I protest against the proposition that the Federal Government controls the unappropriated waters, or any of the waters or water rights of the Colorado River." (Pp. 443-44.)

Subsequently, in debates upon the fourth Swing-Johnson bill on May 28, 1928, Senator King explained to the Senate the position he had taken in his letter to the Secretary (69 CONG. REC. 10262):

"In my letter I contested the position of the Secretary of the Interior which in effect was that the Federal Government has the authority to control the waters of the Colorado River and the right to 'allocate the unappropriated waters of the basin States so as to make unnecessary any compact between them.' This position is taken by some of the officials of the Interior Department. They contend that the States have no authority over the streams, whether navigable or nonnavigable, or the waters thereof, found within their borders. This position indicates the progress being made by bureaucracy in the United States. It seeks to superimpose the Federal Government upon the States and to concentrate not only all political

---

the waters within and upon their borders, they can not use such title and sovereignty to prevent the Congress of the United States from exercising a constitutional authority that has been specifically delegated to it by the States. *The right of the United States Government to construct works of control does not appear to carry with it the right to allocate the unappropriated waters of the Colorado River to the interested basin States. Such allocations should properly be made through compacts between the interested States, approved by Congress.*" (Emphasis added.)

Hearings on H.R. 5773 Before the House Committee on Irrigation and Reclamation, 70th Cong., 1st Sess. 515 (1928).

power but economic power in the National Government."

Again, on December 6, 1928, Senator King made his position abundantly clear in an exchange with Senator Hayden during discussion of Senator Hayden's proposed amendment to the fourth Swing-Johnson bill specifying the terms of a tri-state compact among Arizona, California, and Nevada which California would have been required to ratify as a condition precedent to the effectiveness of the Project Act (70 CONG. REC. 169):

> "Mr. HAYDEN. . . . The only thing required in this bill is contained in the amendment that I have offered, that there shall be apportioned to each State its share of the water. Then, who shall obtain that water in relative order of priority may be determined by the State courts.
>
> "Mr. KING. If the Senator means by his statement that the Federal Government may go into a stream, whether it be the Colorado River, the Sacramento River, or a river in the State of Montana, and put its powerful hands down upon the stream and say, 'This is mine; I can build a dam there and allocate water to whom I please, regardless of other rights, either suspended, inchoate, or perfected,' I deny the position which the Senator takes.
>
> "Mr. HAYDEN. The amendment that I have offered contemplates no such possibility."

And, finally, it is clear that Senator King did not consider that section 5, taken in conjunction with section 4(a), authorized the Secretary of the Interior to

make a contractual allocation among Arizona, California, and Nevada. On December 14, 1928, shortly before he offered the amendment which became section 18 of the Project Act, Senator King engaged in an exchange with Senator Pittman over the significance of the limitation on California and the tri-state compact authorization previously added to section 4(a) which makes clear that both Senators were fully aware of the permissive nature of the tri-state compact authorization (70 CONG. REC. 576):

"Mr. KING. But, as I understand, that limitation of 4,400,000 acre-feet exists only in the event of a 6-State compact, not a 7-State compact. We hope, of course, that there will be a 7-State compact, because, if not, the upper States will not be fully protected.

"Mr. PITTMAN. But now, under the so-called Hayden amendment, there is exactly the same apportionment of the water.

"Mr. KING. Assuming that that shall be accepted by California and Arizona?

"Mr. PITTMAN. Exactly.

"Mr. KING. But, of course, we may not coerce either of those States into an acceptance of the so-called Hayden-Pittman amendment.

"Mr. PITTMAN. If there is a 7-State compact, it will be in accordance with the treaty which the Senate consented to, which gives the same amount of water to California that she would get under a 6-State compact, and it provides also that the 6-State compact ratification holds, unless all three of those States do ratify."

Senator Phipps of Colorado

Senator Phipps was chairman of the committee which held hearings on and favorably reported the fourth Swing-Johnson bill. See Calif. Op. Br. 119-20 & n.7.

On February 23, 1927, during debate on the third Swing-Johnson bill, Senator Phipps asserted that interstate agreement or litigation were the only alternatives available to settle the interstate controversy between the upper and lower basins (68 CONG. REC. 4515):

> "As I said in a statement recently made in Denver, Colorado, regarding this interstate agreement, I am firmly convinced that there must be voluntary ratification on the part of each interested State in order to make the compact effective. This is the only method of settling possible controversies permanently and of putting the water of the stream to its highest beneficial use. It is the only satisfactory method; it is the only legal method to avoid proceedings in the courts which would prove costly and almost interminable."

On December 7, 1928, speaking on the fourth Swing-Johnson bill, Senator Phipps discussed the stalemate between Arizona and California over a tri-state compact as it related to the larger problem of seven-state ratification of the Colorado River Compact. His discussion of the possible resolution of these problems mentions only interstate agreement or litigation, and does not suggest that Congress could resolve the problem by making a compact-like allocation (70 CONG. REC. 244, 245):

> "Mr. President, there seems to be an unfortu-

nate difference of opinion between two of the States, the two that are chiefly interested in this enterprise; the two to which it is most important, much more important than it is to the other five States of the basin. California and Arizona are not very far apart in the matter of water allocation. That difference should be composed.

". . . .

"The upper basin States—perhaps I might more properly speak for Colorado alone—have only this selfish interest in the Boulder Dam proposal, other than a naturally friendly one. Their selfish interest is that, coincident with the authorization of the dam, must be an agreement under the compact of the seven States for division of the water of the Colorado River, which will prevent, for all time, discussions, disputes, and lawsuits which would go to every court up to the Supreme Court of the United States before they were determined. There are so many points which come in that even one lawsuit as between Colorado and Kansas does not decide all of the points involved, and, as the Senator from Kansas who sits before me [Mr. CURTIS] knows, our two States are to-day in the Supreme Court of the United States, and have just argued another case involving a water dispute.

"We have had our differences with Wyoming, unfortunately, and while we have come into compact for division of the water of one of the streams that is interstate, and are endeavoring to cover the waters of another stream that flows through Colorado, through Wyoming, and into Nebraska, we have not yet been able to get to-

gether in an amicable settlement as to that river.

"We are also endeavoring to arrange and have progressed in arranging for agreed divisions of water of the interstate streams flowing between Colorado and New Mexico. On one stream we have already agreed. As to others we are in negotiation.

"It does seem reasonable, fair, and proper that where there is this God-given opportunity to use the waters of a stream to the best advantage, the States should use every endeavor to get together and agree amicably upon the division of those waters, rather than resort to struggles in the courts of the United States to settle their differences."

Senator Pittman of Nevada

Senator Pittman was influential in the final debates on the fourth Swing-Johnson bill and was the moving force in converting Senator Hayden's proposed amendment requiring a tri-state compact as a condition precedent to the effectiveness of the act into a permissive authorization to enter into that compact. Rep. 162-63; Calif. Op. Br. 186-87. He was also a member of the Senate Committee on Irrigation and Reclamation which held hearings on and favorably reported the fourth Swing-Johnson bill.

Senator Pittman was a staunch advocate of states' rights in water resource development. This is well illustrated by the so-called Pittman resolution, prepared by Senator Pittman for, and approved by, the Governors' Conference at Denver in August 1927, which Senator Pittman inserted in the *Congressional Record* on April 28, 1928, during debate on the fourth Swing-

Johnson bill (69 CONG. REC. 7392-93). The text of the resolution follows (*id.* at 7393):

> "Resolution offered by Senator KEY PITTMAN on behalf of the Nevada commission to the Conference of Governors and the Commissioners of the Colorado Basin States in session at Denver, Colo., August 29, 1927.
>
> "Whereas it is the settled law of this country that the ownership of and dominion and sovereignty over lands covered by navigable waters within the limits of the several States of the Union belong to the respective States within which they are found, with the consequent right to use or dispose of any portion thereof, when that can be done without substantial impairment of the interests of the public in the waters, and subject always to the paramount right of Congress to control their navigation so far as may be necessary for the regulation of commerce with foreign nations and among the States; and
>
> "Whereas it is the settled law of this country that subject to the settlement of controversies between them by interstate compact or decision of the Supreme Court of the United States and subject always to the paramount right of Congress to control the navigation of navigable streams so far as may be necessary for the regulation of commerce with foreign nations and among the States, the exclusive sovereignty over all of the waters within the limits of the several States belongs to the respective States within which they are found, and the sovereignty over waters constituting the

boundary between two States is equal in each of such respective States; and

"Whereas it is the sense of this conference that the exercise by the United States Government of the delegated constitutional authority to control navigation for the regulation of interstate and foreign commerce does not confer upon such Government the use of waters for any other purposes which are not plainly adapted to that end, and does not divest the States of their sovereignty over such waters for any other public purpose that will not interfere with navigation: Therefore be it

"*Resolved,* That it is the sense of this conference of governors and duly authorized and appointed commissioners of the States of Arizona, California, Colorado, New Mexico, Nevada, Utah, and Wyoming, constituting the Colorado River Basin States, assembled at Denver, Colo., this 23d day of September, 1927, that:

"The rights of the States under such settled law shall be maintained.

"The States have a legal right to demand and receive compensation for the use of their lands and waters, except from the United States, for the use of such lands and waters to regulate interstate and foreign commerce.

"The State or States upon whose land a dam and reservoir is built by the United States Government, or whose waters are used in connection with a dam built by the United States Government to generate hydroelectric energy, are entitled to the

preferred right to acquire the hydroelectric energy so generated or to acquire the use of such dam and reservoir for the generation of hydroelectric energy upon undertaking to pay to the United States Government the charges that may be made for such hydroelectric energy or for the use of such dam and reservoir to amortize the Government investment, together with interest thereon, or in lieu thereof agree upon any other method of compensation for the use of their waters.

"We, the undersigned committee, to which has been referred the foregoing resolution, as presented to the conference on August 29, 1927, by Senator KEY PITTMAN, having adopted certain amendments unanimously, which are now incorporated therein, we recommend that the resolution set out above be adopted.

KEY PITTMAN,
FRANCIS C. WILSON,
WM. R. WALLACE,
CHARLES E. WINTER,
A. H. FAVOUR,
DELPH E. CARPENTER."

During debate on the third Swing-Johnson bill, Senator Pittman unqualifiedly asserted (68 CONG. REC. 4410):

"The bill does not grant any water to anyone. *The bill can not grant any water to anyone.* . . .

"Under the law which gives the States sovereignty over the water within their borders, the water can not be removed without permission of the States." (Emphasis added.)

During debate on December 11, 1928, on the Phipps amendment to section 4(a) of the fourth Swing-Johnson bill providing for the California limitation, Senator Pittman clearly stated that Congress could not impose that allocation on California without her consent (70 CONG REC. 386):

> "The Phipps amendment does not do anything else except that it states how California shall ratify. The Congress of the United States could not impose it upon California unless California assented to it, because California already has sovereign rights over the water, and the law recognizes her right to use as much as she can put to beneficial use. . . ."

Similarly, Senator Pittman made it clear in an exchange with Senator King of Utah that the terms of the tri-state compact authorization which he had successfully urged be made permissive could not be imposed on Arizona or California by Congress without the consent of those states. 70 CONG. REC. 576. See *supra* p. 17.

Representative Taylor of Colorado

Representative Taylor was a leading supporter of the Swing-Johnson bills in the House of Representatives.

In testimony in 1928 during the House Rules Committee hearings on H.R. 5773, Representative Taylor asserted that there were only two ways of apportioning the waters of the Colorado River system among the seven basin states: by compact or litigation in this Court. Failing that, he asserted that the only way to assure to the upper basin states the protection they desired was to enact the Swing-Johnson proposal

providing for federal approval of the Compact upon six-state ratification, and containing the numerous upper basin amendments designed to subject the use of the proposed dam and public domain to the Compact:[2a]

> "Now, what the four upper States are afraid of is this: There are only three ways of protecting our rights. One is by an interstate agreement, authorized by Congress and consummated by the States and approved by Congress. . . .
>
> ". . . . But we have no way of coercing Arizona or Utah. They, or either of them, can prevent that agreement as long as they want to. The next way to ascertain or protect our rights would be by bringing a suit in the United States Supreme Court, which I have always favored, to have the Supreme Court adjudicate the respective water rights between these seven States. That is the orderly, honest, fair, decent, practical, just, and proper way of settling this matter.
>
> ". . . . That suit ought to be brought; the States ought to take this matter into the United States Supreme Court and have that court determine, adjudge, apportion, and allocate the division of those waters and their use by each of those seven States. But they have not agreed to that, and they will not agree to that.
>
> "So those two best ways of determining our respective rights and settling this controversy are lost and gone.

[2a] *Hearings on H.R. 5773 Before the House Committee on Rules*, 70th Cong., 1st Sess. 15, 16, 17 (1928). *Accord*, 69 CONG. REC. 9764-65 (1928). See also pp. 135-36 *infra*.

". . . . Now, there is only one other way of protecting the upper States, and the rights of the lower States, too, for the future development of the waters of that stream.

". . . .

". . . . When those seven States are unable or unwilling to come to an interstate agreement, and are unwilling to take the matter into the United States Supreme Court to settle it, then by this bill is the only other way those upper States can protect their rights; by having Congress enact a law making those lower appropriations subject to and subordinate to the conditions and provisions of an agreement that all of those States have acknowledged was a fair apportionment between the upper basin of four States and the lower basin of three States. . . ."[2b]

Opponents*

Representative Colton of Utah

During House hearings on the fourth Swing-Johnson bill, Representative Colton commented as follows on the question of federal power to allocate water:[3]

[2b]For an analysis of the upper basin's proposals to protect its apportionment under the Colorado River Compact failing seven-state ratification, which were embodied in the bill under discussion, see appendix C.

[3]*Hearings on H.R. 5773 Before the House Committee on Irrigation and Reclamation*, 70th Cong., 1st Sess. 414 (1928).

*The primary opposition to the Swing-Johnson proposals came from the Arizona and Utah delegations: Senators Hayden and Ashurst of Arizona, King and Smoot of Utah; Reps. Douglas of Arizona, Colton and Leatherwood of Utah. As we point out *supra* p. 10, however, Senator King voted for the bill after his amendment which became § 18 of the act was accepted. The basis of the Arizona and Utah opposition, as it related to federal approval of the Colorado River Compact with less than seven-state ratification, is discussed in appendix C *infra*.

"I have been informed that an attorney for the Reclamation Service of the United States claims that Congress has the power to allocate and apportion all of the Colorado River among the States regardless of their wishes in the matter. Such a theory is abhorrent to our whole plan of government and particularly to the theory on which our whole system of water rights has been built up."

Subsequently, during debate on the bill on May 23, 1928, he made these unqualified assertions (69 CONG. REC. 9648, 9650):

"Congress can not allocate water. . . .

". . . .

". . . . There are only two ways by which this water may be allocated—by a compact between the States and by decision of the Supreme Court."

Representative Douglas of Arizona

In his testimony in 1928 during the House Rules Committee hearings on H.R. 5773 Mr. Douglas asserted:[4]

"I think, sir, the Federal Government has no right whatsoever to go into the boundaries of a State against its will and against its laws and appropriate, either for its use or for any of its beneficiaries, or allocate the waters of that State."

Senator Hayden of Arizona

During hearings on the third Swing-Johnson bill be-

[4] *Hearings on H.R. 5773 Before the House Committee on Rules*, 70th Cong., 1st Sess. 67 (1928).

fore the House Committee on Rules in 1927, Senator (then Representative) Hayden asserted:[5]

> "Mr. HAYDEN. There are only two ways in which this controversy can be settled. Either the States can agree upon an equitable apportionment of waters of the Colorado River or, in the absence of a compact, the Supreme Court of the United States can determine what the rights of the various States are on that stream.
>
> ". . . .
>
> ". . . . Arizona denies that it is within the power of Congress to apportion the waters of an interstate stream among the States. The States themselves must do that by agreement, or it must be done by the Supreme Court of the United States. The withdrawal of the State of Utah from the six-State compact, merely emphasizes the position of Arizona that the Federal Government and any three States or four States or six States can not apportion the waters of the Colorado River. Nor can anything less than all of the seven States apportion the water in which they are all interested."

Representative Leatherwood of Utah

During hearings in 1927 on the third Swing-Johnson bill before the House Committee on Rules Mr. Leatherwood testified:[6]

---

[5] *Hearings on H.R. 9826 Before the House Committee on Rules,* 69th Cong., 2d Sess. 75, 76 (1927). *Accord,* H.R. REP. No. 1657, 69th Cong., 2d Sess., pt. 3, at 1 (1927), quoted *infra* p. 41 note 10. See also *supra* p. 16.

[6] *Hearings on H.R. 9826 Before the House Committee on Rules,* 69th Cong., 2d Sess. 31 (1928). Rep. Leatherwood reasserted his views. *Id.* at 55.

"May I say here, incidentally, gentlemen, that there are only two agencies that can allocate the waters of this great river, the States themselves by treaty ratified by the Congress of the United States, or by the judicial branch of the Government; for the Congress has no power to allocate any of the waters of this river or any other river where the doctrine of prior appropriation is in force.

"Let me say again, that you may follow me, that every one of these States, if they will be true to their conviction, will tell you that they deny, and deny emphatically, that the United States Government owns and controls the unappropriated waters within their boundaries."

Rep. Leatherwood reiterated his convictions the following year during the House Rules Committee hearings on H.R. 5773:[7]

"In substance, I understood the gentleman from Colorado to say that there were but two ways by which this question of the allocation of the waters of the Colorado River could be settled, under the theory of the doctrine of prior appropriation, which we all hold the Supreme Court of the United States has never rejected; first by a compact or a contract between the States ratified by the Congress of the United States; and secondly by a decree of a court of competent jurisdiction.[8]

"That, Mr. Chairman, raises the question that has been raised before, that Congress does not

---

[7] *Hearings on H.R. 5773 Before the House Committee on Rules,* 70th Cong., 1st Sess. 41 (1928).

[8] (Footnote ours.) The remarks referred to are those of Rep. Taylor of Colorado, set out *supra* pp. 24-26.

have power to allocate the waters, the unappropriated waters of a stream, where the law of prior appropriation governs.

"And I still maintain that the Congress of the United States has no power to allocate these waters, and what I understood the gentleman from Colorado to say was that there were the two ways which I have referred to."

APPENDIX B

PROPONENTS AND SUPPORTERS OF THE SWING-JOHNSON BILLS CLEARLY AND CONSISTENTLY DENIED THAT THE BILLS PURPORTED TO MAKE OR TO AUTHORIZE ANY FEDERAL ALLOCATION OF WATER AMONG THE STATES

In this appendix we marshal legislative history directed to the following Arizona assertion (Ariz. Ans. Br. 35):

> "[N]o one denied that the various Swing-Johnson bills provided for a federal allocation of water among the states. The bitter cry of the opposition was that, because of this federal allocation, the bills constituted an unconstitutional invasion by Congress of the rights of the states. On the other hand, the defenders of the bills argued vigorously for their constitutionality."

The legislative history conclusively refutes Arizona's assertion. It is factually correct that the Arizona and Utah opponents of the bills did vigorously argue that the bills attempted to make an unconstitutional interstate allocation.[1] But the authors and other proponents of the bills repeatedly and consistently replied that the bills presented no constitutional questions because the bills did not purport to make or to authorize an interstate allocation of any kind. In fact, the pro-

---

[1]As noted in appendix C *infra*, the Arizona and Utah opponents were concerned primarily about a purported "federal allocation" imposing the interbasin allocation of the Colorado River Compact upon nonratifying states, not about any interstate allocation among Arizona, California, and Nevada.

ponents denied that Congress had any such power (appendix A *supra*).

Arizona bases her argument that Congress provided for a federal allocation upon language in section 5 which appeared for the first time in the third Swing-Johnson bill. Hence, we begin our review of the legislative history at that point.

A. The Third Swing-Johnson Bill

1. *House of Representatives*

Representative Swing introduced H.R. 6251, the third Swing-Johnson bill, on December 21, 1925.[2]

The hearings, begun on February 5, 1926, were barely underway when Representative Hayden of Arizona sounded the keynote of the Arizona theme in opposition to the bill:[3]

> "The bill, in its latest form, however, is based upon the fallacious idea that Arizona can be absolutely ignored; that my State has no rights which must be recognized.
>
> ". . . .
>
> "Then there is another question which to my mind is of much greater importance that will also have to be decided by the Supreme Court; the question of the jurisdiction of the States over appropriations of water within their limits. I doubt very much whether Representatives in Congress

[2]H.R. 6251, 69th Cong., 1st Sess., is Calif. Ex. 196 (Tr. 7709). On February 27, 1926, Mr. Swing introduced H.R. 9826 (Calif. Ex. 197, Tr. 7760), containing a revised financing plan.

[3]*Hearings on H.R. 6251 and H.R. 9826 Before the House Committee on Irrigation and Reclamation*, 69th Cong., 1st Sess. 15, 16 (1926).

from the arid West, where the doctrine of riparian rights does not and has never prevailed, will be in any hurry to accept the theory of this bill that Congress can make appropriations of water; that Congress, without the consent of the State, can take water for beneficial use for power or irrigation or other purposes.

"Mr. LEATHERWOOD. Without the consent of the State?

"Mr. HAYDEN. Not only without the consent of the State but utterly ignoring the State, yet such are the terms of this bill. It represents the first attempt to pass legislation by Congress whereby the Federal Government is assumed to have that power.

"Members of Congress from the West have always contended that the United States has no jurisdiction over appropriations of water for irrigation, power, or other uses. There is no law upon the Federal statute books asserting such a right, and Congress has in many instances declined to interfere with the laws of any State relating to the appropriation, use, or distribution of water. Two good examples of an acknowledgement that the States, and the States alone, have control over appropriations of water are to be found in the reclamation act and the Federal water power act.

"Jurisdiction over appropriations of the waters of streams is one of the highest attributes of sovereignty in the States of the arid region. Water to them means life. Their entire future is bound up in its conservation and beneficial use. To strip

them of their exclusive control over it by a transfer of authority to the Federal Government would leave the States of the West a mere aggregation of dependencies subject to the whims of Congress controlled by a majority membership from States where the value of water for irrigation is little known and slightly appreciated.

"I am sure that the serious minded Congressmen from the West will not fail to realize that the passage of a law which denies the right of Arizona to control appropriations of water within her borders would be but the first step toward the nationalization of every stream where the Federal Government may desire to take charge. Self protection will compel every one who is jealous of the rights of his State to oppose the adoption of so far reaching and such an evil precedent. After the Colorado River is nationalized, what river in the West will next be arbitrarily taken over from the States?"

Representative Leatherwood of Utah, who was to become an opponent of the bill, urged that Mr. Hayden's position as to the bill's purported assertion of overriding federal authority presented a question "to which every member of the committee, every western representative who hails from a Simon-pure appropriation State, should give very careful consideration and study."[4]

---

[4] *Id.* at 19. The committee numbered 11 western Representatives among its 17 members: Chairman Smith (Idaho), and Congressmen Sinnott (Oregon), Leatherwood (Utah), Leavitt (Montana), Winter (Wyoming), Swing (California), Arentz (Nevada), Hayden (Arizona), Hudspeth (Texas), Hill (Washington), and Morrow (New Mexico). *Id.* pt. 1, facing p. 1.

Dr. Elwood Mead, Commissioner of Reclamation, was the first witness. During his testimony in support of the bill, Representative Sinnott of Oregon asked Dr. Mead to state his "position towards the views advanced by Mr. Hayden as to the rights of the State."[5] We set forth Dr. Mead's reply and the ensuing colloquy in which the basic conflict between the views of Mr. Hayden, representing the Arizona opponents, and Mr. Swing, author of the bill, as to the effect of Mr. Swing's bill is presented:[6]

> "Doctor MEAD. As far as the bill is concerned, I do not see where this bill treats Arizona any differently from Nevada and California, the three States that are concerned. They are all on the Colorado. What Mr. Hayden speaks of there is, as he states—it is a difficult question, and it is a question that I think is unsettled, as to just what are the respective rights of the State and the Federal Government in determining a matter of this kind. Here is the State of Arizona with a certain kind of water law. Here is the State of California on the other side, or Nevada, with a different water law, and there must be some way to reconcile and adjust this matter.
>
> "Mr. LEAVITT. They all have the principle of appropriation, do they not?
>
> "Mr. ARENTZ. But the Government does not.
>
> "Mr. HAYDEN. The theory of the bill—and it is perfectly plain—is that whatever the water law of Arizona or California or Nevada may be, the

[5] *Id.* at 31.
[6] *Id.* at 32.

United States proposes to commence this construction and prosecute it regardless of State law.

"Mr. SINNOTT. But to distribute the water equally between you.

"Mr. HAYDEN. There is no proposal in the bill for an equal distribution of water between the States.

"Mr. SINNOTT. The doctor says you are all treated the same.

"Mr. HAYDEN. The bill provides that the distribution of water shall be as the Secretary of the Interior may arrange by contracts. It is entirely in his hands.

"Mr. SWING. *But the distribution will either be by agreement between the States or under their respective laws, as they may avail themselves.*

"Mr. HAYDEN. No; the bill states that the Secretary may make any kind of contract with anybody he pleases, to furnish water at any place.

"Mr. SWING. Other things being equal, Arizona is treated equally here. Those that are on the same footing are treated equally, are they not?

"Mr. HAYDEN. The bill absolutely ignores the water laws of all three States. In that sense Arizona, Nevada, and California are on an equality."

Mr. Hayden refused to accept Mr. Swing's explanation that the distribution of water from the project would "either be by agreement between the States or under their respective laws, as they may avail them-

selves," a position later amplified by Mr. Swing's assertion that his bill did not authorize the Secretary to create water rights and that any rights acquired under the project would derive from beneficial use in accordance with state law. See *infra* pp. 42-43, 55-57.

Later in the hearings, an amendment to the bill was proposed to add what is now the last sentence of the first paragraph of section 5 (Rep. app. 385):

> "No person shall have or be entitled to have the use for any purpose of the water stored as aforesaid except by contract made as herein stated."

That sentence is improperly relied upon by the Master and the other parties to prove that the Project Act imposed a federal allocation upon the "mainstream" waters. It was an upper basin amendment, presented and explained to the committee (and to Mr. Hayden of Arizona, in particular) by Delph E. Carpenter, the upper basin spokesman. That explanation, which conclusively disproves the Master's construction, is as follows:[7]

> "Mr. HAYDEN. The purpose of this amendment is that no person shall have or be entitled to have the use for any purpose of the water stored as aforesaid except by contract made as herein stated.
>
> "Mr. CARPENTER. 'Except by contract made as herein stated' means this: If the flow of the Colorado River is controlled and regulated by the construction of the Black Canyon Dam, and any per-

[7] *Id.* at 163.

son in the State of Arizona attempt to take any water out of the stream which has been discharged from the reservoir and is being carried in the stream bed, as a natural conduit, for delivery to lower users, this law would be brought into effect and he would be prevented from using any of that water independent of the Colorado River compact but unincumbered by any other condition for the benefit of California and Nevada. In other words, the compact does not disturb the rights between Arizona, California, and Nevada, *inter sese,* as to their portion of the water.

"Mr. SWING. The water which is stored by the Government at its own expense would be disposed of by contract as provided in this bill. There should be that privilege given Arizona to secure water on the same terms as is afforded to Nevada and California.

"Mr. HAYDEN. How tight would you tie Arizona?

"Mr. CARPENTER. *The thought of this amendment* is that any water stored in this reservoir under the terms of the compact, when released from storage shall be burdened by the compact wherever it goes. As far as water is concerned, existing claims of the lower States are protected by the compact. Water must pass through this reservoir to take care of the present existing lower claims.

"As to future development from the main river, we insist that water stored in this structure by the United States be stored and released upon the express condition that the persons who receive the

water shall respect and do so under the compact. *It has nothing to do with the interstate relations between Arizona and California.*" (Emphasis added.)

When Mr. Carpenter concluded that "it has nothing to do with the interstate relations between Arizona and California," he meant "it" to refer to "the thought of this amendment" adding the last sentence to the first paragraph of section 5.

Neither the Master nor the United States attempts to explain this legislative history; each argues only on the basis of the language of the sentence. Rep. 151; U.S. Ans. Br. 27. Arizona, however, asserts that by "it" Mr. Carpenter meant only to refer to the Colorado River Compact. Ariz. Ans. Br. 31. Arizona is only partly correct. Mr. Carpenter would have said, had he written out his statement: *"Our amendment (the last sentence of the first paragraph of section 5), which would subject all uses of stored water to the Colorado River Compact and thus afford some measure of protection to the upper basin's Compact apportionment against a non-ratifying Arizona,* has nothing to do with the interstate relations between Arizona and California." Our emphasized interpolation identifies what, from the context, Mr. Carpenter meant by "it."

Mr. Carpenter made equally clear that the proposed amendment to section 5 was designed to protect the upper basin's allocation under the Colorado River Compact, and was not to supplant interstate agreement as the basis for resolution of any controversy in the lower basin:[8]

[8] *Id.* at 161, 164-65.

"That amendment is proposed by the upper States for the fundamental reason I assigned at the outset of my statement to-day, which is that we insist that no use occur by reason of this structure which may later be said to be independent of the compact and be asserted as adverse to the upper States. . . .

". . . .

". . . . Her [Arizona's] quarrel is not with the upper States, but is a fear of future conditions between herself and California. It is a local situation. Under the compact we make no attempt to allocate between those three lower States. We allocate to the lower group so much water. We do the same with the four upper States.

"In the upper country we had a controversy between New Mexico and Colorado over the La Platte [Plata] River. We settled that by a local **[165]** compact entered into immediately after and in harmony with the main compact. It is intended that these local problems, involving only two or more States, shall be settled by supplemental compacts. And so here we would leave to Arizona, California, and Nevada, the disposition of the water given to the lower basin under the Colorado River compact."

Arizona asserts that "much has been omitted from California's version of Mr. Carpenter's testimony which makes clear his recognition that § 5, even as it then stood, authorized the Secretary to contract for the delivery of stored water *regardless of any alleged prior appropriative rights.*" Ariz. Ans. Br. 31-32. (Emphasis

added.) We treat that argument in appendix D *infra* pp. 108-11.

Throughout the hearings Mr. Hayden adhered to his contention that the bill was an assault on the rights of the states, particularly Arizona, to control the unappropriated waters within their borders.

However, the bill was favorably reported out by the committee on December 22, 1926, by a vote of 12 to 3.[9] Representative Hayden submitted his minority views on January 12, 1927, reiterating his opposition to the bill for, among others, substantially the same reasons urged before the committee.[10]

The House Rules Committee held three days of hearings on the bill on January 20-22, 1927, receiving testimony from the proponents and opponents of the meas-

[9]H.R. REP. No. 1657, 69th Cong., 2d Sess., pt. 1 (1926); 68 CONG. REC. 2633 (Rep. Swing); *id.* at 3076 (Rep. Smith).

[10]H.R. REP. No. 1657, 69th Cong., 2d Sess., pt. 3, at 1 (1927):

"On behalf of the State of Arizona I recommend that the bill H.R. 9826 do not pass for the following reasons:

"1. The bill violates the law, as established by the constitutions or laws of all of the States of the arid West, and the consent of Congress, that the right to appropriate water for irrigation, power, and other beneficial uses shall be obtained from the State and not from the Federal Government. For the first time in the history of Federal irrigation and water power legislation Congress by this bill proposes to assert the right of the United States to appropriate water for the generation of hydroelectric power and for irrigation and domestic purposes regardless of State law. The avowed object of the bill is to use the power of the Federal Government to seize the waters of the Colorado River in defiance of the State of Arizona.

"2. It is not within the power of Congress or the legislatures of the six States to divide and apportion the waters of the Colorado River and its tributaries in which seven States are interested, as proposed in this bill. Such apportionment or allocation of the waters of an interstate stream can only be accomplished by a decision of the Supreme Court of the United States or by a complete agreement among the seven States and the United States."

ure. Representative Hayden and Representatives Leatherwood and Colton of Utah led the opposition. Representative Swing's statement in support of the bill met the opponents' objections head on. Here is how he explained the effect of his bill on interstate water rights as among Arizona, California, and Nevada:[11]

> "On the question of Arizona's rights in and to the water of the river, let me say that the Government is not undertaking to create or to assert or to deal in or to dispose of water rights. It proposes to go in and construct a dam and store water for reasons which have been set out, and then it turns the water loose. The Secretary's power, as given by this act is not to sell water. The act says 'The Secretary of the Interior is hereby authorized, under such general regulations as he may prescribe, to contract for the storage of water.' Whose water? It does not say. It might be a community like Imperial Valley that has already acquired a water right, and wants its water stored, or it may be someone who hereafter will acquire a water right, but that right will not be acquired under this bill; not from the United States Government. He will acquire his water right, if he acquires one, from the State and under the laws of the State, in which he puts the water to a beneficial use. There is nothing in this bill which puts the Government in conflict with the water laws of Arizona or Utah or any other State. As a matter of fact, the reclamation law is adopted by section 13 [now 14] of this bill, and

---

[11] *Hearings on H.R. 9826 Before the House Committee on Rules,* 69th Cong., 2d Sess. 116 (1927).

section 8 of the reclamation act says that what the Government does must not be in conflict with the water laws of the States, so there can be no violence done State laws on this score.

"If the water is used in Arizona, the water right must be acquired under the laws of Arizona; if in Nevada, under the laws of Nevada; if in California, under the laws of California."

Representatives Hayden and Leatherwood renewed their arguments during debate on the bill while it was still before the Rules Committee. On February 5, 1927, Mr. Leatherwood explained why Utah had rescinded her ratification of the Compact on a six-state basis, stressing his fear that the bill's purported attempt to "allocate" the waters of the basin by approving the Compact without seven-state ratification was invalid and hence could not adequately protect Utah's interests (68 CONG. REC. 3065):

"Mr. PERKINS. Will the gentleman tell us why Utah withdrew from the compact?

"Mr. LEATHERWOOD. Yes; if the gentleman will follow me I think he will get an answer from my remarks, and if I do not cover the matter fully I will be glad to yield later; but, briefly, we withdrew from the compact because it was sought to put this legislation through Congress and accomplish all that our sister State of California wanted, and by so doing and with only a six-State compact we would be left at the mercy of any State that failed to ratify the agreement, and under the law applicable to the appropriation of unappropriated waters in those western streams

any appropriation made by a State in the lower basin not bound by the agreement would create a priority as against my State and the other upper-basin States in the compact. Briefly, that is why we withdrew. . . .

". . . .

"It should be clearly understood that in the absence of consent on the part of the States to Federal control of the waters to the extent here proposed there is no power in the Congress to exercise that control. The rights of the seven States in the waters of the Colorado River can only be finally determined by the Supreme Court of the United States.

"May I say here, gentlemen, that you must bear in mind that there are only two sources from which an allocation of the unappropriated waters of these western streams can be had; one by the States themselves entering into a voluntary agreement or treaty by and with the consent of the Congress; and the other through a court of competent jurisdiction. But Congress has no power to allocate the waters of one of these western streams where the doctrine of prior appropriation applies. Action by Congress at this time would only result in forcing this issue into the Supreme Court."

Representative Smith of Idaho, chairman of the reporting committee, rose in response to Mr. Leatherwood's remarks. In answer to a question from Mr. Hayden, Mr. Smith clearly asserted that the bill did not purport to divide the waters of the river or make any kind of federal allocation (*id.* at 3076):

"Mr. HAYDEN. *Does the gentleman believe it is within the power of the Congress of the United States to divide the waters of the Colorado River or any other river by definite allocations to the States?*

"Mr. SMITH. *We are not trying to do that.* We propose to let the States agree among themselves, if possible; but the Federal Government certainly has the right to construct a dam on its own property upon a stream which is not navigable without the consent of either of the States. Otherwise, the Federal Government would have to acknowledge that it is not superior to the States.

"Mr. HAYDEN. Does not this bill propose to ratify on the part of Congress an allocation and apportionment of waters amongst the States?

"Mr. SMITH. Absolutely not; except as between the upper basin States and the lower basin States.

"Mr. HAYDEN. The States have not yet agreed upon that, and is it within the power of the Congress to make that kind of division when the States do not agree?

"Mr. SMITH. I think it is competent for Congress in advance to consent to the States so agreeing, and it is certainly competent for Congress to provide that the United States shall be subject to the provisions of this compact.

"Mr. HAYDEN. That is exactly what the situation is.

"Mr. SMITH. There is one thing I can not understand. If the gentlemen opposed to this legis-

lation think their position is so well taken and can be so ably fortified, why do they not allow this bill to come up on the floor of the House? When we had the special rule under consideration before the Committee on Rules to give this bill a privileged status on the floor of the House of Representatives, whom did we find there opposing it? *Only the gentleman from Utah* [Mr. LEATHERWOOD] *and the gentleman from Arizona* [Mr. HAYDEN]. *They were the only two Members from the entire western country who are opposing the bringing out of this bill.*

"We feel very confident of our position, and we believe if the bill is brought out on the floor of the House of Representatives the Members are capable of weighing all the arguments, and we are sure that the conclusion you will reach will be a wise one. In any event that is our manner of enacting legislation. When there is a controversy over measures they are brought into the open House, and arguments are presented for and against, and a conclusion reached by a vote. *But for two men to attempt to prevent the Committee on Rules from bringing out this piece of legislation supported by practically all the people in the western country is unfair and unreasonable.* [Applause.]" (Emphasis added.)[1]

In further response to the Hayden and Leatherwood arguments, Mr. Swing inserted his statement before the Rules Committee in the *Congressional Record,*[2] which

[1]See *supra* p. 34, referencing Rep. Leatherwood's admonition to all western Representatives to resist the bill's purported encroachment on western water law.

[2]68 CONG. REC. 3082-88 (1927).

included his explanation that "the Government is not undertaking to create or to assert or to deal in or to dispose of water rights" and that, under the reclamation law adopted by the bill, all water rights would be acquired under the laws of the state in which the water was put to beneficial use.[3]

On February 8, 1927, Representative Winter of Wyoming spoke in support of the bill.[4] With obvious reference to the Arizona arguments, Mr. Winter asserted that a federal-state controversy was nonexistent, since Congress was only exercising its recognized control of the public lands to subject subsequent Arizona uses to the Compact (68 CONG. REC. 3292, 3294):

> "It is impossible in 15 minutes or 50 minutes to begin an attempt to cover this subject. I am therefore going to try to cover but a few outstanding features of the situation.
>
> "It has been said that this bill presents to the Congress and to the country two new radical propositions, the first one being that it involves the country in Government ownership and operation of a public utility, more particularly referring to the power element; and the other proposition is that it is an attempt to extend Federal authority over rights and realms that have been recognized up

[3] *Id.* at 3087.

[4] Mr. Winter was a member of the committee which held hearings on the bill. See p. 34 *supra* note 4. In response to Mr. Hayden's views on the bill, he had stated that Wyoming would stand "on the rights of the State to control the waters within its boundaries and shall insist upon the necessity of securing the consent of the State in any appropriation thereof." *Hearings on H.R. 6251 and H.R. 9826 Before the House Committee on Irrigation and Reclamation,* 69th Cong., 1st Sess. 20 (1926). After hearing the arguments of the Arizona and Utah opponents, he had nevertheless voted to report the bill.

to this point as State rights, involving, of course, the interstate-commerce clause of the Constitution and the relative rights of the States and of the Federal Government to a navigable river and the uses of its water.

". . . .

"Regardless of the theories of State rights as to the bed of the stream and control of the use of the water of this stream by the States, it being navigable, with which I agree, the Government controls the public lands above high-water mark, where the dam will be built and the land flooded by a storage of the water, and the public lands over which the canals must run to divert the water around the dam for power, or to distant areas for reclamation in California and Arizona. Hence, the Government can require Arizona, before she perfects any water rights, even though she is out of and not bound by the compact, to conform therewith, which means that the rights of the upper States to their equitable division of the water will be protected. . . .

". . . .

". . . . Under this, whether the Government has a proprietary interest in the water or not, it is enabled to control the way and the extent to and in which the Government land in Arizona may be used for the purpose of storing water thereon or transporting it thereover."

The House Rules Committee granted the bill a rule on February 23, 1927,[5] but the Congress adjourned

[5]H.R. REP. No. 2212, 69th Cong., 2d Sess. (1927).

shortly thereafter without any action having been taken on the measure.

2. *Senate*

Senator Johnson introduced S. 1868 on December 21, 1925.[6] No hearing was held on that bill, presumably because the Senate Committee on Irrigation and Reclamation, at the direction of the Senate, had concluded extensive general hearings on Colorado River basin problems the day after the bill was introduced.[7]

Senator Johnson favorably reported his bill from the Senate Committee on Irrigation and Reclamation on April 24, 1926.[8] The vote was 12 to 3, Senators Ashurst and Cameron of Arizona, and Phipps of Colorado, opposing the bill.[9] Senator Ashurst filed minority views.[10] However, the first session of the 69th Congress ended without any action having been taken on the bill. Following the reconvening of Congress for the second session in December 1926, the bill met with determined Arizona resistance. Senator Johnson, asserting that he believed the Arizona opposition "not to be well founded at all" (68 CONG. REC. 4228), answered the Arizona argument that the bill authorized a "federal allocation" invading Arizona's sovereign interests in the waters of the system. Speaking in support of

---

[6]S. 1868, 69th Cong., 1st Sess., is Calif. Ex. 2054 for iden. (Tr. 11,177). On February 27, 1926, Senator Johnson introduced S. 3331 (Calif. Ex. 198, Tr. 7760), containing a revised financing plan.

[7]*Hearings Pursuant to S. Res. 320, 68th Cong., 2d Sess., Before the Senate Committee on Irrigation and Reclamation,* 69th Cong., 1st Sess. (1925).

[8]S. REP. No. 654, 69th Cong., 1st Sess., pt. 1 (1926).

[9]67 CONG. REC. 8020 (1926).

[10]S. REP. No. 654, 69th Cong., 1st Sess., pt. 2 (1926).

the bill on February 21, 1927, he stressed that the Arizona assertions were groundless (*id.* at 4290-91):

> "It is utterly erroneous to assert that there is any endeavor by this measure, sir, to take anything that belongs to the State of Arizona or to interfere in any degree with the [4291] laws of Arizona or the property to which Arizona may claim title. State rights are as far from this bill as is the transit of Venus itself; that doctrine has no more relation to the particular matter than any other irrelevant or any other detached proposition. The property of Arizona is taken by this bill not at all; rights of Arizona are invaded not in the slightest degree by this measure; and when the Senator from Maryland [Mr. BRUCE] asked the other evening of the Senator from Arizona if it is not a fact that California proposes to take Arizona's water without her consent, and the Senator from Arizona answered quickly that is the fact, both were absolutely and wholly in error, for this measure does not in the slightest degree impinge upon the rights of the State of Arizona; nor does California propose by this bill to take any water or anything else that belongs to Arizona of any kind or of any character at all. I can not overemphasize this fact, and a reading of the measure and an understanding of the situation and the law will demonstrate that I am entirely accurate in the assertion that I make. This bill is in accord with the constitution of the State of Arizona; it follows the enabling act of Arizona; it follows the reclamation law from which Arizona has derived so much benefit so generously extended by the United States of America; and it

does naught of any kind or of any character at which Arizona really can cavil or concerning which Arizona can in the slightest degree complain.

". . . .

"Under this bill, sir, we make the entire project a part of the reclamation law. This is a reclamation measure; and by section 13[11] of the bill it is distinctly provided:

> This act shall be deemed a supplement to the reclamation law, which said reclamation law shall govern the construction, operation, and management of the works herein authorized, except as otherwise herein provided.

"The very first section to the act provides for what purposes the act is presented and what are its designs. The act itself says:

> That for the purpose of controlling the floods and regulating the flow of the lower Colorado River, providing for storage and delivery of the waters thereof for reclamation of public lands and other beneficial uses within the United States, and for the generation of electrical energy as a means of making the project herein authorized a self-supporting and financially solvent undertaking, the Secretary of the Interior is hereby authorized—

"And so forth.

"First, we provide for flood control and river regulation.

"Secondly, we provide for irrigation and domestic use.

"And, thirdly, after providing for these, we provide for the byproduct of the bill—power out of which the project may be paid for.

"I repeat to you that this is a reclamation measure, made so by section 13 of the bill. Adverting,

---

[11](Footnote ours.) This provision is now § 14 of the Project Act. Rep. app. 394.

then, to section 8 of the reclamation law, let us see how much there is in this statement that is made about appropriating the water of Arizona and taking the property of that State.

"Section 8 of the reclamation act provides:

> That nothing in this act shall be construed as affecting or intended to affect or to in any way interfere with the laws of any State or Territory relating to the control, appropriation, use, or distribution of water used in irrigation, or any vested right acquired thereunder, and the Secretary of the Interior, in carrying out the provisions of this act, shall proceed in conformity with such laws, and nothing herein shall in any way affect any right of any State or of the Federal Government or of any landowner, appropriator, or user of water in, to, or from any interstate stream or the waters thereof.

"So, first, our act is a reclamation act.

"Secondly, under the reclamation law we can no more affect the rights of Arizona in the waters that flow through Arizona than we could affect the title of any Arizona resident to any particular property. In passing, I may remark that it is entirely a misnomer to say that Arizona or any other State in the West, after all, has title to water. Under western law, the appropriator of water has a title to the use when the application is beneficially made of the water that he thus appropriates; but to talk of title of the State to water is entirely a misapprehension and misapplication of terms."

Senator Pittman later pointed out to the Senate that the bill could not make an allocation of water to any state and did not purport to do so (68 CONG. REC. 4410, 4412):

"The bill does not grant any water to anyone. The bill can not grant any water to anyone. It

does make the water in existence available for irrigation and power, because it provides for the storage of the flood waters for use in irrigation during the irrigation season.

"Under the law which gives the States sovereignty over the water within their borders, the water can not be removed without permission of the States. But of course a peculiar situation is met where there is a river forming the dividing line between two States. In such case both States have an equal sovereignty in the water running between them, each of them, possibly, to the middle of the river. But how can one of them control the amount of water the other may take out of that river? California may take out of the Colorado River all the water that has not been appropriated when the river reaches a point in California, and so Arizona may, on its side of the river, take out of the river all the water that has not been appropriated.

". . . .

"Mr. KENDRICK. I desire to ask the Senator whether he believes in case this bill should be enacted into law and Arizona should remain out of the compact, as she is out of the compact at the present time, that it would in any way adversely affect her rights to her water in the Colorado River or its tributaries?

"Mr. PITTMAN. *It would not do so in the slightest degree. I have no doubt about it.* If a dam shall be built at Boulder Canyon it will impound certain waters and equate the flow be-

low. The water below will be subject to appropriation and use by both California and Arizona, and Arizona, according to the evidence, can use water for 298,000 acres by gravity, and she can irrigate 600,000 acres additional by pumping; that is all; and in California there can be an additional three hundred or four hundred thousand acres irrigated. That is all.

"Mr. KENDRICK. In other words, the compact between the States which ratified deals only with such equities as the respective States have in the water and will not interfere in any way whatsoever with the right of those States which failed to ratify?

"Mr. PITTMAN. *In other words, there is nothing in this proposed legislation that could prevent Arizona from appropriating from the Colorado River within her borders all of the water she could use for irrigation.*" (Emphasis added.)

However, because of the parliamentary maneuvers of the Arizona Senators, capped by a successful filibuster just before adjournment,[12] the Swing-Johnson bill was not acted on by the Senate in the second session.

B. The Fourth Swing-Johnson Bill

1. *House of Representatives*

The fourth Swing-Johnson bill, H.R. 5773, was introduced by Mr. Swing on December 5, 1927.[1] During the hearings on the bill in January 1928, Arizona and Utah renewed their opposition to the bill.[2] Ari-

[12]68 CONG. REC. 4896-900 (1927).

[1]Calif. Ex. 200, Tr. 7712.

[2]Arizona was now represented in the House of Representatives by Lewis W. Douglas, succeeding Mr. Hayden who had been elected to the Senate.

zona's position was again put before the committee by Mulford Winsor, representing the Colorado River Commission and Governor Hunt of Arizona.[3] During Mr. Winsor's presentation, Representative Swing reiterated his assertions that his bill neither created water rights in any state nor authorized the Secretary of the Interior to do so, and that any water rights acquired under the act would "only come into existence by reason and under and by virtue of the laws of the State in which the water is put to beneficial use":[4]

> "Mr. SWING. May I ask, as to the item with which you have just gotten through, that the appropriation laws of the State of Arizona shall govern the water rights within the State of Arizona. If I should give it as my interpretation of this bill that the Secretary of the Interior here is not authorized to deal in water rights, that this law does not undertake to create water rights for the Secretary to sell, nor does it undertake to sell water or water rights, but that he merely contracts for the service of storing water, perhaps for the benefit of communities that now have a right already acquired, [57] based upon beneficial use; or if a right is to be hereafter acquired under this bill, as I interpret it, it must be acquired under the appropriation laws of the State in which the water benefits are to be used, I do not see where there is any violation of the No. 3 point that you have now made.

---

[3] *Hearings on H.R. 5773 Before the House Committee on Irrigation and Reclamation,* 70th Cong., 1st Sess. 19-86 (1928).

[4] *Id.* at 56-58.

"Mr. WINSOR. Yes; the right of the State to control the appropriation, use, and distribution of water within the State, coupled with the other rights that the States have as to the ownership of the lands over which navigable waters flow, undoubtedly would be violated.

"Mr. SWING. *The water rights that are already in existence are created under and by virtue of the water laws of the States in which the water is being used, and that will still be true under this bill as to any future water rights hereafter acquired. The water right itself can only come into existence by reason and under and by virtue of the laws of the State in which the water is put to beneficial use.*

"Mr. WINSOR. It is your theory, then, that if the Secretary of the Interior, under the provisions of this law, should store all of the waters that are allocated by the compact to the lower-basin States, that then, without any violation of the rights of the State, California under California law could appropriate all of that water so stored and made available to the lower-basin States? Is that your theory?

"Mr. SWING. *My theory is this: That the water after it is stored by the Secretary of the Interior is equally available on identical terms for use by the citizens in any State, whether it is Arizona, Nevada, or California, and that their water rights from this reservoir or from the stream after the water is let out of the reservoir is acquired solely and only by virtue of the water laws in the State where it has to be put to use.*

"Mr. WINSOR. And it would be put to use in the State of California.

"Mr. SWING. Or Arizona or Nevada, yes.

"Mr. HUDSPETH. Would that mean, Mr. Swing, the waters impounded?

"Mr. SWING. Yes.

"Mr. HUDSPETH. Then Arizona could control all the water, couldn't they? Isn't the dam in Arizona?

"Mr. SWING. Between Arizona and Nevada.

"Mr. HUDSPETH. I thought it was in the State of Arizona.

"Mr. WINSOR. No, Mr. Swing's idea is that after the water is stored in Arizona and Nevada, and flows on down the river, it might thereafter be appropriated, all of it appropriated by the State of California under California water laws, and thereby not violate the right of the States to control the appropriation of water, as I understand it.

"Mr. HUDSPETH. I did not so understand him. I understood him this way, that the water that flowed through Arizona, Arizona would have its proportion under its laws.

"Mr. WINSOR. Of course, the theory that Mr. Swing has advanced, as I understand him, sets forth the very situation that Arizona is afraid of.

"Mr. SWING. Well, there is nothing in the bill that you know of, is there, which would prevent you from taking water, getting water [58] from the Secretary of the Interior and from this reservoir on identically the same terms that the citizens of any other State do?" (Emphasis added.)

The committee favorably reported the bill on March 15, 1928.[5] Representatives Douglas and Leatherwood subsequently submitted minority views.[6] Mr. Douglas reiterated the Arizona contention that the bill was an unconstitutional attempt to impose the Compact on Arizona without her consent and thus nullify Arizona's right to control the use and appropriation of water within her boundaries.[7] Mr. Leatherwood also asserted that the bill provided for a federal allocation of the waters of the basin which was beyond the power of Congress.[8]

---

[5]H.R. REP. No. 918, 70th Cong., 1st Sess., pt. 1 (1928).

[6]*Id.* pts. 2 (Douglas) and 3 (Leatherwood).

[7]*Id.* pt. 2, at 39:

"The Swing-Johnson bill in its ratification of the six-State compact and in its elimination of the State of Arizona completely ignores and nullifies the well-established doctrine that a State has the right to control the use and appropriation of water within its boundaries, at least in so far as the State of Arizona is concerned.

"The Swing-Johnson bill, in effect, then proposes to transcend the Constitution in that it provides for legislation by six States and the Federal Government for a seventh State antagonistic to such legislation. I contend that six States can not constitutionally so legislate."

[8]*Id.* pt. 3, at 30, 31:

"It is often represented that this bill has as one of its purposes the completion of the Colorado River compact, yet the bill undertakes to provide that the United States may proceed with the construction of this dam and reservoir when six of the seven States have ratified this interstate compact. In other words, it undertakes to impose this inchoate contract upon a State which has not agreed to it, if and when the other parties thereto have agreed. That this is beyond the power of the Congress of the United States must follow from the fact that it does not control the Colorado River for any such purpose.

". . . .

"Once this bill is enacted into law, Congress has declared that it has the right and power to allocate the waters of the Colorado, to determine how they shall be divided between the States, and to what use they shall be put. . . ."

On April 24 and May 2, 1928, the House Rules Committee held hearings on H.R. 5773.[1] Representatives Leatherwood and Douglas restated their objections to the proposal to approve the Compact without Arizona's ratification, contending that this purported "federal allocation" was invalid.[2]

On May 15, 1928, the Rules Committee favorably reported H.R. Res. 208, providing for eight hours of general debate on H.R. 5773 to be divided equally between opponents and proponents of the bill.[3] The res-

---

[1] *Hearings on H.R. 5773 Before the House Committee on Rules,* 70th Cong., 1st Sess. (1928).

[2] Mr. Leatherwood explained his position as follows (*id.* at 44):

> "The question, and the serious question which arises in this case, is whether a less number than all of the States in the basin can by contract settle any of the rights of the nonratifying State, assuming that the doctrine that the States own and control the unappropriated waters of the river, is the law of the land out there. We contend that it is, and it never has been set aside by the courts. In other words, I contend that this bill could not traffick or barter away or in any way bind a nonratifying State as to its rights in the river, and that a lesser number as between themselves might bind themselves but could not traffick in the property in which the nonratifying State has a common interest."

Mr. Douglas agreed (*id.* at 65, 67):

> "If you, and you must concede that States have control over, with the exception of the constitutional authority of the Federal Government to regulate commerce, and are sovereigns of the unappropriated waters flowing within their boundaries, then, Mr. Chairman, you must, and the members of this committee must, conclude that the Federal Government in conjunction with six States, can not allocate waters among seven, and yet, Mr. Chairman, that is exactly what this bill in effect would do. It contemplates a ratification of a 6-State Colorado River compact to which 7 States are parties, but to which only 6 are signatories.
>
> . . . . . .
>
> "I think, sir, the Federal Government has no right whatsoever to go into the boundaries of a State against its will and against its laws and appropriate, either for its use or for any of its beneficiaries, or allocate the waters of that State."

[3] H.R. REP. No. 1666, 70th Cong., 1st Sess. (1928).

olution was agreed to on May 22, 1928,[4] and the bill came on for debate.

On May 23, 1928, Representative Douglas spoke at length in opposition to the bill. 69 CONG. REC. 9623-35. At the outset of his speech, he restated the Arizona argument (*id.* at 9623):

> "That is the project which this bill authorizes. In addition, and as a separate and distinct part of the legislation, there is a provision for the ratification of a compact allocating waters between seven States and to which seven States are by the terms of the compact woven into the fabric of the compact upon the ratification of but six of the seven States.
>
> "The bill further provides for congressional amendments of State water codes. Further than that, it vests in the Secretary of the Interior complete and absolute control over the waters of the Colorado below Boulder Dam.
>
> "The compact phase of the measure could be adequately taken care of by a resolution or an act providing for ratification. I point out to Members of the House that there are two very distinct and separable portions of the bill, the first providing for the construction of the project, and the second dealing with allocation of waters as between States."

Representative Swing responded to Mr. Douglas' long and detailed speech as follows (*id.* at 9635):

> "I only wish I had the time to go fully into each and every one of the contentions made by the gentle-

[4] 69 CONG. REC. 9486, 9490.

man from Arizona.[5] They ought to be answered. They can be answered. They have been answered in the investigations made of the project and in the hearings held on this bill."

With respect to the Arizona argument concerning the purported allocation made by the bill, Mr. Swing's obvious reference was to refutations of this argument by himself and other proponents during the recently concluded hearings as well as in hearings and debates in the previous session (*e.g., supra* pp. 36, 42-43, 44-45, 50-54, 55-56). Further refutations followed.

Representative Colton of Utah then spoke at length in opposition to the bill, asserting that Congress lacked the power to allocate water and that he viewed the Swing-Johnson proposal as an attempt to accomplish that end. Representatives Bankhead and White[6] both responded that the bill did not purport to make any such allocation (69 CONG. REC. 9648-49):

"Mr. COLTON. . . . So that when you say that the Government of the United States owns and controls waters within that State, can not you see that you strike at the very basis of our industrial life? You are saying that you are going to

---

[5](Footnote ours.) A substantial part of the proponents' four hours under H.R. Res. 208 had expired. 69 CONG. REC. 9491-99, 9506-09, 9510-13.

[6]Mr. Bankhead supported the measure and voted for the bill. 70 CONG. REC. 837.

Mr. White was a member of the committee which considered the fourth Swing-Johnson bill (*Hearings on H.R. 5773 Before the House Committee on Irrigation and Reclamation*, 70th Cong., 1st Sess., pt. 1, at II (1928)) and which reported favorably on the bill. H.R. REP. No. 918, 70th Cong., 1st Sess., pt. 1 (1928). He spoke in favor of the bill (69 CONG. REC. 9781) and voted against a motion to recommit, which would have defeated it (*id.* at 9989). He voted for the bill (as amended by the Senate), which became the Project Act. 70 CONG. REC. 837.

take it away from the States and place it in the Federal Government, and section 5 of this bill asserts that very principle. It provides that the Secretary of the Interior shall have control of all of the water stored in the reservoir and its delivery to any part of the river below. We deny that in principle and say it is against the very contract that this country has entered into with our Western States and contrary to the decisions of the United States Supreme Court.

"Mr. BANKHEAD. *As I understand, the whole theory of this bill is predicated on the recognition of the right that the gentleman is now asserting, for the reason that nothing can be done by Congress under this bill until the States acting through this compact shall determine what their respective rights are in reference to this matter.*

"Mr. COLTON. I will answer in this way: If the gentleman from Alabama were stating the proposition correctly, there would not be the slightest objection to this bill other than from the engineering and economic standpoint. I feel sure that it is not fully understood. We do not get full protection under this bill, for there is no seven-State compact. Arizona is not a party at all to this compact.

"She and her citizens may appropriate water at any time.

"Mr. DOUGLAS of Arizona. Arizona is a party to it, but Arizona has not ratified it.

"Mr. COLTON. Yes. The gentleman's statement is more accurate. Arizona can grant applications for water if my theory is correct, and

her citizens can acquire rights by prior usage to every bit of water belonging to the upper States. There is absolutely no protection against her and her citizens. The gentleman from Alabama [Mr. BANKHEAD] has stated the principle for which Utah is contending. We have been pioneers in the development of the Colorado River. We are anxious to see California prosper. This development, however, must not be made at the injury and expense of other States.

". . . .

". . . . And then this question is in my mind: Can Congress at this late date set aside the doctrine of first in use, first in right? Therefore, I say it is a serious question for us to allow this plant to use 10,500,000 acre-feet of water in the dam. Prior usage may give a right to it, and we may be estopped in the courts, at least, in asserting our right to it after it has been put to a beneficial use.

"Mr. ARENTZ. Mr. Chairman, will the gentleman yield?

"Mr. COLTON. Yes.

"Mr. ARENTZ. Following that line of 'first in use, first in right,' you know the land in Utah will not be subject to cultivation possibly for 50 years or 75 years. You want to stop the appropriation of water that should go to the land in Utah, and is there any other way of doing that except by a definite allocation of water to Utah, so that

you can hold it in perpetuity? I do not see what can be done.

"Mr. COLTON. *Congress can not allocate water.*

. . .

". . . .

"Mr. WHITE of Colorado. Will the gentleman yield?

"Mr. COLTON. Yes.

"Mr. WHITE of Colorado. *A while ago the gentleman stated that he doubted whether or not Congress had the power at this late date to nullify, abrogate, or change the doctrine of priority in the use of the water.*

"Mr. COLTON. *I think they have not that power.*

"Mr. WHITE of Colorado. *There is no attempt to do anything of that kind by this bill.* On the contrary, the bill expressly provides for a compact among six States, and the only State that has shown the slightest tendency to stay out of the compact is Arizona. Now, how can that affect a State that is not a member of the compact?

[9649]

"Mr. COLTON. It can not. Moreover, I admit we are somewhat protected so far as California is concerned, although even that is a question in my mind. As the gentleman from Arizona has stated, you have an interstate compact made by seven States, and I do not believe six States may make it binding on the other. I would like to hear the opinion of the gentleman from Virginia [Mr. MONTAGUE] on that. He is a good lawyer. That raises a serious question at least. Let me point

out to the gentleman just what this bill provides. In section 5 it is provided:

> That the Secretary of the Interior is hereby authorized, under such general regulations as he may prescribe—

"To do what?

> to contract for the storage of water in said reservoir and for the delivery thereof at such points on the river and on said canal as may be agreed upon, for irrigation and domestic uses.

"The CHAIRMAN. The gentleman has used 30 minutes.

"Mr. COLTON. I thank the Chair. If that does not give him absolute control of this water, or if it does not seek to give the Secretary of the Interior absolute control of this water, I can not understand the English language, and, gentlemen, that is exactly what we are objecting to. We are saying the Federal Government is trespassing upon territory that does not belong to it whenever it attempts to regulate or control the waters of a river when it is not for the express purpose of navigation and commerce. That is the only power the Congress of the United States has over the water in the streams of this country, and the basic principle upon which Utah has rested its opposition to this bill is that the States control the water for all other purposes." (Emphasis added.)

Representative Winter of Wyoming, reiterating the views he had expressed with reference to the third Swing-Johnson bill in the previous Congress (*supra* pp. 47-48) spoke in support of the bill (69 CONG. REC. 9653, 9655):

"All of the States excepting Arizona have at one time or another ratified, either conditionally

or unconditionally, the seven-State compact and later the six-State compact, which was an agreement among six States to be bound by the terms of the seven-State compact and waiving that portion of that compact which required ratification by seven States. Arizona has seen fit to refuse to enter the compact. I recognize her right to so refuse. I do not recognize and deny her right to prohibit the other six States of the Colorado River Basin or other five States or any number of States to enter into a compact and support in Congress a bill which incorporates, recognizes, and will put into operation such compact. *Arizona will not be bound by any compact to which she is not a party.* That is the limit of her right.

". . . .

"The upper States are protected. This bill gives them substantial, if not complete, protection. If the bill fails, an opportunity to secure the rights of the upper States to that extent will have been lost. If the bill passes, we receive a great measure of protection, even though but six States are bound and one, Arizona, is not.

". . . .

"Regardless of the theories of State rights as to the bed of the stream and control of the use of the water of this stream by the States, it being navigable, with which I agree, the Government controls the public lands above high-water mark, where the dam will be built and the land flooded by a storage of the water, and the public lands over which the canals must run to divert the water

around the dam for power, or to distant areas for reclamation in California and Arizona. Hence the Government can require Arizona, before she perfects any water rights, even though she is out of and not bound by the compact, to conform therewith, which means that the rights of the upper States to their equitable division of the water will be protected. . . ."

On May 24, 1928, Mr. Colton proposed an amendment to the bill requiring that an opinion as to the constitutionality of the measure be received from the Attorney General before the Secretary of the Interior commenced construction of the project. 69 CONG. REC. 9777. He argued that the measure was unconstitutional because it sought to allocate the waters of the river. This proposed amendment was defeated.[7]

---

[7]69 CONG. REC. 9777-78:

"Mr. COLTON. Mr. Chairman and members of the committee, this is one of the most important pieces of legislation that has been before this Congress in a generation. The gentleman from Colorado [Mr. TAYLOR] a while ago announced a doctrine, if I understood him correctly, which is absolutely new from a legal standpoint. He said there were three ways that the waters of this river could be allocated. First, by the Supreme Court of the United States; second, by a compact entered into between the States, and, third, under the provisions of this bill. If that means anything at all it means that the Congress of the United States can allocate the waters of that stream. Gentlemen, that is contrary to every principle upon which our whole body of irrigation law rests. If this bill does seek to [9778] divide or allocate the waters of the Colorado River, I maintain it is absolutely unconstitutional; that it is against all of the decisions of the court that have been made with reference to this question, and it declares an absolutely new policy.

"Congress has never heretofore in the history of this country undertaken to allocate the waters of a stream between the States. If this bill is passed and this measure becomes a law, certainly no expense should be incurred or any work commenced until the Secretary of the Interior has submitted it to the legal department of the Government and has found out whether or not it is constitutional.

"I am simply seeking by this amendment that this vital ques-

On May 25, 1928, Mr. Douglas' motion to recommit H.R. 5773 was defeated (69 CONG. REC. 9989), and the bill was passed (*id.* at 9990).

2. *Senate*

Senator Johnson had introduced S. 728 on December 6, 1927.[1] Following hearings in January 1928,[2] the bill was favorably reported from committee on March 20, 1928.[3] Senator Ashurst of Arizona filed minority views.[4] Senator Johnson spoke in support of the meas-

---

tion, which embarks the Government and the Congress upon a new policy with reference to the allocation of the waters of a stream, be submitted to the legal department of the Government. In the Western States we have maintained, and have maintained from the beginning, that the right to the ownership of the water is in the States. This undertakes to turn over the right to impound these waters, and section 5 provides that the Secretary of the Interior may arrange to distribute or deliver the water lower down the river and also under the canal that is provided for in this bill. That being true, we declare in effect that the water may be allocated by the Secretary of the Interior, and we declare further that the water may be controlled by him. That means that the Congress and the executive department are now embarking upon the policy of controlling, distributing, and allocating the waters of this river. If that is true, I say that before that new policy is adopted it should be submitted to the legal department of this Government for an opinion as to its constitutionality. In the case of Colorado against Kansas it was plainly held that the right to the water was in the States. The Government has no control except for navigation purposes. The gentleman's argument, pushed to its logical conclusion, is dangerous to the rights of all the States.

"The CHAIRMAN. The question is on the amendment offered by the gentleman from Utah.

"The question was taken; and on a division (demanded by Mr. COLTON) there were—ayes, 28, noes 45.

"So the amendment was rejected."

[1]S. 728, 70th Cong., 1st Sess., is Calif. Ex. 201 (Tr. 7712).

[2]*Hearings on S. 728 and S. 1274 Before the Senate Committee on Irrigation and Reclamation,* 70th Cong., 1st Sess. (1928). S. 1274, requiring seven-state ratification of the Compact, had been introduced by Senator Phipps of Colorado.

[3]S. REP. No. 592, 70th Cong., 1st Sess., pt. 1 (1928).

[4]*Id.* pt. 2.

ure on April 26,[5] and Senator Smoot of Utah answered with a two and one half hour speech in opposition,[6] in the course of which he voiced opposition to the purported federal allocation which he argued would be accomplished by the bill's approval of the Compact on a six-state ratification basis (see *infra* pp. 99-101). The proponents of the bill were unable to obtain Senate action on the measure prior to adjournment of the first session on May 29, 1928.

During debate on May 28, just prior to the Arizona filibuster which closed out the session, Senator King of Utah spoke on the proposal to make the Compact effective on six-state ratification. Senator Reed of Missouri[7] was unable to understand how Arizona could be bound by the Compact if she refused to ratify. Senator King explained that in his view Arizona's rights might not be adequately protected under the bill, a contention which Senator Kendrick of Wyoming[8] promptly denied (69 CONG. REC. 10265):

> "Mr. REED of Missouri. Then, as I understand, the Senator claims that the building of these works under the terms of this bill would result in the appropriation of the water by the

[5] 69 CONG. REC. 7245-53.

[6] *Id.* at 7515-44.

[7] Senator Reed voted for the bill. 70 CONG. REC. 603.

[8] Senator Kendrick was a member of the committee which held hearings on the second, third, and fourth Swing-Johnson bills. *Hearings on S. 727 Before the Senate Committee on Irrigation and Reclamation,* 68th Cong., 2d Sess. facing p. 1 (1925); *Hearings Pursuant to S. Res. 320 Before the Senate Committee on Irrigation and Reclamation,* 69th Cong., 1st Sess. II (1925); *Hearings on S. 728 and S. 1274 Before the Senate Committee on Irrigation and Reclamation,* 70th Cong., 1st Sess. II (1928). He was the author of the committee amendment to the bill requiring a limitation on California uses (70 CONG. REC. 386), and supported the bill and voted for its passage. *Id.* at 603.

construction of the dam which is farther down, and that a State which has not assented to the arrangement would be left without any protection? Suppose the State went on and used the water; suppose this proposed dam should be built and then after a while Arizona should herself build a dam, not having consented to this, could she not protect herself?

"Mr. KING. As I see the situation, there are two propositions involved. As I have stated, there are some who contend that the Government is not bound by any compacts among the States concerning the waters of the river, and that it may make such developments as it desires and such use of the water as it wishes if there is no inference with vested rights. Under this view, if the Government builds a dam and impounds water and utilizes a portion to generate power, neither Arizona nor any other State could prevent such action by the United States unless prior appropriations were interfered with. Arizona might be deprived of any further use of the waters of the river and vast areas of her fertile lands be thus condemned to perpetual sterility.

"If Arizona's rights are not protected by treaties or compacts to which the United States and all the States concerned in the river are parties, then appropriations made either by the Government or the States would jeopardize Arizona's right to use any of the waters of the river not heretofore appropriated by her. She could not even within her own borders divert water from the river for use by the State or the people of Arizona if such

diversion interfered with the appropriations so made by the Government or the States referred to.

"Mr. KENDRICK. Mr. President, will the Senator from Utah yield?

"The PRESIDING OFFICER. Does the Senator yield?

"Mr. KING. Yes.

"Mr. KENDRICK. *Mr. President, in answer to the question asked by the Senator from Missouri* [*Mr.* REED], *I desire to say that, as one of those who favor the Swing-Johnson bill, I do not concede that under the provisions of the bill there is any interference at all with the waters of Arizona. In so far as I know, the bill has no such provision and no such intention.*

"As a precautionary measure the committee within less than a month, in passing upon the Senate bill, included an amendment requiring California to agree by legislative act that she would not divert an amount in excess of that provided in the agreement entered into at one time by the States but not ratified by their legislatures. That was done in order to safeguard Arizona's share of the water. That amendment was agreed to by the Senator from California and accepted by the committee without a dissenting vote, as I recall, except that of the Senator from Arizona. It is not intended by this bill to impose any coercion upon the State of Arizona." (Emphasis added.)

Congress reconvened on December 5, 1928. During debate that day Senator Borah of Idaho[9] made it

[9]Senator Borah supported the bill and voted for passage of the measure. 70 CONG. REC. 603 (1928).

clear to Senator Hayden, who had been discussing upper basin hopes for seven-state ratification of the Compact, that the proposed legislation did not prejudice Arizona's interests in any way (70 CONG. REC. 70):

"Mr. BORAH. The Senator has reached a point in which I am very much interested. *Does the State of Arizona contend that any act of Congress can affect its rights in any way in case it does not consent to this compact?*

"Mr. HAYDEN. The State of Arizona positively contends that the Congress of the United States has no jurisdiction over appropriations of waters and that the Congress can not by any enactment in any manner affect the rights of that State or the jurisdiction of that State over the waters of its streams.

"Mr. BORAH. As a proposition of law, let us assume the Senator is correct; but, if that is true, are not the advocates of the bill taking the risk here and not the State of Arizona?

"Mr. HAYDEN. That is a correct assumption; but the last thing that the State of Arizona wants to do, and the last thing that the people of any of the seven States want to do is to throw this controversy into long-drawn-out litigation in the courts. . . .

"Mr. BORAH. I understand the Senator's position now. *I had the impression that the Senators from Arizona felt that legislation here might prejudice their rights, or in some way interfere with their rights; but it did not seem to me that*

that was the correct position. I understand now that it is simply the desire of the Senator to avoid long litigation.

"Mr. HAYDEN. Exactly so. . . ." (Emphasis added.)

On December 11, 1928, Senators Hayden and Borah resumed their discussion of whether the bill's approval of the Compact with only six-state ratification purported to make a "federal allocation" binding on Arizona. Senator Hayden attacked the bill as an attempted assertion of unwarranted federal power; Senator Borah totally rejected Arizona's characterization of the bill (70 CONG. REC. 390, 390-91, 391-92):

"Mr. HAYDEN. Mr. President, the State of Arizona feels that a gross injustice would be done to that State by the passage of an act of Congress which would provide that six States may divide the waters of a stream which belong to seven States without the consent of the seventh. No such bill should be introduced in Congress unless it were upon the assumption that Congress had the right and the power to divide the waters of the stream. . . .

". . . .

"That is what this bill does with respect to the Colorado River compact. It states that, whereas the legislatures of all of the seven States have not approved of the compact, nevertheless the Congress shall approve it and measures shall be taken to put that compact into effect whether the seven States have approved it or not.

". . . .

". . . . Therefore an assertion in this bill that the compact shall be approved, not when ratified by seven States but when ratified by six States, is a wrong and a wholly improper procedure for the Congress of the United States to follow. Therefore I have moved to strike out of the amendment offered by the Senator from Colorado the provision that the Colorado River compact shall be approved by the Congress of the United States to go into effect when ratified by six States and not by seven States.

". . . .

"Mr. BORAH. Mr. President—

"Mr. HAYDEN. I yield to the Senator from Idaho.

"Mr. BORAH. I merely wish to ask a question. Does the Senator from Arizona contend that the passage of this bill will affect any rights which Arizona has as a State or her citizens have by reason of being citizens of the State? Does he contend the passage of the bill could take away those rights, notwithstanding she has not entered into the pact?

"Mr. HAYDEN. We do not know. We look upon the passage of the bill as an assault upon the sovereignty of the State of Arizona. It could be based upon no other theory than that Congress has the right to apportion the waters of the Colorado River and its tributaries in accordance with a certain document, regardless of the wishes of the State of California. It seeks to impose the terms of the Colorado River compact upon the State of Arizona without the consent of that State. There-

fore we resist it. Whether all that we fear could be accomplished or not we do not know. I think the Senator from Idaho would be inclined to take the view that such a thing could not be done; the Supreme Court of the United States would not permit anything of that kind. To pass a bill of this kind, however, places the burden upon the State of Arizona of filing suit and of arguing it before the Supreme Court of the United States. No one can tell in advance what the decision of the Supreme Court will be. Therefore we feel justified in opposing the passage of any proposed legislation that in any manner may seek to divide the waters of the Colorado River, in which the State of Arizona has an interest, without the consent of that State.

"Mr. BORAH. *Mr. President, I do not desire to argue the question, but lest I may be misunderstood in the future—because this question is likely to come back here in another form with reference to some other bill—when I shall vote for* [391] *this bill I shall vote for it upon the supposition that a mere act of Congress cannot take away any rights of the State of Arizona.*[10]

". . . .

"Mr. BORAH. *I can see how Arizona might lose her rights, not by reason of this legislation, but by reason of acts of appropriation going on in carrying out the terms of this bill in case Arizona did not assert her rights in court. If she stood by and water were appropriated to beneficial*

[10](Footnote ours). Senator Borah voted for the bill. See note 9 *supra.*

use in other States, she might lose her rights. She would not lose them, however, [392] *by reason of this legislation, but by reason of the acts of appropriation.*

". . . .

"Undoubtedly, if Arizona stands idly by and does not protect her rights, either by appropriation or by such action in the courts as will protect them, she will lose her rights ultimately. That is one of the penalties of living under the doctrine of prior appropriation. If an individual has a farm or ranch, and the water is running by it, if he does not use it, his neighbor below him or above him can appropriate it and take it way from him, ultimately. So here, I presume, if Arizona should not act, she perhaps would be prejudiced by this legistion in the sense that the acts carrying it out would result in appropriations by others. *It would not be the act of Congress which took away her rights, however, but the acts of appropriation following as a result of it.*" (Emphasis added.)

The fourth Swing-Johnson bill was passed by the Senate on December 14, 1928, by a vote of 65 to 11, only 9 Senators joining Senators Hayden and Ashurst in opposing passage. 70 CONG. REC. 603.

The foregoing Hayden-Borah colloquy well illustrates the divergence of view between the opponents and proponents of the Swing-Johnson bills. Arizona feared that approval by Congress of the Compact without Arizona's ratification would constitute a "federal allocation" of the waters of the basin in violation of Arizona's sovereign interest. The arguments of the pro-

ponents, exemplified by Senator Borah's remarks, stressed that Congress could not make such a federal allocation and that the bill did not purport to do so. It is in this context that Arizona's assertion in her answering brief that "the bitter cry of the opposition was that, because of this federal allocation, the bills constituted an unconstitutional invasion by Congress of the rights of the States" and that "the defenders of the bills argued vigorously for their constitutionality" (Ariz. Ans. Br. 35) must be viewed.

In the Hayden-Borah debate, Senator Hayden expressed uncertainty as to whether Arizona's fears were well grounded. Asserting that "whether all that we fear could be accomplished or not we do not know," he suggested that Senator Borah was "inclined to take the view that such a thing could not be done; the Supreme Court of the United States would not permit anything of the kind." 70 CONG. REC. 390. Senator Borah agreed that Congress could not do so, and the Swing-Johnson bills did not purport to do so.

Whether or not Congress could have done so, Senator Borah's assertions as to the scope of the Swing-Johnson bills were confirmed by this Court in its decision on Arizona's challenge to the constitutionality of the Project Act. In *Arizona v. California,* 283 U.S. 423 (1931), Mr. Justice Brandeis stated the Arizona argument as follows (p. 458):

> "The further claim is that the mere existence of the Act will invade quasi-sovereign rights of Arizona by preventing the State from exercising its right to prohibit or permit under its own laws the appropriation of unappropriated water flowing within or on its borders."

He rejected it with the following explanation (p. 462):

> "The Act does not purport to affect any legal right of the State, or to limit in any way the exercise of its legal right to appropriate any of the unappropriated 9,000,000 acre-feet which may flow within or on its borders. On the contrary, section 18 specifically declares that nothing therein 'shall be construed as interfering with such rights as the States now have either to the waters within their borders or to adopt such policies and enact such laws as they may deem necessary with respect to the appropriation, control, and use of water within their borders, except as modified' by interstate agreement. As Arizona has made no such agreement, the Act leaves its legal rights unimpaired."[11]

[11]Immediately preceding this statement of its holding, the Court had pointed out (283 U.S. at 464): "Arizona has, of course, no constitutional right to use, in aid of appropriation, any land of the United States, and it cannot complain of the provision conditioning the use of such public land."

APPENDIX C

THE LEGISLATIVE HISTORY ITEMS SELECTED BY ARIZONA DO NOT RELATE TO ANY FEDERAL ALLOCATION WITHIN THE LOWER BASIN, BUT RATHER TO SUBSTANTIAL EFFECTUATION OF THE COLORADO RIVER COMPACT'S APPORTIONMENT TO THE UPPER BASIN WITHOUT ARIZONA'S RATIFICATION

Arizona asserts (Ariz. Ans. Br. 35):

> "The bitter cry of the opposition was that, because of this federal allocation, the bills constituted an unconstitutional invasion by Congress of the rights of the states."

Arizona does not identify "this federal allocation" which she asserts engendered opposition to the Swing-Johnson bills. However, the quoted assertion is made with reference to Arizona's argument that section 5 directed the Secretary of the Interior to make a compact-like allocation among Arizona, California, and Nevada. Arizona then quotes some 14 excerpts from the legislative history (*id.* at 35-43), pointing out that they "are but a few of the many which could be quoted" (*id.* at 43) in support of her argument. Over 60 citations to additional portions of the legislative history of the third and fourth Swing-Johnson bills are provided in a footnote. *Id.* at 43 n.56. Arizona contends that these numerous excerpts "all demonstrate a clear recognition that the Swing-Johnson bills, if enacted, would impose complete federal control over the water of the Colorado River in the Lower Basin and would provide

for a federal allocation of that water among the Lower Basin states."[1]

In fact, none of the extracts relate to the mandatory allocation Arizona finds in sections 5 and 4(a), only a few relate to section 5,[2] and all the rest are grossly misleading. The excerpts quoted by Arizona are primarily concerned with two questions: Does the United States own the unappropriated waters of the Colorado River basin, with the consequence that Congress could allocate those waters by statute, obviating the need for a compact? Would approval of the Colo-

---

[1]Ariz. Ans. Br. 43-44. In light of Arizona's alternative positions purportedly in support of the Special Master's Report, we are not certain whether Arizona uses the phrase "water of the Colorado River in the Lower Basin" to refer to the Special Master's "mainstream" (Lake Mead and below) or to the main Colorado River from Lee Ferry to the Mexican border. Under either alternative, we assume Arizona really means that the "federal allocation" was to be only among Arizona, California, and Nevada rather than the "Lower Basin states" (which would also include New Mexico and Utah).

[2]Arizona quotes (Ariz. Ans. Br. 40 & n.49) language from H. R. REP. No. 1657, 69th Cong., 2d Sess., pt. 1, at 11 (1926), that "all rights respecting water or power under the project are, under the terms of the bill, to be disposed of by contract by the government." The report undoubtedly refers to § 5, which provides that *stored water* may not be used without a contract with the Secretary of the Interior. The quoted language from the report must be read in light of the extensive legislative history which we treat in this and accompanying appendixes. See, particularly, the remarks of Rep. Smith of Idaho, chairman of the reporting committee and author of the report quoted by Arizona, made in debate after the bill had been reported (pp. 45-46 *supra*).

Elsewhere in her brief Arizona does quote statements by Delph Carpenter, upper basin spokesman, and Representative Colton of Utah which are directed specifically to § 5. Ariz. Ans. Br. 31-32, 33-34. Mr. Carpenter's remarks, which make clear that the language in § 5 upon which Arizona relies was prompted solely by upper basin considerations, are treated in appendix B *supra* pp. 37-41. Rep. Colton's arguments as to the purported assertion of federal power in § 5 were refuted by the proponents of the bill. Calif. Ans. Br. 51-53; see also app. B *supra* pp. 61-67.

rado River Compact with less than seven-state ratification be an unconstitutional "federal allocation"? It was the latter "federal allocation" which was the basis of the Arizona and Utah opposition to the Swing-Johnson bills, and to which most of the Arizona excerpts refer.[2a]

These two controversies which provide the context for the excerpts quoted by Arizona resulted from Arizona's refusal to ratify the Colorado River Compact, which had been executed at Santa Fe, New Mexico, on November 24, 1922, and unconditionally approved in 1923 by the legislatures of all of the Colorado River basin states except Arizona. Meanwhile, the first and second Swing-Johnson bills had been introduced in Congress in 1922 and 1923 providing for a dam at or near Boulder Canyon and construction of an all-American

---

[2a] A substantial majority of the extracts quoted or cited by Arizona to identify "this federal allocation" are statements by opponents of the bills, which, as we have pointed out (Calif. Ans. Br. 51) are entitled to little weight. For example, Arizona quotes in text statements of the major opponents of the bill in the House—Representatives Hayden and Douglas of Arizona and Leatherwood and Colton of Utah. Ariz. Ans. Br. 33-34, 38-39. In addition, the majority of the citations provided by Arizona in note 56 on pages 43-44 of her answering brief are to statements by opponents of the bill. For example, at least five of Arizona's ten citations to *Hearings on H.R. 6251 and H.R. 9826 Before the House Committee on Irrigation and Reclamation,* 69th Cong., 1st Sess. (1926), are to statements by Mr. Hayden. *Id.* at 15, 17, 19, 105, and 188-89. Similarly, at least 11 of Arizona's 21 citations to *Hearings on S. 728 and S. 1274 Before the Senate Committee on Irrigation and Reclamation,* 70th Cong.. 1st Sess. (1928), apparently are to statements by Arizona and Utah opponents of the bill. *Id.* at 39-40, 53, 64-67, 105-07, 120-21, 127, 144, 147-48, 152-54, 159-62, and 222-23. Finally, at least 11 of the 21 Arizona citations to *Hearings on H.R. 5773 Before the House Committee on Irrigation and Reclamation,* 70th Cong., 1st Sess. (1928), are the opponents' views. *Id.* at 45, 56-59, 120, 123, 128, 206-08, 212-13, 215, 228, 415-16, and 418-20.

We detail the refutation of these opponents' arguments by the proponents of the bill in appendix B.

canal. However, the upper basin states, fearing the priorities that would be acquired by the lower basin as a result of the increased uses made possible by the project, opposed the Swing-Johnson proposals in the absence of seven-state approval of the Compact. When it became increasingly apparent that Arizona would not ratify the Compact, the proponents of the Boulder Dam bill turned their efforts to ways and means to afford the upper basin states the protection of the Compact despite Arizona's refusal to ratify.

Three proposals to accomplish this objective resulted. The first proposal, that Congress simply allocate the unappropriated nonnavigable waters of the basin to achieve the interbasin allocation specified in the Compact, was expressly rejected; indeed, it was never seriously considered. The second proposal, that Congress condition the use of federal facilities and lands to the Compact provisions, was ultimately embodied in the Swing-Johnson bills. The third proposal, that the conditioning of federal facilities and lands be accompanied by at least six-state ratification of the Compact (including California), was adopted by Congress, but only after it had been implemented by requiring California to enact a limitation if Arizona should fail to ratify the Compact (Rep. 165).

Alleged Government Ownership of Unappropriated Nonnavigable Waters

The first proposal was advanced by Ottamar Hamele, counsel for the Bureau of Reclamation. He urged that the United States owned all of the *unappropriated nonnavigable* waters in the Colorado River basin and thus might allocate these unappropriated waters as it saw

fit. Consequently, he suggested that Congress simply allocate unappropriated nonnavigable waters in a manner producing an allocation between the basins in conformity with the provisions of the Colorado River Compact.

Arizona accurately quotes (Ariz. Ans. Br. 37) a portion of Mr. Hamele's testimony during hearings on the second Swing-Johnson bill in 1924, but omits that part of his statement explaining the basis of his theory, which we emphasize below:[8]

> "Mr. HAYDEN. Then, if it is possible by the language that you have suggested to effect an apportionment between the upper and lower basins without the approval of the compact, is it also within the power of the Congress to apportion the waters allocated to the lower basin by the compact between the States of Arizona, Colorado, and Nevada by a similar limitation?
>
> "Mr. HAMELE. I think it is. In order to understand that answer it might be well to amplify it with some comment on the different doctrines concerning the use of water in the arid West.
>
> *"There are two theories that are pertinent to this discussion. One is that the right to the use of water from innavigable streams in the arid West arises from the State; that the appropriator gets his right from the State. The other theory is that the right comes from the Federal Government; that the Federal Government still owns all of the unappropriated innavigable water of the arid West and, therefore, has the power to dispose of it.*

[8] *Hearings on H.R. 2903 Before the House Committee on Irrigation and Reclamation*, 68th Cong., 1st Sess. 882 (1924).

"The latter position is the position that has been taken for a good many years by the Federal Government. It has been under that theory that various developments have been carried on by the Bureau of Reclamation.

"Mr. LEATHERWOOD. You are carrying this only to streams designated innavigable?

"Mr. HAMELE. Yes. I am speaking of innavigable streams; and that is the position taken by the Department of Justice in the Wyoming-Colorado case.

"If that position be good, there certainly can be no question about the power of Congress to direct the use of this water without reference to the Colorado River compact." (Emphasis added.)

Hamele's premise was rejected by opponents and proponents of the Swing-Johnson proposals alike, particularly the representatives of the upper basin, who challenged the validity of the theory of federal ownership of unappropriated western waters. The position of the upper basin states on Hamele's proposal was set forth in a letter of April 7, 1924, from L. Ward Bannister, Denver attorney, to Representative Leatherwood of Utah:[4]

"Proposition 1. The rights of the upper States could be safeguarded by adding to section 8 of the pending bill a provision to the effect that all contracts made under the bill with water users should be subject to the Colorado River compact, whether ratified or not.

"Answer. Underlying this proposition by Mr. Hamele is the assumption that the Federal Gov-

[4] *Id.* at 900, 901, 908.

ernment had riparian rights prior to statehood and therefore still has a right of a property nature to make use of the unappropriated waters and therefore is in a position to say that such part of the unappropriated waters as the upper States would be entitled to under the compact could be allocated to the upper States without the necessity of a compact. Six of the seven States take the view that the Federal Government never had any riparian rights and therefore does not now possess any property right in respect to the use of the unappropriated waters. The Department of Justice at times has claimed, and Mr. Hamele claims, that the Federal Government had and has such rights as a matter of property, but the United States Supreme Court held in Kansas against Colorado[4a] that it is within the power of States to say whether the appropriation system rather than the riparian shall exist and not within the power of the Federal Government to say it shall not exist; and this case comes closer than does any other to a decision of the great question. The upper States can not run the risk of Mr. Hamele's underlying premise being sound.

". . . .

"Proposition 15. The Government probably could fix a division among Arizona, California, and Nevada of the use of the water from the Boulder Canyon project.

"Answer. Of this proposition Mr. Hamele is not sure. He simply says, 'Well, I rather think so.' 'I think that is rather a big question.' It is indeed a 'big question,' but it is no bigger than his

[4a] (Footnote ours.) Kansas v. Colorado, 206 U.S. 46 (1907).

plan to have the Government, so far as the Boulder Canyon project is concerned, divide the water of the river between the upper and the lower States, and it is attended by the same reasons pro and con as to the authority of the Government to do this and by the same grave doubts. The upper States can not afford to run the risk involved in these doubts, and therefore can not afford to let the pending bill pass in advance of the ratification of the compact."

Two years later, presenting the upper basin amendments to the third Swing-Johnson bill during the House hearings, Delph Carpenter forcefully stated the upper basin's views of Mr. Hamele's suggestion:[5]

"Mr. CARPENTER. In our proposed amendments we are trying to fortify against any claim that may be asserted upon any theory of law. *All the upper States concur in the view that the assertion* [201] *made by the United States attorney to the effect that the United States owns all the unappropriated waters of the West and that they are wholly removed from State control, is absolutely untenable, unconstitutional, and unconscionable,* but nevertheless the assertion is being made—is now being pressed by the attorneys for the Department of Justice before every Federal court in the West wherever a case can be brought before that court that could possibly involve that issue.

"Lest some court might so hold, and in the event the Federal courts decide that such is the rule, then

[5] *Hearings on H.R. 6251 and H.R. 9826 Before the House Committee on Irrigation and Reclamation,* 69th Cong., 1st Sess. 200-01 (1926).

we insist that the provisions of this bill be strong enough and clear enough so that the upper States are protected in this—that these attorneys for the departments of government in their zeal and ambition to override State authority, can not come in later and say, 'Yes, you sought to provide protection in this bill, but it did not bind the interests of the United States—the United States owns all these waters, therefore your efforts to protect your upper basin States are futile.'

"This is one of the paragraphs it is proposed to use to offset any such argument. I recall reading the discussion contained in the previous hearings to which you have referred, and my recollection is that the answers there were addressed to the theory of law advanced by Mr. Hamele to the effect that because the Government in his bureaucratic judgment is the proprietor and sovereign and controller of all the waters of the western streams, therefore a mere assertion of a waiver or provision to the effect that the United States is bound by the provisions of the Colorado compact would be a complete solution of the question and would impress that compact upon the river with full effectiveness, overriding all of the States and making the compact of complete force and effect both as to State and national jurisdiction.

"Upon that theory the Federal Power Commission advanced the idea that by putting provisions in the power licenses the rights of the upper States could be completely protected. It was to the matter of completeness of protection that the remarks of Mr. Bannister were addressed, and of

course we concur in his views in that respect. But, be that as it may, section (c)[6] is for the purpose of controlling the situation if it be held that the views of all the States of the West and all the courts of the States and the views expressed by the Supreme Court of the United States up to the present time are all wrong, and it should later be decided that the United States is the owner of the water.

"Mr. WINTER. And you might add the reclamation law itself.

"Mr. CARPENTER. Yes; section 8."

Then, as now, the federal-state controversy over ownership and control of unappropriated waters in the western states raged heatedly. It is clear, however, that whatever the merits of the Hamele contention, the Swing-Johnson proposals did not proceed on that

---

[6](Footnote ours.) Mr. Carpenter was referring to an amendment which the upper basin proposed to add to the bill as § 8-(c). It provided:

"The United States, its permittees, licensees, and contractees, and all users and appropriators of water stored, diverted, carried and/or distributed by the reservoir, canals, and other works herein authorized, shall observe and be subject to and controlled by said Colorado River compact in the construction, management, and operation of said reservoir, canals, and other works and the storage, diversion, delivery, and use of water for the generation of power, irrigation, and other purposes, anything in this Act to the contrary notwithstanding, and all permits, licenses and contracts shall so provide." *Id.* at 117. This paragraph is now § 8(a) of the Project Act, Rep. app. 389.

Its purpose was stated by Mr. Carpenter to be "to make the compact binding upon the property and interests of the United States and those claiming by and under the United States and on all users of water stored, diverted, carried, or distributed by the works authorized by this bill." *Id.* at 197.

theory.[7] This is made abundantly clear in an exchange between Mr. Bannister and Senator McNary,[8] chairman of the Senate Irrigation and Reclamation Committee, during hearings on the Swing-Johnson proposals in 1925. Mr. Bannister had been arguing that Congress did not have the power to divide water among the states,[9] when Senator McNary interrupted and this col-

---

[7]The Department of Justice still adheres to the view that the federal government owns all of the unappropriated waters upon the public lands. *Hearings on Federal-State Water Rights Before the Senate Committee on Interior and Insular Affairs,* 87th Cong., 1st Sess. 47-48 (1961). Though this theory apparently is the basis of the argument presented in support of the Master's decision with respect to water rights for federal reservations (U.S. Ans. Br. 61-65), it is not the argument advanced by the United States to support its assertions that Congress authorized the Secretary of the Interior to allocate the stored waters conserved by Hoover Dam. See U.S. Op. Br. 38 n.15; U.S. Ans. Br. 22-26.

[8](Footnote ours.) Arizona quotes (Ariz. Ans. Br. 38) a statement of Senator McNary during hearings on the second Swing-Johnson bill that "under a certain section of this bill, as I recall it, the Secretary of the Interior could allocate these waters among the different States for the purpose of irrigation." *Hearings on S. 727 Before the Senate Committee on Irrigation and Reclamation,* 68th Cong., 2d Sess. 155 (1924). Senator McNary does not specify, nor does Arizona suggest, the section of the bill to which he referred. The language of § 5, upon which Arizona and the Special Master rely as the basis for the Secretary's authority to make a contractual allocation among Arizona, California, and Nevada, did not appear until almost two years later, during hearings on the third Swing-Johnson bill.

[9]Arizona relies upon Mr. Bannister's 1924 statement that if the stream is navigable "then the Federal Government may do anything on that stream necessary to promote navigability; in other words, it may require the release of all waters from the upper States and the lower States both." Ariz. Ans. Br. 36, quoting from *Hearings on H.R. 2903 Before the House Committee on Irrigation and Reclamation,* 68th Cong., 1st Sess. 181 (1924). Arizona's use of this statement, which is irrelevant in this context, is misleading.

There can be no quarrel with Mr. Bannister's statement of the power of Congress to control navigable waters for navigation purposes. *Cf.* United States v. Gerlach Live Stock Co., 339 U.S. 725, 737 (1950), quoted in Calif. Ans. Br. 119-20. Arizona omits, however, Mr. Bannister's pronouncement a few pages

loquy ensued:[1]

"The CHAIRMAN [McNary]. Well, Mr. Bannister, we are not asserting that power anywhere down the line. We are perfectly familiar with the statement you are making. It is not a part of this controversy. We are going upon the theory that your States are going to do that by a compact.

"Mr. BANNISTER. Very well, Mr. Chairman, I will not continue with that part.

"The CHAIRMAN. Yes; certainly; it is purely academic. It is not a part of this controversy.

"Mr. BANNISTER. Yes. Well, I had heard some contention to the contrary by attorneys in the Department of Reclamation.

"The CHAIRMAN. *Oh, well—*

"Mr. BANNISTER. And there will be no such authority to divide predicated upon the theory of

---

later on the issue which is central to the Arizona position (*Hearings on H.R. 2903, supra* at 194-95):

"When we fall back upon the fundamental premise that Congress has simply the powers either expressly delegated or delegated by implication by the Constitution, we run up against the question of where is the power mentioned in the Constitution, which either by express language or by implication, gives to Congress the right to effect a division of water between States? . . . [T]here is nothing in the Constitution that says that the Federal Government has jurisdiction over an interstate stream.

". . . .

"So, gentlemen, there is nothing in the Federal Constitution upon which to base the power of the Federal Government to divide this water among the States. . . .

". . . .

"If then, Congress has no authority to effect a division, it follows that nothing can be put in this bill that would confer that authority upon Congress and make the provision thus inserted valid and binding."

Accord, id. at 207, 1962.

[1] *Hearings Pursuant to S. Res. 320, 68th Cong., 2d Sess., Before the Senate Committee on Irrigation and Reclamation,* 69th Cong., 1st Sess. 753-54 (1925).

ownership of water, Mr. Chairman. I will not develop that.

"The CHAIRMAN. *No such thought ever entered the imagination of any Member of the Congress.*

"Mr. BANNISTER. I am glad to hear that, for some of the attorneys to whom I have referred have taken the opposite view. . . ."

Conditioning Use of Government Property Upon Compliance With Colorado River Compact

A second proposal was that the federal government employ its power to attach reasonable conditions to the use of federal property, so that all water rights acquired through the federal facilities provided for in the Swing-Johnson bills, as well as all privileges respecting use of the public domain convenient or necessary for the use of waters of the Colorado River, be made expressly subject to the terms of the Colorado River Compact. Consequently, users in Arizona who wished to use the stored water made available by the proposed dam would have to agree to subject such uses to the Compact. Similarly, the Government would condition use of needed rights of way across the public domain in Arizona on an agreement to subject uses of water to the Compact.[1a]

This proposal was advanced during hearings on the second Swing-Johnson bill by William J. Carr, a California attorney, a portion of whose testimony in support of his proposal Arizona quotes in her answering brief. Ariz. Ans. Br. 36-37. However, Arizona omits the vital passages from Mr. Carr's testimony

[1a] See Project Act §§ 8(a), 13(b), (c), and (d) (Rep. app. 389, 393-94). See also Arizona v. California, 283 U.S. 423, 464 (1931), quoted *supra* p. 78 n.11.

which clearly demonstrate that he based his proposal solely on the power of the federal government to impose conditions on the use of federal property, particularly the proposed dam and the public domain. Mr. Carr expressly disavowed any assertion of a general federal power to allocate the waters of the basin:[2]

> "Mr. LEATHERWOOD. And it would be your contention that Congress has power to allocate the waters of this river as between the Colorado River States?
>
> "Mr. CARR. *I do not say that.* I said that the Congress in this legislation, by reason of this being a Government project, by reason of the Government's control of uses of water derived from the project, and by reason of the fact that title to water rights in California is derived from the Government, by reason of Government appropriations and by reason of the fact that appropriations of [571] water will require use of the public domain, can attach conditions binding upon the lower basin that will protect the upper basin to the same extent that the compact would. In brief, the Government will occupy a strategic position by reason of the project and its ownership of the public domain, such that it may and should so limit rights which will grow out of the project that they will not infringe on rights of upper States, just as such limitations are customarily made in the case of permits issued under the Federal water power act.
>
> ". . . ."

[2] *Hearings on H.R. 2903 Before the House Committee on Irrigation and Reclamation,* 68th Cong., 1st Sess. 570-71 (1924).

"Mr. HAYDEN. . . . If Congress has the power to make the apportionment, why have the compact?

"Mr. CARR. There might be conditions where they could not do it.

"Mr. HAYDEN. What are those conditions?

"Mr. CARR. In States, for instance, where there was very little public domain it might not be possible; but where there is such a tremendous amount of public domain, which is something Congress has control over, they can reach all water rights that will be touched in the lower States; but I think your question is really directed to a question of the broad, general policy as to whether Congress in exercise of a broad policy should undertake to do anything like that, and I think Congress would not ordinarily undertake to divide water rights; but here is a case where the matter has been very fully considered, where six out of the seven States have ratified, where, as I understand it, in the other State they lacked one vote of ratification, where apparently there is a pretty general consensus of opinion as to what the fair and equitable division is." (Emphasis added.)

Arizona quotes the following portion of the testimony of Charles L. Childers, then the attorney for Imperial Irrigation District, during hearings on the fourth Swing-Johnson bill (Ariz. Ans. Br. 41-42):

"It is somewhat doubtful if a compact respecting these questions, solemnly approved by the legislatures of the several States and by the Congress, would of itself be so effective as a means

of allocating and administering the allocation of water as an act of the Congress. Compacts for this purpose have not been adjudicated, just how rights will be affected are not known, and the question of State and Federal control has not been settled."

Arizona asserts that by the quoted testimony Mr. Childers conveyed his view "that he believed Congress could and should provide for an allocation of water *in the Lower Basin.*" *Id.* at 41. (Emphasis added.)

Had Arizona provided the context of Mr. Childers' testimony, it would have revealed that he was discussing (1) the Colorado River Compact and (2) the upper basin proposal to have Congress subject lower basin uses to the Compact by conditioning federal rights of way over the public domain.

Mr. Childers' statement immediately following the quotation selected by Arizona reveals that he was discussing the Colorado River Compact:[3]

> "California has been and is willing to be bound by the compact, but if the compact can not be had is there any reason why the Congress, who has the power to do this job in an equitable way, should not proceed to do it? We had hoped, and still hope, to have a seven-State compact. When that seemed impossible we were willing to have a six-State compact and to give protection to upper-basin States, **[445]** the authors of the bill gladly accepted the amendment to the effect that nothing could be done under the bill until at least six States had approved. When the bill began to make prog-

[3] *Hearings on H.R. 5773 Before the House Committee on Irrigation and Reclamation,* 70th Cong., 1st Sess. 444-45 (1928).

ress Utah withdrew her six-State approval, and now her governor comes forward and states that they will not be satisfied with a six-State compact and makes the same demands that are made by Arizona. California is willing to have a seven-State compact, but that apparently can not be had. She is willing to have a six-State compact. That apparently can not be had; she is willing to be bound by a five or four State compact, but gentlemen of the highest integrity state to your committee that they will not be satisfied with less than a compact binding six States.

"With these conditions seeming wholly impossible and with Congress having the power to proceed and do equity to all the States, we feel that Congress should find some way to proceed."

Just before he made the foregoing statement, Mr. Childers expressed his approval of the proposal to have Congress employ its power over the public lands to effectuate the Colorado River Compact:[4]

---

[4] *Id.* at 444. Earlier in his testimony, Mr. Childers, in discussing § 12(c) of the bill (now 13(c)) with Mr. Douglas of Arizona, had made the same point (*id.* at 438):

"Mr. DOUGLAS. So that the effect not only of your ratification but of this section (c) or subsection (c) of section 12 is to use the power of Congress to force the terms of the Colorado River compact upon a State that does not or may not choose to enter into that compact?

"Mr. CHILDERS. It is to impress the compact upon the United States and the public lands. Now, if anyone in Arizona or elsewhere wants to use the property of the United States, it should not object to the terms that the United States imposes. If that should be the Colorado River, all well and good.

"Mr. DOUGLAS. In other words, if the State of Arizona should apply additional storage to any of its lands on any of its tributaries, it would have to come into the Colorado River compact.

"Mr. CHILDERS. No, sir; it would not be obliged to come into the compact at all; but if it used the property of the United States, the water user would have to agree that his water, if taken, is taken in accordance with the terms of the compact."

"It is stated that Congress has no authority or power to apportion the use of water between the States. As such, this may or may not be true. Without entering into a legal argument as to the control and disposition of unappropriated waters, there is no doubt that Congress has plenary power and supreme sovereignty and jurisdiction over the public lands. . . . The United States owns substantially all of the lands on either side of the Colorado River from its source to the Mexican line. It is doubtful if any structure of any kind can be placed upon the main stream or upon the main portions of the tributaries of the Colorado River without the consent of the United States, and it is equally doubtful if any water or power can be taken from the main stream of the river or its major tributaries without crossing Government property."

Conditioning Effectiveness of Bill on Six-State Compact Ratification

The third proposal originated with the spokesmen for upper basin states. Considering that neither the Hamele proposal, which they considered unsound and objectionable, nor the Carr proposal could adequately protect their interests, they turned to a third alternative. They proposed that the Project Act be authorized when the Compact had been ratified by six states, without awaiting action by Arizona. In furtherance of this plan, Colorado, New Mexico, Utah, Wyoming, and Nevada in 1925 reratified the Compact and waived the requirement of seven-state ratification. California, however, conditioned its six-state ratification in 1925 on Congress' authorizing the construction of a dam pro-

viding at least 20,000,000 acre-foot storage capacity.

Consequently, the third Swing-Johnson bills introduced in the 69th Congress authorized a reservoir of 26 million acre-foot capacity and approved the Colorado River Compact when it had received six-state ratification.[5] The upper basin representatives then proposed a number of amendments to the bill designed to give them added protection if Arizona refused to ratify. These amendments were based on the federal government's power to condition the use of federal property and privileges, along the lines previously suggested by Mr. Carr in connection with the second Swing-Johnson bill (*supra* pp. 91-93), and were designed to subject to the Compact all future uses in Arizona to the extent possible by this means.

Arizona viewed the proposal to grant federal approval to the Compact when ratified by only six of the seven basin states as an unconstitutional attempt to allocate the waters of the basin, including those from the Gila in Arizona, in accordance with a Compact which Arizona had not ratified.[6]

Utah, having become disenchanted with six-state ratification of the Compact and having repealed her ratification waiving seven-state approval (Rep. 25), also opposed the proposal. Utah spokesmen asserted Congress could not allocate the basin waters by approving the Compact without Arizona's consent. Thus Arizona would be free to make appropriations which, added to California's appropriations, would exceed the lower ba-

---

[5]H.R. 9826 (Calif. Ex. 197, Tr. 7709) and S. 3331 (Calif. Ex. 198, Tr. 7760), §§ 1 and 12.

[6]See the statements of Senator Hayden and Rep. Douglas quoted in app. B *supra* pp. 41 n.10, 58, 73-74.

sin's Compact allocations.[7] Most of the extracts cited by Arizona are taken from the discussions in the hearings and debates on the third and fourth Swing-Johnson bills relating to this controversy. The Utah and Arizona opponents of the six-state compact proposal argued that federal consent to the Compact when less than all seven of the states had ratified constituted an attempt to effectuate a "federal allocation" of the waters of the Colorado River system which was beyond the constitutional powers of Congress.

That it was such a "federal allocation" that the opponents of the bill were concerned with is amply illustrated by the statements of Governor Dern and Senator Smoot of Utah made during the hearings and debates on the fourth and final Swing-Johnson bill and which Arizona quotes only in part in her answering brief.

For example, Arizona quotes part of the statement of Governor Dern of Utah during the House hearings on the third Swing-Johnson bill (Ariz. Ans. Br. 40-41). Even the portion cited by Arizona indicates on its face that the Gove nor was talking about approval of the Colorado River Compact under the six-state ratification alternative provided for in that bill. The part of his statement following the portion quoted by Arizona makes this abundantly clear. We emphasize it in the following quotation:[8]

> "Under the Johnson bill the essence of the compact idea is almost removed, and the Federal Government is given outright authority to divide the water of the river. That the division is to be

[7] See the explanation given by Representative Leatherwood of Utah, *supra* pp. 43-44. See also Rep. 165.

[8] *Hearings on H.R. 5773 Before the House Committee on Irrigation and Reclamation*, 70th Cong., 1st Sess. 215 (1928).

made according to the terms of the Colorado River compact is a mere incident. The scheme is Federal division of the water, and the compact is no longer a compact but merely a formula. If Congress at this session can divide the river according to this formula, then a future Congress, again succumbing to the pressure of intensive propaganda, may amend the law and divide the river according to some other formula without consulting the States at all.

> *"The Swing and Johnson bills pretend to allocate to the upper basin States in perpetuity the amount of water specified in the compact; but what authority has Congress to allocate water? . . ."* (Emphasis added.)

Governor Dern later supplied the answer to his rhetorical question "what authority has Congress to allocate water?" He stated that he did not believe that Congress possessed the power to make the federal allocation which he considered inadequate even if valid:[9]

> "We agree that there are but two methods to divide the water, either by interstate agreement or by action in the United States Supreme Court. That is the very reason why we hold that Congress is not competent to legislate on this subject, and should not be asked to meddle with strictly state business. We are of the opinion that Congress has no authority whatever to undertake to divide the water of the Colorado River."

Arizona also quotes (Ariz. Ans. Br. 43), without the context, remarks by Senator Smoot of Utah on the

[9] *Id.* at 221.

floor of the Senate in opposition to the Swing-Johnson bill (69 CONG. REC. 7538):

> "The bill is predicated upon the assumption that the Federal Government has very much greater rights in the Colorado River and older streams generally in the country than has ever been recognized by any judicial tribunal. Indeed, the theory upon which this bill must be upheld, if it is upheld at all, is that the Federal Government is sovereign over the Colorado River, and that Congress may determine how the waters of the Colorado should be divided between the States."

Senator Smoot's remarks immediately following those quoted by Arizona also demonstrate that the "federal allocation" which he was discussing was the proposal to approve the Compact with less than full seven-state ratification *(ibid.)*:

> "Now, the bill provides that it shall become effective only upon the ratification by six of the States in the Colorado River Basin of the Colorado River compact. There are, however, seven States in the Colorado River Basin, and it was originally intended that the Colorado River compact should be a compact between these seven States. The fact that one of the States is now left out of the compact, and that the rights of this State are to be determined not by its consent given in a compact or otherwise but by an agreement between six other States and the Federal Government, violates every principle for which the compact idea was originated. In other words, it makes no difference whether one State, two States, three States, or four

States are left out of the compact, the principle that the Federal Government controls the waters of the Colorado River is established just as much by one case as by the other.

". . . .

"Now, however, an entirely different idea is substituted. Because it has been difficult, and thus far impossible, to secure ratification of this seven-State compact by the State of Arizona, it is now proposed to shift to the position that the Federal Government and not the States shall control the waters, and that six of the States and the Federal Government may enter into a compact under which the amount of water which Arizona may take from the stream will be limited and determined."

Most dangerously misleading, however, is Arizona's quotation (Ariz. Ans. Br. 42-43) from Senator Johnson's majority report on the fourth Swing-Johnson bill, in which he asserts that the bill presents a unified plan "for the allocation among the States desiring that allocation of the waters of a great river to which all are entitled."[10] A reading of the report leaves no doubt that Senator Johnson was referring to the "allocation" made by the Colorado River Compact between the upper and lower basins. His description of the "allocation" as "among the States desiring that allocation" is an obvious reference to the controversy over whether any nonratifying state would be bound by the Compact. Later in his report, Senator Johnson devotes three pages to a discussion of the Colorado River basin controversy and the Compact.[11] Here he amplifies the obvious

[10] S. REP. No. 592, 70th Cong., 1st Sess., pt. 1, at 7 (1928).
[11] *Id.* at 14-16.

frame of reference of the extract quoted by Arizona when he reports that "the passage of the bill, it is thought, will very early make the compact effective and settle an interstate controversy of long standing."[12]

The foregoing illustrations are typical of what Arizona has characterized as the "true" and "actual" legislative history (Ariz. Ans. Br. 13, 17) and presented to this Court in support of her argument that section 5 of the Project Act authorized the Secretary of the Interior to make a compact-like contractual allocation of "mainstream" water among Arizona, California, and Nevada.

We think it may be safely assumed that Arizona chose to place in the text of her answering brief those extracts lending most semblance of support to her argument. The context we have provided for most of those extracts, in this appendix as well as in others, clearly demonstrates that they do not support the Arizona assertion. We have examined the many extracts Arizona says (Ariz. Ans. Br. 43 & n.56) could be quoted in support of her argument (but are not), and think it fair to state that they are even less reliable and persuasive than those which we have treated.

[12] *Id.* at 16.

APPENDIX D

THE LEGISLATIVE HISTORY REFUTES ARIZONA'S CONTENTION THAT THE PROPONENTS AND OPPONENTS OF THE SWING-JOHNSON BILLS BELIEVED THE PROJECT ACT WOULD ABROGATE INTERSTATE PRIORITY PRINCIPLES WITHIN THE LOWER BASIN

Arizona attacks California's argument that "the Project Act preserved priority of appropriation and equitable apportionment in the 'mainstream' and in every other part of the Colorado River system in the lower basin." Calif. Op. Br. 159. California's "historiographers" are chided for relying on "only a few isolated statements culled out of the voluminous historical record" which "can hardly be dignified as 'legislative history.'" Ariz. Ans. Br. 17. The "few isolated statements" which Arizona disparages are the views of both of the authors of the bill (Representative Swing and Senator Johnson) and of the author of section 18 (Senator King of Utah), one of the most important provisions supporting our contention.[1] Calif. Op. Br. 146-47, 148-49.

After chastising California, Arizona presents to the Court what she characterizes as "the true legislative history." Ariz. Ans. Br. 17. Arizona's offer consists in major part of statements of Representative Swing and Senator Johnson (*id.* at 18-20) which, purportedly,

---

[1]Moreover, we do not rely only upon statements in congressional hearings and debates. The plain language of the statute, the purposes Congress was trying to achieve in the Project Act, the policy underlying the universal adoption of the priority principles in the arid West, and the congressional understanding of its constitutional power also sustain our position. See our reply brief, pt. III *supra*.

"[show] overwhelmingly the full realization by both friend and foe of the Swing-Johnson bills that they would inevitably supersede the interstate operation *in the Lower Basin* of the doctrines of prior appropriation and equitable apportionment." *Id.* at 17-18. (Emphasis added.) In fact, those statements do not relate to the question of *intra*basin priorities at all. The context of those excerpts from "the true legislative history" is provided by the portions of the statements which Arizona does not quote; that context clearly demonstrates that the Swing and Johnson statements relate solely to the question of *inter*basin rights as between the upper and lower basins under the *Colorado River Compact*.[2]

What the legislative history does reveal is that both proponents and opponents of the Swing-Johnson bills were in agreement that priority of appropriation would survive enactment of the Project Act and retain its interstate applicability in the lower basin except as modified by interstate agreement. The pertinent legislative history was engendered by two themes dominating the consideration of the Swing-Johnson bills. First was the upper basin concern with the threat to its future development if Arizona refused to ratify the Colorado River Compact. Second was Arizona's apprehensions with respect to California's priorities in the absence of a tri-state compact. The recognition that principles of priority of appropriation would retain interstate applicability was the reason why the upper basin was reluctant to give its support to the bill in the absence of a seven-state compact and why Arizona refused to ratify the Compact and opposed the Swing-Johnson bills in the absence of a tri-state compact modifying

[2]We provide that context *infra* pp. 121-27.

those priority principles. Both propositions are illustrated by the following statement of Governor Dern of Utah during hearings on the fourth Swing-Johnson bill. Governor Dern stated, in effect, that California would appropriate most of the lower basin main stream supply and that a nonratifying Arizona would not be prevented from asserting her priorities against the upper basins:[3]

> "California is a State of quick development. It is ready to use its water in the near future, and use all the water that is allocated to the lower basin before Arizona begins. When Arizona commences to take water the lower-basin water will all be gone, and the water that Arizona takes will come out of water allocated to the upper basin by the compact, but not as yet used by the upper basin."

Arizona's spokesmen repeatedly asserted that, absent a tri-state compact, California would both expand her existing appropriative rights and also acquire new prior rights. Thus, Arizona feared that California would preempt the lower basin's main stream supply, to Arizona's detriment. The Arizona view was emphatically stressed during the House hearings on the third Swing-Johnson bill,[4] when it had become apparent that the upper basin states, with the possible exception of Utah, were prepared to accept the bill with six-state ratification of the Compact. In Representative Hayden's opening statement in opposition to the bill, he force-

---

[3] *Hearings on H.R. 5773 Before the House Committee on Irrigation and Reclamation,* 70th Cong., 1st Sess. 244 (1928).

[4] *Hearings on H.R. 6251 and H.R. 9826 Before the House Committee on Irrigation and Reclamation,* 69th Cong., 1st Sess. (1926).

fully stated the need for a tri-state compact to protect Arizona against California priorities:[5]

> "My position has always been that whenever the Colorado River compact is approved by my State Arizona should insist that there be no development on that river in the lower basin until a supplemental compact had been agreed to by the States of Arizona, California, and Nevada. The compact contemplates and provides a means for the negotiation of just such agreements. Arizona stands in even greater need for protection against prior appropriations in California than do the States of the upper basin and has the same reasons for blocking development until her future is provided for and protected."

During the testimony of Secretary of Commerce Hoover, Mr. Hayden reiterated Arizona's apprehensions:[6]

---

[5] *Id.* at 17.

[6] *Id.* at 49. Nevada spokesmen shared Mr. Hayden's view. For example, Arizona cites (Ariz. Ans. Br. 39) an exchange between Representative Leatherwood and Charles P. Squires, a member of the Colorado River Commission of Nevada, during hearings on the third Swing-Johnson bill, to show that both men understood that the bill would vest control of the water in the federal government. A close reading of the colloquy indicates that it does not have the far-reaching implications Arizona suggests. Most important, however, we quote here the immediately preceding portion of that exchange (not quoted by Arizona) which clearly demonstrates that, whatever the views of Messrs. Squires and Leatherwood may have been as to the extent of federal authority provided for by the bill, Mr. Squires assumed that, absent a compact among Arizona, California, and Nevada, priority of appropriation would control rights among those three states. Representative Leatherwood did not disagree (*Hearings on H.R. 6251 and H.R. 9826, supra* note 4, at 43):

> "Mr. LEATHERWOOD. Does your State believe in the doctrine of prior appropriations?
>
> "Mr. SQUIRES. We have such a doctrine in force within the State.

"There is a strong feeling in Arizona that unless we have a thorough understanding with California and Nevada prior rights will be acquired to the use of the water, particularly in California, which will prevent development within the State of Arizona."

Arizona quotes a statement made during these hearings by S. G. Hopkins, Colorado River Commissioner of Wyoming (Ariz. Ans. Br. 39-40), which concludes that "if the Government constructs this reservoir you have only to go to the Government and obtain your water contracts and irrigate your land" (Ariz. Ans. Br. 40). The Arizona extract is taken from a colloquy between Mr. Hopkins and Representative Hayden who was again explaining how California would acquire water rights through the project which would be prior to Arizona's. Mr. Hopkins did not deny Senator Hayden's assertion that California users would acquire priorities as a result of any uses made possible by the dam. Furthermore, Mr. Hopkins made clear that the contracts were to protect the upper basin's Compact apportionment. Here is Arizona's extract, set in its context:[7]

"Mr. HAYDEN. We believe our rights will be jeopardized for the reason that the land in Cali-

---

"Mr. LEATHERWOOD. Does your State undertake to control and dispose of the unappropriated water within the boundary of the State?

"Mr. SQUIRES. We recognize the right of prior appropriation.

"Mr. LEATHERWOOD. Do you believe in that right?

"Mr. SQUIRES. I believe it is a right that can be properly carried out.

"Mr. LEATHERWOOD. Do you think it ought to be preserved to the States?

"Mr. SQUIRES. If there is no compact between the three States, or between the seven States or the six States, the prior appropriation would naturally still remain."

[7] *Hearings on H.R. 6251 and H.R. 9826, supra* note 4, at 108.

fornia is easily susceptible of irrigation and the cost of diversion would not be excessive. There is a large area of land in the Imperial Valley, the Coachella Valley, and the Palo Verde Valley. All of it can be irrigated below the Boulder Canyon dam. In addition to that, filings have been made by the City of Los Angeles for a domestic water supply which will take a large quantity of water from the Colorado River.

"Being neighbor to a rich State and one that is ready to proceed, *we in Arizona believe that the California lands will be put under cultivation first and thereby acquire water rights which would be prior to ours.* Consequently when the time came to reclaim lands in Arizona there may be no water left for them, any more than there would be for the States of the upper basin without the Colorado River compact.

"Mr. HOPKINS. This reservoir will be a great benefit to Arizona in the irrigation of her lands below the reservoir. There is nothing in the bill which would prevent Arizona from taking water from the reservoir and utilizing it on her land. *The only thing is that the water will be subject to the terms of the compact.* The water is appropriated now, and you can not irrigate the Parker project with the present flow of the stream. If the Government constructs this reservoir you have only to go to the Government and obtain your water contracts and irrigate your land." (Emphasis added.)

Senator Hayden made the same point in explaining Arizona's position to Delph E. Carpenter, upper basin

spokesman who presented the upper basin amendments to the bill:[8]

> "Mr. HAYDEN. I am trying to point out the logic of the situation. The four States of the upper basin say that because there is to be immediate development for the benefit of California which will result in the acquisition of water rights prior to any they may acquire, they are compelled to oppose any such legislation unless granted the protection afforded by the Colorado River compact. Is there any inconsistency on the part of the State of Arizona in setting up the same state of facts and asking that nothing be done until her rights are protected?
>
> "Mr. CARPENTER. There may be strong arguments presented, but I would not care to enter into them. I will have to ask to be excused.
>
> "Mr. HAYDEN. I can see no inconsistency in the position of the State of Arizona. *Without some agreement between them California will acquire a prior right to the use of water and power from Colorado River, leaving but little or none for the future needs of Arizona.* You, as an official of the State of Colorado, are trying to protect the interests of your State. In doing that you must remain neutral toward the lower basin States. However, I think you must concede that Arizona has the same right to protect herself as has the State of Colorado." (Emphasis added.)

Mr. Hayden continued to press his argument, finally eliciting the following comment from Mr. Carpenter:[9]

---

[8] *Id.* at 158.
[9] *Id.* at 162-63.

"Mr. HAYDEN. Without an understanding with the States of California and Nevada, should this bill pass, the water will be first applied to a beneficial use in California, and when the time comes for development in Arizona, my State may have no water.

"Mr. CARPENTER. What you have said is true in part, but I must respectfully disagree with any thought that, physically, California could legitimately beneficially use all the water of the river. There is too much. It is also true that, under this bill, *the Secretary of the Interior could contract with water users in the State of Ari-* [163] *zona for the use of water or power without let or hindrance,* except that the party contracting with the United States would agree that his particular claim should be subordinate to the Colorado River compact, *not subordinate to the rights of the State of California*—simply subordinate to the rights of the upper States as defined in the compact." (Emphasis added.)

We emphasize that portion of Mr. Carpenter's reply also emphasized by Arizona when she argues that, according to Carpenter, the lower basin states would be "free to contract with the Secretary for stored water on a basis of equality and regardless of prior appropriative rights." Ariz. Ans. Br. 32. In context, however, Mr. Carpenter's reply is clear (1) that he did not deny the premise of Mr. Hayden's assertion that California would acquire priorities against Arizona by reason of prior beneficial use, and (2) that he disagreed only with Mr. Hayden's suggestion that Calj-

fornia could physically appropriate all of the water in the river so as to leave none for Arizona.[10]

Arizona asserts that her interpretation of Mr. Carpenter's answer was shared by Mr. Swing. In support of this contention Arizona relies on the following statement by the author of the bill:[1]

> "The water which is stored by the Government at its own expense would be disposed of by contract as provided in this bill. There should be that privilege given Arizona to secure water on the same terms as is afforded to Nevada and California."

Mr. Swing's reference to the fact that Arizona would be able "to secure water on the same terms" as Nevada and California obviously meant only that Arizona would not be discriminated against in any way. It cannot be distorted to support Arizona's inference that Mr. Swing intended his bill to shear California's existing rights of their priorities and to obliterate the only existing system of law for the determination of interstate water rights as between those states. Mr. Swing repeatedly asserted that the contracts provided for in his bill were not to be a source of title to water rights and that any rights acquired under such contracts would derive from state law.[2] Priority of appropriation was

---

[10]Mr. Carpenter subsequently reiterated this point in response to a question from Rep. Hudspeth of Texas (*id.* at 165):

> "Mr. HUDSPETH. Suppose California should appropriate all of the water, would not that all go to her to the detriment of the State of Arizona?
>
> "Mr. CARPENTER. The best answer to that question is that it can not be done. California could not possibly appropriate all of that water if she tried to do so. She would drown herself out. Physical inhibitions would come into play."

[1]Ariz. Ans. Br. 33, quoting *id.* at 163.

[2]See Mr. Swing's explanations of his bill quoted *supra* pp. 36, 42-43, 55-57.

and is the prevailing law in Arizona, California, and Nevada. See Rep. 22.

The Arizona spokesmen voiced the same fears in their subsequent arguments in opposition to the fourth Swing-Johnson bill two years later.

Mr. Mulford Winsor, in presenting the views of the Colorado River Commission of Arizona and the Governor of Arizona during the hearings on the fourth Swing-Johnson bill, viewed the proposed legislation as imposing no restrictions on California's ability to acquire appropriative priorities to Arizona's detriment:[3]

> "Under the terms of the compact the water allotted to the lower basin is allotted not to any State but to the several States of the basin collectively, and in the absence of recognition of what we consider to be the law of the land—that is, the right of the State to control the appropriation of water within their boundaries—and in the absence of an agreement dividing the water between the lower States, there would be nothing to prevent California, if this act should become effective and this storage were created, from taking all of the allocation to the lower basin. There would be nothing to prevent the depletion of the water by Mexico and there would be nothing to keep Arizona from being left holding the bag."

Respresentative Lewis W. Douglas, who had succeeded Mr. Hayden in the House, elicited agreement from Governor Emerson of Wyoming that under the

---

[3]*Hearings on H.R. 5773 Before the House Committee on Irrigation and Reclamation,* 70th Cong., 1st Sess. 51 (1928).

proposed legislation California would acquire priorities against Arizona:[4]

> "Mr. DOUGLAS. If this bill should be enacted into law, it would permit the State of California to appropriate to beneficial use in the absence of an agreement between the States of California and Arizona and Nevada the waters of the Colorado River faster than it would permit the State of Arizona to apply to beneficial use water from the Colorado River?
>
> "Governor EMERSON. That is probably true.
>
> ". . . .
>
> "Mr. DOUGLAS. You have heard that this bill, in the absence of a treaty between the lower basin States, permits the State of California to apply to beneficial use the waters of the Colorado faster than it would permit the State of Arizona to apply to beneficial use the water of the Colorado?
>
> "Governor EMERSON. That is undoubtedly true."

Mr. Douglas later asserted that, absent a tri-state agreement, Arizona's only possible protection against California's priorities would be litigation.[5]

---

[4] *Id.* at 324.

[5] *Id.* at 429-30: "Mr. DOUGLAS. . . . If California applies to beneficial use in the absence of a compact between Arizona and California, the 7,500,000 acre-feet of water allocated to the lower basin States, there will be no water available in the Colorado River under the terms of California's ratification—and California's ratification does not become effective until those terms have been accepted—there will be no water in the Colorado available in the main stream for use in Arizona.

"Mr. HUDSPETH. Mr. Douglas, if six States ratify and your State does not, how are you going to protect yourself against California? I don't mean to say that California would 'hog' this water, but how is your State going to protect itself if the State of California should take more than she is entitled to?

Senator Hayden restated the Arizona position during final debate on the bill on December 11, 1928:[6]

> "In the lower basin, however, both in Arizona and in California, particularly in the latter State, there is immediate prospect that the water will be placed to beneficial use. So, with an apportionment to the lower basin as a whole, and without any division of water between the States in the lower basin,

---

"Mr. DOUGLAS. By the physical conditions there would be no protection.

"Mr. HUDSPETH. Is there a tribunal to go into, any court?

"Mr. CHILDERS. Of course, you could go into the courts, naturally.

"Mr. HUDSPETH. But that would be your only resort?

"Mr. CHILDERS. That would be the only recourse. [430].

"Mr. SWING. And that has been suggested.

"Mr. DOUGLAS. In fact, if this bill is passed by the Congress and signed by the President—that is, this bill in its present form—the State of Arizona will go into court, and that litigation will probably take six or seven years.

"Mr. HUDSPETH. That is what I had in mind when I asked you if there was any possibility of the States getting together.

"Mr. DOUGLAS. I should think the Supreme Court could issue an injunction."

[6]70 CONG. REC. 388. Rep. Douglas had made a similar statement of Arizona's position during the House debates on H.R. 5773 in the previous session (69 CONG. REC. 9782):

"The State of Arizona since then has been attempting to negotiate with California. It wants a compact with California before it signs the seven-State compact for this reason. It is in the same position with respect to California that the upper basin States are with respect to the lower-basin States. California can apply to beneficial use the waters of the Colorado infinitely faster than can Arizona. California's ratification of the compact was conditional upon the construction of a storage dam on the Colorado, the construction of which, by the nature of the topography of the country and of the appropriations in the act and the works to be constructed would give the waters of the Colorado, to California, and Arizona simply said to California, 'You make an equitable agreement with us relative to an allocation of water between us and also give us a right to tax power which is to be developed by the use of the fall within our State, and of our undivided interest in the Colorado, which power you are going to use in your State to increase the industries of your State, to increase the taxable wealth of your State, and then we will sign the Colorado River compact.'"

the State of California could immediately appropriate and put to use the major portion of the water. We were greatly alarmed in the State of Arizona to learn that the State of California had made filings, had given notice to the world that they intended to appropriate out of the Colorado River all of the water apportioned to the lower basin, which would leave absolutely no water from the main stream for the State of Arizona.

"If the filings made by the State of California have the value assigned to them by the senior Senator from California, if they do establish perfected rights as he has asserted, then, without an agreement between the States of Arizona and California, if those filings are valid, there would be absolutely no water left in the Colorado River for the State of Arizona. . . ."

Senator Borah agreed that the interstate applicability of the principles of priority of appropriation might produce that result (70 CONG. REC. 391-92):

"I can see how Arizona might lose her rights, not by reason of this legislation, but by reason of acts of appropriation going on in carrying out the terms of this bill in case Arizona did not assert her rights in court. If she stood by and water were appropriated to beneficial use in other States, she might lose her rights. She would not lose them, however, [392] by reason of this legislation, but by reason of the acts of appropriation."

Senator Hayden rejoined that the Project Act would indirectly aid in producing that result, in that the construction of Hoover Dam pursuant to the act would facilitate the acquisition of priorities by California pur-

suant to contracts that might be executed by the Secretary of the Interior (*id.* at 392):

> "That is exactly what we fear—that if, subsequent to the passage of this legislation, a great dam is erected in the Colorado River without the consent of the State of Arizona, the water impounded behind that dam will be claimed and controlled by the Federal Government, and the State of Arizona will have no jurisdiction over it. The Secretary of the Interior may then enter into contracts to permit the use in California of a much larger quantity of water out of that dam than is fair to the State of Arizona.[6a] The State of Arizona will be helpless unless it does proceed, as the Senator suggests, by

---

[6a] (Footnote ours.) In repeatedly asserting Arizona's fears of California's priorities, Senator Hayden made no distinction between the priorities that already attached to California's natural flow rights and those that would attach to rights acquired in stored water as a result of uses made pursuant to contracts. His recognition that priorities attached to prior uses, whether of natural flow or stored water, accords with the view held by other members of Congress.

For example, during hearings on the third Swing-Johnson bill before the House Rules Committee, Rep. Colton of Utah, in reply to a question from Rep. White, asserted that priority of appropriation would control the rights of Arizona's users of Colorado River waters, whether of natural flow or stored water. *Hearings on H.R. 9826 Before the House Committee on Rules,* 69th Cong., 2d Sess. 54-55 (1927):

"Mr. WHITE. Let me ask you a question there. *Does your law in Utah and in your surrounding States make any distinction between the right to use the natural flow of a stream and the right to use the impounded waters?*

"Mr. COLTON. *Well, no, not so far as use is concerned,* if I understand your question correctly, Mr. White. We do not recognize the doctrine of riparian rights at all.

"Mr. WHITE. I will illustrate what I mean in this way. I take it that the citizens of Arizona living up above the site of this proposed dam, under your rules of law, have a right to divert the water of the Colorado River for beneficial uses. Now, they may do that with [55] the waters that naturally flow in the stream, but if there should be a dam built and a lake created of stored water, impounded water, do they have the

filing a suit in the Supreme Court of the United States to determine its rights."

Senator Borah agreed, but asserted that such was the consequence of "living under the doctrine of prior appropriation" *(ibid.)*:

> "Undoubtedly, if Arizona stands idly by and does not protect her rights, either by appropriation or by such action in the courts as will protect them, she will lose her rights ultimately. That is one of the penalties of living under the doctrine of prior appropriation. If an individual has a farm or ranch, and the water is running by it, if he does not use it, his neighbor below him or above him can appropriate it and take it away from him, ultimately. So here, I presume, if Arizona should not act, she perhaps would be prejudiced by this legislation in the sense that the acts carrying it out would result in appropriations by others. It would not be the act of Congress which took away her rights, however, but the acts of appropriation following as a result of it.
>
> "Mr. HAYDEN. Mr. President, that is why we oppose the passage of a bill which authorizes large appropriations of money to construct a dam and other works which will inevitably lead to appropriations of water which are adverse to the State of Arizona, unless and until there is an agree-

---

right to use that impounded water, that stored water, in the same way that they would the water naturally flowing in the stream?

"Mr. COLTON. Yes, sir. *It is prior appropriation for the use of the water that counts,* and wherever there is any surplus water that is not being used our citizens may acquire the right to use it, whether it is stored or whether it is flowing."

ment between Arizona and California apportioning those waters. We desire an agreement so that if Arizona is not in position to use her share of the water immediately, it will be reserved for her. In other words, Arizona's position in this matter is exactly and identically on all fours with the position of the States of the upper basin. We ask no more and no less in the way of protection from immediate development in California than do the States of the upper basin."

Both of the foregoing problems—(1) California could appropriate the bulk of the lower basin's Compact allocation and (2) a nonratifying Arizona could assert her future claims against the Compact apportionment of the more slowly developing upper basin—were resolved by requiring, as a condition precedent to effectiveness of the act absent seven-state ratification within six months, that at least six states (including California) ratify the Compact and that California agree to a specified limitation.[7] The Master accurately states this congressional purpose in requiring the limitation of California (Rep. 165-66):

"The reason that Congress imposed this limitation on California's consumptive use of mainstream water in the event that all seven states did not agree to the Colorado River Compact within six months of the date of enactment of the Project Act is apparent from the statutory language itself. It was for the benefit of the other six states.

"Absent seven-state ratification of the Compact, the Upper Basin required protection against appro-

[7]In addition, §§ 8(a) and 13(b), (c), and (d) of the act subject to the Compact all uses of federal facilities and lands under either alternative.

priations in the Lower Basin in excess of the Compact apportionment. The Upper Basin feared that Arizona might not ratify, in which event California, unless limited, would be able to appropriate from the mainstream substantially all of the Lower Basin apportionment, leaving Arizona free to make further appropriations from the mainstream outside the Compact ceilings. The limitation on California left a sufficient margin for exploitation by Arizona so as to secure the Upper Basin against undue encroachment by the nonratifying state.

"Similarly, Arizona and Nevada were concerned that California's rapid development would enable that state to appropriate most of the mainstream water available in the Lower Basin. The California limitation afforded these states protection against this eventuality. Unless California agreed with them to an acceptable division of mainstream water such as that suggested in the second paragraph of Section 4(a), they could, simply by delaying ratification for six months, bring the limitation into effect."[8]

---

[8]There was little doubt that, failing an agreement with California, Arizona would delay ratification in order to bring the limitation into effect. During final debates on the fourth Swing-Johnson bill, Senators Phipps and King engaged in a discussion of the pending Pittman-Hayden amendment authorizing a tri-state compact. Senator Phipps had just explained that there would be no limitation on California in the event of seven-state ratification. Senator King prophesied that Arizona would not be inclined to ratify the Compact since, absent a tri-state agreement, she would then have no protection against existing and proposed California appropriations which would be facilitated by the project (70 CONG. REC. 389):

"Mr. KING. But, as I understand the statement just made by the Senator, the limitation of 4,400,000 acre-feet is based solely upon the 6-State compact, and if there is a 7-State compact there is no limitation.

Arizona argues that Congress resolved the controversy by "the imposition of a mandatory formula for allocation created by the interaction of §§ 4(a), 5, and 8(b)" (Ariz. Ans. Br. 43). The Master has rejected the Arizona argument that sections 5 and 4(a) provided a mandatory formula which the Secretary was bound to follow.[9]

If the Arizona argument concerning the effect of sections 5 and 4(a) were accurate, Senator Hayden should have rejoiced after the adoption of the amendments adding the "conform to" language to section 5 and the Pittman-Hayden tri-state compact authorization to section 4(a). If, as Arizona says, the effect of these amendments was to require the Secretary to make contractual compact-like allocations to Arizona, California, and Nevada which would stand on a parity, all Arizona fears of California priorities should have been erased with their adoption. The feebleness of the Arizona argument is amply demonstrated by the fact that both Arizona Senators voted *against* the bill as amended. 70 CONG. REC. 603. Further, Representative Douglas of Arizona never received the good news when the amended bill was sent back to the House. Asserting that he remained "as bitterly opposed to the project authorized in the Senate amendment as I was

---

"Mr. PHIPPS. That is correct.

"Mr. KING. Then if there is no limitation what advantage is there to Arizona if she does ratify the compact? California is in a superior position to appropriate the water and Arizona might get no water. California might then appropriate all of the 7,500,000 acre-feet allocated to the lower basin and Arizona, when ready to appropriate water from the river, and finding her share used by California might come to the upper basin States and make demands upon them."

[9]Rep. 162-63, 202. We treat the legislative history refuting Arizona's argument in appendix E.

to the project authorized by the House bill" (*id.* at 836), he voted against the measure. *Id.* at 837.

Statements of Senator Johnson and Representative Swing Quoted by Arizona

Arizona quotes portions of several excerpts from the legislative history, primarily statements by Representative Swing and Senator Johnson, purporting to support her argument that "the true legislative history shows overwhelmingly the full realization by both friend and foe of the Swing-Johnson bills that they would inevitably supersede the interstate operation in the Lower Basin of the doctrines of prior appropriation and equitable apportionment." Ariz. Ans. Br. 17-18.

We here provide the context for the statements by Swing and Johnson quoted by Arizona to demonstrate that they were limited *solely* to the question of California's rights *as against the upper basin* under the Colorado River Compact.[1]

The colloquy between Representatives Raker and Swing quoted by Arizona (Ariz. Ans. Br. 18-19) reveals on its face that the discussion related to interbasin priorities as affected by the Compact, particularly Article VIII.[2] This context is also provided by the full statement of Arthur P. Davis, Director of the Reclamation Service (a portion of which is quoted by

---

[1]The statement of Governor Dern of Utah quoted by Arizona (Ariz. Ans. Br. 20) should be viewed in the same context. See *supra* pp. 98-99.

[2]The citation provided by Arizona to support her assertion that "Mr. Swing repeated these views in the Senate committee hearings on the pending legislation" (Ariz. Ans. Br. 19 & n.18) does not sustain Arizona's proposition, *i.e.*, that all appropriative

Arizona (Ariz. Ans. Br. 19) as expressing his understanding of Mr. Swing's statement):[3]

> "In case of water shortage in the lower valleys, under the principles of the Supreme Court decision in the Wyoming-Colorado case, the Imperial Valley farmers would have the right to cause to be closed during the period of shortage all the headgates of canals above them which are junior to their appropriations of 1900 and earlier. This would include all three of the Government projects *in the upper basin*—two in Colorado, and one in Utah—and many private enterprises as well, which have hard enough struggle at best without adding water shortage and litigation.
>
> "The irrigators *in the lower basin* do not desire litigation, as is shown by their avoidance of it in the past shortages. If a large reservoir is built and the water regulated, there will be plenty of water for them so there will be no litigation. The representative from Imperial Valley has testified that the district is willing to yield all claim to the low water flow in exchange for a right in the reservoir, and no doubt all irrigators served from the reservoir would do the same." (Emphasis added.)

Arizona then quotes portions of Representative Swing's statements in connection with the third and fourth Swing-Johnson bills (Ariz. Ans. Br. 19-20). Mr. Swing's statement before the House Rules Com-

---

rights in the lower basin were allegedly superseded; on the contrary, Mr. Swing's remarks before the Senate Committee are consistent only with our interpretation.

[3] *Hearings on S. 727 Before the Senate Committee on Irrigation and Reclamation*, 68th Cong., 2d Sess. 81 (1925).

mittee during its hearings on the third Swing-Johnson bill expressly related to California's water rights as affected by the Colorado River Compact, as the following context shows:[4]

"Mr. GARRETT. You do not mean to say that California has unconditionally ratified it [the Colorado River Compact]?

"Mr. SWING. California did unconditionally ratify it, and then subsequently made it conditioned.

"Mr. GARRETT. It repealed it?

"Mr. SWING. Yes. It stands now on the conditional ratification that if it has to give up its vested water rights to the upper-basin States, which it is willing to do if it is supplied with storage water, because water is water, whether it comes out of a reservoir or out of the flow of the stream. In the interests of peace on the river, all it asks is that it be afforded storage to take the place of its present rights in and to the natural flow of the river. So, the construction of this dam can not possibly interfere with the rights of Utah under the Colorado River compact, because the terms of the Colorado River compact cover this project by express declaration. And, in addition to that, all contracts to be made by the Secretary of the Interior for the beneficial use of either water or power out of this project, are to be governed by the restrictions and limitations of the compact which are put into the contracts, and those same restrictions and limitations must go into

[4] *Hearings on H.R. 9826 Before the House Committee on Rules*, 69th Cong., 2d Sess. 107 (1927).

every contract, and the beneficiary of the contract must recognize the superior right of the upper-basin States, to that extent."

Mr. Swing's statement before the Rules Committee in the next Congress is equally clear that he was discussing California's rights as affected by the Colorado River Compact. This is amply demonstrated by the part of his statement Arizona quotes:[5]

> "California can not afford to support such a proposal, because *under the Colorado River compact,* California must surrender her present water rights to the natural flow of the river and look to storage instead." (Emphasis added.)

The most misleading extract employed by Arizona is one taken from Senator Johnson's explanation of the fourth Swing-Johnson bill on the floor of the Senate in 1928. Arizona provides the Court with only this much of Senator Johnson's statement:[6]

> "Ah, you see in the days to come what will happen in that river if no protection be accorded *those people* and the appropriation law of the West be permitted to obtain. Then will be demonstrated the utter futility of the position that is now maintained by some." (Emphasis added.)

By "those people," Senator Johnson meant "those upper basin people."

The quoted extract is taken from a long statement by Senator Johnson explaining how his bill provided the maximum possible protection to the upper basin against lower basin appropriations, failing seven-state

---

[5]Ariz. Ans. Br. 19-20, quoting *Hearings on H.R. 5773 Before the House Committee on Rules,* 70th Cong., 1st Sess. 80 (1928).
[6]Ariz. Ans. Br. 20, quoting 69 Cong. Rec. 7251 (1928).

ratification of the Compact. The Arizona assertion (Ariz. Ans. Br. 20) that Senator Johnson "was explaining the provisions, then in § 5 of the bill" when he made the quoted statement is misleading. Senator Johnson had just finished explaining the protective provisions for the upper basin contained in sections 4 and 5 (section 5 then contained the limitation provision) of the bill. Here is Senator Johnson's statement repeated, with the context immediately preceding the quotation used by Arizona (69 CONG. REC. 7250-51):

> "I repeat and repeat how we have endeavored to protect these upper basin States. We write the bill around the compact, we make every drop of water that comes from the storage and the regulation of the Colorado River under this scheme subject to the compact. We write, then, that California shall use perpetually only a specific amount of water, naming the maximum amount which may be used.
>
> "All these things are done in the good-faith endeavor to protect in every possible way the States of the upper basin and those who claim that they want protection under the Colorado River compact. Yet some of them would prefer to let this water continue to flow down to the sea for an indefinite period, to go to waste in the Gulf of California, the land remain in drought to the detriment of people in southern Arizona and southern California, to permit that to be done indefinitely, rather than to permit the measure of protection—and it is a full measure of protection that is accorded them—under this bill.
>
> ". . . ."

"I submit, sir, that under the provisions which have been written in this measure at the instance of the Senator from [7251] Wyoming, under the provisions all through this bill by which we take care of the Colorado River compact, remembering that practically all the land there upon the banks of the Colorado River is land that is owned by the United States of America, from the site of the dam practically down to the international boundary; remembering all that, how can it be said that there is any State in the upper basin or any other place that is not amply protected by the provisions of this bill?

"In addition to that, yielding to the demands that have been made that profit and revenue should come from this measure, the Committee on Irrigation and Reclamation has accorded them the same percentage of profit that is accorded in the existing laws to-day, and they have done it on a project that is paid for by the United States of America in the first instance and that is paid for by the people of California in the second instance. I do not complain of it, but I do complain when any men here say that the upper-basin States are not protected or that we have taken something that does not belong to us. Here we have done everything that can be done by a people in order to have their protection and to give them what they are entitled to.

"Ah, you will see in the days to come what will happen in that river if no protection be accorded those people and the appropriation law of the West be permitted to obtain. Then will be demonstrated

the utter futility of the position that is now maintained by some."

Arizona also relies on a colloquy between Senators Walsh and Johnson to support her contention that Senator Johnson recognized that the Secretary of the Interior, under the bill, "could dispose of the stored water without regard to appropriative rights" (Ariz. Ans. Br. 45). Arizona belabors us for describing that colloquy as confused and then quotes a portion of that colloquy as "a clear and unconfused declaration by one of the bill's sponsors that it would wipe out appropriative rights and that the only way anyone could get any water was under a contract with the Secretary."[7] While Senator Johnson did assert, in accordance with the plain language of the last sentence of the first paragraph of section 5, that a contract would be required for all uses of "stored water," his statements cannot, by any stretch of the imagination, be construed as a declaration that the bill "would wipe out appropriative rights." The full Walsh-Johnson colloquy (70 CONG. REC. 167-68) is set out in Arizona's legislative history volume at 37-38, 40-43. Here is the portion (70 CONG. REC. 168) which Arizona quotes in her answering brief (Ariz. Ans. Br. 45-46):

> "Mr. WALSH of Montana. If the city of Los Angeles has this enormous appropriation of the waters of the Colorado River, a perfected appropriation of an inchoate appropriation, does it follow, if the Government erects this dam across the Colorado River and creates a great storage basin, that

[7]Ariz. Ans. Br. 46. Arizona asserts that Rep. Swing "expressed similar views" and provides a cross reference to the statements of Mr. Swing which we treat *supra* pp. 121-24.

it must yield up that amount of water to the city of Los Angeles?

"Mr. JOHNSON. I rather think so, just exactly as if it were a perfected right for irrigation purposes.

"Mr. WALSH of Montana. Yes; but I always understood that the interest that stores the water has a right superior to prior appropriations that do not store.

"Mr. JOHNSON. Possibly so. What is the point?

"Mr. WALSH of Montana. The point is that apparently, if that is correct, then this expenditure is being made with no right in the Government of the United States to control the water which is stored, but that it must go to those appropriators.

"Mr. JOHNSON. No; the bill provides that a contract in advance must be made for the storage of water by the Secretary of the Interior.

"Mr. WALSH of Montana. A contract with whom?

"Mr. JOHNSON. With those who utilize and take and appropriate the water.

"Mr. WALSH of Montana. That is to say, the Government may dispose of the stored water as it sees fit?

"Mr. JOHNSON. Yes; under the terms of this bill."

Here is the immediately following portion of the colloquy, clearly demonstrating that Senator Johnson was trying to explain that the contract requirement was

merely an added condition to whatever right Los Angeles might possess, and that, whatever the source of the right to use "stored water," appropriation or contract, priority would be a principal incident of that right (70 CONG. REC. 168):

"Mr. WALSH of Montana. Then how can it be said that the city of Los Angeles has a perfected interest?

"Mr. JOHNSON. It has a perfected right there unquestionably, but the bill requires the city of Los Angeles to conform to it, and the city of Los Angeles is perfectly willing to conform to it just exactly as if it had no perfected right.

Mr. WALSH of Montana. *Am I correct in the assumption that the Government of the United States must distribute the water to the various appropriators in accordance with their several appropriations?*

"Mr. JOHNSON. *If they contract.*

"Mr. WALSH of Montana. Yes; but to contract means a liberty of contract. That is what I want to know. Can the Secretary give the water to them or withhold it from them as he sees fit?

"Mr. JOHNSON. Certainly, because before he begins work upon the dam he has to have the contract in his possession for its payment, and he is the one who is to fix the sums that are to be paid.

"Mr. WALSH of Montana. Yes, but that is quite contradictory. It seems to me that the city of Los Angeles has no rights by virtue of this appropriation.

"Mr. JOHNSON. Certainly it has, but those rights unquestionably will be controlled by this bill.

"Mr. WALSH of Montana. I should like to have a very much clearer understanding about that than I have.

"Mr. JOHNSON. I fear I can not make it any clearer to the Senator. I would like to do so if I were able." (Emphasis added.)

Senator Walsh then asked whether the Secretary would be obliged to contract with the city of Los Angeles, to which Senator Johnson's reply may have been somewhat vague and ambiguous *(ibid.)*:

"Mr. JOHNSON. No; he is not obliged to do so, but he is obliged to contract with somebody that makes the same claims to the same waters, and unless the contract is by mutuality agreed upon then he will not build the dam. That is the condition precedent to the construction of the dam.

"Mr. WALSH of Montana. Then he is at liberty to contract with the city of Los Angeles, which has an appropriation, or with some one else that has not an appropriation?

"Mr. JOHNSON. Yes; he is at liberty to contract with the city of Los Angeles, which has an appropriation.

"Mr. WALSH of Montana. *But can he disregard the city of Los Angeles?*

"Mr. JOHNSON. *I doubt very much if he can.*

"Mr. WALSH of Montana. *And contract with some one else who has no appropriation?*

"Mr. JOHNSON. *I doubt very much, first, if he would, and I doubt, secondly, if he could.*

". . . .

"Mr. WALSH of Montana. I directed the inquiry merely for the purpose of trying to find

out, if I can, under what kind of obligation the Government of the United States, should it build this dam, would be to those who have the appropriations.

"Mr. JOHNSON. The Government would be under no obligations until it makes its terms. I seem unable to make that plain. But here is everything in this scheme, plan, or design: Everything is dependent upon the Secretary of the Interior contracting with those who desire to obtain the benefit of the construction, and he is not to undertake any expenditure nor to undertake any construction until that shall have been accomplished.

"Mr. WALSH of Montana. Let us suppose the Arizona people are perfectly willing to meet the requirements and that the Los Angeles people are perfectly willing to meet the requirements, and other people who have not even attempted to make any appropriation are perfectly able and willing to meet the requirements. Who then has the right?

"Mr. JOHNSON. The Secretary of the Interior and the Government have the right.

"Mr. WALSH of Montana. *The Secretary of the Interior may utterly ignore those appropriations?*

"Mr. JOHNSON. *Possibly so.*

"Mr. WALSH of Montana. *That is what I am curious to find out about.*" (Emphasis added.)

Here is how Senator Johnson was understood by Senator Walsh (70 CONG. REC. 169 (1928)):

"Mr. WALSH of Montana. . . . [I]f, as contended apparently by the Senator from California, the city of Los Angeles has a right, inchoate in character, in process of perfection, which

entitles it to a certain amount of water out of the Colorado River, if we allocate so much of the water to the State of Arizona as interferes with its rights, would we not be taking property from the people of Los Angeles without due process of law?

"Mr. HAYDEN. If the right were of a character that must be recognized, I would agree with the Senator.

"Mr. WALSH of Montana. That, I understand, is the contention of the Senator from California, that the hands of the Government are tied; that if we shall erect a dam there at all we shall have to give enough water out of that dam to the city of Los Angeles to satisfy its appropriation.

"Mr. HAYDEN. But I am quite sure, if I understood correctly the Senator from California, that he qualified that statement by saying that, after all, the Secretary of the Interior could allow the city of Los Angeles to have such quantity of water as might be determined by contract."

Immediately thereafter, Senator Phipps added his observation that priority of appropriation principles should control competing claims to the stored water (whether rights were based on appropriation or contract) *(ibid)*:

"Mr. PHIPPS. It seems to me that in resolving such a difficulty, should it arise, there would be taken into consideration the fact that water for domestic use should take priority over water intended for purposes of irrigation. Aside from that, those filings are first in point as compared with those to which the Senator from Arizona referred. They are for a superior use, and, in addition thereto, the applicant who has made the filing [the city

of Los Angeles] has pursued the proper course in developing the manner of appropriation or the manner of diverting the water and putting it to the highest beneficial use. I do not anticipate any difficulty on that score in resolving the question of priority by the Secretary of the Interior."

APPENDIX E

THE LEGISLATIVE HISTORY OF THE SECTION 5 REQUIREMENT THAT WATER DELIVERY CONTRACTS EXECUTED PURSUANT THERETO SHALL "CONFORM TO" SECTION 4(a) REFUTES ARIZONA'S ARGUMENT THAT CONGRESS UNILATERALLY IMPOSED A FEDERAL ALLOCATION OF COLORADO RIVER WATERS UPON ARIZONA, CALIFORNIA, AND NEVADA

This appendix covers the legislative history of the requirement in section 5 of the Project Act that contracts executed pursuant to that section "shall conform to paragraph (a) of section 4 of this Act." Arizona argues that this language states Congress' intention to impose upon Arizona, California, and Nevada a federal allocation precisely as set forth in the second paragraph of section 4(a) (consenting to the terms of a tri-state compact never ratified by any state). *E.g.*, Ariz. Ans. Br. 12-13, 31-32 & n.35, 34 & n.41; Ariz. Op. Br. 84-99.

The legislative history confirms the literal and natural reading of the statute: That "conform to" language in section 5 does not impose any interstate allocation except as agreed upon by the states. The Master has rejected this Arizona contention.[1]

---

[1]Rep. 162-63: "Arizona, while agreeing with the United States that the Project Act constitutionally delegates to the Secretary of the Interior the power to allocate mainstream water among the claimant states, argues that the second paragraph of Section 4(a) establishes a formula for the allocation which the Secretary is required precisely to follow, and that those clauses in her water delivery contract which deviate from the formula are void. This argument is premised on the language in Section 5 that 'contracts respecting water for irrigation and domestic uses . . . shall conform to paragraph (a) of section 4 of this act.' The second paragraph, Arizona points out, is included within Section 4(a). But the second paragraph of Section 4(a) is

A. Views of the Upper Basin Authors of the "Conform to" Language

1. *Lack of congressional power to make a federal allocation*

Senator Phipps and Representative Taylor, both from the upper basin State of Colorado and both proponents of the Swing-Johnson bill (69 CONG. REC. 9989-90 (1928), 70 CONG. REC. 603, 837 (1928)) were the authors of the language in section 5 requiring that contracts executed pursuant to that section "shall conform to paragraph (a) of section 4 of this Act." *Infra* pp. 138-39, 140-41. Both legislators held the view that Congress lacks the power to apportion water among the states because such an objective can only be accomplished by interstate agreement or litigation in this Court (*supra* app. A, pp. 18-20, 24-26).

It is unlikely that either man would vote for a bill which imposed any federal allocation; it is inconceivable that either would author language designed to achieve that result.

Mr. Taylor made clear his long-standing views opposing federal control of western waters in an exchange with Senator (then Representative) Hayden during hearings on the third Swing-Johnson bill:[2]

---

plain in that it merely *authorizes* a tri-state compact for the division of water; it does not compel it; nor does it condition approval of the Colorado River Compact upon acceptance of the proposed tri-state compact. Indeed, the second paragraph was specifically amended on the floor of the Senate to make the suggested division permissive rather than mandatory. The suggested compact which Congress was willing to approve in advance is of no compelling force or effect since no such compact has ever been agreed to. In so far as Section 5 refers to the second paragraph of Section 4(a) it is for the purpose of requiring the Secretary to respect the compact if ratified by the states. See also Section 8(b). Arizona's contention in this respect must therefore be rejected."

[2] *Hearings on H.R. 6251 and H.R. 9826 Before the House Committee on Irrigation and Reclamation*, 69th Cong., 1st Sess. 78-79 (1926).

"Mr. HAYDEN. Mr. Taylor was a member of this committee when I first came to Congress. He afterwards became its chairman. During that time many bills of various kinds were reported to the House, but during all the years that he had any connection with this committee, there was never any bill considered relating to the appropriation and use of water when Mr. Taylor did not insist that there be incorporated in it the provision which is a part of the reclamation act, that nothing in such act should affect the law [79] of any State with regard to the appropriation, use, and distribution of water. I would like to ask whether he now feels, as heretofore, that that principle should continue to be recognized?

"Mr. TAYLOR. Yes; I do, and I have put it into many acts. I feel that way now, and I do not think we ought to surrender any rights.

"Mr. HAYDEN. Then, you are opposed to the nationalization of rivers in the Western States?

"Mr. TAYLOR. Yes."

2. *Disinterest in intra-lower basin allocation*

Senator Phipps and Representative Tayor repeatedly disclaimed any interest in resolving the intra-lower

---

Mr. Hayden had just asked Mr. L. Ward Bannister, prominent upper basin water attorney, whether he favored the precedent, purportedly being set by the Swing-Johnson proposals, "which might arise to haunt you on the next stream in Colorado that the Government desired to nationalize," to which Mr. Bannister had replied as follows (*id.* at 78): "I do not believe in the nationalization of the waters of the West, and I think that this bill can be so drawn that it would not mean their nationalization. We can limit the use of the water to the States that do ratify, and preserve all the autonomy of those States. We are not establishing the precedent."

basin dispute. Each sought only protection for the upper basin's apportionment under the Colorado River Compact. For example, on April 24, 1928, Representative Taylor asserted during hearings before the House Rules Committee on H.R. 5773, the fourth Swing-Johnson bill:[3]

> "Personally I am not concerned as to how these gentlemen of the lower three States divide the water between themselves, or what they do with it down in that lower country, or whether Uncle Sam builds the dam or whether private people build the dam. But I am immensely interested in the future development of these four upper States and in preserving their water rights for all time for this and succeeding generations when those States are developed. . . ."

Mr. Taylor reiterated these views during debate on May 24, 1928, the day before he offered the "conform to" language as an amendment to the bill (*infra* pp. 138-39) (69 CONG. REC. 9765):

> "The four upper States should be and three of them are willing to take their joint allotment of that 7,500,000 acre-feet and divide it among them-

---

[3] *Hearings on H.R. 5773 Before the House Committee on Rules,* 70th Cong., 1st Sess. 21 (1928). Mr. Taylor had expressed the same views before that committee the year before:

"Thirdly, let the four upper basin States divide between themselves the 7,500,000 acre-feet of water allotted to them by both the seven and six State compacts. . . .

"Also let the three lower basin States similarly divide between themselves the 8,500,00 acre-feet allotted to them by that compact. The three lower States have not yet been able to agree among themselves as to how they would divide that portion of the stream. That is none of the business of the four upper States. Our four upper States will agree among themselves somehow. . . ." *Hearings on H.R. 9826 Before the House Committee on Rules,* 69th Cong., 2d Sess. 20 (1927).

selves afterwards. And the three lower basin States should be willing to do the same. But Arizona has never been willing to do so. In a word, what the upper States want by this legislation is to protect our water rights for future development, and also to prevent the present gigantic waste of flood waters that might be used, and also prevent Mexico from getting all of it. We are not otherwise directly concerned in this long and bitter strife between Arizona and California."

Senator Phipps shared Mr. Taylor's view. During debate on May 2, 1928, a few weeks before he submitted an amendment to section 5 containing the "conform to" language (*infra* p. 139), Senator Phipps asserted (69 CONG. REC. 7625):

> "I do not care to enter into a discussion as to an equitable division of water between California and Arizona, as that is a matter they could settle between themselves, and the more promptly that question can be disposed of I think the better off they will both be."

B. History of "Conform to" Language

1. *House of Representatives*

On May 25, 1928, Representative Taylor of Colorado proposed the addition of the "conform to" language to section 5 of H.R. 5773, the House version of the bill, as a "clarifying amendment." It was adopted after the following brief colloquy (69 CONG. REC. 9988):

> "Mr. TAYLOR of Colorado. Mr. Chairman, I ask unanimous consent to return to section 5 for the purpose of offering a brief amendment.
>
> "The CHAIRMAN. Is there objection?

"Mr. LEATHERWOOD. Mr. Chairman, reserving the right to object, on what subject?

"Mr. TAYLOR of Colorado. It is a clarifying amendment.

"Mr. DOUGLAS of Arizona. Mr. Chairman, I reserve the right to object.

"The CHAIRMAN. The Clerk will report the proposed amendment.

"The Clerk read as follows:

> Amendment offered by Mr. TAYLOR of Colorado: Page 6, line 22, after the word "service" strike out the period and insert: "and shall conform to paragraph (a) of section 4 of this act."

"The CHAIRMAN. Is there objection?

"There was no objection.

"The CHAIRMAN. The question is on agreeing to the amendment.

"The amendment was agreed to."

Section 4(a) of H.R. 5773, to which Representative Taylor's "conform to" language was directed, provided only for a six-state ratification of the Colorado River Compact.[4]

2. *Senate*

In the Senate, the phrase "and shall conform to paragraph (a) of section 4 of this Act," in section 5 first appeared in an amendment to S. 728, the fourth Swing-Johnson bill, printed on May 19, 1928, by Senator Phipps but never offered. That amendment proposed (1) to put a limitation provision on California into section 4(a), and (2) to add the phrase "and shall conform to paragraph (a) of section (4) of this Act," after the word "service" in section 5.[5]

---

[4]See Calif. Ex. 2082 for iden. (Tr. 11,177), p. 5.

[5]Calif. Ex. 2004, Tr. 11,173. Calif. Ex. 2001, Tr. 11,173, is a copy of S. 728, to which that amendment was proposed.

On December 5, 1928, Senator Phipps printed another amendment to S. 728, which was identical to his earlier amendment except for the addition of an embargo on Federal Power Commission licenses on the Colorado River system until the act became effective.[6] This amendment was never offered.

That same day H.R. 5773, which had passed the House, was made the pending bill and its text was replaced by that of S. 728. 70 CONG. REC. 67-68.[6a]

Also on December 5, Senator Hayden printed an amendment to H.R. 5773, providing, *inter alia,* two paragraphs for section 4(a); the first paragraph provided for a limitation on California; the second paragraph provided for the ratification of a three-state compact among Arizona, California, and Nevada as a condition precedent to the act's taking effect.[7] On December 6, 1928, Senator Hayden offered his printed amendment. By agreement, this Hayden amendment was made the "pending amendment" to the bill. 70 CONG. REC. 176.

On December 7 (calendar day, December 8), 1928, Senator Phipps of Colorado printed an amendment to H.R. 5773, in terms identical to the amendment which he had previously printed on December 5, 1928, to the Senate bill, S. 728.[8] On December 10, 1928, Senator Phipps offered this amendment, which contained the "conform to" language, as an amendment to the pending Hayden amendment, which did not. 70 CONG. REC. 324.

---

[6]Calif. Ex. 2009, Tr. 11,173.
[6a]See Calif. Ex. 2010, Tr. 11,173.
[7]Calif. Ex. 2011, Tr. 11,173.
[8]Calif. Ex. 2012, Tr. 11,173.

The Phipps amendment to the Hayden amendment to the bill was not subject to amendment; the Phipps amendment was an amendment in the second degree, and Senate rules forbade amendments in the third degree. On December 11, 1928, Senator Hayden withdrew his "pending amendment" so that Senator Phipps could reoffer his amendment, which he did. The Phipps amendment then became the "pending amendment" in the first degree and thus itself subject to amendment. 70 CONG. REC. 382. The Hayden amendment thereby lost all status. As noted above (*supra* p. 140), Senator Phipps' amendment contained only a limitation provision to be included in section 4(a), the "conform to" phrase for section 5, and the embargo on Federal Power Commission licenses for section 6.

After the Phipps amendment had been amended by changing the limitation from 4,600,000 to 4,400,000, and by eliminating the Gila River system from the Federal Power Commission embargo, Senator Hayden proposed a second paragraph to section 4(a) as an amendment to the Phipps amendment. His amendment would have required, as a condition precedent to the effectiveness of the act, that California ratify the prescribed tri-state compact.[9]

On December 12, 1928, Senator Pittman suggested (1) that the Hayden amendment be changed to make it permissive, authorizing Arizona, California, and Nevada to enter into a tri-state compact, rather than requiring such a compact as a condition precedent to the effectiveness of the Project Act; and (2) that the tri-state compact should not become effective until Ari-

[9]Calif. Ex. 2014, Tr. 11,173.

zona, California, and Nevada had ratified the Colorado River Compact. Senator Pittman stated (70 CONG. REC. 469):

"This is what I propose, to strike out all of the agreement between the three States, and let them enter into it if they want to, but if they do not want to, let them stay out of it. That is not coercing a State.

"This is what I propose, to strike out all of the Hayden amendment down to and including the word 'agree,' on page 1, in line 6, and in lieu thereof insert the following:

> The States of Arizona, California, and Nevada are authorized to enter into an agreement, which shall provide.

"Then go ahead and put down the provisions of the Hayden amendment, and at the end of the Hayden amendment put in a seventh paragraph, which shall read:

> Said agreement to take effect upon the ratification of the Colorado River compact by Arizona, California, and Nevada.

"The Constitution requires that before States may enter into an agreement they shall be authorized by Congress to enter into the agreement. I start out by having Congress, by this act, authorize an agreement. I make the agreement specific by reason of the fact that otherwise it might be held that they would have to come back to Congress for approval of the agreement they entered into. They approve a specific agreement in advance and authorize it. The terms are set out. It does not take effect unless all three States ratify the Colorado River compact.

"Mr. HAYDEN. It should not.

"Mr. PITTMAN. It should not. It does not require California to enter into that agreement. It does not require Arizona to enter into that agreement. It does not require Nevada to enter into that agreement. If they do not enter into that agreement, then we have the bill as it stands. Whatever States do not ratify are not bound by this measure. That, then, becomes an optional matter and not a coercive matter.

"I am confident, however, that if the State of Arizona were willing to enter into such an agreement she would, of course, ratify the Colorado River compact, and if she were not willing to ratify the Colorado River compact she would not want California bound by these conditions, because she would not be in the 7-State compact, and would have nothing to do with it.

"Therefore I say that the fair and practical way is to set out the terms of an agreement which the Congress of the United States would be satisfied for the States to enter into, and say that if they see fit to enter into it they may, but it shall not become effective as a subsidiary agreement to the main 7-State compact until those three States do ratify the 7-State compact.

"I offer that as a suggestion. I do not want to interfere with the vote on this amendment, but I would like very much to have it in a voluntary agreement, rather than impose it upon California as a condition of the ratification.

"Mr. HAYDEN. Mr. President, I am not at all insistent that my amendment be adopted in the

exact language in which it is offered. The suggestion made by the Senator from Nevada is entirely satisfactory to me.

"Mr. PITTMAN. Then I offer it.

"The PRESIDING OFFICER. The amendment would be an amendment in the third degree, and it would not be in order.

"Mr. HAYDEN. Have I the privilege of perfecting my amendment so as to carry out the suggestion of the Senator from Nevada?

"The PRESIDING OFFICER. The Senator can do that.

"Mr. HAYDEN. Then I am pleased to do that."

Senator Pittman then explained to Senators Bratton and Shortridge the effect of his amendment (*id.* at 470):

"I have simply changed the form of the amendment. Instead of making it a condition of ratification on the part of California, I have simply provided that the States of Arizona, California, and Nevada may or may not enter into an agreement 'in the following words, to wit,' and so forth; that if they do enter into that agreement it shall take effect when each of those States has ratified the Colorado River compact. The only legal question involved is whether or not Congress passing a bill and setting out the agreement into which they must enter, they would have to come back and have Congress say it was all right.

". . . .

"What I objected to, as I said once before, was that these conditions or terms of an agreement, involving her ratification of the 6-State compact,

were imposed upon California as a condition of the going into effect of this legislation. I contend that it is not a matter that should be imposed upon any State as a condition of ratification of this legislation. I believe that it is a very proper statement of an agreement between these States when we leave it to the States to adopt or not as they see fit. I think it is entirely proper to provide, as a condition of such an agreement coming into effect, that the three States shall have ratified the 7-State compact before it comes into effect, because the main object of the agreement is to bring about an agreement among the seven States.

"It is supposed to be a subsidiary agreement to the general agreement among the seven States, and no subsidiary agreement, taking the benefits of another agreement, should be permitted until those getting the benefits of the subsidiary agreement have become parties to the main agreement. So that is in the amendment as it is now accepted and modified by the Senator from Arizona himself."

Senator Pittman clearly stated what he conceived to be the Senate's function with respect to the lower basin controversy in this exchange with Senator Waterman of Colorado *(ibid.)*:

"Mr. WATERMAN. Is it not true that the entire controversy now pending in this body arises out of the fact that the three States of the lower basin can not agree as to the subsidiary arrangement under the 7-State compact?

"Mr. PITTMAN. That is entirely correct.

"Mr. WATERMAN. Then, ought we not to use every effort and ever endeavor to so bring about legislation that there is a reasonable probability that Arizona and California may come into accord?

"Mr. PITTMAN. I think it is our duty. I have not anything further to say. I have explained my ideas. The amendment is in its present form because it has been modified by the Senator from Arizona. I can not see why any one of the three lower States should object to such an amendment. It is not imposed as a condition of ratification. It is purely optional with them whether they want to agree to it or not."

Senator Bratton then asserted that he believed the tri-state compact authorization, even in its permissive form, unduly hampered the sovereignty of the states involved (see *supra* pp. 8-10), to which Senator Pittman replied as follows (*id.* at 471):

"Mr. PITTMAN. Mr. President, this question has been here now for seven years. The seven States have been attempting to reach an agreement. Apparently the Senate of the United States is about to reach an agreement as to what ought to be done. The Senate has already stated exactly what it thinks about the water. That might have been an imposition on some States. Why do we not leave it to California to say how much water she shall take out of the river or leave it to Arizona to say how much water she shall take out of the river? It is because it happens to become a duty of the United States Senate to settle this matter, and that is the reason.

". . . .

"We have already decided as to the division of the water, and we say that if the States wish they can enter into a subsidiary agreement confirming that. We have already agreed that the 7-State pact shall be binding."

Senator Pittman's reply is relied on by Arizona as evidencing his understanding that the Congress was allocating the water in accordance with the terms of the tri-state compact. Ariz. Ans. Br. 47. Although those particular statements of Senator Pittman may, in isolation, carry an inference that he assumed Congress was dividing the waters, his repeated remarks both before and after the quoted statement wholly negative that inference.

Senator Pittman's objective is amply demonstrated by the exchange between Senator Pittman and Senator Johnson immediately following Senator Pittman's remarks relied on by Arizona. During that exchange, Senator Pittman made it clear that he was merely trying to facilitate ratification of the tri-state compact by giving congressional approval in advance to the particular compact terms set out. *Id.* at 471. He stated (*ibid.*):

"I think that we would save months of time by this amendment. If California and Nevada and Arizona do not like this agreement, they do not have to approve it. If they want to amend it they can do so, and ask approval of the amended agreement."

Senator Johnson and Senator Pittman then engaged in the following colloquy which conclusively establishes that the tri-state compact authorization cannot

have the mandatory effect Arizona argues for (*id.* at 471-72):

> "Mr. JOHNSON. Here is the difficulty which strikes me in the matter: First of all, we are authorizing the doing of something that already the States have the right to do. Secondly, we are stating the things that the three States are to do, and we are making a sort of Procrustean bed upon which they must [472] lie in the determination of matters that are suggested within this amendment, without any elasticity, without any opportunity to alter phraseology or possibly terms. What is done by the amendment is to put the impress of the Federal Government upon the necessity of agreement, and, if one of the States should not agree, leave that State in a position which would not be particularly enviable.
>
> "With the distinct understanding that this authorization is one that is after all an authorization that is wholly unnecessary, because the parties may, in any fashion they desire, meet together and contract and subsequently come to Congress for ratification of that contract; that there is no impress of the Congress upon the terms, which might be considered coercive to any one of those States, I am perfectly willing to accept the amendment.
>
> "Mr. PITTMAN. There is nothing necessary at all, of course, so far as the adoption of this amendment is concerned, unless the element of time is considered valuable. If it should happen, mind you, that two weeks from now the legislatures of the three States, being in session, should

be perfectly satisfied with the terms of this proposed agreement and should ratify it, they could on the next day also ratify the 7-State agreement. On the other hand, if we do not adopt this amendment now, but allow the three States to meet together and agree and they should agree, then it will be necessary for them to come to Congress next fall; and we might find that Congress next fall would not ratify the agreement entered into by the three States, might we not?

"Mr. JOHNSON. That is possible.

"Mr. PITTMAN. Suppose, for instance, a majority of the Senate found there were certain things in the agreement it did not like.

"Mr. JOHNSON. That is all right; *but what I want to make clear is that this amendment shall not be construed hereafter by any of the parties to it or any of the States as being the expression of the will or the demand or the request of the Congress of the United States.*

"Mr. PITTMAN. *Exactly, not.*

"Mr. JOHNSON. *Very well, then.*

"Mr. PITTMAN. *It is not the request of Congress.*

"Mr. JOHNSON. *I accept the amendment, then.*" (Emphasis added.)

REPLY BRIEF FOR THE STATE OF NEVADA, Intervener

REPLY BRIEF FOR THE STATE OF NEVADA

Since the respective contentions of the United States and the States of Arizona, California and Nevada and the respective answers thereto have been stated and re-stated in the Opening and Answering Briefs, Nevada believes that a Reply Brief in the usual sense is unnecessary. Neither the United States, Arizona nor California urge any contentions or raise any issues in their

Answering Briefs to which Nevada has not already answered either in her Opening Brief or in her Answering Brief.

Accordingly, this Reply Brief, with few exceptions, will be confined, for the Court's convenience, to a summary of the issues and Nevada's position thereon.

SUMMARY OF ARGUMENT

I.

By her first Exception, Nevada asks that the final decree herein be clear and definite that the Colorado River Commission of Nevada is the proper entity to contract for Lake Mead storage and that further subcontracts with individual users are not required. By her second Exception, she requests that because of the relatively small quantity of water awarded her and because of the fact that substantially all of it will be used for domestic and municipal purposes, that the decree provide that Nevada need not contribute to present perfected rights in other States in short water years or that there be a minimum of 250,000 acre-feet annually below which her rights shall not be cut. Nevada's uses are not the type which can be altered and changed in short water years in the way that the irrigation uses can be altered in the case of the principal users in Arizona and California, neither of whom have objected to this request by Nevada. By her third Exception, Nevada asks that because of a possible conflict of interest among entities under the Secretary of the Interior, that an independent Commissioner under the control of this Court be appointed to hereafter control the operation of the Colorado River in the Lower Basin and the delivery of water therefrom. By her fourth Exception, Nevada requests that whatever official operates the Colorado River under the decree herein shall be required to promulgate detailed Rules and Regulations concerning the manner, method and plan of operation.

II.

The United States has not presented any argument seriously challenging that the Special Master was in error in holding that the provision in Article 5(a) of the Nevada contract with the United States (and a similar provision of the Arizona contract) providing that her allocation should be reduced by upstream tributary uses was invalid. On the contrary, as pointed out in detail in the Master's Report, such a provision is contrary to Sections 5 and 18 of the Boulder Canyon Project Act and is inconsistent with the provisions of Section 4(a) of the same Act limiting California's use of water. The legislative history of that Act clearly demonstrates that Nevada should be entitled to 300,000 acre-feet of Lake Mead storage and there was never the slightest hint that this should be diminished by her upstream tributary uses.

There is likewise no merit in the contention of the United States that in addition to the existing contracts with the Colorado River Commission of Nevada, the statutorily designated agent of the State, there should be other contracts with individual users. This Commission is a legal entity. The Nevada contracts provide throughout that deliveries of water shall be made to, be controlled by, and be paid for by the State; in fact, the whole contract is definitely a contract between the United States and the State. This is entirely different from the Arizona contract which, by its terms, provides for individual contracts with separate users and contains no provisions for deliveries of water to, or payments from the State.

III.

California's repetitious argument as to an unconscionable shortage in the supply available to her is based on invalid assumptions and somewhat tricky arithmetic. She tries to convert the limit of 4,400,000 acre-feet of water annually imposed on her by the

Project Act and her own statute into a guarantee of that amount. Neither the United States nor any of the other sovereign States ever guaranteed her any amount. Her assumptions as to water supply are incorrect because she overlooks the fact that the total tributary supply in the Lower Basin is not subject to control by the Upper Basin and the amount provided by nature from that source will always be available, together with 7,500,000 acre-feet average annually at Lee Ferry from the Upper Basin. The Upper Basin must release water not required for domestic and agricultural uses when needed in the Lower Basin and the Upper Basin use under existing and authorized projects will not exceed 3,840,000 acre-feet per annum. The only time the 8,500,000 acre-feet of Lower Basin depletion becomes critical would be whenever it became necessary to compute the contributions of the two Basins to the Mexican supply. At that time, the controlling figure would be the total Lower Basin beneficial consumptive use, computed at the lower-most dam in the United States (Imperial Dam), and this would not necessarily be the arithmetic total of the separate beneficial consumptive uses. California's shortage argument is not persuasive.

IV.

Nevada concurs with the United States that the Master's interpretation of Section 4(a) of the Project Act is correct and that it created a contractual allocation scheme which has been properly carried out by the Secretary of the Interior in the contracts he has made for Lake Mead storage water. The Recommended Decree is entirely proper on this theory. But, in addition to this, if it should be determined that, contrary to the Master's Report, the Court should make an equitable apportionment of the Colorado River mainstream water, a decree substantially identical with that recommended by the Master would be proper.

The United States, having taken control of all of the waters of this navigable river at Lake Mead, has prior and superior rights thereto. All former natural-flow rights in California were converted into contract rights for such storage. No independent natural-flow rights have been recognized in any way since the completion of Hoover Dam.

In any allocation the *res* must be the storage water in Lake Mead. The existing contracts are valid in every way. The Colorado River is unique as compared with all other prior equitable apportionment suits because here storage water must be apportioned. Consequently, the contracts have the same characteristics and standings as the Court has found appropriation rights to have in other equitable apportionment suits. An award of 2,800,000 acre-feet to Arizona, 4,400,000 acre-feet to California and 300,000 acre-feet to Nevada, out of the first 7,500,000 acre-feet of mainstream water, is in accordance with the contracts and meets every test of an equitable apportionment suit. This is particularly true because the Recommended Decree provides for those rights which were "present perfected rights" on June 25, 1929. It also requires contributions to fill them from other States in short water years, along with a general provision for proration of the supply in such years. Even if we concede, *arguendo*, that there must be an equitable apportionment as California contends, the decree herein complies with every rule that has been established by prior decisions as to such apportionment and should be upheld.

V.

Nevada is entitled to a decree awarding her the right to the beneficial consumptive use of 300,000 acre-feet of Lake Mead storage annually, undiminished by her upstream tributary uses, under any theory that may be adopted in the decision of this case.

ARGUMENT

I. NEVADA'S EXCEPTIONS TO THE MASTER'S REPORT

Nevada filed only four Exceptions to the Master's Report and Recommended Decree, all of which are more or less of a perfecting nature.

Exception I requests apt language in the final decree herein to make it clear that in Nevada the basic contract with the State, acting through the Colorado River Commission of Nevada, is sufficient and that additional subcontracts between the Secretary of the Interior (hereinafter Secretary) and the actual users are not necessary. The Special Master points out in his Report (page 210) that the Nevada contract, different from that of Arizona, does not require such subcontracts. Nevada's argument in support of this Exception appears at pages 52–55 of her Opening Brief. The United States takes issue with Nevada on this point. This will be commented upon later, *infra*, pp. 13–15.

Exception II requests that the provisions of the Recommended Decree be amended to provide that no part of Nevada's allocation of water be used to supply so-called "present perfected rights" in Arizona and California in years when the allocations of such States are not sufficient to supply such rights. Or in the alternative, Nevada asks that a minimum figure (she suggests 250,000 acre-feet) be fixed below which Nevada's allocations should not be reduced to make contribution to others. This is necessary because the principal uses of Nevada will be domestic uses and industrial uses in the nature of the sustenance of life and the continuation of business. They are not of the nature that can be temporarily suspended in years of short supply. Nor does Nevada have any large quantity of perfected rights on the mainstream. On the other hand, the two other States, each of whom have large quantities of perfected rights use the major portion of their water for irrigation use, a type of use which can be reduced

or even suspended in short water years. Nevada's argument in support of this Exception appears at pages 56–58 of her Opening Brief.

Neither the United States, Arizona nor California, in their Answering Briefs, challenged the correctness of Nevada's position on this point. California's only comment (Answering Brief, page 31) is that since Nevada takes this position (to which California does not disagree), Nevada assumes the existence of shortage. This inference is unwarranted.

Exception III requests that the Court appoint a Commissioner with power to supervise the operation of the Colorado River in the Lower Basin and to control the delivery of the waters thereof. The Master recommends that these duties be imposed upon the Secretary. Nevada believes that it is more just and equitable to have such an independent Commissioner, subject to the control of this Court. The Secretary operates in many capacities and there is much chance of a conflict of interest between the proprietary water demands of the many agencies under him and those of other water users. This would not seem to be a desirable situation.

Exception IV requests that the Decree provide that whichever official is given the management and control of the Lower Colorado River he be required to promulgate Rules and Regulations setting forth in detail the manner, method and plan that will be followed in operating the river in determining annual allocations and scheduling deliveries. Absent a set of Rules and Regulations such as this, the various water users would be left in constant uncertainty and there would be an invitation to unnecessary controversy.

Nevada's argument in support of these Exceptions appears at pages 59–61 of her Opening Brief. Neither the United States, Arizona nor California take issue with Nevada in respect to these two requests. In fact, California, in her briefs before the Master, made a similar recommendation.

II. ISSUES BETWEEN NEVADA AND THE UNITED STATES

There are two specific issues between Nevada and the United States. The Master found in his Report at pages 237–247 that the provision in Article 5(a) of the amended Nevada contract (Report, p. 420) with the United States (and a similar Article 7(d) in the Arizona contract (Report, p. 401)) providing that her allocation of 300,000 acre-feet of water from the mainstream should be reduced by deducting therefrom the amount of her upstream tributary uses, was invalid and void. Nevada and Arizona agree with the Special Master. The United States disagrees.

Likewise, Nevada contends, and the Master has found in his Report (page 210), that the contract between the United States and the Colorado River Commission of Nevada, a statutorily created entity of the State of Nevada created for the express purpose of contracting for, receiving, paying for and controlling the distribution of all Colorado River water to which Nevada is entitled, is sufficient and that additional subcontracts between the Secretary and the individual users, such as is required in the Arizona contract, are unnecessary. The United States disagrees.

Nevada's argument on these issues is found at pages 48–49, 52–55 of her Opening Brief and pages 49–61 of her Answering Brief.

In brief summary, on the first issue, the Master advances three principal reasons why that provision in Article 5(a) of the amended Nevada contract, and Article 7(d) of the Arizona contract, charging tributary uses, are in violation of the Boulder Canyon Project Act[1] (hereinafter Project Act) and are unenforceable (Report, pages 237–247).

---

[1] 45 Stat. 457, 43 U.S.C. 617.

(1) Since Section 5 of the Project Act requires contracts for permanent service, the contract provision referred to above would be in violation of this section.

(2) These contract provisions also violate Section 18 of the Project Act which provides, in effect, that State law shall govern water rights and priorities intra-state, and

(3) These contract provisions are inconsistent with the Section 4(a) limitation on California's use of mainstream water and would result in an allocation out of harmony with the California limitation, and, indeed, would defeat the basic purpose of the delivery contracts themselves.

There are reasons other than those relied upon by the Master why his decision is proper and sound. The legislative history of Section 4(a) of the Project Act demonstrates clearly that Congress intended that Nevada should have an undiminished 300,000 acre-feet of beneficial consumptive use on the mainstream. There is nothing in it even remotely suggesting that this amount should be reduced by tributary uses in Nevada above Lake Mead.

There is nothing in the Project Act that authorized, directed or permitted the Secretary to limit Nevada's allocation of water from Lake Mead by deducting therefrom tributary uses in Nevada nor could any act of any Nevada official in signing such a contract be deemed to be a waiver or release of any rights which that State, as a sovereign, possessed.[2]

There is nothing in the Brief of the United States which seriously challenges the soundness and correctness of the Master's decision on this point.

On the second issue, the Nevada contract is entirely consistent

---

[2]Pertinent also is Arizona's Argument on this point (pages 152–162, Answering Brief) in which Nevada fully concurs.

with Section 5 of the Project Act. Nevada is a "person"[3] as used in that section and therefore entitled to have the use of the water contracted for. The Nevada contract was drafted in the light of circumstances peculiar to Nevada. Existing and future uses will be for industrial and municipal use. It would be ridiculous to require individual and duplicate contracts for each industrial and municipal user of Lake Mead water. It is logical and sensible that the water delivery contracts be with the State of Nevada, acting through its Colorado River Commission of Nevada, an entity created by law specifically for this purpose.

Additionally, it should be added, as the Master points out (Report, page 210), that the Nevada contract is distinctly different from the Arizona contract.

With respect to the delivery of water by the United States, the Arizona contract provides (Article 7(a)) that "the United States shall deliver, and Arizona, *or agencies or water users therein*, will accept * * *."

The Nevada contract provides (Article 4(a)) that "the United States *shall deliver to the State* * * *."

Also, Article 5(a) provides "water agreed to be delivered to the State * * *." Article 6 provides "the State shall receive the water * * *."

Article 7(1) of the Arizona contract provides:

> "Delivery of water hereunder shall be made for use within Arizona to such individuals, irrigation districts, corporations or political sub-divisions therein of Arizona *as may contract therefor with the Secretary*."

---

[3]The United States and Nevada are defined as "persons" in Nevada Revised Statutes governing the appropriation and beneficial use of waters within the State. NRS 533.010 and NRS 533.325.

The Nevada contract does not contain this provision or anything comparable to it.

Also, with respect to the charges for the delivery of water, Article 9 of the Arizona contract provides:

> "A charge of 50 cents per acre shall be made for all water actually diverted from Lake Mead during the Boulder Dam cost repayment period, *which said charge shall be paid by the users of such water.*"

Also in the same Article, it provides:

> "Charges for the storage or delivery of water diverted at a point or points below Boulder Dam * * * shall be as agreed upon between the Secretary *and such users* at the time of execution of contracts therefor, and shall be paid *by such users.*"

In contrast, the Nevada contract (Article 9), provides:

> "A charge of 50 cents per acre-foot shall be made for the diversion by or delivery of water to the State * * *. Charges shall be made against the State * * *."

Also, in Article 10, it provides that:

> "The State shall pay monthly for all water delivered to it hereunder * * *."

Also, Article 8 provides that the State "shall make full and complete written monthly reports," and Article 11 provides that "all deliveries to the State shall be refused in the event of default."

The Arizona contract does not contain comparable provisions.

There is nothing in the briefs of the United States that challenges the correctness of the Master's decision (page 210), "that the Nevada contract, unlike the Arizona contract, does not require additional subcontracts between each water user and the Secretary of the Interior."

III. COMMENTS ON CALIFORNIA'S ANSWERING BRIEF

A large portion of California's Answering Brief is devoted to arguing, over and over again, that there is something inherently wrong in the Master's Recommended Decree because, as she says, it creates "a built-in shortage." There are several assumptions used in California's argument which are not valid. The conclusions reached are as erroneous as these assumptions.

One of these is the implied assumption that in some way she was *guaranteed* 4,400,000 acre-feet every year. But the fact is that she was not guaranteed any amount of water whatsoever. Her rights at all times had been, and must of necessity always continue to be, dependent upon the presence of the necessary amount of water in the stream. Likewise, they had been at all times, and must now be, considered to be subject to the rights of the other two sovereign Lower Basin States, as and when their equitable shares had been determined. California had not always had 4,400,000 acre-feet of water annually available prior to the construction of Hoover Dam. Although in our opinion she greatly exaggerates the case, there may be times in the future when she may not get that amount although, as the Master pointed out in detail, this seems highly unlikely. No one by any Compact, statute, or any other document has guaranteed that amount of water to California every year. Certainly Arizona and Nevada must not be considered to have placed themselves in the status of second-class States and to have agreed to surrender water which they might otherwise be entitled to use, in order to always keep a full 4,400,000 acre-feet of water annually available to California. It is only an act of legerdemain to attempt to convert the *limit*, which was placed on California to prevent her from taking an undue amount of water, into a *guarantee* that no matter how short the supply she would always have that amount. The guarantee of her present perfected rights, which were in the order of

3,010,827 acre-feet (Appendix III, Nevada's Opening Brief, page 110), gives California the maximum protection which she could ask of a Court in this regard. The additional requirement that the other States must contribute from their share, if necessary, to supply this amount gives her as great security as she could ask for under any theory.

Another unsupportable assumption is the frequently repeated statement that the three Lower Basin States are going to be limited to 6,500,000 acre-feet of mainstream water (beneficial consumptive use). California arrives at this figure by some tricky arithmetic. She assumes a total water supply in the whole Lower Basin System of 8,500,000 acre-feet (exclusive of Mexican delivery) and then by deducting assumed tributary uses of 2,000,000 acre-feet, arrives, in sort of a backward manner, at a mainstream supply of 6,500,000 acre-feet. This is a purely synthetic figure, one that in all probability will seldom, if ever, occur. The actual physical facts are that there will always be available the total of (1) the actual tributary flows and (2) the amount of water passing Lee Ferry, *giving effect to all of the provisions of the Compact and the reasonably foreseeable upstream uses.*

The flow in the tributaries joining the Colorado River below Lake Mead cannot, of course, be reduced by the upstream States in any way, nor by the Secretary or any other official. The tributary flow will always be there in the Lower Basin. The total of this tributary flow will not be limited by the total beneficial consumptive use—and in most years will exceed that amount. Additionally, regardless of the development in the Upper Basin, under the provisions of Article III(d) of the Compact there will always be available in the mainstream at Lee Ferry an annual average of 7,500,000 acre-feet (derived from the 10-year guaranteed total of 75,000,000 acre-feet therein provided for). California has indicated this combination of flows in her quotation

from the answers of Honorable Herbert Hoover to questions submitted to him by the then Representative Hayden (Footnote 6, page 81, California's Answering Brief).

Also, the Upper Basin is required by Article III(e) of the Compact not to withhold water not reasonably required for "domestic and agricultural uses."[4] The Master noted (Report, page 115) that to date the Lee Ferry depletion under existing and presently authorized projects would not exceed 3,840,000 acre-feet per annum. And as he points out, the possibility of there being sufficient upstream depletion to reduce the mainstream flow to the figure assumed by California in her frantic argument is so remote as to be improbable. Actually, in practical effect, and taking the above-mentioned factors into account, the total of 8,500,000 acre-feet of consumptive use on the combined mainstream and tributaries will probably only be needed to be taken into account in determining the relative contributions of the two Basins to the Mexican supply, if that problem is ever reached.

It should be further noticed that if and whenever the issue is raised between the two Basins, as to whether the Lower Basin is exceeding the beneficial consumptive use awarded it, that the question will be what is the *total* Lower Basin beneficial consumptive use. As mentioned above, since this will most likely come into play, if ever, in determining contributions to the Mexican supply, the place where this total Lower Basin use should be determined is at Imperial Dam, the lowest point of diversion for use in the United States. This total use will not necessarily

---

[4]Article III(e) provides: "The States of the Upper Division shall not withhold water, and the States of the Lower Division shall not require the delivery of water, which cannot reasonably be applied to domestic and agricultural uses."

be the sum of the various separate uses in the Lower Basin. Because of the salvage of river losses in the Lower Basin and many other factors, the net total Lower Basin depletion measured at Imperial Dam will undoubtedly be less than the arithmetic total of the separate beneficial consumptive uses. This is particularly true with respect to diversions from the mainstream. This is another factor of error in California's bland assumption that there will only be 6,500,000 acre-feet of beneficial use available for the three Lower Basin States out of the mainstream below Lake Mead.

To test the legal correctness of the Master's Recommended Decree by the assumptions and arithmetic continuously used by California is fallacious.

Regardless, however, of the correctness or incorrectness of California's water computations, the basic fact remains that the Court must, in this action, decree an allocation of water among the Lower Basin States. The specific water to be so allocated is, of course, the water stored in Lake Mead. Nevada urges that the allocation of this water must be consistent with Section 4(a) of the Project Act. As has been mentioned in Nevada's Opening Brief, whatever else may be derived from the legislative history, the one point which stands out as crystal clear is that the members of Congress thought that, by Section 4(a) of the Project Act, they were determining the relative shares of the three Lower Basin States in and to 7,500,000 acre-feet of mainstream water. It is important, in view of the argument in California's Answering Brief, to point out that neither this section of the Act nor any of the debates indicate any intention to guarantee that the stream would flow this quantity. At the most, the members of Congress assumed that it was reasonable to expect that there would be 7,500,000 acre-feet annually available, and the record to date

indicates that this is, and for a long time in the future will be, a reasonable assumption. Accordingly, Nevada believes that a determination of this action upon an interpretation of Section 4(a) of the Project Act is proper.

Nevada concurs with the United States in the position that the interpretation of Section 4(a) arrived at by the Master is logical and proper. Certainly, none of the opposing parties have been able to select and designate from the great mass of legislative history any conclusive and positive evidence that destroys the Master's interpretation, or that conclusively supports a different or contrary interpretation.

While most of the parties now support the proposition that so-called III(b) water is surplus or excess, it is Nevada's position that the determination of this point is inseparably connected with the determination of other questions as to whether Section 4(a) and the California Limitation Act[5] are deemed to apply to mainstream water or system water. If the Master's solution is followed and it is deemed that only mainstream water has been allocated by the Secretary's contracts, then there is no vice in describing all or any part of the million acre-feet of III(b) water in the mainstream as excess or surplus, which shall go one-half to California and one-half to Arizona (less only 4 percent thereof for Nevada). But if the determination of this question is otherwise, and it is held that Section 4(a) and the Limitation Act apply to the waters of the entire system, then it is illogical and improper to consider the III(b) water as other than apportioned water, and it cannot be classified as excess or surplus water. Inasmuch as Nevada accepted the Master's decision on the basic question, she did not specifically except to his finding that III(b) water was excess or surplus. Nevertheless, this basic question is

---

[5]Act of March 4, 1929; ch. 16, 48th Session; Statutes and Amendments to the Codes, 1929, pp. 38–39.

an integral part of this case and the classification of the III(b) water must be consistent with the determination of whether we are talking about mainstream water or system water.

However, the basic issue in the case is whether allocation of the waters of the river as made by the Special Master's Recommended Decree should be upheld. Nevada states again that this allocation, based upon the secretarial contracts, should be sustained for the reasons given in the Master's Report. But, the basic allocation determined by him need not necessarily rest solely upon the theory announced by the Master.

For it seems to Nevada that an allocation of Colorado River water among the Lower Basin States, identical with that recommended by the Special Master, can be upheld without the necessity of determining many of the questions voluminously discussed in the briefs herein.

California urges strenuously that there must be an equitable apportionment of the waters of the Colorado River among the Lower Basin States. As Nevada has mentioned in prior briefs herein (Opening Brief, page 49; Answering Brief, pages 23, 41–43), as this proposition is presented by California, she only gives lip service to this theory. What is really proposed is that there be an adjudication of mainstream water rights on a priority basis so as to in effect award the major share of the water to California. But if the matter is approached on the basis of making a true equitable apportionment of the mainstream waters among these three sovereign States using established principles and factors (*Nebraska* v. *Wyoming*, 325 U.S. 580, 618; *Hinderlider* v. *La Plata River & Cherry Creek Ditch Co.*, 304 U.S. 92 (1938); *Kansas* v. *Colorado*, 206 U.S. 461 (1907) 185 U.S. 146 (1902), what do we find?

First, we find that the Congress has authorized and the United States has built Hoover Dam and Lake Mead Reservoir and

the accompanying complex of downstream dams and has taken physical control of all the water of the main Colorado River from Lake Mead to the Mexican Border. This being a navigable stream, and the basic dam and reservoir having been built specifically in connection with the control of navigation, there was and could be no right on the river which, under the previous decisions of this Court, could have priority over the water rights appurtenant to these reservoirs and structures. Accordingly, all of California's argument as to private rights fails.

If the Court should consider an equitable apportionment of the Colorado River waters among the three sovereign States of the Lower Basin, the factual situation is distinctly and controllingly different from that which existed in other equitable apportionment suits which have been decided by this Court. In these prior cases, there have been no overriding superior storage rights in the Federal Government such as exists here. On the contrary, there was presented and decided only the rights of the contesting States to the natural flow, and only rights evidenced by private appropriations made under State law.

In this connection, it should be noted that appropriations made under the law of any specific State cannot be considered as invading the portion of the water of any interstate stream which may then or thereafter be equitably apportioned to another State. At best, the appropriations under State law can only have full binding force and effect as among the claimants to that body of water to which their parent sovereign State is entitled. In the absence of a division between States by a Compact (and there is admittedly none here) the apportionment of the waters among sovereign States in the final analysis is a judicial function. This has been the basic position of Nevada from the commencement of this action.

The basic function of this litigation is to arrive at an apportionment of Colorado River water.[6] If this Court should decide to consider this as a suit to equitably apportion the waters of the Colorado River, we find a situation where the United States has taken into its control all of the waters of the main Colorado River reaching Lake Mead as well as other waters entering the mainstream between that point and the Mexican Border.

We also find in existence contracts made by the Secretary of the Interior with the States of Arizona and Nevada and with the various California entities claiming the rights to divert the waters of the Colorado River. No question as to either the existence or validity of these contracts is raised by any party. There can be no question but that under the Project Act the Secretary was directed to make such contracts. And the Congress provided a positive prohibition against delivering water except by and under such contracts. Under this state of facts, could any court in an

---

[6]"We are met at the outset by the question what rule is to be applied. It is established that a more liberal answer may be given than in a controversy between neighbors members of a single State. *Connecticut* v. *Massachusetts*, 282 U.S. 660, 51 S.Ct. 286. Different considerations come in when we are dealing with independent sovereigns having to regard the welfare of the whole population and when the alternative to settlement is war. In a less degree, perhaps, the same is true of the quasi-sovereignties bound together in the Union. A river is more than an amenity, it is a treasure. It offers a necessity of life that must be rationed among those who have power over it. * * * Both States have real and substantial interests in the River that must be reconciled as best they may. The different traditions and practices in different parts of the country may lead to varying results but the effort always is to secure an equitable apportionment without quibbling over formulas." *New Jersey* v. *New York*, 283 U.S. 336, 342.

equitable apportionment suit ignore the existence of these contracts or the rights of the parties thereunder?

In this case, these contracts have a standing and a function comparable to those appropriations made under State law which were recognized in cases such as *Nebraska* v. *Wyoming*, *supra*. It is under these contracts that all water deliveries have been made from the Colorado River since the advent of Hoover Dam and Lake Mead on the stream. Since that time, the Secretary has had complete control of the operation and management of all structures on the river starting with Hoover Dam and continuing on down to Imperial Dam, the last structure in the United States above the Mexican boundary. The Secretary, through his agents, has made all determinations and performed all functions relating to the storage, release from storage and diversion of Colorado River water during this period.

Here it might be parenthetically noted that contrary to the argument advanced by California (Answering Brief, page 114), the actual practice on the river during this period of nearly three decades has *not* been one of recognizing that any of the California parties had retained appropriative rights in the natural flow of the Colorado River which were unaffected by the rights of the United States resulting from the construction of Hoover Dam. On the contrary, the actual practice during this period is that all water deliveries *have been treated as deliveries of storage water* under and pursuant to contracts.

To this extent, the practice on the Colorado River has been contrary to that customary on other western rivers. The usual practice is similar to that indicated as existing on the North Platte River in *United States* v. *Tilley*, 124 F.2d 850 (C.C.A. 1941), cert. den. 316 U.S. 691 (1942). Namely, that after the construction of federally built reservoirs, those operating the stream have continued to recognize pre-existing appropriative rights to

the natural flow and to deliver water thereunder, and have stored in the reservoirs only surplus water over and above that required to fill the prior natural flow rights. This stored water has been delivered in addition to and as a supplement to these pre-existing normal flow rights. Here on the Colorado, the practice has been exactly to the contrary of this customary western practice. There is not an iota of evidence in the record that after the construction of Hoover Dam those in control of the river have ever at any time recognized that the pre-existing rights to the normal flow were still in existence. No such water has been allowed to flow through Lake Mead and past Hoover Dam, as unstorable water. Nor has there ever been any attempted measurement of water diverted into California canals as natural-flow water as distinguished from storage water. Nor have any separate river records been kept as to natural-flow diversions and supplemental storage-water diversions. On the contrary, *all water* which has been diverted into the California canals has been treated as storage water and as deliveries under the contracts. There is nothing in the evidence to indicate that California has ever objected to this procedure. To now assert the continued and continuing existence of those normal-flow rights, which were being diverted into her State prior to the construction of Hoover Dam, is of no avail. Against the paramount and superior rights which the United States has to take control of, store, and deliver, in accordance with authorized contracts, all of the waters of the river, the rights have long disappeared.

In the light of all of these circumstances, if the Court should determine to lay aside the troublesome question of interpreting Section 4(a) and instead treat this action as being one for equitable apportionment of the Colorado River waters, a decree substantially identical with that recommended by the Master would still be proper. Since the decree, in conformity with the

provisions of the Compact and the Project Act protects "present perfected rights" as of June 25, 1929, the same result is obtained as though existing appropriative priorities had been protected, as in the other equitable apportionment suits. And since the decree further provides that these perfected rights should be filled even if it was necessary, in time of shortages, to take water from the allotments of the other States, a similar result is reached here as was obtained in former cases by recognizing appropriative priorities in their chronological order regardless of State lines. The Recommended Decree meets all requirements in these respects.

Storage water must be allocated in this suit since that is in reality the only water supply available. By recognizing the contracts which, as we have noted heretofore, have the same characteristics as appropriative priorities on other streams, the Recommended Decree makes a true allocation among the States of the Lower Basin. If this allocation is decreed by this Court as an equitable apportionment, then it would seem the question as to whether Congress intended that the Secretary of the Interior should make interstate allocations, or whether the delegation of authority to do so is constitutional, and the question as to whether or not the Secretary's allocation is in conformity with the statute all become moot.

For we find in actual existence a contract providing for the use of storage water up to 2,800,000 acre-feet in Arizona, and another contract providing for the use of 300,000 acre-feet in Nevada. Collectively, the contracts with individual California water users provide for 5,362,000 acre-feet of storage. However, as a condition precedent to the passage of the Act to authorize the construction of great Hoover Dam and the All-American Canal, principally for her benefit, California had agreed that she would be limited to 4,400,000 acre-feet out of the first 7,500,000

acre-feet. If this Court apportions the water of the mainstream so that 2,800,000 acre-feet is awarded to Arizona, 4,400,000 acre-feet to California and 300,000 acre-feet to Nevada, in the exercise of its judicial power, all of the substantive rights of the parties will be protected. And the decree will be in harmony with the pattern followed in past equitable apportionment suits.

Additional support to the proposition that a decree founded upon the rules of equitable apportionment is proper here is the fact that even though the Master characterized his decree as being based upon a statutory contractual allocation, he still found it necessary to base it *in part* upon a theory identical with equitable apportionment. This he did when he provided that in years of shortage the supply should be prorated among the three Lower Basin States in the same proportion as he found their rights to be under their contracts. But beyond question it must be conceded that he found nothing in the Project Act (which he designated as the controlling document) which in any way provided for proration in times of shortage; or which provided anything whatsoever as a method of dividing water in years when there was not a full supply. The only exception to this general statement is the provision that present perfected rights should be protected. But beyond this, the question is entirely one for the Court to determine in the exercise of its judicial authority. At least subconsciously, the Master was exercising this judicial authority derived from the so-called Federal Common Law applicable to suits between States for the allocation of the waters of interstate streams when he provided for this pro-rata sharing in short years.[7] His basic

---

[7]This Court, in reversing the Colorado Supreme Court in *Hinderlider* v. *La Plata River & Cherry Creek Ditch Co.*, 304 U.S. 92, 110, stated: "For whether the water of an interstate stream must be apportioned between the two States is a question of 'federal common law' upon which neither the statutes nor the decisions of either State can be conclusive."

finding, upon which he founded his proration determinations, to the effect that the States, as sovereigns, stood on a parity of right, is entirely sound, and likewise, in conformity with the Federal Common Law rule.

In view of the foregoing, Nevada submits that even if we concede, *arguendo*, that the California contention is correct and that there can be no determination in this case other than upon the theory of equitable apportionment by judicial decree, nevertheless the Recommended Decree is still a proper one to be entered in this action.[8] When cognizance is taken of the different factual situation that prevails on the Colorado River from that prevailing on the rivers involved in other like suits, the Decree herein is consistent with the past rulings of this Court, and with the pattern of former decrees. The particular factor, unique in this case, is the fact that the *res* necessarily has to be storage water in Lake Mead and in other downstream reservoirs. The decree, in dividing the storage water, follows all the basic rules of prior equitable apportionment decisions. No decree substantially different therefrom could be entered in this suit even if all parties were to agree that this was the proper theory for the decision. In the last analysis, the lengthy argument by California to the effect

---

[8]While the Master disclaims any reliance upon the doctrine of equitable apportionment (Report, p. 138), it may logically be argued that the Master has in effect made an apportionment of the beneficial consumptive use of the waters of the Colorado River to each of the sovereign States of Arizona, California and Nevada upon that doctrine, and has followed the principles laid down in prior decisions of this Court. *Kansas* v. *Colorado*, 206 U.S. 46 (1907), 185 U.S. 146 (1902); *Connecticut* v. *Massachusetts*, 282 U.S. 660 (1931); *New Jersey* v. *New York*, 283 U.S. 336 (1931); *Hinderlider* v. *La Plata River & Cherry Creek Ditch Co.*, 304 U. S. 92 (1938); *Nebraska* v. *Wyoming*, 325 U.S. 580 (1945).

that the decree is vastly in error because the Master ignored the theory of equitable apportionment is of no practical avail to her. The vice of the California position is her assumption that there are still in existence appropriative rights to natural-flow water when, as a matter of fact, all of them long ago were converted into contract rights for storage water. This is abetted by her further erroneous assumption that in some mysterious way she was guaranteed 4,400,000 acre-feet, come what may.

CONCLUSION

Nevada submits that the apportionment of mainstream water among the States of Arizona, California and Nevada proposed by the Master is a just and fair allocation and should be sustained.

Nevada, in her Opening Brief and in her Answering Brief, has established that the Master's proposed division of mainstream water can be sustained on any one of several legal theories. It can be sustained under the theory adopted by the Master that the provisions of the Project Act constituted a statutory contractual allocation. In the absence of the Project Act, the contracts made by the Secretary would have been valid and could be judicially sustained under the general Reclamation Law. Or if this Court should determine this case on the basis of equitable apportionment, it would be judicially proper to use the contracts made by the Secretary as a yardstick in arriving at an equitable apportionment.

There is nothing in the Answering Briefs of the United States, Arizona, or California which seriously challenges the correctness of the foregoing conclusions.

BRIEF OF ARIZONA IN OPPOSITION TO MOTION OF THE NAVAJO TRIBE OF INDIANS FOR LEAVE TO INTERVENE

This brief is submitted by the State of Arizona in opposition to the motion of the Navajo Tribe of Indians for leave to intervene.

Several separate and independent reasons exist for the denial of intervention. First, the motion is untimely. Second, to grant the Navajo Tribe leave to intervene would in effect authorize a suit by the Indians against the State of Arizona without its consent. Finally, since the United States has elected to represent the interests of the Indians in this litigation, the Indians are without power to intervene and to adopt positions which would derogate from their complete representation by the United States.

ARGUMENT

I

The motion for leave to intervene should be denied as untimely.

This motion of the Navajo Tribe for leave to intervene comes almost nine years after the commencement of this suit by Arizona, more than five years after the commencement of the trial before the Master and almost a year after the issuance of the Master's Report. Coming at so late a date, the motion should be denied as untimely.

This action was commenced on January 19, 1953, when the Court granted Arizona's motion for leave to file its Bill of Complaint. 344 U. S. 919 (1953). On the same day the United States was granted leave to intervene. Both the United States' brief supporting its application for leave to intervene and its petition of intervention filed in December 1953 clearly indicated that the United States regarded the existence and extent of Indian water rights on the Colorado River and its tributaries to be in issue in the litigation. The Navajo Tribe in its brief upon this motion makes clear that it was aware of these facts and of the

intention of the United States to represent the interests of the Indians, including the Navajo Tribe, in the litigation.

Not until June 1956 did hearings begin before the Master. Nearly a month after the commencement of the trial, the Navajo Tribe, along with a number of other Indian tribes, filed a motion for leave to file a "representation of interest". No motion for leave to intervene was made, even though the Indians then asserted that their interests had not been, and would not be, adequately represented by the United States without the appointment of separate counsel to act on their behalf. The motion was referred by Mr. Justice Douglas to the Master, who heard argument and on July 18, 1956 delivered an oral opinion denying the motion.[1] The Master, however, authorized the movants to file a brief with him upon the conclusion of the trial stating their views of the issues affecting them.[2] In denying the application the Master also stated:

> "If any party wants to use this transcript as a basis for presenting the question to the Supreme Court I shall be glad to certify it."[3]

Neither the Navajo Tribe nor any of the other tribes that had sought leave to file a representation of interest took advantage either of the opportunity afforded them to file a brief at the close of trial or of the Master's suggestion that they present the question of their right to file a representation of interest to the Court.

Approximately two and one half years elapsed from the conclusion of the trial until the promulgation of the Master's Final Report. During all of this time the Navajo Tribe took no steps to obtain intervention in the action.

---

[1] Tr. 2638-46.

[2] Tr. 2645.

[3] Tr. 2646.

Not until after all of the parties had filed their exceptions to the Master's Report, had filed their Opening and Answering Briefs with the Court and were about to file their Reply Briefs did the Navajo Tribe make this motion. Plainly, the Navajo Tribe has delayed much too long to be permitted to intervene at this juncture.

The Navajo Tribe seeks to excuse its delay by pointing to its efforts to obtain a representation of interest in 1956 and to its request made in February of this year to the Attorney General that the United States take exception to the Master's Report in various respects as it was thought to affect the Navajo's interests. But neither of these steps explains nor excuses the failure of the Navajo Tribe to seek intervention in the four years from the commencement of the action to the beginning of the trial or at the time the representation of interest was sought or during the five years that have elapsed since the denial of the motion for leave to file a representation of interest. Nor can the Navajo Tribe justify its failure to submit a brief to the Master, as he suggested, or to seek review in this Court of the Master's denial of the motion for leave to file a representation of interest. Finally, a letter written to the Attorney General only a few weeks before exceptions to the Master's Report were to be filed and after many years of litigation can hardly qualify as a sufficient effort to protect the interests of the Navajo Tribe.

Whether or not petitioner's application for leave to intervene in an original action in this Court is governed by Rule 24 of the Federal Rules of Civil Procedure and whether or not the application is regarded as of right or permissive, it is clear that the application should not be granted if it is untimely. *American Brake Shoe & Foundry Co.* v. *Interborough Rapid Transit Co.*, 112 F. 2d 669 (2d Cir. 1940); 4 MOORE'S FEDERAL PRACTICE 97-100

(2d ed. 1950). Whether a motion to intervene is timely depends first upon the time that has elapsed and the legal proceedings that have taken place since the commencement of the action, see *Distinti* v. *Cunningham*, 272 F. 2d 528 (D. C. Cir. 1959), and second upon the extent to which the party seeking intervention has foregone the opportunity to protect his known interests by intervention earlier in the litigation. See *Kelley* v. *Summers*, 210 F. 2d 665, 673-74 (10th Cir. 1954); *American Brake Shoe & Foundry Co.* v. *Interborough Rapid Transit Co., supra; United States* v. *Schofield*, 175 F. Supp. 654, 656-57 (E. D. Pa. 1959).

Arizona does not dispute movant's many authorities which hold that timeliness must be determined by the particular facts and circumstances in each case. However, "where there has been much litigation by way of motions, depositions and discovery, taking of testimony before a Master, etc., tardy intervention will usually be denied." 4 MOORE'S FEDERAL PRACTICE at 99.

II

Petitioner's motion for leave to intervene should be denied, since the grant of intervention would authorize a suit by petitioner against the State of Arizona without its consent.

States of the Union are immune from suit in the federal courts without their consent except where that immunity has been surrendered by the adoption of the Constitution of the United States. There has been such a surrender of immunity by the states with respect to original actions in the Supreme Court only (1) by one state against another and (2) by the United States against a state. *Principality of Monaco* v. *Mississippi*, 292 U. S. 313 (1934); *Duhne* v. *New Jersey*, 251 U. S. 311 (1920); *Smith* v. *Reeves*, 178 U. S. 436 (1900); *Hans* v. *Louisiana*, 134 U. S. 1 (1890).

Since there has been no such surrender of immunity with respect to suits against a state by individual Indians or by Indian tribes, the sovereign immunity of the states extends to suits by Indians and Indian tribes. *United States* v. *Minnesota*, 270 U. S. 181, 193 (1926); *Cherokee Nation* v. *Georgia*, 30 U. S. (5 Pet.) 1 (1831); *cf. Skokomish Indian Tribe* v. *France*, 269 F. 2d 55, 560-62 (9th Cir. 1959).

Such immunity exists whether the Navajo Tribe is regarded as a citizen of the State of Arizona or as a citizen of New Mexico or of Utah or as a citizen of all or none of these states. If the Navajo Tribe is regarded as a citizen of a state other than Arizona, it is barred from prosecuting its claims against the State of Arizona by the Eleventh Amendment to the Constitution, which provides that "the Judicial Power of the United States shall not be construed to extend to any suit in law or equity, commenced or prosecuted against one of the United States by citizens of another state. . . ." See *Ford Motor Co.* v. *Treasury Department*, 323 U. S. 459, 464 (1945). If the Navajo Tribe is regarded as a citizen of the State of Arizona, this Court is without jurisdiction to entertain its suit against Arizona because the judicial power of the federal courts does not extend to a suit brought against a state without its consent by its own citizens. *Hans* v. *Louisiana*, 134 U. S. 1 (1890). If the Navajo Tribe is regarded as not being a citizen of any state, it may not prosecute a suit against the State of Arizona because the "States of the Union, still possessing attributes of sovereignty, . . . [are] immune from suits, without their consent, save where there has been 'a surrender of this immunity in the plan of the' " Constitution. *Principality of Monaco* v. *Mississippi*, 292 U. S. 313, 322-23 (1934) (quoting from THE FEDERALIST No. 81 (Hamilton)). No such surrender has been made respecting suits in the federal courts by Indian tribes.

That an Indian tribe cannot be a party litigant in any case within the original jurisdiction of the Supreme Court has been recognized by leading authorities on Indian law. Thus, Professor Cohen stated:

> "As already seen, the Indian tribes within the territory of the United States, while having some of the attributes of sovereignty usually possessed by independent communities, have been declared by the Supreme Court not to be either states of the Union or foreign nations within the meaning of Article III, Section 2, of the United States Constitution giving original jurisdiction to the Supreme Court in controversies in which a state of the Union or a citizen thereof, and a foreign state or subjects and citizens thereof are parties. Consequently, an Indian tribe as such cannot sue, be sued, or intervene in any case where the original jurisdiction of the Supreme Court is invoked." COHEN, HANDBOOK OF FEDERAL INDIAN LAW 371 (1945) (footnotes omitted); see also UNITED STATES DEPARTMENT OF THE INTERIOR, FEDERAL INDIAN LAW 341 (1958).

It is clear that intervention by the Navajo Tribe in this litigation would constitute a suit against the State of Arizona. Whether or not a suit is one against a state is not to be determined by niceties of the law of parties but by the actual effect a judgment in favor of the private litigant would have against the state. "[T]he nature of a suit as one against the state is to be determined by the essential nature and effect of the proceeding. *Ex parte Ayers*, 123 U. S. 443, 490-99; *Ex parte New York*, 256 U. S. 490, 500; *Worcester County Trust Co.* v. *Riley*, 302 U. S. 292, 296-98." *Ford Motor Co.* v. *Treasury Department*, 323 U. S. 459, 464 (1945).

By its petition for intervention the Navajo Tribe seeks a determination that it is entitled to large quantities of

water for use on its reservation. It requests a decision that its rights to water are prior in time and hence superior to those of other users in the State of Arizona. It further seeks a determination that its allotment of water is to be independent of and not drawn from the water apportioned to Arizona pursuant to the Boulder Canyon Project Act.[4] In seeking this relief the Navajo Tribe asserts interests directly in conflict with the interests of all other users, represented by Arizona as *parens patriae*. Only an affirmative judgment in favor of the Navajo Tribe and against the State of Arizona, as representative of its other water users, will accomplish the purposes of the Navajo's prayer for relief. Such a judgment would, in essence, be one in favor of the Navajos, as plaintiffs, and against the State of Arizona, as defendant.

III

Since the United States has elected to represent the interests of the Indians in this litigation, the Navajo tribe is without power to intervene.

The United States is authorized by law and obligated by long-standing custom to represent the interests of the Indians and the Indian tribes in litigation in the courts of the United States. Both Congress and the courts have recognized this traditional moral obligation to the Indians and have embodied it into law. Thus, Congress has provided that "in all States and Territories where there are reservations or allotted Indians the United States district attorney shall represent them in all suits at law and in equity."[5]

---

[4] 45 Stat. 1057 (1928), 43 U. S. C. §§617-617u (1958).

[5] Act of March 3, 1893, 27 Stat. 631, 25 U. S. C. §175 (1958).

Similarly, this Court has recognized when the United States has elected to prosecute or intervene in a suit on behalf of individual Indians or of an Indian Tribe, it is entitled to exercise complete and exclusive control over the litigation to the exclusion of the Indians themselves. *Heckman* v. *United States,* 224 U. S. 413 (1912).

In the *Heckman* case Mr. Justice Hughes, writing for the Court, stated:

> "There can be no more complete representation than that on the part of the United States in acting on behalf of these dependents—whom Congress, with respect to the restricted lands, has not yet released from tutelage. Its efficacy does not depend upon the Indian's acquiescence. It does not rest upon convention, nor is it circumscribed by rules which govern private relations. It is a representation which traces its source to the plenary control of Congress in legislating for the protection of the Indians under its care, and it recognizes no limitations that are inconsistent with the discharge of the national duty.
>
> "When the United States instituted this suit, it undertook to represent, and did represent, the Indian grantors whose conveyances it sought to cancel. It was not necessary to make these grantors parties, for the Government was in court on their behalf. Their presence as parties could not add to, or detract from, the effect of the proceedings to determine the violation of the restrictions and the consequent invalidity of the conveyances. As by the act of Congress they were precluded from alienating their lands, they were likewise precluded from taking any position in the legal proceedings instituted by the Government to enforce the restrictions which would render such proceedings ineffectual or give support to the prohibited acts. The cause could not be dismissed upon their consent; they could not

> compromise it; nor could they assume any attitude with respect to their interest which would derogate from its complete representation by the United States." 224 U. S. at 444-45.

Since the decision in the *Heckman* case, the right of the United States to "enter its appearance and take over the general management of the case without consulting" its Indian wards has been acknowledged by the lower federal courts on numerous occasions. *E.g., Sadler* v. *Public National Bank & Trust Co.*, 172 F. 2d 870, 874 (10th Cir. 1949); *United States* v. *Adamic*, 54 F. Supp. 221 (W. D. N. Y. 1943). This right of the Government has also been recognized by the leading treatise writers. COHEN, HANDBOOK OF FEDERAL INDIAN LAW 370 (1945); UNITED STATES DEPARTMENT OF THE INTERIOR, FEDERAL INDIAN LAW 336 (1958). Questions of intervention by Indians, similar to that presented here, have been raised and decided adversely to the intervenor. Thus, in *Pueblo of Picuris* v. *Abeyta*, 50 F. 2d 12, 14 (10th Cir. 1931), the right of an Indian pueblo to intervene and present contentions inconsistent with those of the United States was denied, the court stating:

> "The statutory power of the United States to initiate actions for the Pueblo Indians necessarily involves the power to control such litigation. If the private attorneys of the pueblo could dictate the averments of the bill, or could prevail in questions of judgment in the introduction of evidence, there would be no substance to the guardianship of the United States over the Indians. There cannot be a divided authority in the conduct of litigation; divided authority results in hopeless confusion. If the United States has power to dismiss with prejudice prior to trial, as has been held, it certainly has power to decline to appeal after trial, if it believes the decision of the trial court is without error."

Earlier in this litigation the Navajos and other Indian tribes sought to file a representation of interest, discussed earlier. The Master regarded the application as one seeking intervention in all but name and held that it should be denied. He stated:

> "The trusteeship of the United States in behalf of the Indians is the creation of a plenary legislative power. It is beyond the power of the courts to disqualify this trustee. The relationship between this trustee and its Indian wards is not 'circumscribed by rules which govern private relations,' Heckman v. U. S., 224 U. S. 413. It rests on the presumption that 'The United States will be governed by such considerations of justice as will control a christian people in their treatment of a (n) * * * dependent race,' Missouri, Kansas & Texas Railway Company v. Roberts, 152 U. S. 114, 117.
>
> "The foregoing considerations lead to these conclusions.
>
> "1. The unconventional status sought by the petitioners in this litigation is one not likely to promote the orderly development of the issues and proof and the forging of a suitable decree. This is underscored by the circumstance that a substantial portion of the proofs has already been taken on the issues as framed by the pleadings; and the magnitude of the case is such that permission to take part in the case without a substantial adjournment to permit adequate preparation would amount to an empty ritual.
>
> "2. The legal power of the Attorney General to represent the petitioners and to manage the litigation in their behalf cannot be curtailed by judicial action."[6]

---

[6] Tr. 2644-45.

Thus, all of the authorities make clear that intervention by the Navajo Tribe in the circumstances of this case would be beyond the power of the Court to authorize, a fact which the Indian tribes themselves appear to have recognized at the time that leave to file a representation of interest was sought.[7]

Moreover, the grant of a right of intervention in these circumstances would be unwise as well as unauthorized. Not only might conflict arise between the views of the Government and those of its Indian wards, but such intervention would also necessarily imply the right on the part of the Indians to reach a settlement or compromise of the litigation without the consent of the United States.

Further, acknowledgment of the right of the Navajo Tribe to intervene in this litigation could precipitate the filing of many more applications for intervention by other tribes claiming the right to the use of water of the main stream or of tributaries of the Colorado River and having perhaps different or conflicting views from those of the Navajos. Plainly, the United States as the traditional guardian of Indian rights is the only party who can properly represent the interests of all of these Indian tribes.

TREATISES

U.S. DEP'T OF THE INTERIOR, OFFICE OF THE SOLICITOR, FEDERAL INDIAN LAW (1958) 8

REQUEST FOR 90 DAYS TO ANSWER NAVAJO PETITION AND EXCEPTIONS, IF NAVAJO MOTION IS GRANTED

If the Court grants the motion for leave to intervene tendered by the Navajo Indian Tribe on September 25, 1961,[1] and orders filed its petition of intervention annexed thereto and accompanying exceptions to the Special Master's Report, the California defendants request at least 90 days to respond to the proposed petition and exceptions of the Navajo Indian Tribe.

Unless this request is granted, the inexcusable and substantial delay of the Navajo Indian Tribe in presenting its contentions made in the foregoing documents would result in substantial prejudice to the California defendants.

STATEMENT IN SUPPORT OF REQUEST

The following facts support the foregoing request of the California defendants:

1. *Indian motion of June 28, 1956, denied by Special Master*[2]

On June 28, 1956 (during the first month of the trial before the Special Master (Rep. 3)), Mr. Justice Douglas referred to the Special Master a motion presented to the Justice by the Navajo Indian Tribe, as well as by six other Indian tribes and communities within the lower Colorado River basin.[3] Tr. 2638,

---

[1]Cited hereafter as "Navajo Motion of September 25, 1961."

[2]For the convenience of the Court, a copy of the Master's opinion and ruling from the transcript is appended hereto (cited hereafter as "app.").

[3]"Motion for Leave To File Representation of Interest and Representation of Interest," submitted by seven Indian tribes and communities, cited hereafter as "Indian Motion of June 28, 1956."

2640-41 (app. at A1, 2-4). That motion requested, in effect, that the Special Master require the Attorney General of the United States, because of a purported conflict of interest, to appoint separate and independent counsel to represent the Indian petitioners. Indian Motion of June 28, 1956, pp. 10-11; Tr. 2640-42 (app. at A3-4). The motion also recited in part that "there is doubt whether petitioners may intervene as separate parties since their interests are committed to adjudication by the intervention of the United States . . . ." Indian Motion of June 28, 1956, p. 2, par. 6. Counsel for the Navajo Indian Tribe was Norman M. Littell, Esq., who is one of counsel on the pending application.

After receiving a brief from the United States and hearing oral argument, the Master denied the 1956 motion. Tr. 2638-46 (app. hereof). No attempt was made by the Navajo Indian Tribe or by any of the

---

The Navajo Indian Reservation is located above Lake Mead "within the northeast corner of Arizona, the northwest corner of New Mexico and the southeast corner of Utah" and thus is "in part located within the drainage basin of the Colorado River and of the Little Colorado River, a tributary of the Colorado River" within the lower basin. Navajo Motion of September 25, 1961, pp. 1-2, par. I.

The other six Indian petitions in 1956 (and their general locations) were: Colorado River Indian Tribes of the Colorado River Indian Reservation, Arizona and California (on the Colorado River below Lake Mead); Gila River Pima-Maricopa Indian Community, Arizona (on the Gila River system, a lower basin tributary of the Colorado River); Hualapai Indian Tribe of the Hualapai Reservation, Arizona (on the Colorado River between Lee Ferry and Lake Mead); Salt River Pima-Maricopa Indian Community of the Salt River Reservation, Arizona (on the Gila River system); San Carlos Apache Tribe, Arizona (on the Gila River system); and Fort McDowell Mohave-Apache Indian Community of the Fort McDowell Reservation, Arizona (on the Gila River system).

See U.S. Ex. 100 (Tr. 12,493), a map showing Indian irrigated lands and proposed ultimate development within the lower Colorado River basin, March 1956.

other Indian petitioners to secure a review of the Master's ruling by this Court. See Tr. 2646 (app. at A-7). The Special Master also ruled that the Indian petitioners could file a brief with the Special Master after the hearings. Tr. 2645 (app. at A-6). Neither the Navajo Indian Tribe nor any of the other Indian petitioners filed any such brief during the 10 months from the end of the trial (August 28, 1958) until the matter was finally submitted to the Special Master (July 1, 1959) after the parties had exchanged three rounds of briefs, together with their proposed findings and conclusions. Rep. 3.

The United States proposed findings and conclusions and supporting brief before the Special Master, submitted in April 1959, made most of the contentions about Indian water rights to which the Navajo Indian Tribe now objects. *Compare* Navajo Exceptions II-IV (pp. 3-7) *with* (*1*) U.S. Findings 4.0.2 (p. 51) and 4.2.1 through 4.2.10 (pp. 57-59); Conclusions 4.2 (p. 61), 11.1(c) (p. 227), and 11.5 through 11.8 (pp. 230-35); (*2*) U.S. Brief in Support of Findings of Fact and Conclusions of Law Proposed by the United States (April 1959), pp. 22-31.

2. *Draft Report of Special Master*

On May 5, 1960, the Special Master released a Draft Report which he circulated among the parties for their comments. Rep. 3. The Draft Report contained the same determinations which the Navajo Indian Tribe now attacks. See DR 219-20, 221-56, 265-67, 275-76, 279-87, 316 (Decree art. VII(B)).

3. *Comments on Draft Report*

On June 10, 1960, the comments on the Draft Report submitted by the United States did not object to determinations which the Navajo Indian Tribe now attacks. The Navajo Indian Tribe did not submit to the Special Master any comments on the Draft Report.

4. *Oral argument before Special Master on Draft Report*

On August 17-19, 1960, oral argument was held in New York City on the Draft Report. Rep. 3; Tr. 22,-594-23,113. No time for argument was even requested by the Navajo Indian Tribe.

5. *Report of Special Master*

On December 5, 1960, the Report of the Special Master, which makes no material changes in the decision proposed by the Draft Report, was submitted to this Court, and was received and ordered filed by the Court on January 16, 1961 (364 U.S. 940). The schedule for filing exceptions, and opening, answering, and reply briefs was established in the notice accompanying that order of the Court.[4]

6. *Exceptions to Special Master's Report*

On February 27, 1961, all parties submitted to this Court their exceptions to the Report of the Special Master. The Navajo Indian Tribe tendered no exceptions.

---

[4]The schedule was: exceptions on February 27, 1961; opening briefs on May 22, 1961; answering briefs on August 14, 1961; and reply briefs on October 2, 1961.

California Exception IV-5 (p. 25) excepted to the Master's determinations of (1) the quantities of water reserved by the United States for Indian reservations (Rep. 254-87) and for other federal lands and purposes (Rep. 291-300), (2) the priorities accorded to such federal reservations, and (3) the bases upon which the Report predicated water rights for such federal reservations. However, we also announced (Calif. Exceptions, p. 25 n.9) that although we disagreed in principle with these determinations of the Master, we did not plan to brief the point for two reasons:

First, the quantities of Indian water in dispute in California are relatively small.

Second, the Master correctly decided (Rep. 247-48) that federal uses in Arizona and Nevada are chargeable to those states out of water from which California users are excluded by the California Limitation Act. As the Master said, "All of the parties seem to agree to this accounting . . . ." Rep. 247.

We further stated that if this latter decision were attacked by any party, we reserved our challenge to the determinations which sustain the federal claims. Calif. Exceptions, p. 25 n.9.

No party excepted to the Master's determination that federal rights and uses are chargeable to those states in which the use is made (Rep. 247-48) or to his corollary determination that the federal rights within each state are limited by the interstate allocation to each state (Rep. 300-02). See also Rep. 312-13 and proviso to Decree art. II(C) (Rep. 353).

7. Opening briefs

On May 22, 1961, opening briefs in support of their exceptions were filed by the parties. The Navajo Indian Tribe tendered no brief.

No party challenged therein the Master's determination that federal rights and uses are chargeable to and limited by the allocation to the state in which the use is made. California's opening brief repeated the reasons given in our exceptions why we did not brief the Indian issues although we disagreed with those determinations. Calif. Op. Br. 31 n.6, 283-84.

8. Answering and reply briefs

On August 14, 1961, answering briefs filed by the parties made no change in the situation described above; nor did the reply briefs filed October 2, 1961. The Navajo Indian Tribe tendered none.

9. Pending application of Navajo Indian Tribe

On September 25, 1961, the pending application tendered by the Navajo Indian Tribe contended that allocations to Indian tribes should be made separate and apart from any allocation to the states. See Navajo Motion of September 25, 1961, pp. 5-6; Brief in Support of Motion, pp. 36-41; Navajo Petition of Intervention, p. 51, par. V; Navajo Exception III, pp. 4-5.

In conjunction with the foregoing contention, the application of the Navajo Indian Tribe also claimed a super-senior aboriginal priority to a quantity of water which is indefinitely expansible in the future. See Navajo Motion of September 25, 1961, pp. 4-5, 6; Brief in Support of Motion, pp. 30-36, 41-46; Navajo Peti-

tion of Intervention, pp. 50-51, pars. II-IV; Navajo Exceptions II, pp. 3-4, and IV, pp. 5-7.

Presumably, the foregoing contentions would be applicable to all Indian tribes throughout the entire Colorado River basin. *Cf.* U.S. Ex. 100 (Tr. 12,493), a map showing Indian irrigated lands and proposed ultimate development within the lower Colorado River basin, March 1956.

10. *Delay by Navajo Indian Tribe and prejudice to California defendants*

The Navajo Indian Tribe has inexcusably failed to brief its claims before the Special Master for his recommendation to this Court.

The Navajo Indian Tribe has inexcusably delayed in presenting its claims to this Court; those claims should have been submitted consistently with the schedule for exceptions and briefs established by the Court in this cause. (See notice accompanying the order of the Court (364 U.S. 940), dated January 16, 1961, summarized p. 4 *supra* note 4.)

The California defendants have not briefed the Indian issues; but, given timely notice of the contentions of the Navajo Indian Tribe that the Indian allocations should be separate and apart from the allocations to each state, we would have briefed all Indian issues extensively. Consequently, the inexcusable and substantial delay of the Navajo Indian Tribe in presenting its contentions have prejudiced California's rights by, in effect, preventing our briefing of the Indian issues, which have become even more important because of the extremity of the present contentions of the Navajo Indian Tribe.

11. *Merits of the Navajo Indian Tribe's contentions*

The water right claimed by the Navajo Indian Tribe (see item 9 *supra* pp. 6-7) is based on unsound premises and cannot be sustained. All arguments and contentions on the merits are reserved.

12. *Status of Navajo Indian Tribe to intervene*

We do not consider herein the question whether the Navajo Indian Tribe can intervene as a separate party in this suit in which, in effect, it already is a party represented by the United States acting as guardian for Indian tribes. See Indian Motion of June 28, 1956, p. 2, par. 6, quoted *supra* p. 2; *cf.* Tr. 2643-45 (app. at A5-7).

The State of California does not waive any immunity from suit in the original jurisdiction of this Court by the Navajo Indian Tribe. See U.S. CONST. amend. XI; *Cherokee Nation v. Georgia,* 30 U.S. (5 Pet.) 1 (1831); *Texas-Cherokees & Associate Bands v. Texas,* 257 U.S. 615 (1921) (per curiam order denying motion for leave to file original bill of complaint, upon authority of *Cherokee Nation v. Georgia, supra*); U.S. DEP'T OF THE INTERIOR, OFFICE OF THE SOLICITOR, FEDERAL INDIAN LAW 341 (1958). *Cf. New Jersey v. New York,* 345 U.S. 369, 372 (1953).

CONCLUSION

For the foregoing reasons, if the Court grants the motion of the Navajo Indian Tribe, the Court should grant to the California defendants not less than 90 days within which to file their responses to the petition of intervention and exceptions of the Navajo Indian Tribe.

APPENDIX

Opinion and Ruling of Special Master Denying Indian Motion of June 28, 1956 (Tr. 2638-46)

Morning Session—Wednesday, July 18, 1956—
10 A.M.

THE MASTER: I should like first to make an informal disposition of the application which has been argued on behalf of the Indian Tribes. I will read it into the record.

An application on behalf of the Colorado River Indian tribes of the Colorado River Indian Reservation in Arizona and California; the Gila River Pima-Maricopa Indian community, Arizona; Hualapai Indian Tribe of the Hualapai Reservation, Arizona; the Navajo Tribe of Indians of the Navajo Reservation, Arizona and New Mexico; Salt River Pima-Maricopa Indian Community of the Salt River Reservation, Arizona; the San Carlos Apache Tribe, Arizona; and the Fort McDowell Mohave-Apache Indian Community of Fort McDowell Reservation, Arizona.

There has been presented by their respective attorneys an application for leave to file a "representation of interest." Accompanying this application is a petition on behalf of the same Indian Tribes submitted by the respective attorneys. The petition in part alleges:

That the petitioners are American Indian tribes, each with a tribal organization recognized by the Secretary of the Interior as authorized to represent its tribe. Each of the tribes resides within the lower Colorado River Basin and is the beneficial owner of land and the right to the use of [2639] water within the basin.

That this case; that is, Arizona v. California, et al., presents for adjudication the relative rights of the parties litigant and of petitioners and other Indian wards of the United States to divert water from the Lower Colorado River Basin.

That Indian rights in the water stem from treaties with Indian tribes, executive action, the creation of Indian reservations and various acts of Congress.

That the United States has intervened in this case and has placed the rights of petitioners in issue. As a result, petitioners are precluded from asserting their rights in their own names and on their own behalf. They have no control over the course of the suit nor any participation in the trial.

That the United States has interests which are in conflict with the interests of the petitioners. These conflicting interests arise out of its treaty with Mexico and out of its contractual obligations to deliver water and electricity. The conflict is emphasized by the circumstance that the Attorney General is under the obligation to defend the United States before the Indian Claims Commission and the Court of Claims in suits brought by the Indian tribes seeking compensation for loss of water rights. (It is not clear whether such suits are now pending or whether such [2640] suits are a future possibility. The latter is the probable intention of the allegation.)

Additional allegations give illustrations of the operation of the conflict in the prosecution of this case.

So much for the allegations.

The prayer for relief is as follows:

Wherefore Petitioners pray as follows:

1. That cognizance be taken of this representation in view of the helpless position in which these petitioners find themselves;

2. That the Attorney General be called upon to explain his unauthorized amendment of the petition of intervention.

3. That the Special Master be instructed as follows: (a) To determine whether a conflict exists between the Indian interests and the interests of the United States apart from those of the Indian; (b) to determine whether the Indian interests are or can be adequately represented by the Attorney General of the United States; (c) to recommend whether the interests of justice and fair dealing require separate and independent counsel for the Indians.

On June 28, 1956, the application and the accompanying petition were presented to Mr. Justice Douglas, who endorsed them "Referred to the Special Master, Honorable Simon Rifkind, [2641] for appropriate action."

On the request of the petitioners, argument on the petition before the Special Master was adjourned to July 6th. In the course of the argument, counsel for the petitioners particularized the relief sought by the petitioners as follows:

1. To order the Attorney General to reinstate the pleading withdrawn from the Supreme Court file.

2. To request the Attorney General to arrange for private counsel for the Indians.

3. Such private counsel should have the status of special assistant to the Attorney General with full power to act on behalf of the Indians and with instructions from the Attorney General which would give him independence of action.

4. The fees of such private counsel and his expenses to be paid by the Attorney General.

5. That the Court might privately and informally recommend such a course of action to the Attorney General.

6. That the petitioners have time for preparation for trial, and

7. To have during the trial the right of examination and cross-examination of witnesses.

It was made clear beyond doubt that the petitioners [2642] did not seek or desire to intervene as parties.

In opposition to the application and the petition, the United States filed a brief. Therein it relies upon its plenary power conferred by statute to manage the affairs of Indians. It contends that the manner of exercising this power, which is political and administrative in nature, is a question for the legislative branch to determine and is not one for the courts. It cited many precedents to support its position and relies especially on Heckman v. The United States, 224 U.S. 413.

The other parties expressed varying views of the petition.

In its petition for intervention, the United States has assigned the Indian claims as one of the interests

it seeks to protect and further in this litigation. In the actual prosecution of these hearings before the Special Master, the United States has appeared by a number of attorneys. How the several responsibilities of the United States have been distributed among the several lawyers has not been disclosed to the Special Master, nor, indeed, whether there has been any allocation of function. [2643]

The petitioners do not seek the independent status of parties. They disavow any desire for intervention. They would have the Attorney General designate another lawyer upon whom would devolve a special concern for the claims of the Indians. Such a lawyer would still be the agent of the Attorney General. In effect, the Attorney General would speak with several voices and might occupy conflicting positions. It is unnecessary to elaborate upon all the anomalies, some or all of which would be encountered in such a trial. The Attorney General might at once concede a fact and withhold its concession. In one role he might be content with the testimony of a witness and refrain from cross-examination. In his other role he would be moved to impeach both the witness and the testimony.

In short, the petitioners would in every sense behave like parties but remain non-parties. It may well be that conflict between the general interest of the United States and the special interest of the Indians is inevitable. Indeed, in any single representation by the United States of a general and a special interest there is almost bound to be conflict for in a sense the special interest is always at war with the general interest. Such conflict if governed by the usual rules which obtain between trustee and ward would at times disqualify the trustee,

or would in [2644] any case justify separate intervention on behalf of the ward, but this is not the ordinary case of private trustee and ward.

The trusteeship of the United States in behalf of the Indians is the creation of a plenary legislative power. It is beyond the power of the courts to disqualify this trustee. The relationship between this trustee and its Indian wards is not "circumscribed by rules which govern private relations," Heckman v. United States, 224 U.S. 413. It rests on the presumption that "The United States will be governed by such considerations of justice as will control a Christian people in their treatment of a(n) * * * dependent race," Missouri, Kansas & Texas Railway Company v. Roberts, 152 U.S. 114, 117.

The foregoing considerations lead to these conclusions.

1. The unconventional status sought by the petitioners in this litigation is one not likely to promote the orderly development of the issues and proofs and the forging of a suitable decree. This is underscored by the circumstance that a substantial portion of the proofs has already been taken on the issues as framed by the pleadings; and the magnitude of the case is such that permission to take part in the case without a substantial adjournment to permit adequate preparation would amount to an empty ritual.

2. The legal power of the Attorney General to [2645] represent the petitioners and to manage the litigation in their behalf cannot be curtailed by judicial action.

There is, nonetheless, some room for accommodation. First, if the petitioners are in possession of evidence which would buttress their claims to water I assume that the Attorney General would not reject its proffer to him and that he would not withhold it from the trial. No allegation to the contrary is made in the petition. If this assumption is valid, as I believe it is, the record of this trial should, at its conclusion contain all the substantial evidence which the special representation of the petitioners would produce.

Second, there may however be disagreement between petitioners and the Attorney General concerning the interpretation of the evidence and concerning the rules of law which govern the relief to be awarded in the light of the evidence. I think it is within the judicial power to receive from one not a party a brief which may be helpful to a court in deciding a controversy. The practice of receiving briefs from amici curiae is well established. Indeed, the Supreme Court has at times invited briefs from non-parties.

The appropriate action which, in my opinion, is responsive to this petition is that the petitioners be authorized to file a brief with the Special Master upon the conclusion of the hearings. [2646]

I have given consideration to several arguments advanced by the other parties to this litigation. They are addressed to marginal aspects of this problem and require no further comment.

That disposes of the application. If any party wants to use this transcript as a basis for presenting the question to the Supreme Court I shall be glad to certify it.

STATEMENT OF NEW MEXICO RELATING TO MOTION ON BEHALF OF NAVAJO TRIBE OF INDIANS FOR LEAVE TO INTERVENE.

Comes now the State of New Mexico and for its response to the Motion on Behalf of Navajo Tribe of Indians of the Navajo Reservation, Arizona, New Mexico and Utah, for Leave to Intervene, Brief in Support Thereof and Petition of Intervention, respectfully advises this Honorable Court:

(1) That respondent New Mexico has no objection to the Motion for Leave to Intervene filed on behalf of the Navajo Indian Tribe and does not object to the same.

(2) New Mexico does, however, reserve its right to answer the Petition of Intervention and file briefs relating to the issues raised as to the claims and arguments of the Navajo Tribe of Indians in the event their Petition of Intervention is allowed by this Court.

Respectfully submitted,

STATE OF NEW MEXICO,

EARL E. HARTLEY,
Attorney General,

THOMAS O. OLSON,

CLAUD S. MANN,

DUDLEY CORNELL,
Special Asst. Attorneys General.

v.

STATE OF CALIFORNIA, ET AL.

RESPONSE OF THE UNITED STATES TO THE MOTION ON BEHALF OF THE NAVAJO TRIBE OF INDIANS FOR LEAVE TO INTERVENE

INTRODUCTORY STATEMENT

The Motion for Leave to Intervene on Behalf of the Navajo Tribe is similar to an application filed by the Navajo and other Indian tribes for separate representation in the trial of this case. That application was filed early in the trial proceedings before the Special Master and was referred to and disposed of by him (Tr. 2638–2646; Transcript of July 18, 1956). Although the relief there sought, unlike the present application, did not extend to intervention of the Indian tribes as parties,[1] the effect of granting

[1] One of the grounds for the earlier application was "6. There is doubt as to whether petitioners may intervene as separate parties since their interests are committed to

their application would have been tantamount to their intervention. This was recognized by the Special Master who stated, "In short, the petitioners would in every sense behave like parties but remain non-parties" (Tr. 2643). Accordingly, the reasoning by which the Special Master denied that application applies here—"The legal power of the Attorney General to represent the petitioners and to manage the litigation in their behalf cannot be curtailed by judicial action" (Tr. 2644–45). The United States resists the present motion as it resisted the earlier one.

It should be noted that the Special Master makes no adjudication of the water rights of the Navajo Indian Reservation. The Special Master's Report does not affect rights or priorities of Indian reservations for which no specific provision is made (see Article VIII, subdivision (C), of the Recommended Decree on page 360 of the Report), except as legal principles enunciated therein may apply on the basis of *stare decisis*. Nothing has been taken from the Navajo Indians and their complaint is that their rights have not been affirmatively recognized.

---

adjudication by the intervention of the United States * * *" (p. 2, Motion for Leave to File Representation of Interest by the Colorado River Indian Tribes of the Colorado River Indian Reservation, Arizona and California; Gila River Pima-Maricopa Indian Community, Arizona; Hualapai Indian Tribe of the Hualapai Reservation, Arizona; Navajo Tribe of Indians of the Navajo Reservation, Arizona and New Mexico; Salt River Pima-Maricopa Indian Community of the Salt River Reservation, Arizona; the San Carlos Apache Tribe, Arizona; and the Fort McDowell Mohave-Apache Indian Community of the Fort McDowell Reservation, Arizona).

ARGUMENT

I

THE UNITED STATES IS AUTHORIZED EXCLUSIVELY TO REPRESENT THE INDIAN TRIBES IN LITIGATION AFFECTING THEIR PROPERTY RIGHTS

The representation of Indian tribes by the United States is an aspect of the plenary power of the United States to manage the affairs of Indians and Indian tribes. *Worcester* v. *Georgia,* 6 Pet. 515; *United States* v. *Kagama,* 118 U.S. 375; *United States* v. *Ramsey,* 271 U.S. 467. "The power existing in Congress to administer upon and guard the tribal property, and the power being political and administrative in its nature, the manner of its exercise is a question within the province of the legislative branch to determine, and is not one for the courts." *Cherokee Nation* v. *Hitchcock,* 187 U.S. 294, 308; *Lone Wolf* v. *Hitchcock,* 187 U.S. 553, 565; *Tiger* v. *Western Investment Co.,* 221 U.S. 286, 311.

Congress has generally delegated to the Secretary of the Interior the management of Indian property and to the Attorney General the conduct of litigation affecting that property. Thus, as to the authority of the Secretary of the Interior, it was said in *United States* v. *Anglin & Stevenson,* 145 F. 2d 622 (C.A. 10) certiorari denied, 324 U.S. 844, 628–629:

> We do not forget that historically and traditionally the Secretary of the Interior has been selected as the executive arm of the Government to execute the declared Congressional policy with the Indians. As such, he and his

> subordinates have the responsibility of discharging the obligation of the Government to its Indian wards, and in that respect, he is given wide discretionary powers to deal with the individual Indians who are dependent upon the Government for tutelage and protection. [Cases omitted.] In the discharge of these duties, he acts as supervisor, agent, guardian, and trustee of the Indian and his property, whether in the nature of lands or restricted funds. While exercising the powers and duties imposed by law, he is clothed with sovereign immunity, and ordinarily is not amenable to judicial processes, or bound by judicial decrees absent legislative consent. * * * It is not the judicial function to administer the affairs of incompetent Indians, and courts should be at pains not to invade the trust or encroach upon the prerogative which has been traditionally assigned to the Secretary of the Interior.

The authority of the Attorney General to control litigation affecting Indian property is equally broad. This is, of course, necessary in order to effectuate the responsibility of the Secretary of the Interior. It is provided in 28 U.S.C. 507(b) that "[t]he Attorney General shall have supervision over all litigation to which the United States or any agency thereof is a party * * *."[2] See also *United States* v. *Winston*,

[2] "In all States and Territories where there are reservations or allotted Indians the United States Attorney shall represent them in all suits at law and in equity." Act of March 3, 1893, 27 Stat. 631, 25 U.S.C. 175. See also Act of June 22, 1870, 16 Stat. 164, as amended September 3, 1954, 68 Stat. 1229, 5 U.S.C.

170 U.S. 522, 525. "If the United States is entitled to institute an action on its own behalf and on behalf of the Indians, the Indians cannot determine the course of the suit or settle it contrary to the position of the Government." Cohen, *Handbook of Federal Indian Law* (1942), p. 370; *Federal Indian Law,* Department of the Interior (1958), p. 336. *Conner* v. *Cornell,* 32 F. 2d 581, 584–585 (C.A. 8); *McGugin* v. *United States,* 109 F. 2d 94 (C.A. 10); *White* v. *Sinclair Prairie Oil Co.,* 139 F. 2d 103, 106–107 (C.A. 10); *United States* v. *Adamic,* 54 F. Supp. 221, 223 (W.D. N.Y.).

This Court recognized the complete control of the United States over Indian litigation in *Heckman* v. *United States,* 224 U.S. 413, where the United States sued to set aside conveyances of allotted lands by restricted Indians, as follows (pp. 444–446):

> There can be no more complete representation than that on the part of the United States in acting on behalf of these dependents—whom Congress, with respect to the restricted lands, has not yet released from tutelage. Its efficacy does not depend upon the Indians' acquiescence. It does not rest upon convention, nor is it circumscribed by rules which govern private relations. It is a representation which traces its source to the plenary control of Congress in

306; Executive Order No. 6166 of June 10, 1933 (Reorganization of Executive Agencies), Section 5, 5 U.S.C., following Section 132; Reorganization Plan No. 2 of May 24, 1950, 64 Stat. 1261, as amended July 5, 1952, 66 Stat. 121, 5 U.S.C., following Section 292.

> legislating for the protection of the Indians under its care, and it recognizes no limitations that are inconsistent with the discharge of the national duty.
>
> * * * * *

It is then clear that the United States, acting through the Attorney General, has full authority to represent the various Indian tribes in the pending litigation. It is equally clear that the action of the Attorney General in doing so is binding upon those tribes. For instance, in the action entitled *Pueblo of Picuris* v. *Abeyta,* 50 F. 2d 12 (C.A. 10), the court dismissed an appeal taken by the Pueblo after the Attorney General had decided not to appeal, stating at page 13 that "a decree rendered in a suit brought by the pueblo does not bind the United States, while a decree rendered in a suit brought by the United States does bind the pueblo." In *Mars* v. *McDougal,* 40 F. 2d 247 (C.A. 10) certiorari denied, 282 U.S. 850, a suit brought by an Indian was dismissed because an earlier suit involving the same claim brought in the name of the United States had been dismissed with prejudice on motion of the Attorney General.

In this case the Attorney General, acting for the United States, has undertaken representation of the interests of the several Indian tribes[3] and it "is to be

---

[3] In the Lower Basin of the Colorado River there are 25 Indian Reservations. Evidence of the water rights of each of them, and Proposed Findings of Fact and Conclusions of Law and briefs in support thereof, were submitted by the United States to the Special Master. See particularly Findings of Fact and Conclusions of Law Proposed by the United States, pp. 37, 42, 45, 51–125, 227, 230–235, 237. The decisions which

presumed" that "the United States will be governed by such considerations of justice as will control a Christian people in their treatment of [a] * * * dependent race." *Missouri, Kansas & Texas Ry. Co.* v. *Roberts,* 152 U.S. 114, 117. It is plain that there is no basis for intervention by the Navajo Tribe either as a matter of right or as a matter of judicial discretion.

II

BECAUSE THE NAVAJO TRIBE HAS HERETOFORE HAD AMPLE OPPORTUNITY TO MAKE REPRESENTATIONS RESPECTING ITS INTEREST IN THE LITIGATION, ITS UNTIMELY MOTION FOR LEAVE TO INTERVENE NOW IS WITHOUT JUSTIFICATION

Even were it not clear that intervention by the Navajo Tribe is precluded by the United States' exclusive authority, there is in the circumstances of this case no justification for the motion at this stage of the proceeding.

The controversy respecting allocation of the waters of the Lower Colorado River has plagued the States of the basin, the United States, and the people of the

---

have been made respecting the extent to which the United States should accept and the extent to which it should except to the Master's Report have necessarily involved an exercise of judgment as to what will best serve the interests of all the Indian reservations involved. If the Navajo Tribe were to be permitted to intervene because of disagreement with the Attorney General's judgment it would follow that each of the tribes inhabiting the 24 other reservations should have the same opportunity. Thus the force of the authorities which deny the right of an Indian tribe to intervene in a case where the representation of its interests has been undertaken by the United States is multiplied in the instant case.

618272—61——2

entire region for nearly half a century. After earlier unsuccessful attempts to bring the matter before this Court, *Arizona* v. *California,* 283 U.S. 423, *Arizona* v. *California,* 292 U.S. 341, *Arizona* v. *California,* 298 U.S. 558, this case was initiated in 1952. The United States' Petition in Intervention was filed in December, 1953. Hearings before the Special Master began on June 14, 1956, and continued intermittently until August 28, 1958. Proposed findings of fact and conclusions of law, and briefs in support thereof, answering briefs, and reply briefs were submitted to the Special Master during the period ending July 1, 1959. On May 5, 1960, the Special Master submitted his draft report to the several parties. In August, 1960, the Special Master heard oral argument by the parties with respect to his draft report and on January 16, 1961, the Special Master's report dated December 5, 1960, was received and ordered filed by the Court. Exceptions of the several parties to the report were filed on February 27, 1961, and briefs in support of exceptions, answering briefs and reply briefs have now been submitted to the Court. After nearly nine years, during which the first Special Master appointed by the Court died and was replaced, and the second Special Master suffered a heart attack from which he fortunately recovered, the case is now ready for argument to and consideration by the Court.

A decision of the great issues which for many years have impeded full development of the water resources of the southwestern region of the United States, and hence the full development of the other resources of the region, is now imminent. Even were there merit

to the subject motion, which we deny, we respectfully submit that that decision should not be delayed by the intervention now of additional parties. It is too late to consider whether additional parties, who are clearly neither necessary nor indispensable, should now be given leave to enter the case.[4]

The Tribe's review of "Past efforts of Navajo Tribe to Secure Adequate Representation," in its argument to establish timeliness of its motion, does not disclose all of the pertinent facts. While it is true, as above noted, that it and other tribes did petition the Court to require the Attorney General to designate separate counsel to represent their interests, the Special Master, to whom the petition was referred, as a part of his mentioned ruling, encouraged the applicants to proffer to the Attorney General, and the Attorney General to consider for presentation in the case, any relevant evidence in their possession. He also specifically authorized the applicants to file an *amicus curiae* brief with him upon conclusion of the hearings and he expressly invited an application to the Court for review of his ruling.

Neither the Navajo Tribe nor any other tribe of the Lower Colorado River Basin sought review of the Master's decision or availed itself of the opportunity

---

[4] We suggest that the contention that allowance of the motion would not make necessary referral of the case back to the Special Master or otherwise delay decision by the Court is frivolous. If the "void" which the Tribe would fill consists of the absence of evidence, a point on which the motion and the supporting documents is peculiarly vague, it cannot be filled without the taking of additional evidence.

to file an *amicus* brief with the Special Master. All interested tribes were invited to review the evidence being prepared by the United States with regard to the claims for water rights for the respective reservations inhabited by them. The Navajo Tribe accepted this invitation and its representatives who made the examination found no fault and made no adverse comment with regard to such evidence. Neither did the Tribe nor its General Counsel suggest or proffer any additional evidence. On the contrary, the Chairman of the Tribal Council, by letter of March 5, 1957, to the Solicitor, Department of the Interior,[5] stated that, after its review by the Tribe's Assistant General Counsel and its consulting engineers, he was "entirely satisfied" with the preparation of evidence "to show Indian water rights on the Navajo Reservation."[6]

A copy of the letter of February 2, 1961, addressed by the General Counsel for the Tribe to the Attorney General, referred to in the motion and the brief in support thereof, is attached as Appendix B. It is to be noted that in that letter the only reference to any of the five areas in which it is stated in paragraph IV of the motion that "The United States

[5] Copy of the letter is annexed as Appendix A.

[6] In support of the claim asserted in the United States' Petition of Intervention with respect to the Navajo Indian Reservation (see Appendix II to the Petition) the evidence was designed to establish the reserved rights to use specific quantities of the waters of certain tributary streams for agricultural, domestic, stock watering and similar purposes on the reservation. See Findings of Fact and Conclusions of Law Proposed by the United States before the Special Master, Findings 4.0.2, 4.0.3, 4.2.1–4.2.13, Conclusion 4.2.

has failed vigorously to assert" the interests of the Navajo Indians is the request that exception be taken to the Report's adoption of irrigable acreage on an Indian reservation as a basis for measurement of the quantities of water reserved for use on the reservation. In a telephone conversation between a member of tribal counsel's staff and a representative of the Department of Justice which preceded the letter[7] it was explained that, notwithstanding our agreement with the proposition that irrigable acreage is not the sole basis for measuring the quantum of the waters reserved for use on an Indian reservation (see fn. 28, p. 80, of our Answering Brief), we did not consider the language of the Report in this respect an appropriate subject for exception. This conclusion was predicated on (1) the Special Master's express recognition (Rept. 265) that, with respect to the five reservations to which the Recommended Decree applies, the basis for measurement which he adopted does not mean that the reserved waters may not be used for purposes other than agricultural and related uses, (2) the absence of prejudice to any claim which might later be made with respect to the Navajo reservation in view of the Master's exclusion of that reservation from the area of adjudi-

[7] The letter was written in response to our suggestion during that conversation that counsel's views respecting exceptions to be noted by the United States, orally indicated during the conversation, should be put in written form for our further consideration. In light of the purpose of the letter and in light of counsel's intention stated during the telephone conversation to arrange a conference at a later date, it was assumed that written response to the letter was not expected.

cation, and (3) the fact that the evidence of water rights appurtenant to the Navajo reservation presented to the Master, with the full approval, as above noted, of the Tribe's Assistant General Counsel, its consulting engineer, and the Chairman of the Tribal Council, had employed irrigable acreage as the appropriate and principal basis for measuring the quantum of the rights reserved. Except for repeating this request in the letter of February 2, 1961, counsel for the Tribe made no further effort to demonstrate to the Attorney General or his representatives that the exception should be noted notwithstanding these circumstances.

We respectfully submit that in all this there is nothing to justify a reopening of the case to permit counsel for the Navajo Tribe to support his present views at this late stage in the case.

III

THE CHARGE OF "INADEQUATE REPRESENTATION" IS WITHOUT MERIT

Even were the motion of the Navajo Tribe legally cognizable and appropriate at this time, it should be denied for the reason that at their strongest the assertions of "inadequate representation" present nothing more than the question whether the judgment of the Attorney General or the judgment of tribal counsel is better, concerning the manner in which the rights of the United States with respect to the Navajo and other Indian reservations in the Lower Basin can best be asserted and protected. This is evident from

the motion and supporting documents. It is at least partially demonstrated by what has already been said in this response. But even though we wish to avoid arguing against any claim of right which the United States may possibly have in behalf of the Navajo and other Indian tribes, we feel that it is appropriate to make at least a brief response to the Navajo Tribe's enumeration of "five areas of major importance" in which it is charged the United States "has failed vigorously to assert" the Tribe's interests.

A. THE JUSTICIABILITY OF TRIBUTARY USES

The first of the enumerated "areas" involves the United States' omission to except to the Special Master's refusal to adjudicate its claims of right with respect to the Navajo Indian Reservation. It is true that in the Government's Petition of Intervention a necessity for determination of its rights with respect to the Navajo and all other Indian Reservations was alleged. It is also true that before the Special Master we urged that the rights to use water from available sources on the Navajo Reservation and all other Indian reservations within the Lower Basin should be adjudicated by the decree in this case. (See *e.g.*, Tr. 13000–13016.) In our submissions to the Special Master we proposed findings of fact and conclusions of law for the adjudication of all such rights on the basis of our evidence respecting the same, including those appurtenant to the Navajo Reservation (*supra*, p. 6, fn. 3, and p. 10, fn. 6).

But on August 23, 1957, the Special Master had announced his intention to receive evidence from the

United States of its claims of right to use tributary waters on the several Indian reservations, but to defer the taking of evidence of possibly conflicting claims on the same tributaries until after report to and action by the Court with respect to other issues in the case. The rationale for this ruling appears at pp. 13796 to 13805 of the transcript. No limitation with respect to the trial of mainstream Indian reservation rights was imposed. Tr. 13809. Although we disagreed then,[8] and continue to disagree, with the Master's suggestion that the several States lack power in their capacities as *parens patriae* to bind the claimants in those States of conflicting rights, we concluded on reflection that for the other reasons given, relating to the practical management of the litigation, neither the Court nor the Special Master on reconsideration would be disposed to reverse the ruling. Either because of absence of proof of conflicting claims or in reliance on the ruling, the States generally refrained from challenging the evidence submitted by the United States with respect to its claims of right to use water from tributary sources on the several Indian reservations.

The Special Master's determination that mainstream and tributary uses above Lake Mead are not accountable in the allocation of mainstream water if approved would make irrelevant an adjudication at

[8] Counsel for the Government advised the Special Master at the time that review of the ruling, either by request to him for reconsideration or by application to the Court, would probably be sought (Tr. 13806).

this time of the rights to use water on the Navajo Reservation as against users of mainstream water. If the Court agrees with our first and second exceptions to the report where we oppose this determination, it will then be necessary to determine the appropriateness of an application, under Article IX of the Recommended Decree and the Special Master's ruling of August 23, 1957, for adjudication of those rights.[9] Under the same authority, application can be made for adjudication of those rights if, contrary to the Master's determination at page 324 of the Report, actual conflict between the claims asserted by the United States and other water users from the tributaries involved is demonstrable. But in the present posture of the case, we submit that

[9] On the record made before the Special Master the extent of conflict between tributary uses on the Navajo Reservation and downstream uses of mainstream waters is uncertain. See Tr. 12817; 12819–20. If, as suggested in the letter of February 2, 1961, from the General Counsel for the Navajo Tribe to the Attorney General, there is possible basis for a claim of right to use water from the mainstream on the Navajo Reservation, this is a matter of which the Court can properly be asked to take cognizance only by an application to receive additional evidence after decision on the pending exceptions to the Special Master's report. It is not an appropriate subject for exception now because no pleading, no evidence and no argument to support such a claim has been submitted to the Court or to the Special Master. Apparently in recognition of this situation and of the Tribe's acquiescence in and approval of the Government's limitation of its claims with respect to the Navajo Reservation to tributary uses, the Tribe has not charged that the omission heretofore to assert a claim of right to use mainstream waters on the reservation constitutes "inadequate representation."

the United States' decision not to except to the Master's omission to adjudicate the rights to use tributary waters on the Navajo and other Indian reservations represents a reasonable exercise of judgment and that any other course would be ill-advised, unwise, and not in the best interest of any of the Indian tribes, the United States, or the efficient administration of the litigation.

B. ABORIGINAL RIGHTS OF THE NAVAJO TRIBE

The second of the areas of "inadequate representation" enumerated in the motion relates to the theory of reservation by the United States of rights to the use of water on Indian reservations advocated by the United States and adopted by the Special Master. Complaint is made that the United States has not asserted aboriginal rights in the Navajo Indian Tribe to the use of water on the Navajo Reservation and that such rights are paramount and superior to all other claims of right in the same source of water supply.

We submit that the doctrine of reservation by the United States of rights to use water on Indian resercations established on lands withdrawn from the public domain is in no way inimical to the Navajo Indians or to Indians inhabiting the other reservations with respect to which we have advocated the doctrine in this case. Where there is evidence of use and occupancy on which a claim of aboriginal title might be based, there is nothing in the doctrine to pre-

clude a further claim based on aboriginal title. However, the extent of the rights based on such title which might be claimed with respect to the Indian reservations in the Lower Basin is extremely limited, if such rights exist at all, while the doctrine on which we have primarily relied is all embracing.

For example, without regard to what the Navajo Indians may claim in litigation with the United States before the Indian Claims Commission or elsewhere respecting their aboriginal title to the lands on which they roamed before they were confined to their reservation, the fact is that under Article IX of the Treaty of 1868 (U.S. Exhibit 201) the Navajo Tribe expressly relinquished "all right to occupy any territory outside their reservation, as herein defined," reserving only the right to hunt on unoccupied lands contiguous to the Reservation. The reservation as defined by the Treaty consisted of only a relatively small area in the eastern portion of the reservation as it now exists (U.S. Exhibit 293, last page). There were a large number of additions by subsequent Executive Orders and acts of Congress (*Ibid.*). Only four of the eighteen areas of water use with respect to which specific proof was prepared and submitted to the Special Master are located within, or partly within, the original Treaty reservation (U.S. Proposed Finding of Fact 4.2.10). Obviously, lands outside the reservation created by the Treaty of 1868 were open to settlement and the surplus nonnavigable waters thereon were subject to appropriation under the

Desert Land Act of 1877 (43 U.S.C. 321) until such lands were reserved by later executive order or statute. So far as rights to use water on the original Treaty reservation are concerned, we believe that the priority date as of the date of creation of the reservation, June 1, 1868, is sufficient to protect the interests of the Navajo Tribe against any claims of conflicting rights in the water sources on that area.[10]

Moreover, the doctrine of reservation of rights to the use of water by the United States for use on Indian reservations as announced by the Special Master was presented and argued extensively in the United States' submissions to the Special Master. The Navajo Tribe did not take exception to that presentation by filing an *amicus curiae* brief with the Master or otherwise. We note also that in the letter of February 2, 1961 addressed by General Counsel for the Tribe to the Attorney General, no mention of this point was made. We submit that even if the record before the Master warranted a claim of right in behalf of the Navajo Tribe based on aboriginal title, the omission to assert such claim before the Special Master has in no way prejudiced the interests of the Tribe and does not in any manner support the charge of "inadequate representation."

---

[10] If in this case or in other litigation it should appear that there are conflicting claims of priority dates earlier than June 1, 1868, there is nothing in the Report of the Special Master to preclude a claim in behalf of the Indians of aboriginal title if the facts warrant such a claim being made.

C. LACK OF SEPARATE APPORTIONMENTS TO INDIAN TRIBES

The third and fourth "areas" enumerated in the motion to support the charge of "inadequate representation" relate to the United States omission to except to the Special Master's determination that uses of water on the several Indian reservations are chargeable to the State allocations and his failure to make separate apportionments to "indian users." The contention seems to be that in acquiescing in the Master's decision the United States has "consented * * * that the indians must * * * look to the states for their share of water." (Motion, pp. 5–6.)

The United States has never in this litigation contended for separate apportionments to the Indian Tribes. Early in the proceedings it did contend that a separate apportionment should be made to the United States, as against the several States. However, long before the hearings before the Special Master were concluded, the United States took the position that consumptive uses under rights claimed by the United States, except those involving international obligations, should be chargeable to the allocations to the respective States in which the uses were made. We further contended, however, that the United States' reserved rights which are in no way dependent on State authorization, and particularly its rights for use on the various Indian Reservations, are not limited by State allocations. This position was submitted to (see Findings of Fact and Conclusions of Law Proposed by the United States, Conclusion 11.5), and briefed before, the Special Master. Deci-

sion not to except to the Special Master's determination that the United States' claims of right with respect to the Indian reservations are limited by State allocations was predicated on the particular facts of this case and the realization that the ruling would work no prejudice because of (1) the preferred status given such rights under the Master's interpretation of the provision for satisfaction of "present perfected rights" in the Boulder Canyon Project Act, (2) the Master's determination that rights reserved for use on such reservations have priority as of the dates of creation of the reservations, and (3) the availability of uncommitted water within the allocations to those States in which are situated reservations which do not have very early priority dates. We submit that the judgment so exercised is reasonable and is no basis for the charge of inadequate representation.

The assertion by the Navajo Tribe that the United States has consented that the Indians must look to the States for their share of water misconceives the effect of the Master's ruling with respect to the chargeability of uses on the Indian reservations. On the contrary, the Master has clearly recognized that the right to make these uses does not depend upon consent or authorization by the respective States.

D. BASIS FOR MEASUREMENT OF THE QUANTITY OF WATER RESERVED FOR USE ON INDIAN RESERVATIONS

The fifth "area" of complaint enumerated in the motion in support of the charge of "inadequate representation" relates to the omission of the United States to except to the Special Master's determination

that, with respect to the Indian reservations for which he has determined that water rights should be adjudicated, the quantum of the reserved water rights is "sufficient water to irrigate all of the practicably irrigable lands in a reservation and to supply related stock and domestic uses." At pages 11 and 12, *supra*, we have explained our reasons for not accepting the suggestion of the General Counsel for the Navajo Tribe that exceptions be taken to this determination in the Report. Beyond this, we question the standing of the Navajo Tribe even to suggest an exception to this determination by the Special Master which does not relate to the Navajo Reservation.

Nevertheless, if there is definitive evidence not yet brought to the attention of the Attorney General of substantial present or potential uses of Lower Basin water on the Navajo Indian Reservation additional to those with respect to which evidence has thus far been presented, we believe it will be incumbent upon the United States to bring such evidence before the Court if and when it is determined that the water rights pertaining to the Navajo Reservation are to be adjudicated in this case, and to make every reasonable argument in support of the inclusion of such uses within the reserved right.[11] However, we submit that

[11] In the case of one other Indian reservation (See Findings of Fact and Conclusions of Law Proposed by the United States, Finding 4.17.8 and Conclusion 4.17.2), evidence was introduced of the quantitative requirements of a project for commercial recreation and it was argued before the Special Master that use for such purpose was included in the reservation of rights to the use of water to accomplish the purposes

the Master's acceptance of that for which the United States has contended, on the basis of the evidence introduced with respect to the Indian reservations on the mainstream below Hoover Dam, is not basis for exception by the United States and it is not basis for exception by the Navajo Tribe. Neither is it basis for the charge that the United States has not adequately represented the Navajo Tribe's interest.

CONCLUSION

Because the Navajo Tribe is without right to intervene in this case, because granting of its motion for leave to intervene would further delay decision by this Court of the issues now before it, and because there is no basis for the Navajo Tribe's charge of "inadequate representation" of its interest by the United States, we urge that the motion for leave to intervene be denied.

Respectfully submitted.

of the reservation (United States Brief before the Special Master in Support of Findings of Fact and Conclusions of Law, pp. 45–46).

APPENDIX A

THE NAVAJO TRIBE,
Window Rock, Arizona, 5 March 1957.

Mr. J. REUEL ARMSTRONG
Solicitor, United States Department of the Interior
Washington 25, D.C.

DEAR MR. ARMSTRONG: By your letter of December 21, 1956, you invited me and my representatives to contact Mr. Geraint Humpherys, Field Solicitor of the Department of the Interior, in order to review the evidence of Indian water rights on the Navajo Reservation prepared for presentation in the trial of *Arizona* v. *California* before a Special Master of the Supreme Court.

Accordingly, accompanied by Laurence Davis, Assistant General Counsel of the Navajo Tribe, I visited Phoenix on January 17, 1957, and in the company of Mr. Humpherys and his staff, reviewed the material that had been prepared. Both Mr. Davis and I were very favorably impressed, but we did not wish to express any opinion in writing concerning the evidence until it had been reviewed by Dean H. T. Person, Consulting Engineer for the Navajo Tribe. Mr. Person visited Mr. Humpherys' office on February 1 and 2 of this year and reviewed the material. A copy of his letter to me dated February 25, 1957, is enclosed. As you can see, Dean Person completely approves of the evidence that has been prepared to date.

Therefore, permit me to state that I am entirely satisfied with the preparation of evidence done by

the Department of the Interior under the direction of Mr. Humpherys for the case of *Arizona* v. *California* to show Indian water rights on the Navajo Reservation. I only hope that the Department of Justice will coordinate completely with the Department of the Interior and make proper use of this material before the Special Master.

Thank you very much for giving us the opportunity to review the preparation by the Department of the Interior of evidence concerning our rights involved in the Arizona-California litigation before trial.

Sincerely yours,

/s/ Paul Jones
PAUL JONES, Chairman
Navajo Tribal Council.

Laramie, Wyoming, February 25, 1957

Mr. PAUL JONES
Chairman, Navajo Tribal Council
Window Rock, Arizona.

DEAR MR. JONES:

In accordance with your wire of January 20, 1957, I visited the office of the Bureau of Indian Affairs at Phoenix on February 1 and 2 to review the data and exhibits which are being prepared for presentation in

the Arizona-California Colorado River suit before the United States Supreme Court.

Our findings resulting from this visit and review of data and exhibits are summarized below:

1. The irrigated and potentially irrigable acreages on the Navajo Reservation in the Lower Colorado River Basin as determined by the Bureau of Indian Affairs, agrees with our findings as submitted in our report to you in August, 1956.

2. The water requirements for presently irrigated and potentially irrigable Navajo lands as determined by the Bureau of Indian Affairs conforms substantially with our estimates of water requirements.

3. During our visit to Phoenix we examined the exhibits that had been prepared and discussed what the Bureau of Indian Affairs contemplated for exhibits which had not yet been prepared. We believe the exhibits will clearly show the situation in connection with the Navajo water rights in the lower Colorado River Basin.

4. It is our opinion that the Bureau of Indian Affairs is doing a conscientious and good job to present a clear and accurate picture of the Navajo water rights and water requirements in the lower Colorado River Basin.

Respectfully submitted.

LAW OFFICES
NORMAN M. LITTELL
1824–26 JEFFERSON PL., N.W.
WASHINGTON 6, D.C.
FEDERAL 8–1895

FEBRUARY 2, 1961.

Re: *Arizona* vs. *California,* U.S. Supreme Court No. 9 Original, October Term, 1960

The Honorable ROBERT F. KENNEDY
Attorney General
Department of Justice, Washington, D.C.

DEAR MR. ATTORNEY GENERAL:

The Supreme Court has received the report of the Special Master in the above entitled cause between the states of Arizona and California over the waters of the Colorado River, and has set February 27, 1961 as the date for filing exceptions to the Special Master's report. The Special Master has made a number of proposed findings which are gravely prejudicial to the position of the Navajo Indian Tribe. This is to request that exceptions be taken to the report of the Special Master and that any other action be taken that may be necessary to protect and preserve the position of the Navajo Indian Tribe which is represented in this cause by the Department of Justice.

I have particular reference to the following proposed findings set forth in the Special Master's report:

1. *Main Stream of the Colorado River:* While the Special Master allocates water from the

main stream of the Colorado to five Indian tribes (see Master's report p. 267 et seq.) no allocation whatsoever is made for the Navajo Indian Tribe. If the Special Master's report is adopted this will mean that the Navajo Indian Tribe will not have any rights to water from the main stream of the Colorado River notwithstanding the fact that a substantial portion of the western boundary of the Navajo Reservation is formed by the Colorado River. This grave loss to the tribe will preclude future development of the reservation and otherwise prevent the beneficial development of the reservation intended by the Congress. If the evidence in the record does not merit an exception then I respectfully suggest that this phase of the case be completely re-examined and a request made to reopen the case for the purpose of submitting the necessary evidence. For example, one point that should be examined is whether or not consideration was given to the fact that there are now multipurpose reclamation projects on the Colorado River, and will be others in the near future, which have altered, or will alter, the elevation of the river such that it will be feasible to pump water from the river, an operation which may not have been considered feasible at previous river elevations.

2. *Winters Doctrine:* In his discussion of *Winters* vs. *United States,* 207 U.S. 564 (1908) and subsequent cases discussed in the Special Master's report in Section IV commencing on page 254, the Special Master takes the position that the reservation of water for the future needs of Indian reservations is based upon expanding agricultural and related water needs. With respect to those Indian tribes allocated water by the Special Master, water was reserved on the basis of practicably irrigable lands on those reservations and related stock and domestic uses. I respectfully request that

you take exception to this interpretation on the grounds that the so-called Winters doctrine is not so limited. It is true that water was reserved for Indian tribes for agricultural, stock, and domestic uses, but it was also reserved for any other use that Indian tribes might make of the reservations set aside for them by the United States Government. For example, on the Navajo Reservation there has been industrial development and we contemplate greatly expanded industrial development in the near future. This development will require water in substantial quantities and no recognition for such use is given in the Special Master's report. While the tribes allocated water by the Master may not have contemplated industrial development on their reservations, this construction of the Winters doctrine could be fatal to many tribes who depend on industrial development.

3. *Definition of Navajo and Hopi Reservations:* The description and discussion of the Navajo Reservation and the Hopi Reservation, appearing in the Special Master's report on pages 80 and 82 respectively, overlooks completely the fact that there is presently under litigation a dispute between the Navajo and Hopi tribes as to the ownership of the area which the Special Master refers to as the Hopi Reservation. As a consequence of this error the Special Master further errs in describing the Navajo Reservation as one of approximately 14,000,000 acres (p. 80) and in stating that some 6,000 Navajos occupied the "Hopi Reservation" (pp. 80–81).

The area referred to as the Hopi Reservation by the Special Master was in fact set aside by Executive Order of December 16, 1882 and pursuant to the Act of July 22, 1958 (P.L. 85–547; 72 Stat. 402) the Navajo and Hopi tribes are presently litigating

the title to this area before a specially constituted three-judge Federal District Court sitting at Prescott, Arizona (Healing et al vs. Jones, No. Civil 579. Prescott, U.S.D.C., Ariz.). The trial of this litigation was only recently completed and counsel for the Navajos and Hopis are in the process of submitting proposed findings of fact. The references in the Special Master's report to the "Hopi Reservation" which are both in error and severely prejudicial to the position of the Navajo Tribe should be corrected.

Respectfully submitted.

/s/ Norman M. Littell,
NORMAN M. LITTELL,
General Counsel, Navajo Tribe.

MOTIONS BY NAVAJO INDIAN TRIBE FOR RECONSIDERATION OF ITS MOTION FOR LEAVE TO INTERVENE AND FOR ORDER TO UNITED STATES TO SHOW CAUSE WHY IT SHOULD NOT BE ORDERED TO ACCOUNT TO THE COURT AS TO THE ADEQUACY OF ITS REPRESENTATION OF NAVAJO INTERESTS.

COMES NOW the Navajo Tribe of Indians of the Navajo Reservation, Arizona, New Mexico and Utah, and respectfully moves this Court for a reconsideration of its Motion for Leave to Intervene and for an order to the United States to show cause why it should not be ordered to account to this Court as to the adequacy of its repre-

sentation of the Navajo Indian Tribe in this litigation, and as reason therefor states the following:

I.

That after the Navajo Indian Tribe filed its Motion for Leave to Intervene and its supporting brief, responses in opposition to the motion were received by the Court from Arizona, California and the United States. These responses set forth two defenses to the motion which raised important legal issues not previously discussed in the Navajo Brief. These defenses pertained (1) to the states' alleged immunity from suit in an original jurisdiction action and (2) to the alleged exclusive control over the litigation by the United States so far as indian interests are concerned. After receiving these responses, but before a Navajo Reply Brief could be prepared, the Court denied the motion. The denial may have been founded upon the defenses so asserted. We respectfully submit that it is imperative that the Court reconsider the Motion for Leave to Intervene in light of the strong legal arguments which may be raised, and which are in fact raised in the brief which follows here, against the said defenses, which defenses are not valid as a bar to the proposed Navajo intervention.

II.

That the Navajo Indian Tribe set forth in its initial brief a detailed analysis of the inadequate representation given to its interests by the United States in this litigation. Nothing said in the responding brief filed by the United States effectively explains or mitigates the said inadequacy of representation. Such arguments as were asserted by the United States are answered in the brief

which follows here. There remains a lack of proper explanation to the Court by the United States concerning the reasons and justification for its wilful neglect in this litigation of indian interests and in particular those of the Navajo Indian Tribe. If, as the United States contends, it is the guardian of said indian interests here, it is incumbent upon it as a fiduciary to give to the Court a full accounting of the actions it has taken and the policies it has followed pursuant to that alleged capacity.

WHEREFORE, the Navajo Indian Tribe respectfully moves the Court in accordance with the motions as above stated.

IN THE

SUPREME COURT OF THE UNITED STATES

October Term, 1961

No. 8, Original

STATE OF ARIZONA, Complainant,

v.

STATE OF CALIFORNIA, PALO VERDE IRRIGATION DISTRICT, IMPERIAL IRRIGATION DISTRICT, COACHELLA VALLEY COUNTY WATER DISTRICT, METROPOLITAN WATER DISTRICT OF SOUTHERN CALIFORNIA, CITY OF LOS ANGELES, CALIFORNIA, CITY OF SAN DIEGO, CALIFORNIA, AND COUNTY OF SAN DIEGO, CALIFORNIA, Defendants,

UNITED STATES OF AMERICA AND STATE OF NEVADA, Interveners,

STATE OF UTAH AND STATE OF NEW MEXICO, Impleaded Defendants.

BRIEF OF THE NAVAJO INDIAN TRIBE IN SUPPORT OF ITS MOTIONS FOR RECONSIDERATION OF ITS MOTION FOR LEAVE TO INTERVENE AND FOR ORDER TO UNITED STATES TO SHOW CAUSE WHY IT SHOULD NOT BE ORDERED TO ACCOUNT TO THE COURT AS TO THE ADEQUACY OF ITS REPRESENTATION OF NAVAJO INTERESTS.

This brief will not repeat the arguments made in the earlier Navajo brief, but will rather discuss the two new issues raised by Arizona and the United States in their briefs as defenses to the Navajo intervention. These issues are: (1) The contention that the Navajos cannot intervene in this action because such intervention would constitute a violation of the immunity of the states, particularly of Arizona and California, from suit, as such

immunity is provided by the Eleventh Amendment to the United States Constitution; (2) The contention that the intervention cannot be allowed because it would derogate from the "exclusive" control of the United States over the litigation insofar as indian interests are concerned. In addition, this brief will attempt to place in proper perspective the United States reply to the Navajo contention that the United States has failed adequately to represent Navajo interests in this litigation.

I. Navajo Intervention as Not Violating States' Immunity from Suit Without Their Consent.

The California defendants have made only a brief reference, on page 8 of their Response to the earlier Navajo brief, to "immunity from suit in the original jurisdiction of this Court by the Navajo Indian Tribe," but Arizona has stated the view most elaborately that the Navajo intervention, if granted, would violate the states' immunity from suit. (Pages 5 through 8, inclusive, of Arizona's brief in opposition to the original Navajo motion.)

A careful analysis of the several authorities cited by Arizona indicates that such support as they may offer for the Arizona contention is indeed very weak.

The United States Constitution grants original jurisdiction to this Court in instances in which suit is brought by one state against another or by the United States against a state. To the extent of this grant of jurisdiction, the state sued possesses no immunity. It is equally clear, however, particularly in light of the Eleventh Amendment to the Constitution, that the judicial power of the United

States does not extend to suits against one of the states by citizens of another or of a foreign state. In addition, it is axiomatic that a state cannot be sued in its own courts without its consent.

This doctrine of immunity was the major premise upon which Arizona relied. Its minor premise, stated on page 7 of its answering brief, was that "intervention by the Navajo Tribe in this litigation would constitute a suit against the State of Arizona." An additional implicit element in its support of its minor premise must necessarily have been that Arizona has not consented to the "suit" by the Navajo Tribe and has not waived its immunity as to the tribe.

Would the intervention in fact constitute a suit against Arizona or any other state involved in this action? In support of its affirmative view, Arizona quoted from Felix S. Cohen, Handbook of Federal Indian Law, page 372, where it is said that "consequently, an Indian tribe as such cannot sue, be sued, or intervene in any case where the original jurisdiction of the Supreme Court is invoked."

The Navajo Indian Tribe has already demonstrated its respect for Mr. Cohen in its earlier brief, where favorable reference was made to his Handbook. It is respectfully submitted, however, that the statement quoted above is of somewhat greater breadth than logic or supporting cases cited would justify. Clearly the Navajo Indian Tribe, or any other tribe, could not initiate an action against a state and thereby invoke the original jurisdiction of this Court. Indeed, even if a state were to sue the Indian tribe itself, that would not, standing alone, satisfy the constitutional prerequisites for original jurisdiction.

But this does not compel a conclusion that where one state has in fact created original jurisdiction by suing another in the Supreme Court, an indian tribe cannot intervene in such an action to protect its own vital interests which may be profoundly affected and prejudiced by the lawsuit. It is difficult to see how the Supreme Court would be ousted from its already existing jurisdiction by such an intervention, or in what manner the constitutional provision as to original jurisdiction limits the right to intervene. The statement quoted by Arizona states that an indian tribe may not intervene in such a case. The logic of the law does not demand or support such a conclusion.

Indeed, logic supports just the opposite conclusion. The Constitution provides for an action within the original jurisdiction of the Supreme Court. It is not lightly to be supposed that the Constitution itself contemplates an original jurisdiction proceeding conducted in a manner which would otherwise violate the Due Process Clause of the Fifth Amendment. This could easily result if it were held than an action within the original jurisdiction of the Court, once begun, could not involve parties other than states or the United States. Perhaps nothing could be more determinative of the property rights and future development of the indians of Arizona than the judgment of the Court in this case. To proceed and to bind the petitioner by the ultimate judgment without permitting participation in the suit would be to use the original jurisdiction of this Court to impair legal rights without proper legal process.

In analogous cases, it has sometimes been contended by a state, after beginning an action against a private party, that its sovereign immunity from suit creates a bar

against counterclaims by the defendant pertaining to the subject-matter of the suit. The West Virginia Supreme Court, in *State v. Ruthbell Coal Co.*, 56 S.E. 2d 549 (1949), forcefully answered this contention with the following language:

> "We think it would be unconscionable and contrary to the due process clauses contained in the Fourteenth Amendment to the Constitution of the United States, and Article III, Section 10, of the West Virginia Constitution, to permit the State, as a plaintiff, to bring a citizen into court for the purpose of asserting liability against such citizen, and then strip that citizen of all the procedural rights and defenses which he would have if the state had not been a party plaintiff. We, therefore, are of the opinion that the counterclaim set up in the amended special plea is not a suit against the state within the meaning of the . . . Constitution of this State. . . ."

The same unconscionable result violative of the principles of due process would result if it were to be held that a person vitally affected by an action within the original jurisdiction of the Supreme Court could not in any case intervene in the action because the person so affected is neither a state nor the United States. Instead, the Constitution is properly to be read as establishing the parties which are necessary to create jurisdiction for such a suit and as leaving other procedural matters, such as intervention, to be conducted according to ordinary and proper legal processes. The logic of the Constitution compels this conclusion.

The statement which Arizona has quoted to the con-

trary finds no support in the cases. In its footnote to the statement, the Handbook cites only *Yankton Sioux Tribe of Indians v. United States*, 272 U.S. 351, 47 S. Ct. 142 (1926). The Yankton case, however, does not in any way pertain to the question of whether an indian tribe, or any other private party, can intervene in an original action in the Supreme Court. It merely states, by way of a dictum, that the United States could not invoke the original jurisdiction of the Supreme Court by a suit not involving a state, a proposition which the Navajo Indians readily admit. No question of intervention was present in the Yankton case, nor did the Court even discuss such an issue.

Arizona's brief does not itself supply the cases that are necessary to fill the void underlying its contention. It states that intervention would constitute a suit against Arizona, but then relies on several cases which merely affirm the doctrine that "the nature of a suit as one against the state is to be determined by the essential nature and effect of the proceeding." In this connection, Arizona cites *Ex parte Ayers*, 123 U.S. 443, 8 S. Ct. 164 (1887); *Ex parte New York*, 256 U.S. 490, 41 S. Ct. 588 (1921); *Worcester County Trust Co. v. Riley*, 302 U.S. 292, 58 S. Ct. 185 (1937); and *Ford Motor Co. v. Treasury Department*, 323 U.S. 459, 65 S. Ct. 347 (1945).

But *Ex parte Ayers, supra*, had nothing to do with intervention or with indian rights. The question was, rather, whether a suit against state officers would have in law constituted a suit against the state, an issue very much unlike that which we face here.

Ex parte New York centered around a similar issue

to that raised in *Ex parte Ayers,* the issue being whether a libel in admiralty against the Superintendent of Public Works in New York would constitute a suit against the State of New York. *Worcester County Trust Co. v. Riley,* involved an identical question as to a suit against the tax officers of two states. This is true, also, of *Ford Motor Co. v. Treasury Department.* All of the cases cited by Arizona to support its contention bear on a question which is not even analogous to that raised in the present instance, and none involve a statement, or even lend themselves to the inference, that intervention would constitute a "suit" for immunity purposes.

The issue of whether intervention is to be considered a "suit" under the sovereign immunity doctrine seems seldom to have been discussed by the authorities. Considerable discussion has been made, however, of a closely related type of problem, the question there being whether, after a state has itself begun a suit against a private party, the private party can counterclaim or cross-claim against the state as to matters involved in the subject-matter of the state's own suit. Would such a counterclaim or cross-complaint be a "suit" against the state and subject to sovereign immunity?

This question is analogous to the present one because in both the counterclaim and the intervention situations it is the state itself which has initiated the litigation, as has Arizona in the present instance, and placed before the court the rights of the respective parties for judicial determination. It is certainly to be conceded that even here a counterclaim, cross-complaint or intervention going beyond the subject-matter of the state's own suit might legitimately be considered a "suit" subject to immunity. But

where the private party seeks merely to assert rights integrally involved in the very matters raised by the state itself, can it be said to be within the contemplation of the historic immunity doctrine or of the Constitution to bar the making of such assertion? Surely a negative answer to this question is called for, either because the counterclaim, cross-complaint or intervention is not to be considered a "suit" in the technical language of the doctrine, or because the state is to be taken to have waived its immunity to this extent by its having started the action in the first place.

We have already quoted from *State v. Ruthbell Coal Co.*, 56 S.E. 2d 549 (W. Va. 1949), in which it is stated by the West Virginia Supreme Court that it would be "unconscionable" and "contrary to due process" to deny a counterclaim in such a case because of a misconceived notion of sovereign immunity. It is also important to note certain further language in that court's opinion which bears on the fact that the state, by initiating the action in the first place, has waived its immunity. The court stated: "This Court, however, has indicated that where, in the first instance, the State has instituted a suit or action against a citizen, *it thereby lays aside its sovereignty* and is subject to all procedural rules which govern any other party litigant." (Emphasis added)

The same view as to the inapplicability of sovereign immunity to counterclaims or cross-complaints germane to the matter in controversy is to be found in *State v. Hartford Accident & Indemnity Co.*, 136 Conn. 157, 70 A. 2d 109 (1949); *Reilly v. State*, 175 A. 582 (Conn. 1934); *Commonwealth of Massachusetts v. Davis*, 160 S.W. 2d 543 (Tex. Civ. App. 1942); *Anderson, Clayton & Co. v.*

State, 62 S.W. 2d 107 (Tex. Comm. App. 1933); and *State v. King*, 84 S.E. 902 (W. Va. 1915). The law has been succinctly stated in *State v. Hartford Accident & Indemnity Co., supra*, as follows:

> "If the state itself invokes the jurisdiction of the court to secure affirmative relief, it subjects itself to any proper cross-demand involved in the subject-matter of the action." 70 A. 2d at 110.

As to a state involved as a defendant in an action within the original jurisdiction of the Supreme Court, the concept of "waiver of immunity" present in the counterclaim cases does not apply. In regard to such states, rather, there is no proper immunity in an original jurisdiction case precisely because the Constitution, in providing for such a case, must be taken to contemplate that doctrines, even though applicable elsewhere, cannot carry over which would warp the litigation into an instrument of injustice by denying participation to persons whose interests have been brought up for judicial appraisal. Thus, even those states that are defendants in a case within the original jurisdiction of the Court cannot complain under sovereign immunity when legitimate parties seek to participate in the litigation.

It is the view of the Navajo Indian Tribe, therefore, that since the vitally significant issue of water rights in the Lower Basin of the Colorado River has been raised by Arizona and made subject by it to judicial determination in an action within the original jurisdiction of this Court, sovereign immunity does not bar the Navajo Indians from asserting their interests respecting those water rights which Arizona has thus placed in legal jeopardy.

II. The United States as Not Having Such "Control" Over the Litigation as to Bar Intervention by the Navajo Indian Tribe if the Representation is Inadequate.

The briefs of both Arizona and the United States have argued that the Attorney General is vested with "exclusive control" in a case in which indian interests are represented and that, therefore, the Navajo Indians cannot derogate from this control by becoming a party to this action.

It would seem from an analysis of the cases and other authorities that this broad and pervasive doctrine of "exclusive control" is the "mighty oak" which has grown out of the proverbial "little acorn". The doctrine is attractive in its breadth and simplicity, and in its exclusive effect, to those who would prefer to hear the indian voice subordinated, but it is a doctrine which in the form set forth by Arizona and the United States is the product of an oversimplified extension of a much narrower doctrine.

Those who assert the "exclusive control" rule rely almost entirely upon *Heckman v. United States*, 224 U.S. 413, 32 S. Ct. 424 (1912) and the small complex of cases which have since applied its doctrine. Both Arizona and the United States have quoted sizable portions from the Heckman case.

Certainly there is no dispute as to the validity of the principles set forth in the Heckman case. The real question pertains to precisely what those principles are and how broadly they may be taken to exclude indian partici-

pation in suits of every kind, especially where the representation given the indians is shown, as here, to have been inadequate. The United States interprets the Heckman doctrine to mean that "when the United States has elected to prosecute or intervene in a suit in behalf of . . . an indian tribe, it is entitled to exercise complete and exclusive control over the litigation to the exclusion of the Indians themselves." (United States Response, page 9) A close reading of the decision, however, does not bear out so broad a generalization.

In the Heckman case the United States filed a bill in equity to cancel certain conveyances made by members of the Cherokee Nation. A statute had placed restrictions upon the alienability of indian lands. The argument was raised that the indians, whose conveyances were to be set aside, should have been made parties to the suit. The Court considered this position untenable. It considered that the United States was representing the very indian grantors whose conveyances it sought to cancel. It held that they "were precluded from taking any position in the legal proceedings instituted by the government to enforce the restrictions which would render the proceedings ineffectual or give support to the prohibited acts."

The Heckman case involves, then, an action under a protective statute the very purpose of which was to protect the indians from their own indiscretion so far as the alienation of lands was concerned. The suit was to overturn something the indians themselves had done and, in doing so, to protect them against themselves. Surely in such a case, under such a statute, the indians who had committed the indiscretion and whose conveyances were to be canceled could not have been given charge of the

litigation, since to give them such charge as parties or otherwise would have been to defeat the purposes of the statute. If the statute, being protective in its nature, declares them incompetent to alienate land in the first instance, it would seem strange to permit them to take over any litigation designed to assert their statutory incompetence.

After saying that in such a case the indians were "precluded from taking any position in the legal proceedings," the Supreme Court went on to say that "This is involved necessarily . . . *in the nature and purpose of the suit.*" (Emphasis added) It is to be thought, then, that the Heckman opinion did not intend to formulate a broad, spacious rule applying to all indian litigation, but intended to state a rule governing the type of protective-statute situation that was then before the Court. If the rule is to go beyond the circumstances of the Heckman case itself, the broadening should in any event be accomplished through a sophisticated extension and certainly not through an oversimplified blanket exclusion.

Arizona and the United States have together cited six cases applying the Heckman doctrine. (Arizona brief, page 10; U.S. Response, page 5) In terms of their facts, all of these cases lie within the area legitimately within the scope of the Heckman case. Although one of them arose under a statute providing for the quieting of title, the other cases all pertained either to leasing or other land alienation problems. The first case, *Connor v. Cornell*, 32 F. 2d 581 (8th Cir. 1929), involved, as in the Heckman case, a suit by the United States to set aside a warranty deed executed in violation of the inalienability of land provisions of the federal statute. The result in the

case was considered res judicata as to a later suit brought by the indian himself. This case was certainly within the limited area covered by the Heckman case. The next case was *Pueblo of Picuris v. Abeyta,* 50 F. 2d 12 (10th Cir. 1931), which arose under a statute giving the Attorney General the power to sue in behalf of the indians in quieting title to certain land. Here again, the case involved a specific statute of a protective nature pertaining to real property. *McGugin v. United States,* 109 F. 2d 94 (10th Cir. 1940) pertained to restrictions on the alienation of land by an indian and had to do with the recovery of certain United States bonds which had been transferred by the indian after having been purchased with the royalties from an oil and gas lease. *United States v. Adamic,* 54 F. Supp. 221 (D.C.W.D.N.Y. 1943) was a suit by the United States to have certain indian leases declared null and void. The next case to arise was *White v. Sinclair Prairie Oil Co.,* 139 F. 2d 103 (10th Cir. 1944). This case involved a suit by the United States on behalf of an indian to obtain an accounting for royalties under certain leases. The decision in the case brought by the United States was considered res judicata in a later suit brought by the indian. The most recent case cited by either Arizona or the United States is *Sadler v. Public National Bank & Trust Co. of New York,* 172 F. 2d 870 (10th Cir. 1949). The Sadler case involved an action for cancellation of an oil and gas lease.

Each of these cases, then, was closely analogous to the Heckman case in its factual situation. There can be seen in these cases no extension of the doctrine of "exclusive control of the litigation" beyond the area covered by protective statutes dealing with indian leasing, convey-

ancing and real property situations. A broader generalization dealing with litigation in other areas is certainly not justified on the basis of these cases.

As to the many other areas of litigation which might arise, two propositions seem clear. They are that (1) an indian tribe constitutes a sufficient legal entity to conduct litigation in its own behalf, and (2) the duty placed on the Department of Justice by federal statute to represent the indians in their litigation is solely for the purpose of securing them adequate representation and is not intended to be of such a mandatory nature as to preempt the indians from any participation in their litigation, particularly where the purpose of the statute providing for the representation is not satisfied because the indians are not being adequately represented.

The capacity of indian tribes to conduct litigation has been discussed in Cohen, Handbook of Federal Indian Law, pages 283-285. After referring to various statutes which themselves allow suits by or against indian tribes, Mr. Cohen stated the following as to the capacity of an indian tribe to sue in the absence of a statute:

> "Although a tribe, as a municipality, is not subject to suit without its consent, it may be argued that a tribe has legal capacity to consent to such a suit. The power to consent to such suit must be regarded as cognate with the power to bring suit.
>
> Some support for the view that an indian tribe is capable of appearing in litigation as a plaintiff or voluntary defendant is found in the statement of the Supreme Court in *United States v. Candelaria*:

'It was settled in *Lane v. Pueblo of Santa Rosa,*' 249 U.S. 110, that under territorial laws enacted with Congressional sanction each pueblo in New Mexico — meaning the Indians comprising the community — became a juristic person and enabled to sue and defend in respect of its lands.'

This statement, standing by itself, could be given a limited scope on the grounds that the Pueblos are statutory corporations. The fact remains, however, that the Supreme Court has entertained suits in which Indian tribes were parties litigant, without any question of legal capacity being raised. An outstanding case in point is the case of *Cherokee Nation v. Hitchcock.* This was a suit brought by an Indian tribe against the Secretary of the Interior. Although judgment was rendered for the defendant, no question was raised, apparently, as to the capacity of the principal plaintiff (individual members were joined as parties plaintiff) to bring the suit."

The capacity of an indian tribe to sue is readily inferable from the principles stated by this Court in *United Mine Workers of America v. Coronado Coal Co.,* 259 U.S. 344 (1922), in which the Court held that labor unions constitute such an entity as may be sued in view of the legislative recognition given to them as subjects of rights and duties. As with labor unions, indian tribes have extensively been made subject to legal rights and duties. Both upon the logic set forth in the quotation above and upon the doctrine of the Coronado case, then, it would seem clear that an indian tribe constitutes such a legal entity as may sue in its own name. This conclusion finds further support in *Makah Indian Tribe v. McCauly,* 39 F.

Supp. 75 (D.C.N.D. 1941), where an indian tribe was the plaintiff and the court stated that "They may . . . . institute and prosecute an action to enforce their rights under the Constitution, laws and treaties of the United States." In *United States v. United States Fidelity & Guaranty Company,* 106 F. 2d 804 (10th Cir. 1939) the court referred to an indian tribe as a "sovereign" and expressed the view that indian tribes are themselves immune from civil suit except where they consent. Certainly the doctrine of "sovereign immunity" would not need to be extended to indian tribes if they were not legal entities capable of being sued.

An argument that an indian tribe lacked capacity to sue would be difficult to sustain. Indeed, the parties to this litigation, in their responses, have not contended that the intervention should be denied on the ground of such a lack of capacity.

It has been important to stress the legal capacity of an indian tribe to conduct litigation, because it would seem most reasonable to suppose that this capacity is the general rule, except where limitations have been placed upon it in an area such as that covered by the Heckman doctrine, which itself actually springs from a statutory limitation. There is nothing upon which a general inhibition of the indian right to protect itself in the courts can be founded, unless such an inhibition is to be found in federal statutes or treaties.

In this connection, see *Siniscal v. United States;* 208 F. 2d 406 (9th Cir. 1953). The Ninth Circuit Court of Appeals referred to the statutory provisions appearing at 25 U.S.C.A. §175, which provides that "In all states

and territories where there are reservations or allotted indians the United States District Attorney shall represent them in all suits at law and in equity." The court stated:

> *"We think 25 U.S.C.A., §175, is not mandatory and that its purpose is no more than to insure the indians adequate representation in suits to which they might be parties."* (Emphasis added)

This language indicates strongly that the statute does not establish an invariable rule requiring Justice Department representation, and that the representation, even where given, is for the purpose of insuring adequate representation. Further, with reference to the indian appellants, the court stated that "They are sued as persons acting individually and not with reference to any right in which the United States or any officer thereof is in the position of trustee or guardian. They were ably represented by counsel. It is not a situation requiring for them a guardian ad litem." We find in this statement a recognition of the distinction between an ordinary situation and a protective, guardian type of circumstance, such as was present in the Heckman case and other inalienability of land cases.

If, then, the general rule is one of indian capacity to sue and the representation by the Justice Department, except in peculiarly protective situations defined by statute, is not mandatory and is only to insure adequate representation, it is reasonable to conclude that in the general situation Rule 24(a) of the Federal Rules of Civil Procedure would apply. This rule pertains to "intervention as of right" in cases where "the representation of the

applicant's interest by existing parties is or may be inadequate . . . ."

Justice Department representation having been provided solely for the purpose of securing adequate representation to the indians, intervention by an indian tribe in its own right would be proper where it is shown that the representation given has in fact been extremely inadequate. If the statute providing for Justice Department representation were construed to exclude intervention in such a case, such a construction would militate against the very purpose of the statute itself. It would, in addition, make the representation mandatory so far as the indians are concerned, something which the Ninth Circuit Court of Appeals has said the statute does not do.

By an oversimplified extension of a doctrine of exclusion which is actually proper only in the area in which it was intended, the briefs of Arizona and the United States have argued that the Navajo Indian Tribe must as a matter of law be denied intervention. The result would be a paternalism which, like so may paternalisms where unduly extended beyond the needs or natural relations of the parties, would cease to be truly paternalistic and would be no more than an excuse for restrictive limitation and oppression.

The intervention is lawful precisely because the "paternalism" does not extend so far.

III. Response to the Argument that the Navajo Motion is Untimely and that the United States Representation Has Been Adequate.

The Navajo Indian Tribe reviewed the question of timeliness extensively in its original brief precisely because it anticipated that a contention as to its untimeliness would be raised. The earlier Navajo brief set out at length the past efforts of the Navajo Indian Tribe to secure adequate representation. (See Brief in support of original Navajo motion, pp. 18 to 25.) It was to be expected that those who sought to minimize the ultimate legal recognition of indian water rights in the Colorado River would oppose the motion for intervention and would seek to disparge the past efforts of the Navajo Tribe to be heard in this case. We doubt whether a continued and protracted discourse among the parties as to letters written, telephone calls made, and the like, will be of significant assistance to the Court beyond what has been said by the parties thusfar. Such a discourse could only serve to obscure the larger issues in a mass of minutia.

Therefore the Navajo Indian Tribe wishes merely to reiterate that those who allege untimeliness must implicitly assume that the inadequacy of the United States representation was sufficiently manifest at an earlier stage in the proceeding as to render necessary the raising of the serious charge of inadequate representation by an earlier motion to intervene. But such a charge cannot lightly be made, and so long as it appeared that the representation might prove to be satisfactory, the Navajo Indian Tribe could not have thought it wise to seek intervention. Its dissatisfaction at one earlier point caused it, together with other indian tribes, to apply to the Special Master for the

appointment of special counsel to represent indian interests, but when this was denied by the Special Master it was to be hoped that the dissatisfaction theretofore manifested by the several indian tribes would provide an incentive to the Department of Justice to press with greater vigor the legal position of the indians. Whatever may have been the conduct of the Department of Justice in the past, it was not to be assumed that after the Special Master's decision it would turn a deaf ear to the remonstrances theretofore made. The full inadequacy of the representation given did not and could not, as has been pointed out in the original Navajo brief, become apparent until after the exceptions to the Special Master's report were filed by the United States.

When those exceptions were filed, it became apparent that the United States had, in the five significant areas referred to in the earlier Navajo brief, taken so accomodating and "reasonable" a position as to fail to represent Navajo interests at all. In its response to the Navajo brief, the United States has argued that the positions it has taken have been "reasonable". They have not been reasonable. They have been worse than neglectful, passive and supine; they have affirmatively downgraded and depressed the position of the client which the Department of Justice is supposed to defend by deleting from the original petition for intervention by the United States the basic allegation based upon the doctrine of *Winters v. United States*, 207 U.S. 564, 28 S. Ct. 207 (1908), although this allegation or its equivalent had for many years been included in every pleading filed by the Department of Justice in which it acted for indian interests where indian water rights were involved.

Advocacy and an impotent "reasonableness" are not to be confused. A good advocate must, of course, assume a reasonable position, but it must also be a virile position, fully asserting the rights of those whom he presumes to represent. It is submitted that from such a perspective the representation given the Navajo Indian Tribe has been grossly inadequate. It is strained indeed to suggest that the Navajo Indian Tribe is somehow at fault for not having realized this before the exceptions to the Special Master's report were filed.

IV. Reconsideration of Earlier Motion is Justified by Presence of Issues Not Previously Briefed; Order to Show Cause is Both Desirable and Legally Appropriate.

The courts have often stated that a motion may be reconsidered, or re-argued, where there are decisions or principles of law which the court has not considered and which might exercise a controlling effect. *Fawcett Publications, Inc. v. New World Club, Inc.*, 72 N.Y.S. 2d 768 (1947); *People v. Dellamura*, 28 N.Y.S. 2d 584 (1941); *In re Hooker's Estate*, 18 N.Y.S. 2d 107, 173 Misc. 515 (1940); *J. I. Case Company v. McDonald*, 76 Idaho 223, 280 P. 2d 1070, 1073 (1955). In the present instance, at the time it decided the original Navajo Motion for Leave to Intervene, the Court had not yet had opportunity to consider the authorities and legal principles set out above in this brief pertaining to the two new issues raised by the brief of Arizona and the United States. Only through the consideration, and consequent legal recognition, of these principles may a correct decision be made upon the motion.

The motion for the order to show cause is both desirable and legally appropriate. It has often been stated by this Court that the indians are wards of the United States and that the United States has a duty to them as a guardian. *Seminole Nation v. United States*, 316 U.S. 286; *United States v. Klamath & Moadoc Tribes*, 304 U.S. 119; *United States v. Ramsey*, 271 U.S. 467; *Jaybird Mining Co. v. Weir*, 271 U.S. 609; *United States v. Minnesota*, 270 U.S. 181; *Cramer v. United States*, 261 U.S. 219; *Barker v. Harvey*, 181 U.S. 481.

That a court of equity has inherent power to obtain from a fiduciary, such as a guardian, an accounting of the action taken under the fiduciary relation has often been stated by the courts. "Courts of equity have inherent jurisdiction to require accountings and settlement by guardians. (21 Cyc. 155) . . . ." *Schindler v. Spackman*, 16 F. 2d 45, 48 (8th Cir. 1926). See also *In re Deming's Guardianship*, 192 Wash. 190, 73 P. 2d 764 (1937); *Haudenschilt v. Haudenschilt*, 129 W. Va. 92, 39 S.E. 2d 328 (1946).

EVOLUTION OF SECTIONS 4(a) AND 5 (1st PARAGRAPH) OF THE BOULDER CANYON PROJECT ACT (FOR USE BY ARIZONA ON ORAL ARGUMENT)

CHAS. H. REED,
Chief Counsel,
Colorado River Litigation,
MARK WILMER
WILLIAM R. MEAGHER
BURR SUTTER
JOHN E. MADDEN
CALVIN H. UDALL
JOHN GEOFFREY WILL
W. H. ROBERTS

THEODORE KIENDL,
Of Counsel

Section 5 of S. 3331, as introduced in the 69th Congress, 1st Session, provided:

SEC. 5. That the said Secretary is hereby authorized, under such general regulations as he may prescribe, to contract for the storage of water in said reservoir and for the delivery thereof at such points on the river and on said canal as may be agreed upon, for irrigation and domestic uses, and delivery at the switchboard to municipal corporations, political subdivisions, and private corporations of electrical energy generated at said dam, upon charges that will provide revenue which, in addition to other revenues accruing to the said subfund under the reclamation law or hereunder, will cover operation and maintenance expense of works constructed hereunder, interest on bonds after completion of the works, and provide for the amortization of said bonds within fifty years. Contracts respecting water for domestic uses may be for permanent service but subject to rights of prior appropriators.

As reported out in the 69th Congress by the Senate Committee on Irrigation and Reclamation, section 5 of S. 3331 read as follows:

SEC. 5. That the said Secretary is hereby authorized, under such general regulations as he may prescribe, to contract for the storage of water in said reservoir and for the delivery thereof at such points on the river and on said canal as may be agreed upon, for irrigation and domestic uses, and delivery at the switchboard to municipal corporations, political subdivisions, and private corporations of electrical energy generated at said dam, upon charges that will provide revenue which, in addition to other revenue accruing [to the said subfund] under the reclamation law [or hereunder] *and under this Act,* will *in his judgment* cover *all expenses of* operation and maintenance [expense of] *incurred by the United States on account*

of works constructed [hereunder, interest on bonds after completion of the works, and provide for the amortization of said bonds within fifty years] *under this Act and the payments to the United States under subdivision (b) of section 4.* Contracts respecting water for *irrigation and* domestic uses [may] *shall* be for permanent service [but subject to rights of prior appropriators]. *No person shall have or be entitled to have the use for any purpose of the water stored as aforesaid except by contract made as herein stated.*[1]

During the floor debate of S. 3331 in the 69th Congress Senator Ashurst proposed the following amendment to section 5:

Provided, That the Secretary of the Interior in the delivery of water shall limit the amounts used in Arizona and California so that neither of said States shall use in excess of one-half of the water available in the lower basin out of the main Colorado River after 300,000 acre-feet has been deducted for use within the State of Nevada.[2]

Section 5 of S. 728, introduced in the 70th Congress in the form shown above, as reported out by the Committee on Irrigation and Reclamation, provided as follows:

SEC. 5. That the Secretary of the Interior is hereby authorized, under such general regulations as he may prescribe, to contract for the storage of water in said reservoir and for the delivery thereof at such points on the river and on said canal as may be agreed upon,

---

[1] Bracketed words omitted and italicized words added by the Committee to S. 3331 as introduced into the Senate. Section 5 appeared in this amended form when S. 728 was introduced in the 70th Congress, 1st Session.

[2] 68 Cong. Rec. 4763 (February 25, 1927).

for irrigation and domestic uses, *and generation of electrical energy* and delivery at the switchboard to *States,* municipal corporations, political subdivisions, and private corporations of electrical energy generated at said dam, upon charges that will provide revenue which, in addition to other revenue accruing under the reclamation law and under this Act, will in his judgment cover all expenses of operation and maintenance incurred by the United States on account of works constructed under this Act and the payments to the United States under subdivision (b) of section 4. Contracts respecting water for irrigation and domestic uses shall be for permanent service: *Provided, however, That said contracts shall not provide for an aggregate annual consumptive use in California of more than 4,600,000 acre-feet of the water allocated to the Lower Basin by the Colorado River compact mentioned in section 12 and one-half of the unallocated, excess and/or surplus water: Provided, further, That no such contracts shall be made until California, by act of its legislature, shall have ratified and approved the foregoing provision for use of water in said State.* No person shall have or be entitled to have the use for any purpose of the water stored as aforesaid except by contract made as herein stated.[3]

Discussing section 5, as amended in Committee in the 70th Congress, Senator Johnson of California stated:

Section 5 provides that the contract must be general for storage and delivery of water and the Secretary shall fix charges to meet the revenue requirements, and that contracts for irrigation and domestic uses must be for permanent service. An amendment has been inserted there at the request of the upper basin

[3] Italicized words added in Committee. See S. REP. No. 592, 70th Cong., 1st Sess. (1928).

States, offered, I think, in the committee, by the Senator from Wyoming which provides that—

Provided, however, That said contracts shall not provide for an aggregate annual consumptive use in California of more than 4,600,000 acre-feet of the water allocated to the lower basin by the Colorado River compact mentioned in section 12 and one-half of the unallocated, excess, and/or surplus water: *Provided further,* That no such contracts shall be made until California, by act of its legislature, shall have ratified and approved the foregoing provision for use of water in said State.

That is another rigorous provision, a rigorous provision to which those who represented California were willing to consent in order that legislation might be accorded, but binding California perpetually and forever to a use not to exceed 4,600,000 acre-feet of water.[4]

An amendment to section 5, printed but not offered by Senator Waterman, in the 1st Session of the 70th Congress, after S. 728 had been reported out of Committee, provided:

On page 7, line 9, strike out the words "That no", together with the following lines numbered 10, 11, and ending with the words in line 12, to wit "in said State", and insert in lieu thereof: "That no such contracts nor any contract whatever, of any kind, shall be made under any provision of this Act until and unless the State of California, by a valid and binding act of its legislature, approved by its governor, shall have first ratified and approved all the provisions of this section of this Act, in any way relating to the use of the waters of the main stream of the Colorado River within or by the State of California, or by any person or corporation of said State, and shall also in and by such act of its legislature, solemnly declare and agree, as

[4] 69 Cong. Rec. 7250 (April 26, 1928).

an express covenant and in express consideration of the passage of this Act, that any and all water demanded and required, or lawfully appropriated and applied to a beneficial use by the State of Arizona or any of its inhabitants, including corporations, municipal or otherwise, or any of them, out of the main stream of the Colorado River at any time in excess of two million nine hundred thousand acre-feet, per annum, plus one-half of the said unallocated excess and/or surplus water, will be furnished and supplied by the said State of California exclusively out of the said four million six hundred thousand acre-feet of water and said one-half of the said unallocated water last aforesaid, so that in no event shall there ever be demanded or required, out of the main stream of the Colorado River, by the States of Arizona, California, and Nevada, or either of them, any water in excess of the amount apportioned to them by Article III of the Colorado River compact, to be delivered to them, or any of them, at Lee Ferry designated in said Colorado River compact or elsewhere.''[5]

Section 4(a) of S. 3331, as introduced into the Senate in the 69th Congress, provided:

SEC. 4. (a) No work shall be begun and no moneys expended on or in connection with the works or structures provided for in this Act, and no water rights shall be initiated hereunder, until the respective legislatures of at least six of the signatory States mentioned in section 12 hereof shall have approved the Colorado River Compact mentioned in said section 12, and shall have consented to a waiver of the provision of the first paragraph of article 11 of said compact making the same binding and obligatory when it shall have been approved by the legislatures of each of the seven signatory States, and until the President, by public proclamation,

[5] 69 Cong. Rec. 5415 (March 27, 1928).

shall have declared that the said compact has been approved by and become binding and obligatory upon at least six of the signatory States.

As reported out by the Committee on Irrigation and Reclamation in the 69th Congress, section 4(a) provided:

SEC. 4. (a) No work shall be begun and no monies expended on or in connection with the works or structures provided for in this Act, and no water rights shall be *claimed or* initiated hereunder, and *no steps* shall be taken by the United States or by others to initiate or perfect any claims to the use of water pertinent to such works *or structures* until [the respective legislatures of at least six of the signatory states mentioned in section 12 hereof] *the States of California, Colorado, Nevada, New Mexico, Utah and Wyoming* shall have approved the Colorado River compact mentioned in [said] section 12 *hereof* and shall have consented to a waiver of the provisions of the first paragraph of Article XI of said compact, [making] *which makes* the same binding and obligatory *only* when [it shall have been] approved by [the legislatures of] each of the seven [signatory] States *mentioned in said section 12, and shall have approved said compact without condition save that of such six-State approval,* and until the President, by public proclamation shall have *so* declared [that the said compact has been approved by and become binding and obligatory upon at least six of the signatory States].[6]

Section 4(a) of S. 728, as reported onto the floor of the Senate in the 70th Congress, 1st Session, provided:

SEC. 4. (a) No work shall be begun and no moneys expended on or in connection with the works or structures provided for in this Act, and no water rights

[6] Bracketed words omitted and italicized words added by the Committee to section 4(a) of S. 3331 as introduced into the Senate.

shall be claimed or initiated hereunder, and no steps shall be taken by the United States or by others to initiate or perfect any claims to the use of water pertinent to such works or structures until the State of California and at least [three] *five* of the States of Arizona, Colorado, Nevada, New Mexico, Utah, and Wyoming shall have approved the Colorado River compact mentioned in section 12 hereof and shall have consented to a waiver of the provisions of the first paragraph of Article XI of said compact, which makes the same binding and obligatory only when approved by each of the seven States mentioned in said section 12, and shall have approved said compact without condition save that of such approval by the State of California and at least [three] *five* of the other States mentioned and until the President by public proclamation shall have so declared.[7]

An amendment to section 4(a), printed but not offered by Senator Bratton as a substitute for section 4(a), as reported onto the floor of the Senate in the 70th Congress, 1st Session, provided:

SEC. 4. (a) This Act shall not take effect, and no authority shall be exercised hereunder unless and until (1) the States of California, Colorado, Nevada, New Mexico, Utah, Arizona, and Wyoming shall have ratified the Colorado River compact mentioned in section 12 hereof and the President, by public proclamation, shall have so declared, or (2) if after one year from the date of the passage of this Act the said States shall fail to ratify the said compact; then if six States, including the State of California, shall ratify said compact and shall consent to waive the provisions of the

[7] Italicized words substituted by the Senate Committee on Irrigation and Reclamation for the bracketed words, which appeared in S. 728 as introduced in the 70th Congress, 1st Session, by Senator Johnson. See S. REP. No. 592, 70th Cong., 1st Sess. (1928).

first paragraph of Article II of said compact, which makes the same binding and obligatory only when approved by each of the seven States mentioned in said section 12, and shall have approved said compact without conditions, save that of such six States' approval and the President, by public proclamation, shall have so declared: *Provided, however,* That if ratification should be upon a six-State basis, then California shall agree in the ratifying Act that the aggregate annual consumptive use in California of waters of the Colorado River shall never exceed 4,200,000 acre-feet and that the use by California of the excess or surplus waters unallocated by the Colorado River compact shall never exceed annually one-half of such excess or surplus waters, such use always to be subject to the terms of the Colorado River compact.[8]

Another amendment to section 4(a) and to section 5, printed by Senator Phipps as a substitute for section 4(a) and as a modification in section 5, as reported onto the floor of the Senate in the 70th Congress, 1st Session, provided:

SEC. 4 (a). This Act shall not take effect and no authority shall be exercised hereunder and no work shall be begun and no moneys expended on or in connection with the works or structures provided for in this Act, and no water rights shall be claimed or initiated hereunder, and no steps shall be taken by the United States or by others to initiate or perfect any claims to the use of water pertinent to such works or structures unless and until (1) the States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming shall have ratified the Colorado River Compact, mentioned in section 12 hereof, and the President by public proclamation shall have so declared, or (2) if said States fail to ratify the said compact within one year from the date of the passage of this Act, then, until six

[8] 69 Cong. Rec. 7047 (April 24, 1928).

of said States, including the State of California, shall ratify said compact and shall consent to waive the provisions of the first paragraph of Article XI of said compact, which makes the same binding and obligatory only when approved by each of the seven states signatory thereto, and shall have approved said compact without conditions, save that of such six State approval, and the President by public proclamation shall have so declared, and, further, until the State of California, by Act of its legislature, shall agree with the United States and for the benefit of the States of Arizona, Colorado, Nevada, New Mexico, Utah, and Wyoming, as an express covenant and in consideration of the passage of this Act, that the aggregate annual diversions of water of and from the Colorado River for use in the State of California, including all diversions under contracts made under the provisions of this Act and all water necessary for the supply of any rights which may now exist, shall not exceed four million six hundred thousand acre-feet of the waters apportioned to the Lower Basin States by the Colorado River Compact and/or more than one-half of any excess or surplus waters unapportioned by said compact, such diversions always to be subject to the terms of said compact.

On page 7, strike out lines 4 to 12, inclusive, and insert in lieu thereof the following: "permanent service and shall conform to paragraph (a) of section 4 of this Act. No person shall."[9]

Another amendment to section 4(a), printed but not offered by Senator Pittman as a substitute for section 4(a), as reported onto the floor of the Senate in the 70th Congress, 1st Session, provided:

SEC. 4(a). This act shall not take effect and no authority shall be exercised hereunder, unless and until the States of Arizona, California, Colorado, Nevada,

[9] 69 Cong. Rec. 7591 (May 2, 1928).

New Mexico, Utah, and Wyoming shall have ratified the Colorado River compact mentioned in section 12 hereof, and the President, by public proclamation, shall have so declared: *Provided,* That the ratification act of the State of California shall contain a provision agreeing that the aggregate annual consumptive use by that State of waters of the Colorado River shall never exceed 4,200,000 acre-feet of the water apportioned to the lower basin by paragraph (a) of Article III of said compact, and that the aggregate beneficial consumptive use by that State of waters of the Colorado River shall never exceed 500,000 acre-feet of the water apportioned by the compact to the lower basin by paragraph (b) of said Article III; and that the use by California of the excess or surplus waters unapportioned by the Colorado River compact shall never exceed annually one-half of such excess or surplus waters; and that the limitations so accepted by California shall be irrevocable and unconditional, unless modified by the agreement described in the following paragraph, nor shall said limitations apply to water diverted by or for the benefit of the Yuma reclamation project for domestic, agricultural, or power purposes except to the portion thereof consumptively used in California for domestic and agricultural purposes.

The said ratifying act shall further provide that if by tri-State agreement hereafter entered into by the States of California, Nevada, and Arizona the foregoing limitations are accepted and approved as fixing the apportionment of water to California, then California shall and will therein agree (1) that of the 7,500,000 acre-feet annually apportioned to the lower basin by paragraph (a) of Article III of the Colorado River compact, there shall be apportioned to the State of Nevada 300,000 acre-feet and to the State of Arizona 3,000,000 acre-feet for exclusive beneficial consumptive use in perpetuity, and (2) of the 1,000,000 acre-feet in addition which the lower basin has the right to use annually by paragraph (b) of said article there shall be

apportioned to the State of Arizona 500,000 acre-feet for beneficial consumptive use, and (3) that the State of Arizona may annually use one-half of the excess or surplus waters unapportioned by the Colorado River compact, and (4) that the State of Arizona shall have the exclusive beneficial consumptive use of the Gila River and its tributaries within the boundaries of said State, and (5) that the waters of the Gila River and its tributaries shall never be subject to any diminution whatever by any allowance of water which may be made by treaty or otherwise to the United States of Mexico; but if, as provided in paragraph (c) of Article III of the Colorado River Compact, it shall become necessary to supply water to the United States of Mexico from waters apportioned by said compact, then the State of California shall and will mutually agree with the State of Arizona to supply one-half of any deficiency which must be supplied to Mexico by the lower basin, and (6) that the State of California shall and will further mutually agree with the States of Arizona and Nevada that none of said three States shall withhold water and none shall require the delivery of water which can not reasonably be applied to domestic and agricultural uses, and (7) that all of the provisions of said tri-State agreement shall be subject in all particulars to the provisions of the Colorado River compact.[10]

Another amendment to section 4(a), offered by Senator Hayden in the 70th Congress, 2d Session, in lieu of all of section 4(a), as it then read, provided:

SEC. 4(a). This act shall not take effect and no authority shall be exercised hereunder, unless and until the States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming shall have ratified the Colorado River compact mentioned in section 12 hereof, and the President, by public proclamation, shall

[10] 69 Cong. Rec. 10259-60 (May 28, 1928).

have so declared: *Provided,* That the ratification act of the State of California shall contain a provision agreeing that the aggregate annual consumptive use by that State of waters of the Colorado River shall never exceed 4,200,000 acre-feet of the water apportioned to the lower basin by paragraph (a) of Article III of said compact, and that the aggregate beneficial consumptive use by that State of waters of the Colorado River shall never exceed 500,000 acre-feet of the water apportioned by the compact to the lower basin by paragraph (b) of said Article III; and that the use by California of the excess or surplus waters unapportioned by the Colorado River compact shall never exceed annually one-half of such excess or surplus waters; and that the limitations so accepted by California shall be irrevocable and unconditional, unless modified by the agreement described in the following paragraph, nor shall said limitations apply to water diverted by or for the benefit of the Yuma reclamation project for domestic, agricultural, or power purposes except to the portion thereof consumptively used in California for domestic and agricultural purposes.

The said ratifying act shall further provide that if by tri-State agreement hereafter entered into by the States of California, Nevada, and Arizona the foregoing limitations are accepted and approved as fixing the apportionment of water to California, then California shall and will therein agree (1) that of the 7,500,000 acre-feet annually apportioned to the lower basin by paragraph (a) of Article III of the Colorado River compact, there shall be apportioned to the State of Nevada 300,000 acre-feet and to the State of Arizona 3,000,000 acre-feet for exclusive beneficial consumptive use in perpetuity, and (2) of the 1,000,000 acre-feet in addition which the lower basin has the right to use annually by paragraph (b) of said article, there shall be apportioned to the State of Arizona 500,000 acre-feet for beneficial consumptive use, and (3) that the

State of Arizona may annually use one-half of the excess or surplus waters unapportioned by the Colorado River compact, and (4) that the State of Arizona shall have the exclusive beneficial consumptive use of the Gila River and its tributaries within the boundaries of said State, and (5) that the waters of the Gila River and its tributaries shall never be subject to any diminution whatever by any allowance of water which may be made by treaty or otherwise to the United States of Mexico, but if, as provided in paragraph (c) of Article III of the Colorado River compact, it shall become necessary to supply water to the United States of Mexico from waters apportioned by said compact, then the State of California shall and will mutually agree with the State of Arizona to supply one-half of any deficiency which must be supplied to Mexico by the lower basin, and (6) that the State of California shall and will further mutually agree with the States of Arizona and Nevada that none of said three States shall withhold water and none shall require the delivery of water which can not reasonably be applied to domestic and agricultural uses, and (7) that all of the provisions of said tri-State agreement shall be subject in all particulars to the provisions of the Colorado River compact.[11]

Another amendment to section 4(a), printed by Senator Bratton in the 70th Congress, 2d Session, as a substitute for section 4(a) as it then read, provided:

SEC. 4. (a) This Act shall not take effect and no authority shall be exercised hereunder, unless and until (1) the States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming shall have ratified the Colorado River compact mentioned in section 12 hereof, and the President, by public proc-

[11] 70 Cong. Rec. 162 (December 6, 1928).

lamation, shall have so declared, or (2) if said States fail to ratify the said compact within one year from the date of the passage of this Act then, until six of said States, including the State of California, shall ratify said compact and shall consent to waive the provisions of the first paragraph of article XI of said compact, which makes the same binding and obligatory only when approved by each of the seven States signatory thereto, and shall have approved said compact without conditions, save that of such six-State approval, and the President by public proclamation shall have so declared: Provided, That in either event the ratification act of the State of California shall contain a provision agreeing that the aggregate annual consumptive use by that State of waters of the Colorado River shall never exceed 4,400,000 acre-feet of the water apportioned to the lower basin by paragraph (a) of article III of said compact, and that the aggregate beneficial consumptive use by that State of waters of the Colorado River shall never exceed 500,000 acre-feet of the water apportioned by the compact to the lower basin by paragraph (b) of said article III; and that the use by California of the excess or surplus waters unapportioned by the Colorado River compact shall never exceed annually one-half of such excess or surplus waters; and that the limitations so accepted by California shall be irrevocable and unconditional, unless modified by mutual agreement subsequently entered into by all of the States affected, to wit: Arizona, Colorado, Nevada, New Mexico, Utah, and Wyoming, nor shall said limitations apply to water diverted by or for the benefit of the Yuma reclamation project for domestic, agricultural, or power purposes except to the portion thereof consumptively used in California for domestic and agricultural purposes.[12]

[12] 70 Cong. Rec. 277 (December 8, 1928).

An amendment offered by Senator Phipps to the amendment of Senator Hayden to section 4(a) in the 70th Congress, 2d Session, and the colloquoy preceding introduction of the amendment, were as follows:

Mr. Phipps. I understand that the pending amendment is the one offered by the junior Senator from Arizona [Mr. Hayden]. I desire to offer an amendment to that amendment, which I believe is permissible under the rule in force.

The Presiding Officer. The Chair will ask the Senator from New Mexico whether he has submitted his amendment? Is it pending?

Mr. Bratton. It has been printed and is lying on the table, but has not been formally proposed.

The Presiding Officer. Then the amendment of the Senator from Colorado to the amendment will be in order.

Mr. Phipps. I ask to have my amendment to the amendment printed in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD as follows:

On page 5, strike out all of lines 1 to 18, inclusive, and insert in lieu thereof the following:

"SEC. 4(a). This act shall not take effect and no authority shall be exercised hereunder and no work shall be begun and no moneys expended on or in connection with the works or structures provided for in this act, and no water rights shall be claimed or initiated hereunder, and no steps shall be taken by the United States or by others to initiate or perfect any claims to the use of water pertinent to such works or structures unless and until (1) the States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming shall have ratified the Colorado River compact, mentioned in section 12 hereof, and the President by public proclamation shall have so declared, or (2) if said States fail to ratify the said compact within one year from the date of the passage of this Act then, until six of said States, including the State of Califor-

nia, shall ratify said compact and shall consent to waive the provisions of the first paragraph of Article XI of said compact, which makes the same binding and obligatory only when approved by each of the seven States signatory thereto, and shall have approved said compact without conditions, save that of such 6-State approval, and the President by public proclamation shall have so declared, and, further, until the State of California, by act of its legislature, shall agree with the United States and for the benefit of the States of Arizona, Colorado, Nevada, New Mexico, Utah, and Wyoming, as an express covenant and in consideration of the passage of this act, that the aggregate annual consumptive use (diversions less returns to the river) of water of and from the Colorado River for use in the State of California, including all uses under contracts made under the provisions of this act and all water necessary for the supply of any rights which may now exist, shall not exceed 4,600,000 acre-feet of the waters apportioned to the lower-basin States by the Colorado River compact, plus not more than one-half of any excess or surplus waters unapportioned by said compact, such uses always to be subject to the terms of said compact."

On page 6, strike out line 25 and on page 7, lines 1 to 8, inclusive, and insert in lieu thereof the following: "permanent service and shall conform to paragraph (a) of section 4 of this act. No person shall".

On page 12, after line 14, add the following paragraph to section 6:

"The Federal Power Commission is hereby directed not to issue or approve any permits or licenses under said Federal water power act upon or affecting the Colorado River or any of its tributaries in the States of Colorado, Wyoming, Utah, New Mexico, Nevada, Arizona, and California until this act shall become effective, as provided in section 4 herein."[13]

[13] 70 Cong. Rec. 324 (December 10, 1928).

The problem of parliamentary procedure raised by the Phipps amendment to the Hayden amendment to section 4(a) was discussed on the floor of the Senate:

Mr. Hayden. Mr. President, I should like to have the attention of the Senate, that I may discuss the parliamentary situation as it exists and what I may do, if possible, to remedy it, in order that the amendment offered by the Senator from Colorado [Mr. Phipps] may be perfected.

As I understand the situation, the amendment offered by the Senator from Colorado [Mr. Phipps] is an amendment in the second degree, an amendment to the amendment which I have offered, and therefore not subject to amendment. The Senator's amendment contains three substantive propositions, upon which there is a difference of opinion between the States of Arizona and California, and we must vote upon all of them as one if his amendment is not subject to amendment. But if the Senator's amendment could be made subject to amendment the Senate could vote upon the various propositions separately. For example, the Senator has taken from another part of the bill a provision that the State of California shall have 4,600,000 acre-feet of water on the Colorado River. Arizona agrees that the State of California shall have 4,200,000 acre-feet of water.

I desire it arranged so that the Senate may vote upon the question of whether it shall be one figure or the other.

I should like to inquire of the President of the Senate, whether, if I should withdraw the amendment which I have offered, would then the amendment offered by the Senator from Colorado be an amendment in the second degree and subject to amendment?

The Vice President. Will the Senator state his question again?

Mr. Hayden. If I should withdraw the amendment which I have offered, to which the amendment of the Senator from Colorado is a substitute, will his amendment then be an amendment in the first degree and subject to amendment?

The Vice President. The amendment of the Senator from Colorado would have to go along with the amendment of the Senator from Arizona if the Senator from Arizona withdraws his amendment.

Mr. Hayden. Would it not then be possible for the Senator from Colorado to immediately reoffer his amendment?

The Vice President. The Senator from Colorado could do that.

Mr. Hayden. I want to state to the Senate that what I am trying to accomplish is to get a vote on the one particular question of whether the quantity of water which the State of California may divert from the Colorado River should be 4,200,000 acre-feet or 4,600,000 acre-feet. I can state in 15 or 20 minutes all the reasons why Arizona favors the lesser figure, and then the Senate may have a vote upon that question.

Mr. Phipps. Mr. President, will the Senator yield?

Mr. Hayden. I yield.

Mr. Phipps. I desire to call attention to the fact that 4,600,000 acre-feet was the figure adopted by the Senate committee and was written in the substitute bill offered by the Senator from California [Mr. Johnson]. Therefore it seems to me that the point comes right down to the question of 4,600,000 acre-feet as recommended by the Senate committee and 4,200,000 acre-feet as written in the amendment of the Senator from Arizona.

Mr. Hayden. And upon that particular issue and upon nothing else I desire to have a vote of the Senate at this time.

Mr. Phipps. The other item that is in the amendment to which the Senator calls attention, as I under-

stand, is the provision regarding the Federal Power Commission. That is the only other matter, is it not?

Mr. Hayden. My amendment as originally offered provides for a 7-State ratification of the Colorado River compact. The Senator from Colorado in his amendment provides for a 6-State ratification. That is another question upon which I should like to have the Senate take a vote. If the Senate will bear with me for a moment, I desire to say that it is only fair to the State of Arizona that the several substantive propositions which are contained in the amendment of the Senator from Colorado and in my amendment be voted upon, each upon its own merits by the Senate, and not grouped together in one particular amendment. If I am privileged to do so, Mr. President, I withdraw, without prejudice, the amendment I have offered.

The Vice President. The Senator has that right. The amendment of the Senator from Arizona to the so-called Johnson amendment is withdrawn.

Mr. Hayden. Now, if the Senator from Colorado [Mr. Phipps] will again offer his amendment just as it is, we can proceed to debate it, to amend it, and to vote upon it.

Mr. Phipps. Mr. President, I understand the Senator from Arizona has withdrawn his amendment. I desire again to offer my amendment as it is now before the Senate.

The Vice President. The question is on agreeing to the amendment offered by the Senator from Colorado [Mr. Phipps].

Mr. Hayden. I offer the following amendment to the amendment offered by the Senator from Colorado.

Mr. Smoot. Let the amendments be now read.

The Vice President. The clerk will state the amendment of the Senator from Colorado and the amendment of the Senator from Arizona to the substitute amendment.[14]

[14] 70 Cong. Rec. 382 (December 11, 1928).

SUPREME COURT OF THE UNITED STATES

No. 8, ORIGINAL.—OCTOBER TERM, 1962.

State of Arizona, Plaintiff,
v.
State of California et al. } Complaint.

[June 3, 1963.]

MR. JUSTICE BLACK delivered the opinion of the Court.

In 1952 the State of Arizona invoked the original jurisdiction of this Court [1] by filing a complaint against the State of California and seven of its public agencies.[2] Later, Nevada, New Mexico, Utah, and the United States were added as parties either voluntarily or on motion.[3] The basic controversy in the case is over how much water each State has a legal right to use out of the waters of the Colorado River and its tributaries. After preliminary pleadings, we referred the case to George I. Haight, Esquire, and upon his death in 1955 to Simon H. Rifkind, Esquire, as Special Master to take evidence, find facts, state conclusions of law, and recommend a decree, all

[1] "The judicial Power shall extend . . . to Controversies between two or more States . . . .

"In all cases . . . in which a State shall be Party, the supreme Court shall have original Jurisdiction." U. S. Const., Art. III, § 2. See also 28 U. S. C. § 1251 (a)(1).

Three times previously Arizona has instituted actions in this Court concerning the Colorado River. *Arizona* v. *California*, 283 U. S. 423 (1931); *Arizona* v. *California*, 292 U. S. 341 (1934); *Arizona* v. *California*, 298 U. S. 558 (1936). See also *United States* v. *Arizona*, 295 U. S. 174 (1935).

[2] Palo Verde Irrigation District, Imperial Irrigation District, Coachella Valley County Water District, Metropolitan Water District of Southern California, City of Los Angeles, City of San Diego, and County of San Diego.

[3] 344 U. S. 919 (1953) (intervention by United States); 347 U. S. 985 (1954) (intervention by Nevada); 350 U. S. 114 (1955) (joinder of Utah and New Mexico).

"subject to consideration, revision, or approval by the Court."[4] The Master conducted a trial lasting from June 14, 1956, to August 28, 1958, during which 340 witnesses were heard orally or by deposition, thousands of exhibits were received, and 25,000 pages of transcript were filled. Following many motions, arguments, and briefs, the Master in a 433-page volume reported his findings, conclusions, and recommended decree, received by the Court on January 16, 1961.[5] The case has been extensively briefed here and orally argued twice, the first time about 16 hours, the second, over six. As we see this case, the question of each State's share of the waters of the Colorado and its tributaries turns on the meaning and the scope of the Boulder Canyon Project Act passed by Congress in 1928.[6] That meaning and scope can be better understood when the Act is set against its background—the gravity of the Southwest's water problems; the inability of local groups or individual States to deal with these enormous problems; the continued failure of the States to agree on how to conserve and divide the waters; and the ultimate action by Congress at the request of the States creating a great system of dams and public works nationally built, controlled, and operated for the purpose of conserving and distributing the water.

The Colorado River itself rises in the mountains of Colorado and flows generally in a southwesterly direction for about 1,300 miles through Colorado, Utah, and Arizona and along the Arizona-Nevada and Arizona-California boundaries, after which it passes into Mexico and empties into the Mexican waters of the Gulf of California. On its way to the sea it receives tributary waters from Wyoming, Colorado, Utah, Nevada, New Mexico, and Arizona.

[4] The two orders are reported at 347 U. S. 986 (1954), and 350 U. S. 812 (1955).

[5] 364 U. S. 940 (1961).

[6] Boulder Canyon Project Act, 45 Stat. 1057 (1928), 43 U. S. C. §§ 617–617t (1958).

The river and its tributaries flow in a natural basin almost surrounded by large mountain ranges and drain 242,000 square miles, an area about 900 miles long from north to south and 300 to 500 miles wide from east to west—practically one-twelfth the area of the continental United States excluding Alaska. Much of this large basin is so arid that it is, as it always has been, largely dependent upon managed use of the waters of the Colorado River System to make it productive and inhabitable. The Master refers to archaeological evidence that as long as 2,000 years ago the ancient Hohokam tribe built and maintained irrigation canals near what is now Phoenix, Arizona, and that American Indians were practicing irrigation in that region at the time white men first explored it. In the second half of the nineteenth century a group of people interested in California's Imperial Valley conceived plans to divert water from the mainstream of the Colorado to give life and growth to the parched and barren soil of that valley. As the most feasible route was through Mexico, a Mexican corporation was formed and a canal dug partly in Mexico and partly in the United States. Difficulties which arose because the canal was subject to the sovereignty of both countries generated hopes in this country that some day there would be a canal wholly within the United States, an all-American canal.[7]

During the latter part of the nineteenth and the first part of the twentieth centuries, people in the Southwest continued to seek new ways to satisfy their water needs, which by that time were increasing rapidly as new settlers moved into this fast-developing region. But none of the more or less primitive diversions made from the mainstream of the Colorado conserved enough water to meet

[7] "[The All-American Canal] will end an intolerable situation, under which the Imperial Valley now secures its sole water supply from a canal running for many miles through Mexico . . . ." S. Rep. No. 592, 70th Cong., 1st Sess. 8 (1928).

the growing needs of the basin. The natural flow of the Colorado was too erratic, the river at many places in canyons too deep, and the engineering and economic hurdles too great for small farmers, larger groups, or even States to build storage dams, construct canals, and install the expensive works necessary for a dependable year-round water supply. Nor were droughts the basin's only problem; spring floods due to melting snows and seasonal storms were a recurring menace, especially disastrous in California's Imperial Valley where, even after the Mexican canal provided a more dependable water supply, the threat of flood remained at least as serious as before. Another troublesome problem was the erosion of land and the deposit of silt which fouled waters, choked irrigation works, and damaged good farm land and crops.

It is not surprising that the pressing necessity to transform the erratic and often destructive flow of the Colorado River into a controlled and dependable water supply desperately needed in so many States began to be talked about and recognized as far more than a purely local problem which could be solved on a farmer-by-farmer, group-by-group, or even state-by-state basis, desirable as this kind of solution might have been. The inadequacy of a local solution was recognized in the Report of the All-American Canal Board of the United States Department of Interior on July 22, 1919, which detailed the widespread benefits that could be expected from construction by the United States of a large reservoir on the mainstream of the Colorado and an all-American canal to the Imperial Valley.[8] Some months later, May 18, 1920, Congress passed an Act offered by Congressman Kinkaid of Nebraska directing the Secretary of the Interior to make a study and report of diversions which

[8] Department of Interior, Report of the All-American Canal Board (1919), 23–33. The three members of the Board were engineers with long experience in Western water problems.

might be made from the Colorado River for irrigation in the Imperial Valley.[9] The Fall-Davis Report,[10] submitted to Congress in compliance with the Kinkaid Act, began by declaring that "the control of the floods and development of the resources of the Colorado River are peculiarly national problems . . . ." [11] and then went on to give reasons why this was so, concluding with the statement that the job was so big that only the Federal Government could do it.[12] Quite naturally, therefore, the Report recommended that the United States construct as a government project not only an all-American canal from the Colorado River to the Imperial Valley but also a dam and reservoir at or near Boulder Canyon.[13]

The prospect that the United States would undertake to build as a national project the necessary works to control floods and store river waters for irrigation was apparently a welcome one for the basin States. But it brought to life strong fears in the northern basin States that additional waters made available by the storage and canal projects might be gobbled up in perpetuity by faster growing lower basin areas, particularly California, before the upper States could appropriate what they believed to be their fair share. These fears were not without foundation, since the law of prior appropriation prevailed in

---

[9] 41 Stat. 600 (1920).

[10] S. Doc. No. 142, 67th Cong., 2d Sess. (1922).

[11] *Id.*, at 1.

[12] The reasons given were:

"1. The Colorado River is international.

"2. The stream and many of its tributaries are interstate.

"3. It is a navigable river.

"4. Its waters may be made to serve large areas of public lands naturally desert in character.

"5. Its problems are of such magnitude as to be beyond the reach of other than national solution." *Ibid.*

[13] *Id.*, at 21.

most of the Western States.[14] Under that law the one who first appropriates water and puts it to beneficial use thereby acquires a vested right to continue to divert and use that quantity of water against all claimants junior to him in point of time.[15] "First in time, first in right" is the short-hand expression of this legal principle. In 1922, only four months after the Fall-Davis Report, this Court in *Wyoming* v. *Colorado*, 259 U. S. 419, held that the doctrine of prior appropriation could be given interstate effect.[16] This decision intensified fears of Upper Basin States that they would not get their fair share of Colorado River water.[17] In view of California's phenomenal growth, the Upper Basin States had particular reason to fear that California, by appropriating and using Colorado River water before the upper States, would, under the interstate application of the prior appropriation doctrine,

---

[14] This law prevails exclusively in all the basin States except California. See Weil, Water Rights in the Western States § 66 (1911); Hutchins, Selected Problems in the Law of Water Rights in the West 30–31 (1942) (U. S. Dept. of Agriculture Misc. Pub. No. 418). Even in California it is important. See 51 Cal. Jur. 2d Waters §§ 257–264 (1959).

[15] *Hinderlider* v. *La Plata River & Cherry Creek Ditch Co.*, 304 U. S. 92, 98 (1938); *Arizona* v. *California*, 283 U. S. 423, 459 (1931).

[16] The doctrine continues to be applied interstate. *E. g.*, *Nebraska* v. *Wyoming*, 325 U. S. 589, 617–618 (1945).

[17] "Delph E. Carpenter, Colorado River Commissioner for the State of Colorado, summarized the situation produced by that decision as follows:

"'The upper state has but one alternative, that of using every means to retard development in the lower state until the uses within the upper state have reached their maximum. The states may avoid this unfortunate situation by determining their respective rights by interstate compact before further development in either state, thus permitting freedom of development in the lower state without injury to future growth in the upper.'

"The final negotiation of the compact took place in the atmosphere produced by that decision." H. R. Doc. No. 717, 80th Cong., 2d Sess. 22 (1948).

be "first in time" and therefore "first in right." Nor were such fears limited to the northernmost States. Nevada, Utah, and especially Arizona were all apprehensive that California's rapid declaration of appropriative claims would deprive them of their just share of basin water available after construction of the proposed United States project. It seemed for a time that these fears would keep the States from agreeing on any kind of division of the river waters. Hoping to prevent "conflicts" and "expensive litigation" which would hold up or prevent the tremendous benefits expected from extensive federal development of the river,[18] the basin States requested and Congress passed an Act on August 19, 1921, giving the States consent to negotiate and enter into a compact for the "equitable division and apportionment . . . of the water supply of the Colorado River." [19]

Pursuant to this congressional authority, the seven States appointed Commissioners who, after negotiating for the better part of a year, reached an agreement at Santa Fe, New Mexico, on November 24, 1922. The agreement, known as the Colorado River Compact,[20] failed to fulfill the hope of Congress that the States would themselves agree on each State's share of the water. The most the Commissioners were able to accomplish in the Compact was to adopt a compromise suggestion of Secretary of Commerce Herbert Hoover, specially designated as United States representative.[21] This compromise divides the entire basin into two parts, the Upper Basin and the Lower Basin, separated at a point on the river in northern Arizona known as Lee Ferry. (A map show-

[20] The Compact can be found at 70 Cong. Rec. 324 (1928), and U. S. Dept. of Interior, Documents on the Use and Control of the Waters of Interstate and International Streams 39 (1956).

[21] H. R. Doc. No. 717, 80th Cong., 2d Sess. 22 (1948).

ing the two basins and other points of interest in this controversy is printed as an Appendix at p. 53.) Article III (a) of the Compact apportions to each basin in perpetuity 7,500,000 acre-feet of water [22] a year from the Colorado River System, defined in Article II (a) as "the Colorado River and its tributaries within the United States of America." In addition, Article III (b) gives the Lower Basin "the right to increase its beneficial consumptive use [23] of such waters by one million acre-feet per annum." Article III (c) provides that future Mexican water rights recognized by the United States shall be supplied first out of surplus over and above the aggregate of the quantities specified in (a) and (b), and if this surplus is not enough the deficiency shall be borne equally by the two basins. Article III (d) requires the Upper Basin not to deplete the Lee Ferry flow below an aggregate of 75,000,000 acre-feet for any 10 consecutive years. Article III (f) and (g) provide a way for further apportionment by a compact of "Colorado River System" waters at any time after October 1, 1963. While these allocations quieted rivalries between the Upper and Lower Basins, major differences between the States in the Lower Basin continued. Failure of the Compact to determine each State's share of the water left Nevada and Arizona with their fears that the law of prior appropriation would be not a protection but a menace because California could use that law to get for herself the lion's share of the waters allotted to the Lower Basin. Moreover, Arizona, because of her particularly strong interest in the Gila, intensely resented the Compact's inclusion of the Colorado River tributaries in its allocation scheme and was bitterly hostile to having

[22] An acre-foot of water is enough to cover an acre of land with one foot of water.

[23] "Beneficial consumptive use" means consumptive use measured by diversions less return flows, for a beneficial (nonwasteful) purpose.

Arizona tributaries, again particularly the Gila, forced to contribute to the Mexican burden. Largely for these reasons, Arizona alone, of all the States in both basins, refused to ratify the Compact.[24]

Seeking means which would permit ratification by all seven basin States, the Governors of those States met at Denver in 1925 and again in 1927. As a result of these meetings the Governors of the upper States suggested, as a fair apportionment of water among the Lower Basin States, that out of the average annual delivery of water at Lee Ferry required by the Compact—7,500,000 acre-feet—Nevada be given 300,000 acre-feet, Arizona 3,000,000, and California 4,200,000, and that unapportioned waters, subject to reapportionment after 1963, be shared equally by Arizona and California. Each Lower Basin State would have "the exclusive beneficial consumptive use of such tributaries within its boundaries before the same empty into the main stream," except that Arizona tributary waters in excess of 1,000,000 acre-feet could under some circumstances be subject to diminution by reason of a United States treaty with Mexico. This proposal foundered because California held out for 4,600,000 acre-feet instead of 4,200,000 [25] and because Arizona held out for complete exemption of its tributaries from any part of the Mexican burden.[26]

Between 1922 and 1927 Congressman Philip Swing and Senator Hiram Johnson, both of California, made three attempts to have Swing-Johnson bills enacted, authorizing

---

[24] Arizona did ratify the Compact in 1944, after it had already become effective by six-state ratification as permitted by the Boulder Canyon Project Act.

[25] Hearings on H. R. 5773 before the House Committee on Irrigation and Reclamation, 70th Cong., 1st Sess. 402–405 (1928).

[26] *Id.*, at 30–31. Arizona also objected to the provisions concerning electrical power.

construction of a dam in the canyon section of the Colorado River and an all-American canal.[27] These bills would have carried out the original Fall-Davis Report's recommendations that the river problem be recognized and treated as national, not local. Arizona's Senators and Congressmen, still insisting upon a definite guaranty of water from the mainstream, bitterly fought these proposals because they failed to provide for exclusive use of her own tributaries, particularly the Gila, and for exemption of these tributaries from the Mexican burden.

Finally, the fourth Swing-Johnson bill passed both Houses and became the Boulder Canyon Project Act of December 21, 1928, 45 Stat. 1057. The Act authorized the Secretary of the Interior to construct, operate, and maintain a dam and other works in order to control floods, improve navigation, regulate the river's flow, store and distribute waters for reclamation and other beneficial uses, and generate electrical power.[28] The projects authorized by the Act were the same as those provided for in the prior defeated measures, but in other significant respects the Act was strikingly different. The earlier bills had offered no method whatever of apportioning the waters among the States of the Lower Basin. The Act as finally passed did provide such a method, and, as we view it, the method chosen was a complete statutory apportionment intended to put an end to the long-standing dispute over Colorado River waters. To protect the Upper Basin against California should Arizona still refuse to ratify the Compact,[29] § 4 (a) of the Act as finally passed

---

[27] H. R. 11449, 67th Cong., 2d Sess. (1922); H. R. 2903, S. 727, 68th Cong., 1st Sess. (1923); H. R. 9826, S. 3331, 69th Cong., 1st Sess. (1926).

[28] Another purpose of the Act was to approve the Colorado River Compact, which had allocated the water between the two basins.

[29] The Upper Basin States feared that, if Arizona did not ratify the Compact, the division of water between the Upper and Lower Basins

provided that, if fewer than seven States ratified within six months, the Act should not take effect unless six States including California ratified and unless California, by its legislature, agreed "irrevocably and unconditionally . . . as an express covenant" to a limit on its annual consumption of Colorado River water of "four million four hundred thousand acre-feet of the waters apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact, plus not more than one-half of any excess or surplus waters unapportioned by said compact." Congress in the same section showed its continuing desire to have California, Arizona, and Nevada settle their own differences by authorizing them to make an agreement apportioning to Nevada 300,000 acre-feet, and to Arizona 2,800,000 acre-feet plus half of any surplus waters unapportioned by the Compact. The permitted agreement also was to allow Arizona exclusive use of the Gila River, wholly free from any Mexican obligation, a position Arizona had taken from the beginning. Sections 5 and 8 (b) of the Project Act made provisions for the sale of the stored waters. The Secretary of the Interior was authorized by § 5 "under such general regulations as he may prescribe, to contract for the storage of water in said reservoir and for the delivery thereof at such points on the river and on said canal as may be agreed upon, for irrigation and domestic uses . . . ." Section 5 required these contracts to be "for permanent service" and further provided, "No person shall have or be entitled to have the use for any purpose of the water stored as aforesaid except by contract made as herein stated." Section 8 (b) provided

---

agreed on in the Compact would be nullified. The reasoning was that Arizona's uses would not be charged against the Lower Basin's apportionment and that California would therefore be free to exhaust that apportionment herself. Total Lower Basin uses would then be more than permitted in the Compact, leaving less water for the Upper Basin.

that the Secretary's contracts would be subject to any compact dividing the benefits of the water between Arizona, California, and Nevada, or any two of them, approved by Congress on or before January 1, 1929, but that any such compact approved after that date should be "subject to all contracts, if any, made by the Secretary of the Interior under section 5 hereof prior to the date of such approval and consent by Congress."

The Project Act became effective on June 25, 1929, by Presidential Proclamation,[30] after six States, including California, had ratified the Colorado River Compact and the California legislature had accepted the limitation of 4,400,000 acre-feet [31] as required by the Act. Neither the three States or any two of them ever entered into any apportionment compact as authorized by §§ 4 (a) and 8 (b). After the construction of Boulder Dam the Secretary of the Interior, purporting to act under the authority of the Project Act, made contracts with various water users in California for 5,362,000 acre-feet, with Nevada for 300,000 acre-feet, and with Arizona for 2,800,000 acre-feet of water from that stored at Lake Mead.

The Special Master appointed by this Court found that the Colorado River Compact, the law of prior appropriation, and the doctrine of equitable apportionment—by which doctrine this Court in the absence of statute resolves interstate claims according to the equities—do not control the issues in this case. The Master concluded that, since the Lower Basin States had failed to make a compact to allocate the waters among themselves as authorized by §§ 4 (a) and 8 (b), the Secretary's contracts with the States had within the statutory scheme of §§ 4 (a), 5, and 8 (b) effected an apportionment of the waters of the mainstream which, according to the Master, were the

---

[30] 46 Stat. 3000 (1929).

[31] California Limitation Act, Cal. Stat. 1929, c. 16, at 38.

only waters to be apportioned under the Act. The Master further held that, in the event of a shortage of water making it impossible for the Secretary to supply all the water due California, Arizona, and Nevada under their contracts, the burden of the shortage must be borne by each State in proportion to her share of the first 7,500,000 acre-feet allocated to the Lower Basin, that is, $\frac{4.4}{7.5}$ by California, $\frac{2.8}{7.5}$ by Arizona, and $\frac{.3}{7.5}$ by Nevada, without regard to the law of prior appropriation.

Arizona, Nevada, and the United States support with few exceptions the analysis, conclusions, and recommendations of the Special Master's report. These parties agree that Congress did not leave division of the waters to an equitable apportionment by this Court but instead created a comprehensive statutory scheme for the allocation of mainstream waters. Arizona, however, believes that the allocation formula established by the Secretary's contracts was in fact the formula required by the Act. The United States, along with California, thinks the Master should not have invalidated the provisions of the Arizona and Nevada water contracts requiring those States to deduct from their allocations any diversions of water above Lake Mead which reduce the flow into that lake.

California is in basic disagreement with almost all of the Master's Report. She argues that the Project Act, like the Colorado River Compact, deals with the entire Colorado River System, not just the mainstream. This would mean that diversions within Arizona and Nevada of tributary waters flowing in those States would be charged against their apportionments and that, because tributary water would be added to the mainstream water in computing the first 7,500,000 acre-feet available to the States, there would be a greater likelihood of a surplus, of which California gets one-half. The result of California's

argument would be much more water for California and much less for Arizona. California also argues that the Act neither allocates the Colorado River waters nor gives the Secretary authority to make an allocation. Rather she takes the position that the judicial doctrine of equitable apportionment giving full interstate effect to the traditional western water law of prior appropriation should determine the rights of the parties to the water. Finally, California claims that in any event the Act does not control in time of shortage. Under such circumstances, she says, this Court should divide the waters according to the doctrine of equitable apportionment or the law of prior appropriation, either of which, she argues, should result in protecting her prior uses.

Our jurisdiction to entertain this suit is not challenged and could not well be since Art. III, § 2, of the Constitution gives this Court original jurisdiction of actions in which States are parties. In exercising that jurisdiction, we are mindful of this Court's often expressed preference that, where possible, States settle their controversies by "mutual accommodation and agreement." [32] Those cases and others [33] make it clear, however, that this Court does have a serious responsibility to adjudicate cases where there are actual, existing controversies over how interstate streams should be apportioned among States. This case is the most recent phase of a continuing controversy over the water of the Colorado River, which the States despite repeated efforts have been unable to settle. Resolution of this dispute requires a determination of what apportionment, if any, is made by the Project Act and what powers are confer[redacted] by the Act upon the Secretary of Interior. Unless m[redacted] the issues presented

[32] *Colorado* v. *Kansas*, 320 U. S. [redacted], 392 (1943); *Nebraska* v. *Wyoming*, 325 U. S. 589, 616 (1945).

[33] *E. g.*, *Kansas* v. *Colorado*, 185 U. S. 125 (1902); *New Jersey* v. *New York*, 283 U. S. 336 (1931).

here are adjudicated, the conflicting claims of the parties will continue, as they do now, to raise serious doubts as to the extent of each State's right to appropriate water from the Colorado River System for existing or new uses. In this situation we should and do exercise our jurisdiction.

I.

Allocation of Water Among the States and Distribution to Users.

We have concluded, for reasons to be stated, that Congress in passing the Project Act intended to and did create its own comprehensive scheme for the apportionment among California, Arizona, and Nevada of the mainstream waters of the Colorado River, leaving each State its tributaries. Congress decided that a fair division of the first 7,500,000 acre-feet of mainstream water would give 4,400,000 acre-feet to California, 2,800,000 to Arizona, and 300,000 to Nevada; Arizona and California would each get one-half of any surplus. Prior approval was therefore given in the Act for a tri-state compact to incorporate these terms. The States, subject to subsequent congressional approval, were also permitted to agree on a compact with different terms. Division of the water did not, however, depend on the States' agreeing to a compact, for Congress gave the Secretary of the Interior adequate authority to accomplish the division. Congress did this by giving the Secretary power to make contracts for the delivery of water and by providing that no person could have water without a contract.

A. *Relevancy of Judicial Apportionment and Colorado River Compact.*—We agree with the Master that apportionment of the Lower Basin waters of the Colorado River is not controlled by the doctrine of equitable apportionment or by the Colorado River Compact. It is true that

the Court has used the doctrine of equitable apportionment to decide river controversies between States.[34] But in those cases Congress had not made any statutory apportionment. In this case, we have decided that Congress has provided its own method for allocating among the Lower Basin States the mainstream water to which they are entitled under the Compact. Where Congress has so exercised its constitutional power over waters, courts have no power to substitute their own notions of an "equitable apportionment" for the apportionment chosen by Congress. Nor does the Colorado River Compact control this case. Nothing in that Compact purports to divide water among the Lower Basin States nor in any way to affect or control any future apportionment among those States or any distribution of water within a State. That the Commissioners were able to accomplish even a division of water between the basins is due to what is generally known as the "Hoover Compromise."

> "Participants [in the Compact negotiations] have stated that the negotiations would have broken up but for Mr. Hoover's proposal: that the Commission limit its efforts to a division of water between the upper basin and the lower basin, leaving to each basin the future internal allocation of its share." [35]

And in fact this is all the Compact did. However, the Project Act, by referring to the Compact in several places, does make the Compact relevant to a limited extent. To begin with, the Act explicitly approves the Compact and thereby fixes a division of the waters between the basins which must be respected. Further, in several places the Act refers to terms contained in the Compact. For example, § 12 of the Act adopts the Compact definition of

---

[35] H. R. Doc. No. 717, 80th Cong., 2d Sess. 22 (1948).

"domestic," [36] and § 6 requires satisfaction of "present perfected rights" as used in the Compact.[37] Obviously, therefore, those particular terms, though originally formulated only for the Compact's allocation of water between basins, are incorporated into the Act and are made applicable to the Project Act's allocation among Lower Basin States. The Act also declares that the Secretary of the Interior and the United States in the construction, operation, and maintenance of the dam and other works and in the making of contracts shall be subject to and controlled by the Colorado River Compact.[38] These latter references to the Compact are quite different from the Act's adoption of Compact terms. Such references, unlike the explicit adoption of terms, were used only to show that the Act and its provisions were in no way to upset, alter, or affect the Compact's congressionally approved division of water between the basins. They were not intended to make the Compact and its provisions control or affect the Act's allocation among and distribution of water within the States of the Lower Basin. Therefore, we look to the Compact for terms specifically incorporated in the Act, and we would also look to it to resolve disputes between the Upper and Lower Basins, were any involved in this case. But no such questions are here. We must determine what apportionment and delivery scheme in the Lower Basin has been effected through the Secretary's contracts. For that determination, we look to the Project Act alone.

B. *Mainstream Apportionment.*—The congressional scheme of apportionment cannot be understood with-

---

[36] " 'Domestic' whenever employed in this Act shall include water uses defined as 'domestic' in said Colorado River compact."

[37] The dam and reservoir shall be used, among other things, for "satisfaction of present perfected rights in pursuance of Article VIII of said Colorado River compact."

[38] §§ 1, 8 (a), 13 (b) and (c).

out knowing what water Congress wanted apportioned. Under California's view, which we reject, the first 7,500,000 acre-feet of Lower Basin water, of which California has agreed to use only 4,400,000, is made up of both mainstream and tributary water, not just mainstream water. Under the view of Arizona, Nevada, and the United States, with which we agree, the tributaries are not included in the waters to be divided but remain for the exclusive use of each State. Assuming 7,500,000 acre-feet or more in the mainstream and 2,000,000 in the tributaries, California would get 1,000,000 acre-feet more if the tributaries are included and Arizona 1,000,000 less.[39]

California's argument that the Project Act, like the Colorado River Compact, deals with the main river and all its tributaries rests on § 4 (a) of the Act, which limits California to 4,400,000 acre-feet "of the waters apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact, plus not more than one-half of any excess or surplus waters unapportioned by said compact . . . ." And Article III (a), referred to by § 4 (a), apportioned in perpetuity to the Lower Basin the use of 7,500,000 acre-feet of water per annum "from the Colorado River System," which was defined in the Compact as "that portion of the Colorado River and its tributaries within the United States of America."

Arizona argues that the Compact apportions between basins only the waters of the mainstream, not the mainstream and the tributaries. We need not reach that question, however, for we have concluded that whatever waters the Compact apportioned the Project Act itself dealt only with water of the mainstream. In the first place, the Act, in § 4 (a), states that the California limitation, which is

[39] Also, California would reduce Nevada's share of the mainstream waters from 300,000 acre-feet to 120,500 acre-feet.

in reality her share of the first 7,500,000 acre-feet of Lower Basin water, is on "water of and from the Colorado River," not of and from the "Colorado River System." But more importantly, the negotiations among the States and the congressional debates leading to the passage of the Project Act clearly show that the language used by Congress in the Act was meant to refer to mainstream waters only. Inclusion of the tributaries in the Compact was natural in view of the upper States' strong feeling that the Lower Basin tributaries should be made to share the burden of any obligation to deliver water to Mexico which a future treaty might impose. But when it came to an apportionment among the Lower Basin States, the Gila, by far the most important Lower Basin tributary, would not logically be included, since Arizona alone of the States could effectively use that river.[40] Therefore, with minor exceptions, the proposals and counterproposals over the years, culminating in the Project Act, consistently provided for division of the mainstream only, reserving the tributaries to each State's exclusive use.

The most important negotiations among the States, which in fact formed the basis of the debates leading to passage of the Act, took place in 1927 when the Governors of the seven basin States met at Denver in an effort to work out an allocation of the Lower Basin waters acceptable to Arizona, California, and Nevada. Arizona and California made proposals,[41] both of which suggested giving Nevada 300,000 acre-feet out of the mainstream of the Colorado River and reserving to each State the exclusive use of her own tributaries. Arizona proposed that all remaining mainstream water be divided equally between

---

[40] Not only does the Gila enter the Colorado almost at the Mexican border, but also in dry seasons it virtually evaporates before reaching the Colorado.

[41] See 69 Cong. Rec. 9454 (1928).

herself and California, which would give each State 3,600,000 acre-feet out of the first 7,500,000 acre-feet of mainstream water. California rejected the proposed equal division of the water, suggesting figures that would result in her getting about 4,600,000 out of the 7,500,000. The Governors of the four Upper Basin States, trying to bring Arizona and California together, asked each State to reduce its demands and suggested this compromise: Nevada 300,000 acre-feet, Arizona 3,000,000, and California 4,200,000.[42] These allocations were to come only out of the mainstream, that is, as stated by the Governors, out "of the average annual delivery of water to be provided by the States of the upper division at Lees Ferry under the terms of the Colorado River compact." The Governors' suggestions, like those of the States, explicitly reserved to each State as against the other States the exclusive use of her own tributaries. Arizona agreed to the Governors' proposal, but she wanted it made clear that her tributaries were to be exempted from any Mexican obligation.[43] California rejected the whole proposal, insisting that she must have 4,600,000 acre-feet from the mainstream, or, as she put it, "from the waters to be provided by the States of the upper division at Lee Ferry under the Colorado River compact."[44] Neither in the States' original offers, nor in the Governors' suggestions, nor in the States' responses was the "Colorado River System"—mainstream plus tributaries—ever used as the basis for Lower Basin allocations; rather, it was always mainstream water, or the water to be delivered by the upper States at Lee Ferry, that is to say, an annual average of 7,500,000 acre-feet of mainstream water.

With the continued failure of Arizona and California to reach accord, there was mounting impetus for a con-

gressional solution. A Swing-Johnson bill containing no limitation on California's uses finally passed the House in 1928 over objections by Representatives from Arizona and Utah.[45] When the bill reached the Senate, it was amended in committee to provide that the Secretary in his water-delivery contracts must limit California to 4,600,000 acre-feet "of the water allocated to the lower basin by the Colorado River compact . . . and one-half of the unallocated, excess, and/or surplus water . . . ." [46] On the floor, Senator Phipps of Colorado proposed an amendment which would allow the Act to go into effect without any limitation on California if seven States ratified the Compact; if only six States ratified and if California legislature accepted the limitation, the Act could still become effective.[47] Arizona's Senator Hayden had already proposed an amendment reducing California's share to 4,200,000 acre-feet (the Governors' proposal), plus half of the surplus, leaving Arizona exclusive use of the Gila free from any Mexican obligation,[48] but this the Senate rejected.[49] Senator Bratton of New Mexico, noting that only 400,000 acre-feet kept Arizona and California apart, immediately suggested an amendment by which they would split the difference, California getting 4,400,000 acre-feet "of the waters apportioned to the lower basin States by the Colorado River compact," plus half of surplus.[50] It was this Bratton amendment that became part of the Act as passed,[51] which had been amended on the

floor so that the limitation referred to waters apportioned to the Lower Basin "by paragraph (a) of Article III of the Colorado River compact," instead of waters apportioned "by the Colorado River compact." [52]

Statements made throughout the debates make it quite clear that Congress intended the 7,500,000 acre-feet it was allocating, and out of which California was limited to 4,400,000, to be mainstream water only. In the first place, the basin Senators expressly acknowledged as the starting point for their debate the Denver Governors' proposal that specific allocations be made to Arizona, California, and Nevada from the mainstream, leaving the tributaries to the States. For example, Senator Johnson, leading spokesman for California, and Senator Hayden, leading spokesman for Arizona, agreed that the Governors' recommendations could be used as "a basis for discussion." [53] Hayden went on to observe that the Committee amendment would give California the same 4,600,000 acre-feet she had sought at Denver.[54] Later, Nevada's Senator Pittman stated that the committee "put the amount in there that California demanded before the four governors at Denver," and said that the Bratton amendment would split the 400,000 acre-feet separating the Governors' figure and the Committee's figure.[55] All the leaders in the debate—Johnson, Bratton, King, Hayden, Phipps, and Pittman—expressed a common understanding that the key issue separating Arizona and

---

[52] 70 Cong. Rec. 459 (1928). That this change was not intended to cause the States to give up their tributaries may reasonably be inferred from the fact that the amendment was agreed to by Senator Hayden, who was a constant opponent of including the tributaries.

[53] *Id.*, at 77.

[54] *Ibid.* Later, Senator Hayden said that his amendment incorporated the Governors' proposal. *Id.*, at 172–173.

[55] *Id.*, at 386.

California was the difference of 400,000 acre-feet,[56] precisely the same 400,000 acre-feet of mainstream water that had separated the States at Denver. Were we to sustain California's argument here that tributaries must be included, California would actually get more than she was willing to settle for at Denver.

That the apportionment was from the mainstream only is also strongly indicated by an analysis of the second paragraph of § 4 (a) of the Act. There Congress authorized Arizona, Nevada, and California to make a compact allocating to Nevada 300,000 acre-feet and to Arizona 2,800,000 plus one-half of surplus, which, with California's 4,400,000 and half of the surplus, would under California's interpretation of the Act exhaust the Lower Basin waters, both mainstream and tributaries. But Utah and New Mexico, as Congress knew, had interests in Lower Basin tributaries which Congress surely would have protected in some way had it meant for the tributaries of those two States to be included in the water to be divided among Arizona, Nevada, and California. We cannot believe that Congress would have permitted three States to divide among themselves water belonging to five States. Nor can we believe that the representatives of Utah and New Mexico would have sat quietly by and acquiesced in a congressional attempt to include their tributaries in waters given the other three States.

Finally, in considering California's claim to share in the tributaries of other States, it is important that from the

---

[56] *Id.*, at 164 (King), 165 (Johnson, Bratton), 382 (Hayden, Phipps), 385 (Bratton), 386 (Pittman). Senator Hayden's statement is representative: "I want to state to the Senate that what I am trying to accomplish is to get a vote on the one particular question of whether the quantity of water which the State of California may divert from the Colorado River should be 4,200,000 acre-feet or 4,600,000 acre-feet." *Id.*, at 382.

beginning of the discussions and negotiations which led to the Project Act, Arizona consistently claimed that she must have sole use of the Gila, upon which her existing economy depended.[57] Arizona's claim was supported by the fact that only she and New Mexico could effectively use the Gila waters, which not only entered the Colorado River too close to Mexico to be of much use to any other States but also was reduced virtually to a trickle in the hot Arizona summers before it could reach the Colorado. In the debates the Senators consistently acknowledged that the tributaries—or at least the waters of the Gila, the only major Arizona tributary—were excluded from the allocation they were making. Senator Hayden, in response to questions by Senator Johnson, said that the California Senator was correct in stating that the Senate had seen fit to give Arizona 2,800,000 acre-feet in addition to all the water in the Gila.[58] Senator Johnson had earlier stated, "[I]t is only the main stream, Senators will recall, that has been discussed," and one of his arguments in favor of California's receiving 4,600,000 acre-feet rather than 4,200,000 was that Arizona was going to keep all her tributaries in addition to whatever portion of the main river allocated to her.[59] Senator Johnson also argued that Arizona should bear more than half the Lower Basin's Mexican burden because in addition to the 2,800,000 acre-feet allotted her by the Act she would get the Gila, which he erroneously estimated at 3,500,000 acre-feet.[60] Senator Pittman, who had sat in on the Governors' conference, likewise understood that the water was

being allocated from "the main Colorado River." [61] And other interested Senators similarly distinguished between the mainstream and the tributaries.[62] While the debates, extending over a long period of years, undoubtedly contain statements which support inferences in conflict with those we have drawn, we are persuaded by the legislative history as a whole that the Act was not intended to give California any claim to share in the tributary waters of the other Lower Basin States.

C. *The Project Act's Apportionment and Distribution Scheme.*—The legislative history, the language of the Act, and the scheme established by the Act for the storage and delivery of water convince us also that Congress intended to provide its own method for a complete apportionment of the mainstream water among Arizona, California, and Nevada.

First, the legislative history. In hearings on the House bill that became the Project Act, Congressman Arentz of Nevada, apparently impatient with the delay to this much needed project, told the committee on January 6, 1928, that if the States could not themselves allocate the water, "there must be some power which will say to California 'You can not take any more than this amount and the balance is allocated to the other States.' " [63] Later, May 25, 1928, the House passed the bill,[64] but it did not contain any allocation scheme. When the Senate took up that bill in December, pressure mounted swiftly for amendments that would provide a workable method for apportioning the waters among the Lower Basin States

[64] 69 Cong. Rec. 9990 (1928).

and distributing them to users in the States. The session convened on December 3, 1928, on the fifth the Senate took up the bill,[65] nine days later the bill with significant amendments passed the Senate,[66] four days after that the House concurred in the Senate's action,[67] and on the twenty-first the President signed the bill.[68] When the bill first reached the Senate floor, it had a provision, added in committee, limiting California to 4,600,000 acre-feet,[69] and Senator Hayden on December 6 proposed reducing that share to 4,200,000.[70] The next day, December 7, Mr. Pittman, senior Senator from Nevada, vigorously argued that Congress should settle the matter without delay. He said,

> "What is the difficulty? We have only minor questions involved here. There is practically nothing involved except a dispute between the States of Arizona and California with regard to the division of the increased water that will be impounded behind the proposed dam; that is all. . . . Of the 7,500,000 acre-feet of water let down that river they have gotten together within 400,000 acre-feet. They have got to get together, and if they do not get together Congress should bring them together." [71]

The day after that, December 8, New Mexico's Senator Bratton suggested an amendment splitting the difference between the demands of Arizona and California by limiting California to 4,400,000 acre-feet.[72] On the tenth, re-

[72] *Id.*, at 277, 385.

flecting the prevailing sense of urgency for decisive action, Senator Bratton emphasized that this was not a dispute limited simply to two States:

> "The two States have exchanged views, they have negotiated, they have endeavored to reach an agreement, and until now have been unable to do so. This controversy does not affect those two States alone. It affects other States in the Union and the Government as well.
>
> "Without undertaking to express my views either way upon the subject, I do think that if the two States are unable to agree upon a figure then that we, as a disinterested and friendly agency, should pass a bill which, according to our combined judgment, will justly and equitably settle the controversy. I suggested 4,400,000 acre-feet with that in view. I still hold to the belief that somewhere between the two figures we must fix the amount, and that this difference of 400,000 acre-feet should not be allowed to bar and preclude the passage of this important measure dealing with the enormous quantity of 15,000,000 acre-feet of water and involving seven States as well as the Government." [73]

The very next day, December 11, this crucial amendment was adopted,[74] and on the twelfth Senator Hayden pointed out that the bill settled the dispute over Lower Basin waters by giving 4,400,000 acre-feet to California and 2,800,000 to Arizona:

> "One [dispute] is how the seven and a half million acre-feet shall be divided in the lower basin. The Senate has settled that by a vote—that California

---

[73] *Id.*, at 333.

[74] *Id.*, at 387.

> may have 4,400,000 acre-feet of that water. It follows logically that if that demand is to be conceded, as everybody agrees, the remainder is 2,800,000 acre-feet for Arizona. That settles that part of the controversy." [75]

On the same day, Senator Pittman, intimately familiar with the whole water problem,[76] summed up the feeling of the Senate that the bill fixed a limit on California and "practically allocated" to Arizona her share of the water:

> "The Senate has already determined upon the division of water between those States. How? It has determined how much water California may use, and the rest of it is subject to use by Nevada and Arizona. Nevada has already admitted that it can use only an insignificant quantity, 300,00 acre-feet. That leaves the rest of it to Arizona. As the bill now stands it is just as much divided as if they had mentioned Arizona and Nevada and the amounts they are to get . . . .
>
> . . . . .
>
> "As I understand this amendment, Arizona to-day has practically allocated to it 2,800,000 acre-feet of water in the main Colorado River." [77]

---

[75] *Id.*, at 467. See also *id.*, at 465.

[76] For example, Senator Pittman's active role in resolving the whole Colorado River problem was acknowledged by Senator Hayden on the Senate floor:

"When Congress assembled in December, 1927, no agreement had been made. The senior Senator from Nevada [MR. PITTMAN], in continuation of the earnest efforts that he has made all these years to bring about a settlement of the controversy between the States with respect to the Colorado River, invited a number of us to conferences in his office and these we talked over the situation." *Id.*, at 172.

[77] *Id.*, at 468–469.

The Senator went on to explain why the Senate had found it necessary to set up its own plan for allocating the water:

> "Why do we not leave it to California to say how much water she shall take out of the river or leave it to Arizona to say how much water she shall take out of the river? It is because it happens to become a duty of the United States Senate to settle this matter, and that is the reason." [78]

Not only do the closing days of the debate show that Congress intended an apportionment among the States but also provisions of the Act create machinery plainly adequate to accomplish this purpose, whatever contingencies might occur. As one alternative of the congressional scheme, § 4 (a) of the Act invited Arizona, California, and Nevada to adopt a compact dividing the waters along the identical lines that had formed the basis for the congressional discussions of the Act: 4,400,000 acre-feet to California, 300,000 to Nevada, and 2,800,000 to Arizona. Section 8 (b) gave the States power to agree upon some other division, which would have to be approved by Congress. Congress made sure, however, that if the States did not agree on any compact the objects of the Act would be carried out, for the Secretary would then proceed, by making contracts, to apportion water among the States and to allocate the water among users within each State.

In the first section of the Act, the Secretary was authorized to "construct, operate, and maintain a dam and incidental works . . . adequate to create a storage reservoir of a capacity of not less than twenty million acre-feet of water . . ." for the stated purpose of "controlling the floods, improving navigation and regulating the flow

---

[78] *Id.*, at 471. The Senator added, "We have already decided as to the division of the water, and we say that if the States wish they can enter into a subsidiary agreement confirming that." *Ibid.*

of the Colorado River, providing for storage and for the delivery of the stored waters thereof for reclamation of public lands and other beneficial uses . . . ," and generating electrical power. The whole point of the Act was to replace the erratic, undependable, often destructive natural flow of the Colorado with the regular, dependable release of waters conserved and stored by the project. Having undertaken this beneficial project, Congress, in several provisions of the Act, made it clear that no one should use mainstream waters save in strict compliance with the scheme set up by the Act. Section 5 authorized the Secretary "under such general regulations as he may prescribe, to contract for the storage of water in said reservoir and for the delivery thereof at such points on the river . . . as may be agreed upon, for irrigation and domestic uses . . . ." To emphasize that water could be obtained from the Secretary alone, § 5 further declared, "No person shall have or be entitled to have the use for any purpose of the water stored as aforesaid except by contract made as herein stated." The supremacy given the Secretary's contracts was made clear in § 8 (b) of the Act, which provided that, while the Lower Basin States were free to negotiate a compact dividing the waters, such a compact if made and approved after January 1, 1929, was to be "subject to all contracts, if any, made by the Secretary of the Interior under section 5" before Congress approved the compact.

These several provisions, even without legislative history, are persuasive that Congress intended the Secretary of the Interior, through his § 5 contracts, both to carry out the allocation of the waters of the main Colorado River among the Lower Basin States and to decide which users within each State would get water. The general authority to make contracts normally includes the power to choose with whom and upon what terms the contracts will be made. When Congress in an Act grants

authority to contract, that authority is no less than the general authority, unless Congress has placed some limit on it.[79] In this respect it is of interest that in an earlier version the bill did limit the Secretary's contract power by making the contracts "subject to rights of prior appropriators." [80] But that restriction, which preserved the law of prior appropriation, did not survive. It was stricken from the bill when the requirement that every water user have a contract was added to § 5.[81] Significantly, no phrase or provision indicating that the Secretary's contract power was to be controlled by the law of prior appropriation was substituted either then or at any other time before passage of the Act, and we are persuaded that had Congress intended so to fetter the Secretary's discretion, it would have done so in clear and unequivocal terms, as it did in recognizing "present perfected rights" in § 6.

That the bill was giving the Secretary sufficient power to carry out an allocation of the waters among the States and among the users within each State without regard to the law of prior appropriation was brought out in a colloquy between Montana's Senator Walsh and California's Senator Johnson, whose State had at least as much reason as any other State to bind the Secretary by state laws. Senator Walsh, who was thoroughly versed in western water law and also had previously argued before this Court in a leading case involving the doctrine of prior

---

[79] In the debates leading to the passage of the bill, Senator Walsh observed that "to contract means a liberty of contract" and asked if this did not mean that the Secretary could "give the water to them [appropriators] or withhold it from them as he sees fit," to which Senator Johnson answered "certainly." 70 Cong. Rec. 168 (1928).

[80] See Hearings on H. R. 6251 and 9826 before the Committee on Irrigation and Reclamation, 69th Cong., 1st Sess. 12 (1926).

[81] See *id.*, at 97, 115.

appropriation,[82] made clear what would follow from the Government's impounding of the Colorado River waters when he said, "I always understood that the interest that stores the water has a right superior to prior appropriations that do not store." He sought Senator Johnson's views on what rights the City of Los Angeles, which had filed claims to large quantities of Colorado River water, would have after the Government had built the dam and impounded the waters. In reply to Senator Walsh's specific question whether the Government might "dispose of the stored waters as it sees fit," Senator Johnson said, "Yes, under the terms of this bill." Senator Johnson added that "everything in this scheme, plan, or design" was "dependent upon the Secretary of the Interior contracting with those who desire to obtain the benefit of the construction . . . ." He admitted that it was possible that the Secretary could "utterly ignore" Los Angeles' appropriations.[83]

In this same discussion, Senator Hayden emphasized the Secretary's power to allocate the water by making contracts with users. After Senator Walsh said that he understood Senator Johnson to be arguing that the Secretary must satisfy Los Angeles' appropriations, Senator

---

[82] *Bean* v. *Morris,* 221 U. S. 485 (1911). This case was relied on by Mr. Justice Van Devanter in *Wyoming* v. *Colorado,* 259 U. S. 419, 466 (1922).

[83] 70 Cong. Rec. 168 (1928). Other statements by Senator Johnson are less damaging to California's claims. For example, the Senator at another point in the colloquy with Senator Walsh said that he doubted if the Secretary either would or could disregard Los Angeles and contract with someone having no appropriation. *Ibid.* It is likely, however, that Senator Johnson was talking about present perfected rights, as a few minutes before he had argued that Los Angeles had taken sufficient steps in perfecting its claims to make them protected. See *id.*, at 167. Present perfected rights, as we have observed in the text, are recognized by the Act. § 6.

Hayden corrected him, pointing out that Senator Johnson had qualified his statement by saying that "after all, the Secretary of the Interior could allow the city of Los Angeles to have such quantity of water as might be determined by contract." Senator Hayden went on to say that, where domestic and irrigation needs conflicted, "the Secretary of the Interior will naturally decide as between applicants, one who desires to use the water for potable purposes in the city and another who desires to use it for irrigation, if there is not enough water to go around, that the city shall have the preference." [84] It is also significant that two vigorous opponents of the bill, Arizona's Representative Douglas and Utah's Representative Colton, criticized the bill because it gave the Secretary of the Interior "absolute control" over the disposition of the stored waters.[85]

The argument that Congress would not have delegated to the Secretary so much power to apportion and distribute the water overlooks the ways in which his power is limited and channeled by standards in the Project Act. In par-

---

[84] 70 Cong. Rec. 169 (1928). At one point Senator Hayden seems to say that the Secretary's contracts are to be governed by state law: "The only thing required in this bill is contained in the amendment that I have offered, that there shall be apportioned to each State its share of the water. Then, who shall obtain that water in relative order of priority may be determined by the State courts." *Ibid.* But, in view of the Senator's other statements in the same debate, this remark of a man so knowledgeable in western water law makes sense only if one understands that the "order of priority" being talked about was the order of present perfected rights—rights which Senator Hayden recognized, see *id.*, at 167, and which the Act preserves in § 6.

[85] 69 Cong. Rec. 9623, 9648, 9649 (1928). We recognize, of course, that statements of opponents of a bill may not be authoritative, see *Schwegmann Bros.* v. *Calvert Distillers Corp.*, 341 U. S. 384, 394–395 (1951), but they are nevertheless relevant and useful, especially where, as here, the proponents of the bill made no response to the opponents' criticisms.

ticular, the Secretary is bound to observe the Act's limitation of 4,400,000 acre-feet on California's consumptive uses out of the first 7,500,000 acre-feet of mainstream water. This necessarily leave the remaining 3,100,000 acre-feet for the use of Arizona and Nevada, since they are the only other States with access to the main Colorado River. Nevada consistently took the position, accepted by the other States throughout the debates, that her conceivable needs would not exceed 300,000 acre-feet, which, of course, left 2,800,000 acre-feet for Arizona's use. Moreover, Congress indicated that it thought this a proper division of the waters when in the second paragraph of § 4 (a) it gave advance consent to a tri-state compact adopting such division. While no such compact was ever entered into, the Secretary by his contracts has apportioned the water in the approved amounts and thereby followed the guidelines set down by Congress. And, as the Master pointed out, Congress set up other standards and placed other significant limitations upon the Secretary's power to distribute the stored waters. It specifically set out in order the purposes for which the Secretary must use the dam and the reservoir:

> "First, for river regulation, improvement of navigation, and flood control; second, for irrigation and domestic uses and satisfaction of present perfected rights in pursuance of Article VIII of said Colorado River compact; and third, for power." § 6.

The Act further requires the Secretary to make revenue provisions in his contracts adequate to ensure the recovery of the expenses of construction, operation, and maintenance of the dam and other works within 50 years after their construction. § 4 (b). The Secretary is directed to make water contracts for irrigation and domestic uses only for "permanent service." § 5. He and his permittees, licensees, and contractees are subject to the Colorado

River Compact, § 8 (a), and therefore can do nothing to upset or encroach upon the Compact's allocation of Colorado River water between the Upper and Lower Basins. In the construction, operation, and management of the works, the Secretary is subject to the provisions of the reclamation law, except as the Act otherwise provides. § 14. One of the most significanct limitations in the Act is that the Secretary is required to satisfy present perfected rights, a matter of intense importance to those who had reduced their water rights to actual beneficial use at the time the Act became effective. § 6. And, of course, all of the powers granted by the Act are exercised by the Secretary and his well-established executive department, responsible to Congress and the President and subject to judicial review.[86]

Notwithstanding the Government's construction, ownership, operation, and maintenance of the vast Colorado River works that conserve and store the river's waters and the broad power given by Congress to the Secretary of the Interior to make contracts for the distribution of the water, it is argued that Congress in §§ 14 and 18 of the Act took away practically all the Secretary's power by permitting the States to determine with whom and on what terms the Secretary would make water contracts. Section 18 states:

> "Nothing herein shall be construed as interfering with such rights as the States now have either to the waters within their borders or to adopt such policies and enact such laws as they may deem necessary with respect to the appropriation, control, and use of waters within their borders . . . ."

Section 14 provides that the reclamation law, to which the Act is made a supplement, shall govern the manage-

[86] See, *e. g.*, *Ickes* v. *Fox*, 300 U. S. 82 (1937); cf. *Best* v. *Humboldt Placer Mining Co.*, 371 U. S. 334 (1963); *Boesch* v. *Udall*, No. 332 (May 27, 1963).

ment of the works except as otherwise provided, and § 8 of the Reclamation Act, much like § 18 of the Project Act, provides that it is not to be construed as affecting or interfering with state laws "relating to the control, appropriation, use, or distribution of water used in irrigation . . . ." [87] In our view, nothing in any of these provisions affects our decision, stated earlier, that it is the Act and the Secretary's contracts, not the laws of prior appropriation, that control the apportionment of water among the States. Moreover, contrary to the Master's conclusion, we hold that the Secretary in choosing between users within each State and in settling the terms of his contracts is not bound by these sections to follow state law.

The argument that § 8 of the Reclamation Act requires the United States in the delivery of water to follow priorities laid down by state law has already been disposed of by this Court in *Ivanhoe Irr. Dist.* v. *McCracken,* 357 U. S. 275 (1958), and reaffirmed in *City of Fresno* v. *California,* 372 U. S. 627 (1963). In *Ivanhoe* we held that, even though § 8 of the Reclamation Act preserved state law, that general provision could not override a specific provision of the same Act prohibiting a single landowner from getting water for more than 160 acres. We said:

> "As we read § 8, it merely requires the United States to comply with state law when, in the construction and operation of a reclamation project, it becomes

---

[87] "Nothing in . . . [this Act] shall be construed as affecting or intended to affect or to in any way interfere with the laws of any State or Territory relating to the control, appropriation, use, or distribution of water used in irrigation, or any vested right acquired thereunder, and the Secretary of the Interior, in carrying out the provisions of such sections, shall proceed in conformity with such laws, and nothing . . . [herein] shall in any way affect any right of any State or of the Federal Government or of any landowner, appropriator, or user of water in, to, or from any interstate stream or the waters thereof." 43 U. S. C. § 383 (1958).

> necessary for it to acquire water rights or vested interests therein. But the acquisition of water rights must not be confused with the operation of federal projects. As the Court said in *Nebraska* v. *Wyoming, supra,* at 615: 'We do not suggest that where Congress has provided a system of regulation for federal projects, it must give way before an inconsistent state system.' . . . We read nothing in § 8 that compels the United States to deliver water on conditions imposed by the State." *Id.*, at 291–292.

Since § 8 of the Reclamation Act did not subject the Secretary to state law in disposing of water in that case, we cannot, consistently with *Ivanhoe,* hold that the Secretary must be bound by state law in disposing of water under the Project Act.

Nor does § 18 of the Project Act require the Secretary to contract according to state law. That Act was passed in the exercise of congressional power to control navigable water for purposes of flood control, navigation, power generation, and other objects,[88] and is equally sustained by the power of Congress to promote the general welfare through projects for reclamation, irrigation, or other internal improvements.[89] Section 18 merely preserves such rights as the States "now" have, that is, such rights as they had at the time the Act was passed. While the States were generally free to exercise some jurisdiction over these waters before the Act was passed, this right was subject to the Federal Government's right to regulate and develop the river.[90] Where the Government, as here,

---

[88] *Arizona* v. *California,* 283 U. S. 423 (1931).

[89] *United States* v. *Gerlach Live Stock Co.,* 339 U. S. 725, 738 (1950).

[90] *First Iowa Hydro-Elec. Coop.* v. *Federal Power Comm'n,* 328 U. S. 152, 171 (1946). See *United States* v. *Chandler-Dunbar Water Power Co.,* 229 U. S. 53, 62–72 (1913); *United States* v. *Willow River Power Co.,* 324 U. S. 499 (1945).

has exercised this power and undertaken a comprehensive project for the improvement of a great river and for the orderly and beneficial distribution of water, there is no room for inconsistent state laws.[91] As in *Ivanhoe*, where the general provision preserving state law was held not to override a specific provision stating the terms for disposition of the water, here we hold that the general saving language of § 18 cannot bind the Secretary by state law and thereby nullify the contract power expressly conferred upon him by § 5.[92] Section 18 plainly allows the States to do things not inconsistent with the Project Act or with federal control of the river, for example, regulation of the use of tributary water and protection of present perfected rights.[93] What other things the States are free to do can be decided when the occasion arises. But where the Secretary's contracts, as here, carry out a congressional plan for the complete distribution of waters to users, state law has no place.[94]

Before the Project Act was passed, the waters of the Colorado River, though numbered by the millions of acre-feet, flowed too haltingly or too freely, resulting in

---

[91] See *Arizona* v. *California*, 283 U. S. 423 (1931); *Nebraska* v. *Wyoming*, 325 U. S. 589, 615 (1945); *First Iowa Hydro-Elec. Coop.* v. *Federal Power Comm'n*, 328 U. S. 152 (1946).

[92] *Nebraska* v. *Wyoming*, 325 U. S. 589 (1945), holds nothing to the contrary. There the Court found it unnecessary to decide what rights the United States had under federal law to the unappropriated water of the North Platte River, since the water rights on which the projects in that case rested had in fact been obtained in compliance with state law.

[93] See *First Iowa Hydro-Elec. Coop.* v. *Federal Power Comm'n*, 328 U. S. 152, 175–176 (1946), where this Court limited the effect of § 27 of the Federal Power Act, which expressly "saved" certain state laws, to vested property rights.

[94] By an Act of September 2, 1958, 72 Stat. 1726, the Secretary must supply water to Boulder City, Nevada. It follows from our conclusions as to the inapplicability of state law that, contrary to the Master's conclusion, Boulder City's priorities are not to be determined by Nevada law.

droughts and floods. The problems caused by these conditions proved too immense and the solutions too costly for any one State or all the States together. In addition, the States, despite repeated efforts at a settlement, were unable to agree on how much water each State should get. With the health and growth of the Lower Basin at stake, Congress responded to the pleas of the States to come to their aid. The result was the Project Act and the harnessing of the bountiful waters of the Colorado to sustain growing cities, to support expanding industries, and to transform dry and barren deserts into lands that are livable and productive.

In undertaking this ambitious and expensive project for the welfare of the people of the Lower Basin States and of the Nation, the United States assumed the responsibility for the construction, operation, and supervision of Boulder Dam and a great complex of other dams and works. Behind the dam were stored virtually all the waters of the main river, thus impounding not only the natural flow but also the great quantities of water previously allowed to run waste or to wreak destruction. The impounding of these waters, along with their regulated and systematic release to those with contracts, has promoted the spectacular development of the Lower Basin. Today, the United States operates a whole network of useful projects up and down the river, including the Hoover Dam, Davis Dam, Parker Dam, Headgate Rock Dam, Palo Verde Dam, Imperial Dam, Laguna Dam, Morelos Dam, and the All-American Canal System, and many lesser works. It was only natural that the United States, which was to make the benefits available and which had accepted the responsibility for the project's operation, would want to make certain that the waters were effectively used. All this vast, interlocking machinery—a dozen major works delivering water according to congressionally fixed priorities for home, agricultural, and industrial uses to people spread over thousands of

square miles—could function efficiently only under unitary management, able to formulate and supervise a coordinated plan that could take account of the diverse, often conflicting interests of the people and communities of the Lower Basin States. Recognizing this, Congress put the Secretary of the Interior in charge of these works and entrusted him with sufficient power, principally the § 5 contract power, to direct, manage, and coordinate their operation. Subjecting the Secretary to the varying, possibly inconsistent, commands of the different state legislatures could frustrate efficient operation of the project and thwart full realization of the benefits Congress intended this national project to bestow. We are satisfied that the Secretary's power must be construed to permit him, within the boundaries set down in the Act, to allocate and distribute the waters of the mainstream of the Colorado River.

II.

Provisions in the Secretary's Contracts.

A. *Diversions above Lake Mead.*—The Secretary's contracts with Arizona and Nevada provide that any waters diverted by those States out of the mainstream or the tributaries above Lake Mead must be charged to their respective Lower Basin apportionments. The Master, however, took the view that the apportionment was to be made out of the waters actually stored at Lake Mead or flowing in the mainstream below Lake Mead. He therefore held that the Secretary was without power to charge Arizona and Nevada for diversions made by them from the 275-mile stretch of river between Lee Ferry and Lake Mead [95] or from the tributaries above Lake Mead. This

[95] The location of Hoover Dam is a result of engineering decisions. As Senator Pittman pointed out, "There is no place to impound the flood waters except at the lower end of the canyon." 68 Cong. Rec. 4413 (1927).

conclusion was based on the Master's reasoning that the Secretary was given physical control over the waters stored in Lake Mead and not over waters before they reached the lake.

We hold that the Master was correct in deciding that the Secretary cannot reduce water deliveries to Arizona and Nevada by the amount of their uses from tributaries above Lake Mead, for, as we have held, Congress in the Project Act intended to apportion only the mainstream, leaving to each State its own tributaries. We disagree, however, with the Master's holding that the Secretary is powerless to charge States for diversions from the mainstream above Lake Mead. What Congress was doing in the Project Act was providing for an apportionment among the Lower Basin States of the water allocated to that basin by the Colorado River Compact. The Lower Basin, with which Congress was dealing, begins at Lee Ferry, and it was all the water in the mainstream below Lee Ferry that Congress intended to divide among the States. Were we to refuse the Secretary the power to charge States for diversions from the mainstream between Lee Ferry and the dam site, we would allow individual States, by making diversions that deplete the Lower Basin's allocation, to upset the whole plan of apportionment arrived at by Congress to settle the long-standing dispute in the Lower Basin. That the congressional apportionment scheme would be upset can easily be demonstrated. California, for example, has been allotted 4,400,000 acre-feet of mainstream water. If Arizona and Nevada can, without being charged for it, divert water from the river above Lake Mead, then California could not get the share Congress intended her to have.

B. *Nevada Contract.*—Nevada has excepted to her inclusion in Paragraph II (B)(7) of the Master's recommended decree, which provides that "mainstream water shall be delivered to users in Arizona, California and Ne-

vada only if contracts have been made by the Secretary of the Interior, pursuant to § 5 of the Boulder Canyon Project Act, for the delivery of such water." While the California contracts are directly with water users and the Arizona contract specifically contemplates further subcontracts with actual users, it is argued that the Nevada contract, made by the Secretary directly with the State of Nevada through her Colorado River Commission, should be construed as a contract to deliver water to the State without the necessity of subcontracts by the Secretary directly with Nevada water users. The United States disagrees, contending that properly construed the Nevada contract, like the Secretary's general contract with Arizona, does not exhaust the Secretary's power to require Nevada water users other than the State to make further contracts. To construe the Nevada contract otherwise, the Government suggests, would bring it in conflict with the provision of § 5 of the Project Act that "No person shall have or be entitled to have the use for any purpose of the water stored as aforesaid except by contract [with the Secretary] made as herein stated." Acceptance of Nevada's contention here would not only undermine this plain congressional requirement that water users have contracts with the Secretary but would likewise transfer from the Secretary to Nevada a large part, if not all, of the Secretary's power to determine with whom he will contract and on what terms. We have already held that the contractual power granted the Secretary cannot be diluted in this manner. We therefore reject Nevada's contention.

III.

Apportionment and Contracts in Time of Shortage.

We have agreed with the Master that the Secretary's contracts with Arizona for 2,800,000 acre-feet of water and with Nevada for 300,000, together with the limitation

of California to 4,400,000 acre-feet, effect a valid apportionment of the first 7,500,000 acre-feet of mainstream water in the Lower Basin. There remains the question of what shall be done in time of shortage. The Master, while declining to make any findings as to what future supply might be expected, nevertheless decided that the Project Act and the Secretary's contracts require the Secretary in case of shortage to divide the burden among the three States in this proportion: California $\frac{4.4}{7.5}$; Arizona $\frac{2.8}{7.5}$; Nevada $\frac{.3}{7.5}$. While pro rata sharing of water shortages seems equitable on its face,[96] more considered judgment may demonstrate quite the contrary. Certainly we should not bind the Secretary to this formula. We have held that the Secretary is vested with considerable control over the apportionment of Colorado River waters. And neither the Project Act nor the water contracts require the use of any particular formula for apportioning shortages. While the Secretary must follow the standards set out in the Act, he nevertheless is free to choose among the recognized methods of apportionment or to devise reasonable methods of his own. This choice, as we see it, is primarily his, not the Master's or even ours. And the Secretary may or may not conclude that a pro rata division is the best solution.

It must be remembered that the Secretary's decision may have an effect not only on irrigation uses but also on other important functions for which Congress brought this great project into being—flood control, improvement of navigation, regulation of flow, and generation and distribution of electric power. Requiring the Secretary to prorate shortages would strip him of the very power of

---

[96] Proration of shortage is the method agreed upon by the United States and Mexico to adjust Mexico's share of Colorado River water should there be insufficient water to supply each country's apportionment.

choice which we think Congress, for reasons satisfactory to it, vested in him and which we should not impair or take away from him. For the same reasons we cannot accept California's contention that in case of shortage each State's share of water should be determined by the judicial doctrine of equitable apportionment or by the law of prior appropriation. These principles, while they may provide some guidance, are not binding upon the Secretary where, as here, Congress, with full power to do so, has provided that the waters of a navigable stream shall be harnessed, conserved, stored, and distributed through a government agency under a statutory scheme.

None of this is to say that in case of shortage, the Secretary cannot adopt a method of proration or that he may not lay stress upon priority of use, local laws and customs, or any other factors that might be helpful in reaching an informed judgment in harmony with the Act, the best interests of the Basin States, and the welfare of the Nation. It will be time enough for the courts to intervene when and if the Secretary, in making apportionments or contracts, deviates from the standards Congress has set for him to follow, including his obligation to respect "present perfected rights" as of the date the Act was passed. At this time the Secretary has made no decision at all based on an actual or anticipated shortage of water, and so there is no action of his in this respect for us to review. Finally, as the Master pointed out, Congress still has broad powers over this navigable international stream. Congress can undoubtedly reduce or enlarge the Secretary's power if it wishes. Unless and until it does, we leave in the hands of the Secretary, where Congress placed it, full power to control, manage, and operate the Government's Colorado River works and to make contracts for the sale and delivery of water on such terms as are not prohibited by the Project Act.

IV.

ARIZONA-NEW MEXICO GILA CONTROVERSY.

Arizona and New Mexico presented the Master with conflicting claims to water in the Gila River, the tributary that rises in New Mexico and flows through Arizona. Having determined that tributaries are not within the regulatory provisions of the Project Act the Master held that this interstate dispute should be decided under the principles of equitable apportionment. After hearing evidence on this issue, the Master accepted a compromise settlement agreed upon by these States and incorporated that settlement in his findings and conclusions, and in Part IV (A)(B)(C)(D) of his recommended decree. No exceptions have been filed to these recommendations by any of the parties and they are accordingly accepted by us. Except for those discussed in Part V, we are not required to decide any other disputes between tributary users or between mainstream and tributary users.

V.

CLAIMS OF THE UNITED STATES.

In these proceedings, the United States has asserted claims to waters in the main river and in some of the tributaries for use on Indian Reservations, National Forests, Recreational and Wildlife Areas, and other government lands and works. While the Master passed upon some of these claims, he declined to reach others, particularly those relating to tributaries. We approve his decision as to which claims required adjudication, and likewise we approve the decree he recommended for the government claims he did decide. We shall discuss only the claims of the United States on behalf of the Indian Reservations.

The Government, on behalf of five Indian Reservations in Arizona, California, and Nevada, asserted rights to water in the mainstream of the Colorado River.[97] The Colorado River Reservation, located partly in Arizona and partly in California, is the largest. It was originally created by an Act of Congress in 1865,[98] but its area was later increased by Executive Order.[99] Other reservations were created by Executive Orders and amendments to them, ranging in dates from 1870 to 1907.[100] The Master found both as a matter of fact and law that when the United States created these reservations or added to them, it reserved not only land but also the use of enough water from the Colorado to irrigate the irrigable portions of the reserved lands. The aggregate quantity of water which the Master held was reserved for all the reservations is about 1,000,000 acre-feet, to be used on around 135,000 irrigable acres of land. Here, as before the Master, Arizona argues that the United States had no power to make a reservation of navigable waters after Arizona became a State; that navigable waters could not be reserved by Executive Orders; that the United States did not intend to reserve water for the Indian Reservations; that the amount of water reserved should be measured by the rea-

---

[97] The Reservations were Chemehuevi, Cocopah, Yuma, Colorado River, and Fort Mohave.

[98] Act of March 3, 1865, 13 Stat. 541, 559.

[99] See Executive Orders of November 22, 1873, November 16, 1874, and May 15, 1876. See also Executive Order of November 22, 1915. These orders may be found in 1 U. S. Dept. of Interior, Executive Orders Relating to Indian Reservations 6–7 (1912); 2 *id.*, at 5–6 (1922).

[100] Executive Orders of January 9, 1884 (Yuma), September 19, 1890 (Fort Mohave), February 2, 1911 (Fort Mohave), September 27, 1917 (Cocopah). For these orders, see 1 *id.*, at 12–13, 63–64 (1912); 2 *id.*, at 5 (1922). The Chemehuevi Reservation was established by the Secretary of Interior on February 2, 1907, pending congressional approval.

sonably foreseeable needs of the Indians living on the reservation rather than by the number of irrigable acres; and, finally, that the judicial doctrine of equitable apportionment should be used to divide the water between the Indians and the other people in the State of Arizona.

The last argument is easily answered. The doctrine of equitable apportionment is a method of resolving water disputes between States. It was created by this Court in the exercise of its original jurisdiction over controversies in which States are parties. An Indian Reservation is not a State. And while Congress has sometimes left Indian Reservations considerable power to manage their own affairs, we are not convinced by Arizona's argument that each reservation is so much like a State that its rights to water should be determined by the doctrine of equitable apportionment. Moreover, even were we to treat an Indian Reservation like a State, equitable apportionment would still not control since, under our view, the Indian claims here are governed by the statutes and Executive Orders creating the reservations.

Arizona's contention that the Federal Government had no power, after Arizona became a State, to reserve waters for the use and benefit of federally reserved lands rests largely upon statements in *Pollard's Lessee* v. *Hagan*, 3 How. 212 (1845), and *Shively* v. *Bowlby*, 152 U. S. 1 (1894). Those cases and others that followed them [101] gave rise to the doctrine that lands underlying navigable waters within territory acquired by the Government are held in trust for future States and that title to such lands is automatically vested in the States upon admission to the Union. But those cases involved only the shores of and lands beneath navigable waters. They do not determine the

---

[101] See, *e. g.*, *United States* v. *California*, 332 U. S. 19, 29–30 (1947); *United States* v. *Holt State Bank*, 270 U. S. 49, 54–55 (1926).

problem before us and cannot be accepted as limiting the broad powers of the United States to regulate navigable waters under the Commerce Clause and to regulate government lands under Art. IV, § 3, of the Constitution. We have no doubt about the power of the United States under these clauses to reserve water rights for its reservations and its property.

Arizona also argues that, in any event, water rights cannot be reserved by Executive Order. Some of the reservations of Indian lands here involved were made almost 100 years ago, and all of them were made over 45 years ago. In our view, these reservations, like those created directly by Congress, were not limited to land, but included waters as well. Congress and the Executive have ever since recognized these as Indian Reservations. Numerous appropriations, including appropriations for irrigation projects, have been made by Congress. They have been uniformly and universally treated as reservations by map makers, surveyors, and the public. We can give but short shrift at this late date to the argument that the reservations either of land or water are invalid because they were originally set apart by the Executive.[102]

Arizona also challenges the Master's holding as to the Indian Reservations on two other grounds, first, that there is a lack of evidence showing that the United States in establishing the reservations intended to reserve water for them, and, second, that even if water was meant to be reserved the Master has awarded too much water. We reject both of these contentions. Most of the land in these reservations is and always has been arid. If the

---

[102] See *United States* v. *Midwest Oil Co.*, 236 U. S. 459, 469–475 (1915); *Winters* v. *United States*, 207 U. S. 564 (1908).

water necessary to sustain life is to be had, it must come from the Colorado River or its tributaries. It can be said without overstatement that when the Indians were put on these reservations they were not considered to be located in the most desirable area of the Nation. It is impossible to believe that when Congress created the great Colorado River Indian Reservation and when the Executive Department of this Nation created the other reservations they were unaware that most of the lands were of the desert kind—hot, scorching sands—and that water from the river would be essential to the life of the Indian people and to the animals they hunted and the crops they raised. In the debate leading to approval of the first congressional appropriation for irrigation of the Colorado River Indian Reservation, the delegate from the Territory of Arizona made this statement:

> "Irrigating canals are essential to the prosperity of these Indians. Without water there can be no production, no life; and all they ask of you is to give them a few agricultural implements to enable them to dig an irrigating canal by which their lands may be watered and their fields irrigated, so that they may enjoy the means of existence. You must provide these Indians with the means of subsistence or they will take by robbery from those who have. During the last year I have seen a number of these Indians starved to death for want of food." Cong. Globe, 38th Cong., 2d Sess. 1321 (1865).

The question of the Government's implied reservation of water rights upon the creation of an Indian Reservation was before this Court in *Winters* v. *United States*, 207 U. S. 564, decided in 1908. Much the same argument made to us was made in *Winters* to persuade the Court to hold that Congress had created an Indian Reservation

without intending to reserve waters necessary to make those reservations livable. The Court rejected all of the arguments. As to whether water was intended to be reserved, the Court said, at p. 576:

> "The lands were arid and, without irrigation, were practically valueless. And yet, it is contended, the means of irrigation were deliberately given up by the Indians and deliberately accepted by the Government. The lands ceded were, it is true, also arid; and some argument may be urged, and is urged, that with their cession there was the cession of the waters, without which they would be valueless, and 'civilized communities could not be established thereon.' And this, it is further contended, the Indians knew, and yet made no reservation of the waters. We realize that there is a conflict of implications, but that which makes for the retention of the waters is of greater force than that which makes for their cession."

The Court in *Winters* concluded that the Government, when it created that Indian Reservation, intended to deal fairly with the Indians by reserving for them the waters without which their lands would have been useless. *Winters* has been followed by this Court as recently as 1939 in *United States* v. *Powers*, 305 U. S. 527. We follow it now and agree that the United States did reserve the water rights for the Indians effective as of the time the Indian Reservations were created. This means, as the Master held, that these water rights, having vested before the Act was passed in 1929, are "present perfected rights" and as such are entitled to priority under the Act.

We also agree with the Master's conclusion as to the quantity of water intended to be reserved. He found that the water was intended to satisfy the future as well as the present needs of the Indian Reservations and ruled

that enough water was reserved to irrigate all the practicably irrigable acreage on the reservations. Arizona, on the other hand, contends that the quantity of water reserved should be measured by the Indians' "reasonably foreseeable needs," which, in fact, means by the number of Indians. How many Indians there will be and what their future uses will be can only be guessed. We have concluded, as did the Master, that the only feasible and fair way by which reserved water for the reservations can be measured is irrigable acreage. The various acreages of irrigable land which the Master found to be on the different reservations we find to be reasonable.

We disagree with the Master's decision to determine the disputed boundaries of the Colorado River Indian Reservation and the Fort Mohave Indian Reservation. We hold that it is unnecessary to resolve those disputes here. Should a dispute over title arise because of some future refusal by the Secretary to deliver water to either area, the dispute can be settled at that time.

The Master ruled that the principle underlying the reservation of water rights for Indian Reservations was equally applicable to other federal establishments such as National Recreation Areas and National Forests. We agree with the conclusions of the Master that the United States intended to reserve water sufficient for the future requirements of the Lake Mead National Recreation Area, the Havasu Lake National Wildlife Refuge, the Imperial National Wildlife Refuge, and the Gila National Forest.

We reject the claim of the United States that it is entitled to the use, without charge against its consumption, of any waters that would have been wasted but for salvage by the Government on its wildlife preserves. Whatever the intrisic merits of this claim, it is inconsistent with the Act's command that consumptive use shall be measured by diversions less returns to the river.

Finally, we note our agreement with the Master that all uses of mainstream water within a State are to be charged against that State's apportionment, which of course includes uses by the United States.

VI.

DECREE.

While we have in the main agreed with the Master, there are some places we have disagreed and some questions on which we have not ruled. Rather than adopt the Master's decree with amendments or append our own decree to this opinion, we will allow the parties, or any of them, if they wish, to submit before September 16, 1963, the form of decree to carry this opinion into effect, failing which the Court will prepare and enter an appropriate decree at the next Term of Court.

It is so ordered.

SUPREME COURT OF THE UNITED STATES

No. 8, ORIG.—OCTOBER TERM, 1962.

State of Arizona, Plaintiff,
v.
State of California et al. } Complaint.

[June 3, 1963.]

MR. JUSTICE HARLAN, whom MR. JUSTICE DOUGLAS and MR. JUSTICE STEWART join, dissenting in part.

I dissent from so much of the Court's opinion as holds that the Secretary of the Interior has been given authority by Congress to apportion, among and within the States of California, Arizona, and Nevada, the waters of the mainstream of the Colorado River below Lee Ferry. I also dissent from the holding that in times of shortage the Secretary has discretion to select or devise any "reasonable method" he wishes for determining which users within these States are to bear the burden of that shortage. (In all other respects MR. JUSTICE STEWART and I—but not MR. JUSTICE DOUGLAS—agree with and join in the Court's opinion, though not without some misgivings regarding the amounts of water allocated to the Indian Reservations.)

In my view, it is the equitable principles established by the Court in interstate water-rights cases, as modified by the Colorado River Compact and the California limitation, that were intended by Congress to govern the apportionment of mainstream waters among the Lower Basin States, whether in surplus or in shortage. *A fortiori*, state law was intended to control apportionment among users within a single State.

I.

INTRODUCTION.

The Court's conclusions respecting the Secretary's apportionment powers, particularly those in times of

shortage, result in a single appointed federal official being vested with absolute control, unrestrained by adequate standards, over the fate of a substantial segment of the life and economy of three States. Such restraint upon his actions as may follow from judicial review are, as will be shown, at best illusory. Today's result, I venture to say, would have dumbfounded those responsible for the legislation the Court construes, for nothing could have been farther from their minds or more inconsistent with their deeply felt convictions.

The Court professes to find this extraordinary delegation of power principally in § 5 of the Project Act, the provision authorizing the Secretary to enter into contracts for the storage and delivery of water. But § 5, as is more fully shown below, pp. 13–19, *infra*, had no design resembling that which the Court now extracts from it. Rather, it was intended principally as a revenue measure, and the clause *requiring* a contract as a condition of delivery was inserted at the insistence not of the Lower but of the Upper Basin States in an effort to insure that nothing would disturb that basin's rights under the Colorado River Compact. There was no thought that § 5 would give authority to apportion water among the Lower Basin States. Indeed, during the hearings on the third Swing-Johnson bill when § 5 took its present form, one of its principal proponents, Delph Carpenter of Colorado, specifically stated that the proposed condition of a contract was intended to require

> "that the persons who receive the water shall respect and do so under the compact. *It has nothing to do with the interstate relations between Arizona and California.*" [1] (Emphasis added.)

---

[1] Hearings before House Committee on Irrigation and Reclamation on H. R. 6251 and H. R. 9826, 69th Cong., 1st Sess. 163.

And Representative Swing, coauthor of the bill, made virtually the same point in explaining the provision before the House Rules Committee:

> "The act says [in § 5] 'The Secretary of the Interior is hereby authorized, under such general regulations as he may prescribe, to contract for the storage of water.' Whose water? It does not say. It might be a community like Imperial Valley that has already acquired a water right . . . or it may be someone who hereafter will acquire a water right, but that right will not be acquired under this bill; *not from the United States Government.* He will acquire his water right, if he acquires one, from the State and under the laws of the State, in which he puts the water to a beneficial use. *There is nothing in this bill which puts the Government in conflict with the water laws of Arizona or Utah or any other State.* As a matter of fact, the reclamation law is adopted by section 13 of this bill [now § 14], and section 8 of the reclamation act says that *what the Government does must not be in conflict with the water laws of the States, so there can be no violence done State laws on this score.*" [2] (Emphasis added.)

The Court concedes, as indeed it must in the face of such unequivocal evidence, that this third Swing-Johnson bill, like its predecessors, established "no method whatever of apportioning the water among the States of the Lower Basin." *Ante,* p. 10. This concession, one would think, would end this aspect of the controversy, since § 5 as ulti-

---

[2] Hearings before House Committee on Rules on H. R. 9826, 69th Cong., 2d Sess. 116. The bill then under consideration, as recommended by the House Committee on Irrigation and Reclamation, appears in H. R. Rep. No. 1657, 69th Cong., 2d Sess. 29–34.

mately adopted is virtually the same as that proposed in the third bill.[3] Yet a method of federal apportionment is discovered in the fourth Swing-Johnson bill as finally enacted, a method which ends by delegating to the Secretary of the Interior the awesome power over the "water" destiny of three States. To what provision does the Court attribute this startling metamorphosis? The fundamental change in approach is apparently found in § 4 (a), which as adopted contains provisions (1) conditioning the effectiveness of the Act on seven-state ratification of the Colorado River Compact or alternatively on California's agreement to limit its annual consumption of Colorado River water, together with six-state ratification of the Compact; and (2) giving permission to California, Arizona, and Nevada to enter a further compact apportioning certain waters to the latter two States pursuant to a stated formula.

It is manifest that § 4 (a), on which the Court so heavily relies, neither apportions the waters of the river nor vests power in any official to make such an apportionment. The first paragraph does not *grant* any water to anyone; it merely conditions the Act's effectiveness on seven-state ratification of the Compact or on six-state ratification, plus California's agreement to a limitation, *i. e.*, a *ceiling*, on her appropriations. The source of authority to make such appropriations must be found elsewhere. And the second paragraph of § 4 (a), suggesting a particular interstate agreement, similarly makes no apportionment of water among the States and delegates no power to any official to make such an apportionment. Indeed, it was accepted by the Senator from Cali-

[3] The only change that need be noted for present purposes is the addition of a clause requiring contracts to conform to § 4 (a), discussed below, as well as to the Compact.

fornia (Mr. Johnson) only after the following colloquy with its proponent, Senator Pittman of Nevada:

> "Mr. JOHNSON. . . . [W]hat I want to make clear is that this amendment shall not be construed hereafter by any of the parties to it or any of the States as being the expression of the will or the demand or the request of the Congress of the United States.
>
> "Mr. PITTMAN. Exactly, not.
>
> "Mr. JOHNSON. Very well, then.
>
> "Mr. PITTMAN. It is not the request of Congress.
>
> "Mr. JOHNSON. I accept the amendment, then." 70 Cong. Rec. 472.

Senator Johnson would surely have been surprised to learn that the formula which was not even "the request of Congress" was in truth one which the Secretary was authorized to force down the throats of the States if they did not voluntarily agree to it.

Even this brief summary, I think, casts the gravest doubts upon the Court's construction of the Project Act as abolishing state law and accepted principles of equitable apportionment in effecting allocations of water among the States. A more detailed analysis will, I believe, demonstrate the incorrectness of the Court's conclusions on this score and will reveal the constitutional difficulties inherent in the uncontrolled delegation of power resulting from those conclusions.

II.

The Background of the Boulder Canyon Project Act.

Judicial apportionment of interstate waters was established long before the Project Act as an effective means of resolving interstate water disputes. *Kansas* v. *Colo-*

rado, 206 U. S. 46. Its acceptability had never been questioned. Priority of appropriation, the basic determinant of judicial apportionment as enunciated in *Wyoming* v. *Colorado,* 259 U. S. 419, was the law in six of the Colorado Basin States,[4] and senior appropriations were respected in the seventh.[5] The law of appropriation, which rests on the basic principle that a water right depends on beneficial use and which gives priority of right to the appropriator first in time, had been repeatedly declared to be indispensable to the development of the arid lands of the West.[6]

This backdrop of firm dedication to the principles of appropriation and of judicial apportionment is critical to an understanding of congressional purpose with respect to the Project Act. It is also critical to recognize that congressional compromise with these deeply respected principles was only partial; the problems facing Congress as a result of *Wyoming* v. *Colorado* were narrow. No Senator or Representative ever suggested that judicial apportionment was generally inappropriate; no Senator or Representative ever inveighed against the law of appropriation as such. The first problem was simply this: Interstate application of the doctrine of priority, unlim-

"Irrigation," said the Nevada court, ". . . would be strangled by the enforcement of the riparian principle." *Twaddle* v. *Winters,* 29 Nev. 88, 106, 85 P. 280, 284.

ited by equitable considerations, threatened to deprive the four Upper Basin States of their fair share of the Colorado River because they were not so quick as California in development. The purpose of the Compact was simply to limit traditional doctrines to the extent necessary to avoid this extreme and harsh result, and to eliminate long and costly litigation.

It was perfectly plain that the Colorado River Compact merely guaranteed to the upper States a specified quantity of water immune from priorities below, subject to stated delivery requirements; it did nothing whatever to interfere with the law of priorities or the principles of equitable apportionment among the States of the Lower Basin.[7] It was precisely because it did not that Arizona refused to approve either the Project Act or the Compact until something was done to safeguard her share of Lower Basin water.[8] Similarly, the upper States feared that in the absence of ratification by Arizona, California would be free to appropriate all the Lower Basin's share under the Compact, and Arizona, not limited by that document, would be free to appropriate, as against the upper States, water the Compact sought to apportion to the Upper Basin.[9]

The remaining problem, therefore, was that California's acquisition of priorities as against Arizona and the upper States had to be further limited. A ceiling had to be put on her interstate appropriative priorities. Solution of

---

[7] Ward Bannister, Denver attorney and spokesman for the Upper Basin States, said that "[t]he pupose of the Compact is to provide the three lower States with a fund of water from which they may appropriate and the four upper States with a fund of water from which they may appropriate." Hearings before House Committee on Irrigation and Reclamation on H. R. 2903, 68th Cong., 1st Sess. 232.

[8] See the remarks of Senator Hayden, 70 Cong. Rec. 388.

[9] See, *e. g.*, H. R. Rep. No. 1657, 69th Cong., 2d Sess., pt. 2, 3–4; Hearings, *supra*, note 2, at 34–37.

this narrow problem likewise did not require complete abrogation of the principles of priority and interstate judicial apportionment.

Still another, and profoundly significant, factor in understanding the effect of the Project Act on the law of appropriation and judicial apportionment is the pervasive hostility that many westerners had to any form of federal control of water rights. Colorado's Delph Carpenter, who was as much responsible as any man for both the Compact and the contract requirement of § 5 of the Project Act, testified in 1925 to what he termed an insidious and calculated policy of the National Government, fostered particularly by the Departments of Interior and Justice, to encroach upon state prerogatives and supersede state authority with respect to the distribution of water. He made it clear, as did Wyoming's Senator Kendrick, that he deemed this policy oppressive, destructive, and deplorable.[10] Utah's Senator King made the same objection on the floor of Congress. 69 Cong. Rec. 10262. When it was suggested that Congress might legislate to meet the problem of California's threatened preemption of the river, a storm of doubt arose as to its

[10] Hearings before Senate Committee on Irrigation and Reclamation pursuant to S. Res. No. 320, 68th Cong., 2d Sess. 663–675. "It was the oppression of the National Government strangling development, preventing development in the States. . . . These two experiences and others taught Colorado, Wyoming, and New Mexico the extent to which a department of the United States would go in overriding State authority and oppressing whole communities. . . . Thus it came to the attention of the States, that the United States Government intended to supersede all State law and override State authority on that river. . . . [A]ny desire by a governmental bureau to ultimately, by insiduous [*sic*] or other methods, take over the control and dominion of the streams within the States and to override State authority at once becomes not only abhorrent but gives rise to a feeling of bitter resentment and sounds a call to arms for self-defense. . . ." *Id.*, at 663, 665, 671, 673. See also his remarks at Hearings, *supra*, note 1, at 146–157.

constitutional power to do so. Upper Basin and Arizona spokesmen—those who were to be benefited by limiting appropriations—repeatedly insisted that the only constitutional ways of apportioning the river were by suit in this Court or by interstate compact.[11] And Senator Brat-

[11] Senator KING: "If the Senator means by his statement that the Federal Government may go into a stream, whether it be the Colorado River, the Sacramento River, or a river in the State of Montana, and put its powerful hands down upon the stream and say, 'This is mine; I can build a dam there and allocate water to whom I please, regardless of other rights, either suspended, inchoate, or perfected,' I deny the position which the Senator takes." 70 Cong. Rec. 169. The Senator in question was Carl Hayden; he denied that his statement, which concerned his authorization for a compact among the three lower States, meant any such thing.

Senator PHIPPS: "I am firmly convinced that there must be voluntary ratification on the part of each interested State in order to make the Compact effective. This is the only method of settling possible controversies permanently and of putting the water of the stream to its highest beneficial use. It is the only satisfactory method; it is the only legal method to avoid proceedings in the courts which would prove costly and almost interminable." 68 Cong. Rec. 4515.

Senator HAYDEN: "There are only two ways in which this controversy can be settled. Either the States can agree upon an equitable apportionment of waters of the Colorado River or, in the absence of a compact, the Supreme Court of the United States can determine what the rights of the various States are in on [*sic*] that stream. . . . *Arizona denies that it is within the power of Congress to apportion the waters of an interstate stream among the States.*" Hearings, *supra,* note 2, at 75, 76. (Emphasis added.)

Representative COLTON: "I have been informed that an attorney for the Reclamation Service of the United States claims that Congress has the power to allocate and apportion all of the Colorado River among the States regardless of their wishes in the matter. Such a theory is abhorrent to our whole plan of government and particularly to the theory on which our whole system of water rights has been built up." Hearings before House Committee on Irrigation and Reclamation on H. R. 5773, 70th Cong., 1st Sess. 414.

Representative LEATHERWOOD: "[T]here are only two agencies that can allocate the waters of this great river, the States themselves

ton of New Mexico, hardly an opponent of the Project Act, objected that by merely suggesting in § 4 (a) the terms of a compact which the States were free to modify or to reject, Congress was infringing upon state sovereignty. 70 Cong. Rec. 470–471.

Congress' entire approach to the problems of prior appropriation was governed by this deep-seated hostility to federal dictation of water rights. When plans for development of the Lower Basin threatened the rights of the upper States, they did not seek the simple (and in my view constitutionally unobjectionable) solution of a legislative apportionment. They employed instead the cumbersome method of interstate compact, which required authorization by Congress and by seven state legislatures prior to negotiation and ratification by the same eight bodies thereafter. When it began to appear that Arizona would not ratify the Compact, Congress still did not legislate a general apportionment. It built the statute around the provisions of the Compact, insisting on ratification by as many States as possible, even at the cost of further delaying the already overdue Project Act. It simply conditioned the use of government property and of water stored behind the dam on compliance with the Compact. Attempts to divide the Lower Basin water

---

by treaty ratified by the Congress of the United States, or by the judicial branch of the Government; for the Congress has no power to allocate any of the waters of this river or any other river where the doctrine of prior appropriation is in force." Hearings, *supra*, note 2, at 31.

WARD BANNISTER: "[T]here is nothing in the Federal Constitution upon which to base the power of the Federal Government to divide this water among the States. . . . [T]he same thing that would invalidate a provision inserted by Congress direct would invalidate any rule promulgated by the Secretary of the Interior under Congressional permission, and the upper States would find themselves utterly helpless." Hearings, *supra*, n. 7, at 195.

by interstate agreement continued through the Denver Conference called by the Upper Basin Governors in the summer of 1927—nearly five years after negotiation of the Compact. Yet it was not until 1927 that an amendment was first offered to protect Arizona by a statutory limitation on California's consumption, and it was not until 1928 that the proposal was adopted into the bill.[12]

Finally, when Congress ultimately resigned itself to the necessity of legislating in some way with respect to the division of Lower Basin waters, it used narrow words suitable to its narrow purpose and to its regard both for the system of judicial apportionment and appropriation and for the rights of the States. Even then Congress did not attempt to legislate an apportionment of Lower Basin water; it simply prescribed a ceiling for California. In the words of Senator Johnson, "We write, then, that California shall use perpetually only a specific amount of water, naming the maximum amount which may be used." 69 Cong. Rec. 7250. Even this, Congress was unwilling to do directly. As reported from committee, the bill contained a provision directing the Secretary of the Interior to limit California's consumption in the exercise of his power of contract.[13] But this was replaced by the present provision, which reached the same result not via the Secretary's contract authority but by the awkward device of requiring California's legislature to consent to the limitation as a condition precedent to the effectiveness of the Project Act. And this was not all; to end the tale Congress added to § 4 (a) specific authorization to Arizona, California, and Nevada to enter into an agreement to complete the division of the Lower Basin water—the same

---

[12] 68 Cong. Rec. 4763; S. Rep. No. 592, 70th Cong., 1st Sess. 2.

[13] S. Rep. No. 592, 70th Cong., 1st Sess. 2.

cumbersome substitute for direct congressional apportionment that had been abortively mooted for six years.

This history bears recapitulation. *First,* the law of appropriation, basic to western water law, was greatly respected, and the solution of interstate water disputes by judicial apportionment in this Court was well established and accepted. *Second,* the problems created by these doctrines as applied in *Wyoming* v. *Colorado* were narrow ones, not requiring for their solution complete abrogation of well-tried principles; existing law was quite adequate to deal with all questions save those Congress expressly solved by imposing a ceiling on California. *Third,* Congress throughout the dispute exhibited great reluctance to interfere with the division of water by legislation, because of a deep and fundamental mistrust of federal intervention and a profound regard for state sovereignty, shared by many influential members. *Finally,* when Congress was forced to legislate with respect to this problem or face defeat of the entire Project Act, it chose narrow terms appropriate to the narrow problem before it, and even then acted only indirectly to require California's consent to limiting her consumption.

It is inconceivable that such a Congress intended that the sweeping federal power which it declined to exercise—a power even the most avid partisans of national authority might hesitate to grant to a single administrator—be exercised at the unbridled discretion of an administrative officer, especially in the light of complaints registered about "bureaucratic" and "oppressive" interference of the Department which that very officer headed.[14] It is utterly incredible that a Congress unwilling because of concern for States' rights even to limit California's maximum consumption to 4,400,000 acre-feet without the consent of her legislature intended to give

[14] See note 10, *supra,* and accompanying text.

the Secretary of the Interior authority without California's consent to reduce her share even below that quantity in a shortage.

III.

The Authority of the Secretary under Section 5 of the Project Act.

The Court holds that § 5 of the Project Act, which empowers the Secretary to contract for water delivery and forbids delivery of stored water without a contract, displaces the law of apportionment among the Lower Basin States, giving the Secretary power to divide the water by contract and to distribute the burden of shortages, without respecting appropriations.

But it does not follow that because no user is entitled to stored water without a contract the Secretary may award or withhold contracts independently of priorities. In fact, § 5 reflects no such intention. The Secretary's power to contract upon appropriate financial charges for water delivery, not included in the early bills, was added during the 1926 hearings in response to a request from Secretary of the Interior Work that users of water, as well as of power, be made to bear the cost of the project.[15] At the same time § 4 (b) for the first time provided that no work under the Act should begin until these revenues were assured by the Secretary's contracts. There was yet no provision prohibiting deliveries without contracts.[16]

Thus originally purely a financial tool, the contract power was later made to serve the additional purpose of enforcing the Compact's provisions against Arizona in the absence of her ratification. At the urging of the upper States § 8 had been amended to subject the United States

---

[15] Hearings, *supra*, note 1, at 6, 46.

[16] H. R. 9826, 69th Cong., 1st Sess., § 5.

in operating the dam to the Compact, to condition the enjoyment of the dam's benefits on compliance with the Compact, and to require that contracts from the United States should so provide.[17] The upper States then insisted on inserting the requirement in § 5 that no one was to receive stored water without a contract, *expressly and solely for the purpose of tying the Compact's enforcement to the contract power.*[18] There was no intent to confer absolute power to grant or withhold. Indeed, to give effect to priorities in time of shortage, up to the maximum quantities permitted California by § 4 (a), tends to promote the stability of water uses, a policy Congress sought to further in § 5 itself by requiring that contracts be for permanent service. In short, disregard of appropriations in one State in favor of those in another, except as required by the inter-basin apportionment of the Compact or by the California limitation, was no part of the purpose of this section; it was designed to insure revenue and to enforce the Compact and the California limitation.[19]

When the provision for water delivery contracts was first inserted in the Swing bill in 1926, it prescribed that "Contracts respecting water for domestic uses may be for permanent service but subject to rights of prior appro-

[17] S. 1868, 69th Cong., 1st Sess.; H. R. 6251, 69th Cong., 1st Sess.; H. R. 9826, 69th Cong., 1st Sess. This amendment, wrote Secretary Work in recommending the bill, "provides for the distribution and use of all water for irrigation, power and otherwise, in accordance with the Colorado River Compact." Hearings, *supra*, note 1, at 8.

[18] See notes 1, 2, *supra*, and accompanying text. Contracts were later made subject also to the California limitation in § 4 (a).

[19] It is significant to contrast the language giving the Secretary authority to enter water delivery contracts with that in § 5 (c), relating to the distribution of electrical power. The latter provision explicitly gives the Secretary authority to resolve conflicts in applications, referring him for the governing standards to "the policy expressed in the Federal Water Power Act as to conflicting applications for permits and licenses."

priators." [20] Proponents of the bill later altered this provision to apply to irrigation contracts as well as to require, rather than simply to permit, that contracts be for permanent service.[21] At the request of the upper States, the phrase "subject to rights of prior appropriators" was deleted.[22] The Court concludes from this bit of history that Congress considered but rejected the suggestion that the law of appropriation govern the distribution of water stored in Lake Mead. But deletion or rejection of a proposed amendment is not strong evidence of legislative intention; the reasons for deletion may be any of a great number, not the least frequent of which is that the suggestion is redundant. Here it seems clear that there was a further reason for the change. The phrase was dropped at the same time the provision *requiring* each user to have a contract was added. Under the bill as it stood prior to this no contract was required, and new contracts were made junior to all prior appropriators, even those initiating or perfecting rights only after the statute became effective. As amended the bill required a contract of every user of stored waters, and the deleted clause was no longer in accord with the contractual plan. It is surely stretching things to suggest that deletion of this no longer accurate language signifies that the Secretary may award contracts on his own authority, without regard for priorities that would obtain under state law.

In support of its construction of § 5 the Court relies in large part upon an exchange between Senator Johnson and Senator Walsh of Montana. 70 Cong. Rec. 168. The only thing this colloquy seems to make clear is that Senator Johnson had not comprehensively analyzed the relationship between § 5 and the law of appropriation. First

---

[20] Hearings, *supra*, note 1, at 12.

[21] *Id.*, at 115.

[22] *Id.*, at 97, 115.

he thought the Secretary would be required to deliver water to those who had appropriated it; then he said this would be required "[i]f they contract"; then he agreed the Secretary might withhold water "as he sees fit"; then he "doubt[ed] very much" whether the Secretary could disregard Los Angeles' appropriations; finally he said "possibly" the Secretary might utterly ignore appropriations. This shifting dialogue can scarcely be deemed an authoritative, or even useful, aid to construction of the statute.

Nor is there warrant for the Court's reliance on the statements of such opponents of the bill as Utah's Representative Douglas and Arizona's Representative Colton. Objections of opponents of a bill are seldom significant guides to its construction. See *Schwegmann Bros.* v. *Calvert Distillers Corp.*, 341 U. S. 384, 394–395. And in any event in this instance the opponents themselves were far from consistent in their views.[23]

Of far greater significance are the statements of the bill's supporters, which confirm that no power to ignore appropriations was given to the Secretary.[24] Representative Swing, author of the bill, responded to Mr. Hayden's assertion that such a power was given with an

---

[23] Thus, almost in the same breath with which Representative Colton made his then seemingly dire prediction of national control, he declared that "Arizona is not a party at all to this compact. She and her citizens may appropriate water at any time." 69 Cong. Rec. 9648. Arizona, as has already been pointed out, was busily opposing the bill on the specific ground that it left California free to appropriate from the river.

[24] The one apparent exception to the unanimity of view among the bill's supporters is the statement in Representative Smith's report of the third Swing bill to the House: "All rights respecting water or power under the project are, under the terms of the bill, to be disposed of by contract by the Government. It is not reasonable to assume that the Government will do anything of an unfair or prejudicial nature to Arizona." H. R. Rep. No. 1657, 69th Cong., 2d Sess. 11.

emphatic denial: "the distribution will either be by agreement between the States or under their respective laws." House Hearings, *supra,* note 1, at 32. The following year he explained that the United States would not dispose of water rights under the bill; it would merely store water belonging to persons acquiring their rights under state law. See p. 3, *supra.* In 1928, defending the House bill against an Arizona witness' charge that California might appropriate the entire Lower Basin supply, Mr. Swing did not dispute the statement as to California's rights but reinforced it by declaring that Arizona was free to make appropriations too. House Hearings, *supra,* note 11, at 57–58. He later assured the House that notwithstanding the bill Arizona "still has the benefit of the law of prior appropriation, and she still has the right to the beneficial use of any of the water she is able to put to use." 69 Cong. Rec. 9781. Delph Carpenter, proponent of the § 5 contract requirement, said that it was designed to burden storage water with the Compact, and thus to protect the Upper Basin, and that "[i]t has nothing to do with the interstate relations between Arizona and California." [25] Senator Johnson, sponsor of the Senate bill, told the Senate the bill was made a part of the recla-

---

[25] See note 1, *supra,* and accompanying text. Mr. Carpenter's remarks also included the following: "'Except by contract made as herein stated' means this: If the flow of the Colorado River is controlled and regulated by the construction of the Black Canyon Dam, and any person in the State of Arizona attempt to take any water out of the stream which has been discharged from the reservoir and is being carried in the stream bed, as a natural conduit, for delivery to lower users, this law would be brought into effect and he would be prevented from using any of that water independent of the Colorado River compact but unincumbered by any other condition for the benefit of California and Nevada. In other words, the compact does not disturb the rights between Arizona, California, and Nevada, *inter sese,* as to their portion of the water." Hearings, *supra,* note 1, at 163.

mation law, which "specifically protects each State in its water rights and in the rights of the citizens of those States to water." 68 Cong. Rec. 4292. Senator Pittman insisted there was nothing in the bill (prior to the California limitation) to prevent either Arizona or California from appropriating all the water she could use.[26] Senator Phipps, whose amendment became the California limitation, declared that any dispute over the relative rights of Arizona and of Los Angeles would be resolved by the Secretary in accordance with priority of appropriation and the normal preference for domestic over agricultural use.[27]

Of further weight in supporting the view that Congress did not construe § 5 to destroy the law of appropriation and apportionment is the fact that the entire controversy over the California limitation took place *after* § 5 was added to the bill. Utah was so certain that Arizona remained free to appropriate water despite § 5 that she

---

[26] "If a dam shall be built at Boulder Canyon it will impound certain waters and equate the flow below. The water below will be subject to appropriation and use by both California and Arizona .... In other words, there is nothing in this proposed legislation that could prevent Arizona from appropriating from the Colorado River within her borders all of the water she could use for irrigation." 68 Cong. Rec. 4412.

[27] "It seems to me that in resolving such a difficulty, should it arise, there would be taken into consideration the fact that water for domestic use should take priority over water intended for purposes of irrigation. Aside from that, these filings are first in point as compared with those to which the Senator from Arizona referred. They are for a superior use, and, in addition thereto, the applicant who has made the filing has pursued the proper course in developing the manner of appropriation or the manner of diverting the water and putting it to the highest beneficial use. I do not anticipate any difficulty on that score in resolving the question of priority by the Secretary of the Interior." 70 Cong. Rec. 169.

repealed her ratification of the six-state Compact thereafter.[28] While the original committee amendment to the Act would have required the Secretary to limit California's appropriations, the debates evidence no conviction that the Secretary had even a permissive authority to do so by virtue of the unamended § 5.

IV.

The Bearing of Other Provisions of the Project Act.

Nothing in the Project Act expressly gives the Secretary power to ignore appropriations so long as financial conditions are met and the Compact and limitations are observed. Senators Hayden and Pittman, as the Court notes, did indicate that § 4 (a) provided for an apportionment of the water, although even they did not suggest that § 4 (a) gave any authority to the Secretary to make an apportionment by his contracts or to allocate the burdens in time of shortage. But in any event, as already noted, pp. 4–5, *supra*, § 4 does not by its terms make an apportionment; rather it simply requires six-state ratification of the Compact and an agreement by California to limit her share as conditions on the effectiveness of the Act, and authorizes an apportionment by the States themselves. In the words of Senator Johnson, the provision

> ". . . does not divide the water between Arizona and California. It fixes a maximum amount beyond which California can not go." 70 Cong. Rec. 385.

Nor does § 6, which requires that the dam be operated for the satisfaction of "present perfected rights" among

---

[28] See 68 Cong. Rec. 3064–3065; Hearings, *supra*, note 11, at 191, 193, 214–215.

other purposes, indicate by negative implication that the Secretary may ignore all other appropriations. This provision was drafted by the Upper Basin States in order to insure that the condition of the Compact had been met to relieve them from the claims of perfected users below.[29] That condition was the construction of an adequate storage reservoir against which those claims could be asserted; the Compact has nothing to do with whether rights perfected under state law since 1929 may be ignored by the Secretary in awarding contracts. Section 8 (b), which subjects the United States and all users of the Project to any compact allocating among the Lower Basin States "the benefits, including power, arising from the use of water accruing to said States," and subjects such an agreement, if made after January 1, 1929, to any delivery contracts made prior to its approval, is similarly no authority for the Court's conclusion. Legislative history is virtually silent as to the reason for giving such contracts precedence, but the provision seems simply to have been intended to promote the entering of contracts by insuring their permanence in accordance with the requirement of § 5.[30] There is no indication in § 8 (b) whether or not the Secretary is free in awarding contracts to ignore existing appropriations; it merely evidences a policy that rights so perfected as to have been reduced to a contract for delivery at a consideration, whatever the basis on which they should be awarded, ought not to be destroyed by a subsequent interstate agreement.

If the statute were completely silent as to whether the Secretary may disregard appropriations, the normal inference would be that Congress did not mean to displace

---

[29] See Hearings, *supra*, note 1, at 98, 116, 117.

[30] Delph Carpenter said that the Secretary's contracts should be lagged for only a limited period of time in order to give the States complete freedom to agree. *Id.*, at 204.

existing law. Enough has been said of the statute's history to buttress this inference beyond question. Moreover, the statute is by no means silent on this matter. The references in § 8 (a) and (b) to "appropriators" of water stored or delivered by the Project, and in § 4 (a) to the taking of steps "to initiate or perfect any claims to the use of water" made available by the dam, are only the least evidence.[31] Section 14 provides that the Reclamation Law shall govern the operation of Hoover Dam except as the Project Act otherwise provides. Section 8 of the Reclamation Law, 32 Stat. 390, 43 U. S. C. § 383, directs the Secretary of the Interior in carrying out his duties under the Act to proceed in accordance with state and territorial laws and declares that nothing in the federal act "shall in any way affect any right of any State or of the Federal Government or of any landowner, appropriator, or user of water in, to, or from any interstate stream or the waters thereof."

Both Representative Swing and Senator Johnson emphasized that this provision was deliberately incorporated into the Project Act to safeguard from federal destruction the rights of the States to their shares of the water.[32] This Court made clear in *Wyoming* v. *Colorado,* 259 U. S. 419, 463, that by thus protecting the rights of any State in an interstate stream Congress intended to leave untouched the law of interstate equitable apportionment. *Ivanhoe Irrig. Dist.* v. *McCracken,* 357 U. S. 275, 291, despite its dictum that § 8 applies only to the acquisition of rights by the United States and not to its operation of

---

[31] It should also be noted that, as the Master held, § 18, quoted *ante,* p. 35, clearly leaves each State free to apply its own law in determining rights among users within its borders. The Court's strained reading of this provision emasculates it entirely and sacrifices even matters of solely intrastate concern on the altar of federal supremacy.

[32] See pp. 3, 17–18, *supra.*

a dam, holds only that the clear command of § 5 of the Reclamation Law, 32 Stat. 389, 43 U. S. C. § 431—that water deliveries to each user not exceed the quantity required for 160 acres—prevails over state law, not that state law does not generally govern priorities in the use of water from federal reclamation projects under § 8.[33] The Court in *Ivanhoe* expressly stated that it was reaching its narrow conclusion:

> "[w]ithout passing generally on the coverage of § 8 in the delicate area of federal-state relations in the irrigation field . . . ." 357 U. S., at 292.

This general question, with reference to what is undoubtedly the most important single water project in the United States, is precisely the question before us today. In view of the language of the Project Act, as well as its background and legislative history, there can, I think, be no doubt of the answer.

V.

The Lack of Standards Defining the Limits of the Secretary's Power.

The Secretary, the Court holds, has already apportioned the waters of the mainstream by his contracts with Arizona and Nevada and has done so in accordance with the formula suggested as a basis for an interstate agreement in § 4 (a). This holding may come as a surprise to those

---

[33] Nor is anything said in *City of Fresno* v. *California*, 372 U. S. 627, relevant here, since the Court there stated only that if the Government exercises its power of eminent domain, "the effect of § 8 in such a case is to leave to state law the definition of the property interests, if any, for which compensation must be made." 372 U. S., at 630. *Fresno* did not consider the question now presented: the effect of § 8 in the *absence* of any exercise of the federal power of eminent domain.

responsible for a statement such as that in the Arizona contract, which provides that its terms are

> ". . . without prejudice to, any of the respective contentions of said states and water users as to . . . (5) what limitations on use, rights of use, and relative priorities exist as to the waters of the Colorado River system . . . ."

But whether the quantum of the Secretary's apportionment was intentional or inadvertent, the Court holds that such an apportionment has been made, and the relevant question for the future is the one that is perhaps primarily responsible for this litigation: How is the burden of any shortage to be borne by the Lower Basin States? This question is not decided; the Court simply states that the initial determination is for the Secretary to make.

What yardsticks has Congress laid down for him to follow? There is, it is true, a duty imposed on the Secretary under § 6 to satisfy "present perfected rights," and if these rights are defined as those perfected on or before the effective date of the Act, it has been estimated that California's share amounts to approximately 3,000,000 acre-feet annually. This, then, would be the floor provided by the Act for California, assuming enough water is available to satisfy such present perfected rights. And the Act also has provided a ceiling for California: the 4,400,000 acre-feet of water (plus one-half of surplus) described in § 4 (a).

But what of that wide area between these two outer limits? Here, when we look for the standards defining the Secretary's authority, we find nothing.[34] Under the

[34] Nor, I submit, does the Court suggest any standards. Certainly, there is nothing in the enumeration of purposes in § 6 which will be of any assistance in helping the Secretary allocate the burden of shortages among competing irrigation and domestic uses within and among the Lower Basin States.

Court's construction of the Act, in other words, Congress has made a gift to the Secretary of almost 1,500,000 acre-feet of water a year, to allocate virtually as he pleases in the event of any shortage preventing the fulfillment of all of his delivery commitments.

The delegation of such unrestrained authority to an executive official raises, to say the least, the gravest constitutional doubts. See *Schechter Poultry Corp.* v. *United States,* 295 U. S. 495; *Panama Refining Co.* v. *Ryan,* 293 U. S. 388; cf. *Youngstown Sheet & Tube Co.* v. *Sawyer,* 343 U. S. 579, 587–589. The principle that authority granted by the legislature must be limited by adequate standards serves two primary functions vital to preserving the separation of powers required by the Constitution.[35] *First,* it insures that the fundamental policy decisions in our society will be made not by an appointed official but by the body immediately responsible to the people. *Second,* it prevents judicial review from becoming merely an exercise at large by providing the courts with some measure against which to judge the official action that has been challenged.

The absence of standards under the Court's construction is an instructive illustration of these points. The unrestrained power to determine the burden of shortages is the power to make a political decision of the highest order. Indeed, the political pressures that will doubtless be brought to bear on the Secretary as a result of this decision are disturbing to contemplate. Furthermore, whatever the Secretary decides to do, this Court will surely be unable effectively to review his actions, since it will not know what guides were intended by Congress to govern those actions.

These substantial constitutional doubts do not, of course, lead to the conclusion that the Project Act must

---

[35] See the discussion in Comment, 14 Stan. L. Rev. 372.

be held invalid. Rather, they buttress the conviction, already firmly grounded in the Act and its history, that no such authority was vested in the Secretary by Congress. Its purpose instead was to leave these matters to state law, and developed principles of equitable apportionment, subject only to the explicit exceptions provided in the Act.

For these reasons I respectfully dissent from the construction which the Court puts upon this aspect of the Act.

SUPREME COURT OF THE UNITED STATES

No. 8, ORIG.—OCTOBER TERM, 1962.

State of Arizona, Plaintiff,
v.
State of California et al. } Complaint.

[June 3, 1963.]

MR. JUSTICE DOUGLAS, dissenting.

I.

This case, I think, has been haunted by several irrelevancies. First, is the fact that the only points from which California can take the water of the Colorado River System are on the mainstream above Laguna Dam, there being no tributaries in that State. This fact, I think, leads the Court to the inference that the tributaries which come in below Laguna Dam contain waters to which California has no rights. The controversy does concern the waters of the lower tributaries, but only indirectly. California does not seek those waters. She merely seeks to have them taken into consideration in the formula that determines the allocation between her and Arizona.

Another irrelevancy is the fact that only 2½% of the Colorado River drainage basin is in California, although 90% of the water which California appropriates leaves the basin never to return. If we were dealing with problems of equitable apportionment, as we were in *Nebraska* v. *Wyoming*, 325 U. S. 589, that factor would be relevant to our problem. And it would be relevant in case we were dealing with litigation concerning waters in excess of the amount granted California under the Project Act. But it is irrelevant here because the only justiciable question that involves the volume of water is one that concerns the source of supply out of which California's

4,400,000 acre-feet will be satisfied—a matter which I think Congress resolved differently than has the Court.

Third, is a mood about the controversy that suggests that here, as in the cases involving multipurpose federal dams, federal control of navigable streams controls this litigation. The right of the Federal Government to the flow of the stream is not an issue here. We deal with a very unique feature of the irrigation laws of the 17 Western States.

The question is not what Congress has authority to do, but rather the kind of regime under which Congress has built this and other irrigation systems in the West. Heretofore those regimes have been posited on the theory that state law determines the allotment of waters coming through the irrigation canals that are fed by the federal dams.

Much is written these days about judicial law-making; and every scholar knows that judges who construe statutes must of necessity legislate interstitially, to paraphrase Mr. Justice Cardozo. Selected Writings (1949 Hall ed.), p. 160. The present case is different. It will, I think, be marked as the baldest attempt by judges in modern times to spin their own philosophy into the fabric of the law, in derogation of the will of the legislature. The present decision, as MR. JUSTICE HARLAN shows, grants the federal bureaucracy a power and command over water rights in the 17 Western States that it never has had, that it always wanted, that it could never persuade Congress to grant, and that this Court up to now has consistently refused to recognize. Our rulings heretofore have been consistent with the principles of reclamation law established by Congress both in nonnavigable streams (*Ickes* v. *Fox*, 300 U. S. 82, 94–96) and in navigable ones. *Nebraska* v. *Wyoming*, 325 U. S. 589, 612. The rights of the United States as storer of waters in western projects has been

distinctly understood to be simply that of "a carrier and distributor of water." *Ickes* v. *Fox, supra,* p. 95. As we stated in *Nebraska* v. *Wyoming, supra,* p. 614:

> "The property right in the water right is separate and distinct from the property right in the reservoirs, ditches or canals. The water right is appurtenant to the land, the owner of which is the appropriator. The water right is acquired by perfecting an appropriation, i. e., by an actual diversion followed by an application within a reasonable time of the water to a beneficial use."

And that result was reached even though under those other projects, as under the present one, the Secretary had broad powers to make contracts governing the use and disposition of the stored water. See, *e. g.,* 43 U. S. C. §§ 389, 440.

The men who wrote the Project Act were familiar with western water law. *Wyoming* v. *Colorado,* 259 U. S. 419, had recently been decided, holding that priority of appropriation was the determining factor in reaching an equitable apportionment between two Western States. *Id.,* at 470. Yet, S. Rep. No. 654, 69th Cong., 1st Sess. 26–27, contains no suggestion that Congress, by § 5, was displacing a doctrine as important to these Western States as the doctrine of seizin has been to the development of Anglo-American property law. Instead, only 25 lines of that report are devoted to § 5, and those lines clearly support MR. JUSTICE HARLAN'S conclusion that the section was designed primarily as a financial tool.

The principle that water priorities are governed by state law is deepseated in western reclamation law. In spite of the express command of § 14 of the Project Act, which makes the system of appropriation under state law determine who has the priorities, the Secretary of Interior

is given the right to determine the priorities by administrative *fiat*. Now one can receive his priority because he is the most worthy Democrat or Republican, as the case may be.

The decision today, resulting in the confusion between the problem of priority of water rights and the public power problem, has made the dream of the federal bureaucracy come true by granting it, for the first time, the life-and-death power of dispensation of water rights long administered according to state law.

II.

At issue on the other main phase of the case is the meaning of the California limitation contained in § 4 (a) of the Project Act. The Court, however, does not use the present litigation as an occasion to determine Arizona's and California's rights under that Act, but as a vehicle for making a wholly new apportionment of the waters in the Lower Basin and turning over all unresolved problems to the Secretary of the Interior. The Court accomplishes this by distorting both the history and language of the Project Act.

The Court relies heavily on the terms and history of a proposed tri-state compact, authorized by § 4 (a) *but never adopted by the States concerned, viz., Arizona, California and Nevada.* The proposed tri-state compact provided for a division of tributary waters identical to that made by the Court, insofar as the Gila is awarded to Arizona. The Court in reality enforces its interpretation of the proposed tri-state compact and imposes its terms upon California.

The Court, however, cannot find in the proposed tri-state compact (the one that was never approved) an allocation of the tributaries other than the Gila; and in order to justify their allocation to Arizona it is forced to turn to the terms of "proposals and counter proposals over the

years," instead of to the language of the Project Act. The result is the Court's, not that of Congress, whose intent we have been called upon to discover and effectuate. The congressional intent is expressed in § 4 (a), which provides that California shall be limited to the use of 4,400,000 acre-feet "of the waters apportioned to the Lower Basin States by paragraph (a) of Article III of the Colorado River compact" (the compact that was approved) and to not more than half of "any excess or surplus waters unapportioned by said compact." [1] These waters are defined in the Colorado River Compact as *system* waters, and not as waters in the mainstream. Yet the Court restricts California to *mainstream waters*. That is the essence of the difference between us.

III.

As I read the Colorado River Compact and § 4 (a) of the Project Act, California is entitled to add all uses of system waters by Lower Basin States in the tributaries to those waters available in the mainstream to determine (1) how much water she can take out of the first 7,500,000 acre-feet apportioned to the Lower Basin States by Article III (a), and (2) whether there are excess or surplus system waters, including Article III (b) waters, of which California has a right to no more than one-half.

I disagree with the Court's conclusion that § 4 (a) of the Project Act refers only to the water flowing in the mainstream below Lee Ferry. The Project Act speaks clearly, and only, in terms of the waters apportioned to the Lower Basin States by Article III (a) of the Compact, *viz.* California may take no more than 4,400,000 acre-feet "of the waters apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River

[1] The relevant provisions of the Project Act, the California Limitation Act, and the Colorado River Compact are set forth in the Appendix.

Compact." Article III (a) of the Compact apportions "from the Colorado River System in perpetuity to the Upper Basin and to the Lower Basin, respectively, the exclusive beneficial consumptive use of 7,500,000 acre-feet of water per annum." The term "Colorado River System" is defined in Article II (a) as including the entire mainstream and the tributaries.[2]

There is, moreover, not a word in Senate Report No. 592, 70th Cong., 1st Sess., reporting the Project Act, that indicates, suggests, or implies that the Colorado River is to be divided and California or any other Lower Basin State restricted to mainstream water. The Report indeed speaks of "enthroning the Colorado River Compact" (*id.*, p. 16), which embraces the entire river system in the United States, not just the mainstream. See Article II (a). Arizona's fears that California would take 5,400,000 acre-feet from the first 7,500,000 acre-feet, if the entire system were used as the source are, I think, unfounded. Out of the first 7,500,000 acre-feet of system water California would be entitled only to 4,400,000 acre-feet. Out of the balance or 3,100,000 acre-feet, California would be excluded.

How much of this 3,100,000 acre-feet should go to Arizona and how much to Nevada, New Mexico, and Utah cannot be determined on this record, the relevant findings not being made in light of the construction which has been given to the Project Act, the Compact, and the Limitation Act. We cannot take as a guide the provisions in the second paragraph of § 4 (a) of the Project Act, *viz.*, the 300,000 acre-feet proposed for Nevada and the 2,800,000 acre-feet proposed for Arizona, *because those provisions come into play only if Arizona, California, and Nevada enter a compact, which to date they have not done.* The division of 3,100,000 acre-feet should, I think, be made

[2] See the Appendix for the relevant portions of Article III.

among Arizona, Nevada, New Mexico, and Utah pursuant to the principles of equitable apportionment. *Nebraska* v. *Wyoming*, 325 U. S. 589.

The evidence is clear that the dependable Lower Basin supply does not exceed 8,000,000 acre-feet if the river system is taken as a whole. By Article III (b) of the Compact the Lower Basin States can increase their beneficial use by 1,000,000 acre-feet, *if additional water is available.* By § 4 (a) of the Project Act California is entitled to not more than one-half of any excess that is "unapportioned by said compact." The amount apportioned to the Lower Basin States by the Compact is 8,500,000 acre-feet, *viz.*, Article III (a) waters in the amount of 7,500,000 "in perpetuity" plus Article III (b) waters, which are highly contingent. After the Upper Basin is given its 7,500,000 acre-feet, the "unapportioned" excess described in Article III (b) would be available. As noted, the present permanent supply for the Lower Basin would not exceed 8,000,000 acre-feet from the mainstream and the tributaries. As I read the Compact and the Project Act, California would get out of the 8,000,000 acre-feet 4,400,000 acre-feet *plus* not more than one-half of Article III (b) waters which, under the foregoing assumption, would amount to one-half of 500,000 acre-feet. If there is a further surplus (either in the sense of Article III (b) or in the more remote sense in which § 4 (a) of the Project Act uses that word)[3] the division between the Lower Basin

[3] It is said that the § 4 (a) language referring to surplus or excess waters, one-half of which is to go to California, the other to Arizona, is meaningless if read literally. That turns on the meaning of the words "excess or surplus waters unapportioned" by the Compact. They mean, it is said, all waters unapportioned by Article III (a) and (b), because Article III (c) defines or speaks of surplus in such manner as to indicate that surplus is only that water over and above Article III (a) and (b) water. This is true, at least for the limited purpose of Article III (c). From that premise it

States should follow the principles of equitable apportionment which we applied in *Nebraska* v. *Wyoming,* 325 U. S. 589. If § 4 (a) is to be read as referring to system waters, California's total rights is available Lower Basin waters would amount to not more than 4,650,000 acre-feet annually (4,400,000 plus 250,000). She would also have a right, albeit highly contingent, to any additional Article III (b) waters that become available to the Lower Basin and to such share of the waters in both Basins over 16,000,000 acre-feet (7,500,000 to Upper Basin, 7,500,000 to Lower Basin under Article III (a), plus 1,000,000 to Lower Basin under Article III (b)) as is equitable. *Nebraska* v. *Wyoming, supra.*

---

is reasoned that § 4 (a), literally construed, would allow Arizona and California to split equally all waters over 16,000,000 acre-feet, that is after 7,500,000 acre-feet went to each of the Basins, and after the Lower Basin received an additional 1,000,000 acre-feet under the provisions of Article III (b). If that is true and if California and Arizona were allowed to divide up the rest, the Upper Basin States would forever be limited to their initial 7,500,000 acre-feet, something not contemplated by Article III (f), which specifically provides for apportionment of waters in excess of 16,000,000 between the Upper and Lower Basins. Thus, it is argued that the words "excess or surplus waters" as used in § 4 (a) are meaningless and in hopeless conflict with the terms of the Compact if read literally.

This interpretation is ill-founded. The first paragraph of § 4 (a) contains only a limitation; it apportions no water. The tri-state compact authorized by the second paragraph of § 4 (a) has never been made. But, even if it had been made it could affect only the rights of its signatories *vis-à-vis* each other. For § 4 (a) explicitly provides "that all of the provisions of said tri-State agreement shall be subject in all particulars to the provisions of the Colorado River compact."

The words "excess or surplus waters unapportioned by said compact" mean, I think, Article III (b) waters plus all waters in the entire System in excess of 16,000,000 acre-feet. Not only does this interpretation allow the Project Act and the Colorado River Compact to be construed as a harmonious whole, but it is also compelled by the legislative history. See 70 Cong. Rec. 459–460.

Under the Court's reading of § 4 (a), however, a far different division is made. The Court says that the language of § 4 (a) limiting California to 4,400,000 acre-feet "of the waters apportioned to the Lower Basin States by paragraph (a) of Article III of the Colorado River compact" (7,500,000 acre-feet per annum) is just a "shorthand" way of saying that California is limited to 4,400,000 acre-feet of the water available in the mainstream. According to the Court, California has no rights in system waters, as this would include rights in the tributaries, and the Court has decided that the tributaries belong exclusively to Arizona. Thus, if California is to obtain any "excess or surplus" waters, the surplus must be flowing in the mainstream. That is, California can assert her right to "surplus" waters only when the flow of the mainstream is more than 7,500,000 acre-feet per year. But if, as the evidence shows, the dependable Lower Basin supply of *system* waters is only 8,000,000 acre-feet per annum, 2,000,000 of which are in the tributaries, California can look only to 6,000,000 acre-feet in the mainstream. Thus, California will never be entitled to any of the additional Article III (b) waters (500,000 acre-feet) in the Lower Basin system. Those "surplus" waters would necessarily be in the tributaries, and under the Court's interpretation they belong exclusively to Arizona, § 4 (a) to the contrary notwithstanding.

As a practical matter, the only place California can get system waters is from the mainstream, there being no tributaries of the Colorado River in California. The question to be decided is whether or not under § 4 (a) of the Project Act California can take into consideration Arizona's uses on her tributaries in determining her (California's) right to divert water from the mainstream. The Court says California cannot, because when the Project Act refers to her rights in *system* waters as the measuring rod, it really means her rights in mainstream waters. With due respect the majority achieves that

result by misreading the Colorado River Compact, the Project Act, and by misreading the legislative history leading up to the California Limitation Act. An analysis of the legislative history will show, as already noted, that the Court's analysis is built mainly upon statements made by the various Senators in arguing the terms of a proposed tri-state compact that was never made.

IV.

The Project Act needs the Compact to achieve a settlement of the issue of the apportionment of water involved in this case. It is argued that an apportionment, constitutionally, can be achieved only in one of two ways—by an interstate compact or by a decree of equitable apportionment. That proposition need not, however, be resolved here, because (apart from a contingency not relevant here) the Project Act by the express terms of § 4 (a) is dependent on the ratification of the Compact.[4] If the Compact is ratified, it and the Project Act are to supply the measure of waters which California may claim.[5]

---

[4] Under § 4 (a) of the Project Act it is provided that if all seven States fail to ratify the Compact in six months (which in fact they did fail to do), the Project Act shall not take effect until six of the States, including California, ratify the Compact and waive the provisions of Article XI of the Compact (which required approval of all seven States) and the President has so declared by public proclamation. A further condition was the passage of California's Limitation Act. The Presidential Proclamation is dated June 25, 1929. 46 Stat. 3,000; and California's Limitation Act was approved March 4, 1929, and became effective August 14, 1929.

[5] The Colorado River Compact is referred to many times in the Project Act—§ 1, § 4 (a), § 6, § 8, § 12, § 13, § 18, and § 19.

By § 18 the rights of the States to waters within their borders are not interferred with "except as modified by the Colorado River Compact or other interstate agreement."

By § 8 (a) "all users and appropriators" of water are "subject to and controlled by said Colorado River Compact . . . anything in this Act to the contrary not withstanding . . . ."

The overall accounting of the waters is provided for in Article III of the Compact. By Article III (a) "the exclusive beneficial consumptive use of 7,500,000 acre-feet of water per annum" is apportioned "in perpetuity to the Upper Basin and to the Lower Basin, respectively," meaning that each basin gets 7,500,000 acre-feet. By Article III (b) the Lower Basin is given the right to increase its beneficial consumptive use by 1,000,000 acre-feet per annum. By Article III (c) any deficiency owed Mexico "shall be equally borne by the Upper Basin and the Lower Basin." The Lower Basin by definition includes California. Article II (g). Tributary uses in Arizona diminish California's right under Article III (c) to require the Upper Basin States to supply water to satisfy Mexico. California is to be charged with water from the Gila when the accounting is made with Mexico. That is, California is presumed to enjoy the waters from the Lower Basin tributaries for purposes of Article III (c) of the Compact. It is manifestly unfair to charge her with those waters under Article III (c) of the Compact and to say that she is entitled to none of them in computing the 4,400,000 acre-feet which the Limitation Act and the Project Act give her out of the waters of Article III (a) of the Compact.

Section 1 of the Project Act authorizes the Secretary of the Interior to construct and operate the Boulder Dam "subject to the terms of the Colorado River *compact*." By § 4 (a) the Project Act is not to be operative unless and until the seven States "shall have ratified the Colorado River *compact*"; and if they do not, then "the provisions of the first paragraph of Article XI of said *compact*" must be waived. Moreover, the 4,400,000 acre-feet allotted to California by § 4 (a) are described in terms "of the waters apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River *compact*."

Section 4 (a) describes the "excess or surplus" waters in terms of those "unapportioned by said *compact*"; and it makes all "uses always to be subject to the terms of said *compact*." The *compact* is, indeed, the underpinning of the Project Act.

The Compact apportions the waters "from the Colorado River System" which by definition includes the mainstream and its tributaries in the United States. And California's Limitation Act, containing the precise language of the allocation of waters in § 4 (a) of the Project Act, describes the 4,400,000 acre-feet in terms "of the waters apportioned to the lower basin states by paragraph 'a' of article three of the said Colorado River *compact*." [6]

So it seems that the Compact is the mainspring from which all rights flow. The 7,500,000 acre-feet of water apportioned by Article III (a) of the Compact "from the Colorado River System" to the Lower Basin is the supply out of which California's 4,400,000 acre-feet is to be taken.

To repeat, the words "excess or surplus waters unapportioned by said compact," as used in § 4 (a) of the Project Act, mean, in my view, all waters available in the Lower Basin in excess of the first 7,500,000 acre-feet covered by Article III (a) of the Compact.[7]

The additional 1,000,000 acre-feet described in Article III (b) was added to the Compact "to compensate for the

---

[6] It was indicated in *Arizona* v. *California*, 292 U. S. 341, 357, that the Limitation Act incorporates the Compact:

"It may be true that the Boulder Canyon Project Act leaves in doubt the apportionment among the states of the lower basin of the waters to which the lower basin is entitled under Article III (b). But the Act does not purport to apportion among the states of the lower basin the waters to which the lower basin is entitled under the Compact. The Act merely places limits on California's use of waters under Article III (a) and of surplus waters; and it is 'such' uses which are 'subject to the terms of said compact.'"

[7] See note 3, *supra*.

waters of the Gila River and its tributaries being included within the definition of the Colorado River System." *Arizona* v. *California,* 292 U. S. 341, 350–351; and though Arizona has long claimed those 1,000,000 acre-feet as hers, that construction of Article III (b) of the Compact was rejected long ago. *Arizona* v. *California, supra,* p. 358.

V.

While the legislative history of the California limitation contained in § 4 (a) looks several ways, much of it is legislative history made with a view to its favorable use in the future—a situation we have noticed on other occasions. See *Schwegmann Bros.* v. *Calvert Corp.,* 341 U. S. 384. I think an objective reading of that history shows that the tri-state compact authorized by § 4 (a) of the Project Act (a compact never made) was *the one and only way* visualized by that Act through which Arizona could get the *exclusive use* of the waters of the Gila River. For the second paragraph of § 4 (a) of the Project Act states that the tri-state compact, *if made,* shall give Arizona "the exclusive beneficial consumptive use of the Gila River and its tributaries" within the boundaries of Arizona. Fears that this appropriation would injure New Mexico are not relevant to our problem, since the proposed tri-state compact would not hurt New Mexico unless she agreed to it. The legal rights of States not parties to the Compact would be unimpaired, as *Arizona* v. *California,* 283 U. S. 423, 462, holds. The same applies to any concern that Upper Basin rights would be imperiled by the tri-state compact.

After much discussion, the amendment allocating 4,400,000 acre-feet to California by § 4 (a) of the Project Act was finalized by Senator Phipps, Chairman of the Committee on Irrigation and Reclamation, who identified those 4,400,000 acre-feet as system waters. He made it unmistakably clear by adding to § 4 (a) the words "by

paragraph (a) of Article III" of the Compact which in his words "show that that allocation of waters refers directly to the seven and one-half million acre-feet of water" described by Article III (a) of the Compact. 70 Cong. Rec. 459. That amendment was agreed to without a roll call. 70 Cong. Rec. 473. Prior to that time Senator Phipps had proposed that California receive 4,600,000 acre-feet. *Id.*, p. 335.

The following colloquy took place:

> "Mr. HAYDEN. Under the circumstances I should like to inquire of the Senator from Colorado how he arrives at the figure 4,600,000 acre-feet of water instead of 4,200,000 acre-feet as proposed in my amendment?
>
> "Mr. PHIPPS. It was just about as difficult for me to arrive at 4,600,000 acre-feet as it would have been to arrive at 4,200,000 acre-feet. The arguments pro and con have been debated in the committee for quite a period of time. The contentions made by the Senators from Arizona have not been conclusive to my mind. For instance, I will refer to the fact that *Arizona desires to eliminate entirely all waters arising in the watershed and flowing out of the Gila River.*
>
> "Mr. HAYDEN. There is nothing of that kind in the Senator's amendment.
>
> "Mr. PHIPPS. There is nothing of that kind in the Senator's amendment, but that has been one of the arguments advanced by California as being an offset to the amount to which Arizona would try to limit California.
>
> "Mr. HAYDEN. If the Senator thought there was force in that argument, I should think that he would have included in his amendment a provision eliminating the waters of the Gila River and its tributaries, as my amendment does.

"Mr. PHIPPS. I do not consider it necessary because the bill itself, not only the present substitute measure but every other bill on the subject, *ties this question up with the Colorado River compact.*

"Mr. HAYDEN. My amendment does that.

"Mr. PHIPPS. Yes; that is true, but under estimates of engineers—one I happen to recall being made, I think, by Mr. La Rue—notwithstanding all of the purposes to which water of the Gila may be put by the State of Arizona, at least 1,000,000 acre-feet will return to the main stream. Yet Arizona contends that that water is not available to California; whereas to-day and for years past at least some of the waters from the Gila River have come into the canal which is now supplying the Imperial Valley.

"It is not a definite fixed fact that with the enactment of this proposed legislation the all-American canal is going to be built within the period of seven years; as a matter of fact, it may not be built at all; we do not know as to that. *But I do not think that the water from the Gila River, one of the main tributaries of the Colorado, should be eliminated from consideration. I think that California is entitled to have that counted in as being a part of the basic supply of water.*" (Italics added.)

It is plain from this colloquy that Senator Phipps thought that his amendment, limiting the amount California can claim, "ties this question up with the Colorado River Compact" and that the Gila River (below Lake Mead) should be "counted in as being a part of the basic supply of water" which California is entitled to have included in the computations for the Lower Basin States.

The word of Senator Phipps, who was chairman of the committee and who offered the amendment, is to be taken as against those in opposition or those who might be

making legislative history to serve their ends. *Schwegmann Bros.* v. *Calvert Corp., supra,* pp. 394–395: "The fears and doubts of the opposition are no authoritative guide to the construction of legislation. It is the sponsors that we look to when the meaning of the statutory words is in doubt."

If California were restricted by the Project Act to the use of 4,400,000 acre-feet out of the mainstream, it is difficult to believe that Senator Ashhurst of Arizona would have expressed his bitter minority views in the Report on the Project Act. S. Rep. No. 592, 70th Cong., 1st Sess., pt. 2. He said that the bill "sedulously and intentionally proposes to sever Arizona's jugular vein" (*id.*, p. 3), that "the amount of water apportioned to California . . . is not warranted in equity, law, justice, or morals" (*id.*, p. 4), that the bill is "a reckless and relentless assault upon Arizona." *Id.*, p. 38. He apparently never imagined that the proposed legislation would confine California to mainstream water. He indeed charged that the bill "authorizes California, which comprises only 2½ per cent of the Colorado River Basin and contributes no water, to appropriate . . . over 38 per cent of the estimated constant water supply available in the main Colorado River for all seven States in the basin and for Mexico." *Id.*, p. 5.

Like Senator Ashhurst and like the Chairman of the Senate Committee, Senator Phipps, I too read the Project Act to speak in terms of the entire Colorado River system in the United States.

APPENDIX.

Section 4 (a) of the Project Act provides in relevant part:

"This Act shall not take effect and no authority shall be exercised hereunder and no work shall be begun and no moneys expended on or in connection with the works or structures provided for in this Act, and no water rights shall be claimed or initiated hereunder, and no steps shall be taken by the United States or by others to initiate or perfect any claims to the use of water pertinent to such works or structures unless and until (1) the States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming shall have ratified the Colorado River compact, mentioned in section 13 hereof, and the President by public proclamation shall have so declared, or (2) if said States fail to ratify the said compact within six months from the date of the passage of this Act then, until six of said States, including the State of California, shall ratify said compact and shall consent to waive the provisions of the first paragraph of Article XI of said compact, which makes the same binding and obligatory only when approved by each of the seven States signatory thereto, and shall have approved said compact without conditions, save that of such six-State approval, and the President by public proclamation shall have so declared, and, further, until the State of California, by act of its legislature, shall agree irrevocaby and unconditionally with the United States and for the benefit of the States of Arizona, Colorado, Nevada, New Mexico, Utah, and Wyoming, as an express covenant and in consideration of the passage of this Act, that the aggregate annual consumptive use (diversions less returns to the river) of water of and from the Colorado River for use in the State of California, including all uses under contracts made under the provisions of this Act and all water necessary for the supply of any rights which may now exist, shall not exceed four mil-

lion four hundred thousand acre-feet of the waters apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact, plus not more than one-half of any excess or surplus waters unapportioned by said compact, such uses always to be subject to the terms of said compact.

"The States of Arizona, California, and Nevada are authorized to enter into an agreement which shall provide (1) that of the 7,500,000 acre-feet annually apportioned to the lower basin by paragraph (a) of Article III of the Colorado River compact, there shall be apportioned to the State of Nevada 300,000 acre-feet and to the State of Arizona 2,800,000 acre-feet for exclusive beneficial consumptive use in perpetuity, and (2) that the State of Arizona may annually use one-half of the excess or surplus waters unapportioned by the Colorado River compact, and (3) that the State of Arizona shall have the exclusive beneficial consumptive use of the Gila River and its tributaries within the boundaries of said State, and (4) that the waters of the Gila River and its tributaries, except return flow after the same enters the Colorado River, shall never be subject to any diminution whatever by any allowance of water which may be made by treaty or otherwise to the United States of Mexico but if, as provided in paragraph (c) of Article III of the Colorado River compact, it shall become necessary to supply water to the United States of Mexico from waters over and above the quantities which are surplus as defined by said compact, then the State of California shall and will mutually agree with the State of Arizona to supply, out of the main stream of the Colorado River, one-half of any deficiency which must be supplied to Mexico by the lower basin, and . . . (6) that all of the provisions of said tri-State agreement shall be subject in all particulars to the provisions of the Colorado River compact . . . ."

By § 1 of the California Limitation Act it was provided that when the seven States approved the Compact and its approval is proclaimed by the President that:

". . . the State of California as of the date of such proclamation agrees irrevocably and unconditionally with the United States and for the benefit of the states of Arizona, Colorado, Nevada, New Mexico, Utah, and Wyoming as an express covenant and in consideration of the passage of the said 'Boulder canyon project act' that the aggregate annual consumptive use (diversions less returns to the river) of water of and from the Colorado river for use in the State of California including all uses under contracts made under the provisions of said 'Boulder canyon project act,' and all water necessary for the supply of any rights which may now exist, shall not exceed four million four hundred thousand acre-feet of the waters apportioned to the lower basin states by paragraph 'a' of article three of the said Colorado river compact, plus not more than one-half of any excess or surplus waters unapportioned by said compact, such uses always to be subject to the terms of said compact."

Article III of the Compact provides in relevant part:

"(a) There is hereby apportioned from the Colorado River System in perpetuity to the Upper Basin and to the Lower Basin, respectively, the exclusive beneficial consumptive use of 7,500,000 acre feet of water per annum, which shall include all water necessary for the supply of any rights which may now exist.

"(b) In addition to the apportionment in paragraph (a), the Lower Basin is hereby given the right to increase its beneficial consumptive use of such waters by one million acre-feet per annum.

"(c) If, as a matter of international comity, the United States of America shall hereafter recognize in the United

States of Mexico any right to the use of any waters of the Colorado River System, such waters shall be supplied first from the waters which are surplus over and above the aggregate of the quantities specified in paragraphs (a) and (b); and if such surplus shall prove insufficient for this purpose, then, the burden of such deficiency shall be equally borne by the Upper Basin and the Lower Basin, and whenever necessary the States of the Upper Division shall deliver at Lee Ferry water to supply one-half of the deficiency so recognized in addition to that provided in paragraph (d).

"(d) The States of the Upper Division will not cause the flow of the river at Lee Ferry to be depleted below an aggregate of 75,000,000 acre-feet for any period of ten consecutive years reckoned in continuing progressive series beginning with the first day of October next succeeding the ratification of this compact."
